The Department's three principal undergraduate offerings—English and American Literature, the English major with a Creative Writing emphasis, and Literary Journalism—are reflected in the graduate programs, which, at this level, also involve collaboration with the Department of Comparative Literature: M.A. and Ph.D. in English, M.A. and Ph.D. in Comparative Literature, M.F.A. in English (Creative Writing), and an emphasis in Creative Nonfiction within the Ph.D. degree in English. A student's courses for the M.A. and Ph.D. in English may include a specialization in American literature as well. The faculty is particularly equipped to guide students with special interests in criticism and theory, an area which candidates for the Ph.D. in English or in Comparative Literature may stress by adding the Schoolwide Critical Theory emphasis. Applicants for graduate degrees in English must submit scores for the Graduate Record Examination (GRE) including the Subject Test in Literature in English. Ordinarily students are not admitted to the English program unless they plan to continue, and are qualified to

continue, to the degree of Ph.D. Students are admitted to the M.F.A. program chiefly on the basis of submitted creative work.

Specific requirements for the graduate degrees will be established by consultation between members of the faculty and the candidate. First-year graduate students or candidates for the Master of Fine Arts in English (Creative Writing) plan a program with an assigned advisor; candidates for the Ph.D. plan with an advisor and three-person committee. At the time of the M.A. examination, the Graduate Committee evaluates the student's graduate career up to that point and offers advice about future prospects. Candidates for literary degrees are encouraged to study philosophy, history, foreign languages and literatures, and the fine arts.

Only in exceptional circumstances will students be permitted to undertake programs of less than six full courses during the academic year. The normal expectation is enrollment in three courses each quarter; Teaching Assistants take two courses in addition to earning credit for University Teaching. Students who are not teaching should be able to complete course work in two years. The Ph.D. qualifying examination should be taken within a couple of quarters after courses are finished. The Ph.D. in English normally should be completed in seven years or less.

The Department recognizes that many of its graduate students intend to become teachers, and it believes that graduate departments should be training college teachers as well as scholars—indeed, that teaching and most literary scholarship complement one another. Thus the Department has initiated a program by which all its Ph.D. candidates may gain supervised training as part of the formal seminar work required for the degree. M.F.A. candidates also have the opportunity to participate in this program. Candidates for the Ph.D. are expected to acquire experience in teaching.

The Murray Krieger Fellowship in Literary Theory is intended for an outstanding entering graduate student who is pursuing the Ph.D. in English or Comparative Literature and who demonstrates a primary interest in theory as theory relates to literary texts. A range of other fellowships is also available to students in the Department.

Emphasis in Creative Nonfiction

Students admitted to the emphasis in Creative Nonfiction must meet all course, language, and examination requirements for the Ph.D. in English. Their course work must include: (a) three writing workshops in nonfiction; (b) three courses in nonfictional literature or rhetoric; and (c) if needed for the projected dissertation, one course outside the Department. Students must also conduct a dissertation defense.

School Emphases

Schoolwide graduate emphases are available in Asian American Studies, Critical Theory, and Feminist Studies. Refer to the appropriate sections of the *Catalogue* for information.

ENGLISH

Master of Arts in English

Each candidate for the M.A. will be assigned to a graduate advisor who will supervise the student's program. The M.A. plan of study includes (1) the completion of course work, as advised, for three quarters or the equivalent; (2) demonstrated proficiency in reading a designated foreign language, modern or classical; and (3) the submission of materials (including a statement about work accomplished and plans for future study, and a sample essay) to the Graduate Committee, who will review and assess the student's progress, recommend whether further study toward the Ph.D. is advisable, and, if so, give advice about areas for further study.

The Department of English sponsors a Summer M.A. Program in English designed for teachers and returning students. The M.A. degree in English is awarded to candidates who complete 32 units of graduate course work through two consecutive summers in the

program and submit an acceptable Master's essay. Applicants from outside the State of California may apply for the program.

Master of Fine Arts in English

The Master of Fine Arts (M.F.A.) is a degree in creative writing. The M.F.A. degree is normally conferred upon the completion of a two- to three-year residence. Each quarter the candidate will be enrolled in either the poetry or fiction section of the Graduate Writers' Workshop, which will constitute two-thirds of a course load, the other course to be selected in consultation with the student's advisor. It is expected that M.F.A. candidates will complete at least one supervised teaching seminar.

In addition to course work, the candidate is required to present as a thesis an acceptable book-length manuscript of poetry or short stories or a novel.

Doctor of Philosophy in English

The program for the Ph.D. in English requires about two years of full-time enrollment in regular courses beyond the B.A.; proficiency in the reading of two acceptable foreign languages, modern or classical; satisfactory performance on designated examinations; and the dissertation.

The languages acceptable depend upon the nature of the student's program as determined by the student's advisors. Reading competence in one of these languages must be established in the first year of residence, and competence in the second before the Qualifying Examination. Competence in the two languages required for the Ph.D. is verified through examination.

Upon completion of course work the student is examined in three areas: (1) a primary field; (2) a secondary field; and (3) theory and/or criticism.

Upon satisfactorily completing this Qualifying Examination, the student is admitted to candidacy for the degree. As soon after completion of the Qualifying Examination as is practical, the student presents a dissertation prospectus for the approval of the doctoral committee. The dissertation itself must also be approved by the committee, which may or may not require an oral examination on it. All work for the Ph.D. degree must be in courses limited to graduate students. The normal time for advancement to candidacy is four years. The normal time for completion of the Ph.D. is seven years, and the maximum time permitted is nine years.

Courses in English and Literary Journalism

LOWER-DIVISION

Satisfaction of the UC Entry Level Writing requirement is a prerequisite for all departmental courses except E 6, E 7, and E 8. See the Requirements for a Bachelor's Degree section for information on fulfilling this requirement.

Descriptions of the topics to be offered in the undergraduate literary courses during a given year are available in the Department office in the fall.

E 6 British Literature to the Renaissance (4) F. Lecture, three hours. Various topics in literature of the Middle Ages and Renaissance in English, such as the heroic, the rise of tragedy, women in literature, literature and nature. Primarily designed for nonmajors. (IV)

E 7 Literature in English from the Eighteenth to the Twentieth Centuries (4) W. Lecture, three hours. Various topics in literature in English outside the U.S., such as Romanticism, the development of the novel, revolution and industrialism in literature, the literary representation of war. Primarily designed for nonmajors. (IV)

E 8 American Literature (4) S. Lecture, three hours. Various topics in American literature, such as the literature of colonialism, U.S. literature and popular culture, the New England tradition, the English literature of the Pacific Rim. Primarily designed for nonmajors. (IV)

LJ 20 Introduction to Literary Journalism (4). Lecture, three hours. Reading of selected texts to explore the ways in which literary journalism and related nonfiction modes formulate experience. Students write several short papers and one final project. Prerequisite: satisfactory completion of the lower-division writing requirement.

LJ 21 Reporting for Literary Journalism (4). Seminar, three hours. Instruction and hands-on training in how to interview, report, research, and collect the types of information needed to write literary journalism. Prerequisite: satisfactory completion of the lower-division writing requirement. Open to Literary Journalism majors only.

E 28 The Nature of Literature F, W, S, Summer. Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers in each course. E 28D and E 28E also require creative writing. Prerequisite: satisfaction of the lower-division writing requirement.

E 28A The Poetic Imagination (4). (IV)

E 28B Comic and Tragic Vision (4). (IV)

E 28C Realism and Romance (4). (IV)

E 28D The Craft of Poetry (4). (IV)

E 28E The Craft of Fiction (4). (IV)

WR 30 The Art of Writing: Poetry (4) F, W, S. Beginners' workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings. May be repeated once for credit with a different instructor. (I)

WR 31 The Art of Writing: Prose Fiction (4) F, W, S. Beginners' workshop in fiction writing, evaluation of student manuscripts, and parallel readings. May be repeated once for credit with a different instructor. (I)

WR 37 Intensive Writing (6). Discussion, three hours; tutorial, two hours. Deals with review of grammar and usage, the process of writing, rhetorical principles, and guided practice in writing. Readings selected from current fiction and nonfiction; writing assignments require analysis of readings and demonstration of rhetorical principles. Successful completion of WR 37 with letter grade of C or above fulfills the UC Entry Level Writing requirement and one quarter of the UCI lower-division writing requirement. Students who achieve a C- or below must repeat the course or enroll in the equivalent. Students held for the UC Entry Level Writing requirement must satisfy the requirement before the beginning of their fourth quarter of residency. Prerequisite: students must have taken the UC Analytical Writing Placement Examination. Enrollment open to recommended students only. Only one course from WR 37, WR 39, or WR 39AP may be taken for credit. (I)

WR 38 The Art of Writing: Nonfiction and Journalism (4). Beginners' workshop in the writing of nonfiction and news articles, evaluation of student manuscripts, projects. (I)

WR 39A Fundamentals of Composition (4) F, W, S, Summer. Discussion, three hours. Deals with the fundamentals of grammar, usage, paragraph development, principles of rhetoric, and the writing of expository essays. Some exercises; frequent papers. A student seeking to satisfy the UC Entry Level Writing requirement who receives a grade below C must repeat the course, normally in the next quarter of residency. Students held for the UC Entry Level Writing requirement must satisfy the requirement before the beginning of their fourth quarter of residency. Only one course from WR 37, WR 39, or WR 39AP may be taken for credit.

WR 39AP Fundamentals of Composition with Laboratory (4) F, W, S, Summer. Lecture, three hours; laboratory, two hours. Deals with the fundamentals of grammar, usage, paragraph development, principles of rhetoric, and the writing of expository essays. Some exercises; frequent papers. Successful completion with a letter grade of C or above fulfills the UC Entry Level Writing Requirement. A student seeking to satisfy the UC Entry Level Writing requirement who receives a grade below C must repeat the course, normally in the next quarter of residency. Students held for the UC Entry Level Writing requirement must satisfy the requirement before the beginning of their fourth quarter of residency. Open only to students placed into the course as a result of the UC Analytical Writing Placement Examination or the Academic English Placement Test. Prerequisite: students must have taken the UC Analytical Writing Placement Examination. Only one course from WR 37, WR 39, or WR 39AP may be taken for credit.

WR 39B Critical Reading and Rhetoric (4) F, W, S, Summer. Discussion, three hours. Guided practice in the critical reading and written analysis of both popular and academic prose. Readings selected from literary, academic, journalistic, and fictional genres; writing topics require rhetorical analysis of readings and demonstration of rhetorical principles in student writing. Prerequisite: WR 39A or the equivalent. (I)

WR 39C Argument and Research (4) F, W, S, Summer. Discussion, three hours. Guided writing practice in argumentation, logic, and inquiry. Readings are selected from current nonfiction and from materials students select from the University library. Research strategies emphasized. Prerequisite: WR 37 or WR 39B. (I)

WR 90 Intermediate Poetry Writing (4). Intermediate workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings. Prerequisite: WR 30 or equivalent. May be repeated once for credit with a different instructor.

WR 91 Intermediate Fiction Writing (4). Intermediate workshop in the writing of fiction, evaluation of student manuscripts, and parallel readings. Prerequisite: WR 31 or equivalent. May be repeated once for credit with a different instructor.

UPPER-DIVISION

E 100 History of Literary Theory and Criticism from the Classics to the Present (4) F, W. A series of lectures and discussions beginning with a focus on ancient critics and literary theorists, and pursuing the issues they raise from medieval times to modernity. Prerequisites: three courses from the E 28 series, or LJ 20, LJ 21, and an E 28 course. E 100 and Comparative Literature CR 100A may not both be taken for credit.

E 101 Undergraduate Seminar: Applications in Literary Theory and Criticism (4) F, W, S. Seminar, three hours. Open to upper-division majors in English only, and required of all English majors soon after the completion of E 100. Sections limited to 20 students. Each instructor defines a theoretical, critical, or conceptual topic (e.g., theme, approach, genre) and explores it through an emphasis on literary texts. Prerequisites: E 100; satisfactory completion of the lower-division writing requirement. May be taken for credit twice as topics vary.

WR 101 Undergraduate Seminar: Applications in Literary Theory and Criticism for Creative Writing (4). Seminar, three hours. Substitute for E 101 for Creative Writing emphasis students. Prerequisites: E 100; satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. Formerly WR 100B.

LJ 101A Lectures in the History and Theory of Literary Journalism (4). Lecture, three hours. Required of beginning majors in Literary Journalism. Lectures on topics that explore the historical and theoretical dimensions of literary journalism. Prerequisites: LJ 20, LJ 21 and one course from the E 28 or CL 50 series or equivalent.

LJ 101B Literary Journalism Core Writing Seminar (4). Seminar, three hours. Limited to 20 students. Writing seminars in announced specialized genres that students will both study and practice. Examples: "The Memoir"; "Review Writing"; "The Editorial"; "Writing Biography"; "The Profile"; "Political Writing." Prerequisites: satisfactory completion of the lower-division writing requirement and LJ 101A. May be taken for credit three times as topics vary.

E 102 English and American Literary History F, W, S, Summer. Lecture, three hours. Studies of works representative of historical periods of literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre. Prerequisites: upper-division standing; majors only. May be repeated for credit as topics vary.

102A Medieval and Renaissance Literature (4)

102B Restoration and Eighteenth-Century Literature (4)

102C Romantic and Nineteenth-Century Literature (4)

102D Twentieth-Century Literature (4)

E 103 Topics in Literature, Theory, and Criticism (4) F, W, S, Summer. Lecture, three hours. A series of lectures on and discussions of announced topics in literary criticism, theory, history, genres, modes, major authors. Prerequisite: none for most topics; check departmental descriptions of individual course topics. May be repeated for credit as topics vary.

LJ 103 Lectures on Topics in Literary Journalism (4). A series of lectures on, and discussions of, announced topics in literary journalism and the literature of fact. Examples: "Writing the Palate"; "Early Modern Women in the Public Sphere"; "Victorian Cultural Critics"; "Writing about War." May be repeated for credit as topics vary.

E 105 Multicultural Topics in Literatures in English (4) F, W, S. Focuses on ethnic or minority literatures, or treats issues related to race and cultural identity. May be repeated for credit as topics vary.

E 106 Advanced Seminar (4). Seminar, three hours. Required of all English majors. Limited to 25 students. Focuses on a topic within the area of literatures in English. Seeks to provide majors intensive work on a single topic in the field of English in a discussion setting. Prerequisites: two upper-division English (E) courses. May be repeated for credit as topics vary.

WR 109 Nonfiction and Journalism (4). Three hours. The course develops out of WR 38 for students with special competence for advanced work in journalism. Prerequisite: consent of instructor.

WR 110 Short Story Writing (4) F, W, S. Three-hour workshop in short fiction; discussion of student writing and of relevant literary texts. May be repeated once for credit toward graduation, but not repeated for credit within the major. Prerequisite: consent of instructor.

WR 111 Poetry Writing (4) F, W, S. Three-hour advanced poetry writing workshop; discussion of student writing and of relevant literary texts. May be repeated once for credit toward graduation, but not repeated for credit within the major. Prerequisite: consent of instructor.

WR 113 Novel Writing (4). Three-hour advanced workshop in fiction writing; discussion of student writing and of relevant literary texts. Prerequisite: consent of instructor.

WR 115 Conference in Writing (4). Primarily for writing emphasis seniors. May be repeated for credit toward graduation but not repeated for credit within the major. Prerequisite: consent of instructor.

WR 139 Advanced Expository Writing (4) F, W, S, Summer. Discussion, three hours. Study of rhetorical techniques; practice in writing clear and effective prose. Several essays of varying lengths, totaling at least 4,000 words. Prerequisites: satisfaction of the lower-division writing requirement of the breadth requirement and junior standing. May not be counted toward the upper-division requirements for majors or minors. (I)

E 140 Children's Literature (4). Lecture course open to all students. Explores the nature of children's literature and the special critical problems raised by it. Primarily for nonmajors. May not be counted toward the upper-division requirements for majors.

E 150 Topics in Literature for Nonmajors (4). Lecture, three hours. Major texts in English, American, and Comparative Literature explored for basic humanistic issues and themes, on announced topics. Primarily for upper-division students, but not requiring previous training in literature. May be repeated as topics change. May not be counted toward the upper-division requirements for majors.

E 160 English Language Cinema (4). Focuses on any one of the different cinematic traditions in the English-speaking world, from a historical theoretical, or comparative perspective. May be taken for credit twice as topics vary.

WR 179 Advanced Composition for Teachers (4). Principles of formal composition and problems of teaching. Selecting handbooks and ancillary reading, marking papers, making assignments, and conducting workshops and tutorials. Prerequisites: satisfactory completion of the lower-division writing requirement and junior standing. Same as Education 179.

E 181 The Structure of English (4). An examination of American English phonology, morphology, and syntax. Useful for prospective teachers of English in elementary and secondary schools and for teachers of English as a second language. Prerequisite: Linguistics 3 or consent of instructor. Same as Linguistics 163B.

E 184 History of English (4). External (historical and social) and internal (linguistic) changes which have affected the English language from its Germanic roots to the present day. Prerequisite: Linguistics 3. Same as Linguistics 172.

E 187 Selected Topics in English Linguistics (4)

E 198 Special Topics (4-4-4). Directed group study of selected topics. By consent, by arrangement.

LJ 198 Special Topics (4-4-4). Directed group study of selected topics. By consent, by arrangement.

E 199 Reading and Conference (1 to 4). To be taken only when the materials to be studied lie outside the normal run of departmental offerings, and when the student will have no formal chance to pursue the subject. Prerequisites: consent of the student's advisor, the instructor, and the Department Chair.

LJ 199 Reading and Conference (1 to 4). To be taken only when the materials to be studied lie outside the normal run of departmental offerings, or when students have obtained internships at local publications. Prerequisites: consent of the student's advisor, the instructor, and the Literary Journalism Program Director.

GRADUATE

All graduate courses may be repeated when the topic varies. Descriptions of the topics to be treated in a given academic year are published by the Department in the fall. Enrollment in each graduate course requires the consent of the instructor. The courses are limited to registered graduate students, except for specially qualified fifth-year students seeking teaching credentials, who may enroll if they have first received permission from the Department's Graduate Committee and if space permits.

In addition to the following courses, graduate students in the Department of English might find Humanities 200 (The Nature and Theory of History) and Humanities 291 (Interdisciplinary Topics) of special interest.

E 210 Studies in Literary History (4) F, W, S

E 215 Prospectus Workshop (2) F. Workshop for the writing of the graduate student prospectus for those who have completed their qualifying examinations. Topics covered and assignments completed culminate in a presentation of a draft of the prospectus in class. Biweekly discussions.

CR 220 A, B Studies in Literary Theory and Its History (4, 4) F, W. Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English and American theorists. Same as Humanities 220 A, B.

E 225 Studies in Literary Genres (4) F, W, S

E 230 Studies in Major Writers (4) F, W, S

E 235 Methods of Literary Scholarship (4)

CR 240 Advanced Theory Seminar (4) F, W, S

WR 250A-B Graduate Writers' Workshop (Fiction) (4-4) F, W, S. Satisfactory/Unsatisfactory only.

WR 250C Graduate Writers' Workshop (Poetry) (8) F, W, S. Satisfactory/Unsatisfactory only.

WR 251A-B Writing in Conference (Fiction) (4-4) F, W, S. Satisfactory/Unsatisfactory only.

WR 251C Writing in Conference (Poetry) (8) F, W, S. Satisfactory/Unsatisfactory only.

WR 252 Graduate Workshop in Nonfiction (4) F, W, S. Reading and critique of student-manuscripts in creative nonfiction. The instructor leads discussions and meets with students on an individual basis. Satisfactory/Unsatisfactory only. May be taken for credit three times.

E 290 Reading and Conference (4) F, W, S

E 291 Guided Reading Course (4)

E 299 Dissertation Research (4 to 12) F, W, S. Satisfactory/Unsatisfactory only.

E 398 Rhetoric/Teaching of Composition (4) F, W. Readings, lectures, and internship designed to prepare graduate students to teach composition. Formal instruction in rhetoric and practical work in teaching methods and grading. Consent of instructor required.

E 399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

UNDERGRADUATE PROGRAM IN EUROPEAN STUDIES

168 Humanities Instructional Building; (949) 824-8119

David Carroll, **Director**

Advisory Committee

Luis F. Avilés, *Department of Spanish and Portuguese*

Carolyn P. Boyd, *Department of History*

David Carroll, *Department of French and Italian*

Russell Dalton, *Department of Political Science*

Jane O. Newman, *Department of Comparative Literature*

Core Faculty

Luis F. Avilés, Ph.D. Brown University, *Associate Professor of Spanish*

Philippe A. Barbé, Ph.D. Northwestern University; Doctorate, University of Paris, *Assistant Professor of French*

George Bauer, Ph.D. Princeton University, *Professor of Art History*

Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor of Art History*

Carolyn P. Boyd, Ph.D. University of Washington, *Department Chair and Professor of History*

Ellen S. Burt, Ph.D. Yale University, *Department Chair of French and Italian and Associate Professor of French and Comparative Literature*

David Carroll, Ph.D. The Johns Hopkins University, *Director of European Studies and Professor of French*

Russell Dalton, Ph.D. University of Michigan, *Professor of Political Science*

Sarah Farmer, Ph.D. University of California, Berkeley, *Associate Professor of History*

Ana Paula Ferreira, Ph.D. New York University, *Professor of Portuguese and Comparative Literature*

Linda Georgianna, Ph.D. Columbia University, *Professor of English*

Michelle M. Hamilton, Ph.D. University of California, Berkeley, *Assistant Professor of Spanish*

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Professor of History*

James D. Herbert, Ph.D. Yale University, *Department Chair and Professor of Art History*

Gail K. Hart, Ph.D. University of Virginia, *Director, Humanities Core Course and Professor of German*

Karen R. Lawrence, Ph.D. Columbia University, *Dean of the School of Humanities and Professor of English and Comparative Literature*

Meredith Lee, Ph.D. Yale University, *Professor Emerita of German*

Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History*

Anthony McGann, Ph.D. Duke University, *Assistant Professor of Political Science*

Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History*

Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish*

Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature*

Gary Richardson, Ph.D. University of California, Berkeley, *Assistant Professor of Economics*

Jill Robbins, Ph.D. University of Kansas, *Associate Dean of the School of Humanities and Associate Professor of Spanish*

Thomas P. Saine, Ph.D. Yale University, *Professor Emeritus of German*

Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature*

Martin Schwab, Ph.D. University of Bielefeld, *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature*

Victoria Silver, Ph.D. University of California, Los Angeles, *Associate Professor of English*

James Steintrager, Ph.D. Columbia University, *Associate Professor of English*

The program in European Studies provides undergraduates with an opportunity to study Europe from the vantage points of several disciplines in the humanities and social sciences. Because Europe is both a geographical place and an idea which changes throughout history, it has had different meanings at different times and in different places. The study of Europe thus requires an open, pluralistic, and interdisciplinary curriculum that takes a critical approach

to the idea (or ideas) of Europe. The program provides a multidisciplinary view of Europe as a whole and of its historical, political, and cultural formation and global implications. It also provides a focus on a specific area of European experience that cuts across traditional disciplinary and national boundaries. Participation in an Education Abroad Program in a European country is strongly recommended for all European Studies majors.

Students may elect to emphasize one of the following areas:

Medieval Studies, Early Modern Europe (1450–1789), Modern Europe (1789–present), Encounters with the Non-European World, British Studies, French Studies, German Studies, Italian Studies, The Mediterranean World: Past and Present, Russian Studies, or Spanish-Portuguese Studies. As an alternative, students may define their own emphasis in consultation with a program advisor and with the approval of the European Studies Advisory Board.

Because there are so many emphasis options within the major, students are assigned for academic advising to members of the European Studies Advisory Board and are required to consult with their advisor on a quarterly basis.

CAREER OPPORTUNITIES

A degree in European Studies prepares its graduates to enter advanced degree programs in international business, history, law, and political science. The strong academic skills and professional orientation acquired by European Studies majors are necessary to pursue successful careers in such fields as international banking, law, journalism, management, public relations, publishing, and government service. Humanities graduates in general learn to express ideas clearly, do independent research, and think analytically and imaginatively—the required tools for success beyond the undergraduate career.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Requirements for the Major

Completion of two years of language (through the 2C level) in French, German, classical Greek, Italian, Latin, Portuguese, Russian, or Spanish.

Thirteen courses, of which four may be lower-division: (a) Humanities 101A-B; (b) six courses from an approved emphasis list (see sample below), four of which must be upper-division; (c) four multidisciplinary electives: two courses in European History or Political Science or Social Science outside the student's emphasis, and two courses in European Literature or Arts outside the student's emphasis; and (d) Humanities 190. NOTE: One course from either the approved emphasis list or the elective category must be from the Encounters with the Non-European World emphasis. In addition, annual consultation with a faculty advisor is required. NOTE: Courses are sometimes approved in more than one emphasis. Any course that appears on the approved list for a student's emphasis cannot be used as a course outside the emphasis even if it also appears on other lists.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Emphases and Approved Courses: The following list includes a few examples of courses that have been approved for each emphasis. The complete list is extensive and varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information about approved courses, students are advised to consult the School of Humanities Web site at <http://www.humanities.uci.edu/>.

Medieval Studies: Gothic Architecture (Art History 114A), Women and Gender in Late Medieval Literature (English 102A), Jewish History from Ancient to Early Modern (History 130A).

Early Modern Europe (1450–1789): Art of Venice (Art History 121), Milton (English 103), Tudor England (History 117A).

Modern Europe (1789–present): Modern European Art (Art History 134), German Literature and Culture in Translation (German 150), World War, Cold War, and Reunification: 1939– (History 122C).

Encounters with the Non-European World: New World Slave Societies and Their Legacies (African American Studies 140), Topics in East Asian Philosophy (East Asian Languages and Literatures 117), Indian and Colonial Societies in Mexico (History 161A).

British Studies: Elizabethan and Jacobean Drama (Drama 103), Medieval and Renaissance Literature (English 102A), Stuart England (History 117B).

French Studies: Problems in French Culture (French 110), French Cinema (French 160), Early Modern France: 1500–1774 (History 120A).

German Studies: Literature and Society 1918–1945 (German 102B), Emergence of the German Nation: 1815–1890 (History 122A), Hegel to Nietzsche (History 127B).

Italian Studies: Studies in Southern Renaissance Art (Art History 121), Renaissance Europe (History 112A), Introduction to Italian Literature (Italian 101).

The Mediterranean World: Past and Present: Studies in Greek Art (Art History 103), Classical Mythology (Classics 150), Later Roman Empire (History 105B).

Russian Studies: Twentieth-Century Russia (History 124B), Peoples and Cultures of Post-Soviet Eurasia (Political Science 154F), Topics in Russian Literature (Russian 150).

Spanish/Portuguese Studies: Introduction to Portuguese and Brazilian Literature (Portuguese 120), Latin American Literature of the Twentieth Century (Spanish 130C), Literature in Translation (Spanish 150).

Requirements for the Minor

Nine courses are required: (a) Humanities 101A-B; (b) three courses selected from a single emphasis (see sample list above and at <http://www.humanities.uci.edu/>); and (c) four electives: two courses in European History or Political Science or Social Science outside the student's emphasis, and two courses in European Literature or Arts outside the student's emphasis, approved by petition to the European Studies Committee. NOTE: Courses are sometimes approved in more than one emphasis. Any course that appears on the approved list for a student's emphasis cannot be used as a course outside the emphasis even if it also appears on other lists.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

DEPARTMENT OF FILM AND MEDIA STUDIES

235 Humanities Instructional Building; (949) 824-5386
Fatimah Tobing Rony, Acting Department Chair

Core Faculty

- Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)
- Sohail Daulatzai, Ph.D. University of Southern California, *Assistant Professor of African American Studies and of Film and Media Studies* (cultural studies, postcolonial theory, race, internationalism, cultural politics of hip-hop, sports, cinema)
- Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Associate Professor of Film and Media Studies and Graduate Advisor to the Visual Studies Ph.D. Program* (film history, audio-visual media and the built environment, contemporary architecture and urbanism, avant-garde cinema, modernism and modernity)
- Nanette Fornabai, Ph.D. Brown University, *Assistant Professor of French and of Film and Media Studies* (early French film, detective film, film noir, science and cinema)
- Jonathan M. Hall, Ph.D. University of California, Santa Cruz, *Assistant Professor of Comparative Literature and of Film Studies* (Japanese film, East Asian Cinemas, queer and psychoanalytic theory, experimental and avant-garde film)
- Victoria E. Johnson, Ph.D. University of Southern California, *Assistant Professor of Film and Media Studies and of African American Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)
- Peter O. Krapp, Ph.D. University of California, Santa Barbara, *Associate Professor of Film and Media Studies* (digital culture, media theory, cultural memory, history and politics of the Internet, hypertexts)
- Bliss (Felicidad) Cua Lim, Ph.D. New York University, *Assistant Professor of Film and Media Studies* (Filipino and Hong Kong cinema, Third World and postcolonial studies, horror, fantastic cinema, and the politics of genre; temporality)
- Mark S. Poster, Ph.D. New York University, *Professor of History, Film and Media Studies, and Comparative Literature* (theory and history of the media, theory of technology and culture, and Internet studies)
- Fatimah Tobing Rony, Ph.D. Yale University, *Acting Department Chair and Associate Professor of Film and Media Studies* (documentary and ethnographic film, race and representation, film history and theory, film production)
- Jared Sexton, Ph.D. University of California, Berkeley, *Assistant Professor of African American Studies and of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Affiliated Faculty

- Philippe A. Barbé, Ph.D. Northwestern University; Doctorate, University of Paris, *Assistant Professor of French* (Francophone studies, twentieth-century French literature)
- Juan Bruce-Novoa, Ph.D. University of Colorado, *Professor of Spanish* (Latin American and Chicano studies)
- David Carroll, Ph.D. The Johns Hopkins University, *Director of European Studies and Professor of French* (film history and criticism, French cinema, film and society)
- Edward Fowler, Ph.D. University of California, Berkeley, *Department Chair of East Asian Languages and Literatures and Professor of Japanese* (modern Japanese literature, film, and cultural studies)
- James D. Herbert, Ph.D. Yale University, *Professor and Department Chair of Art History* (modern European art, critical theory, and visual culture)
- Kyung Hyun Kim, Ph.D. University of Southern California, *Associate Professor of Korean Culture and Director of the Film and Video Center* (modern Korea, Asian cinema, critical theory)
- Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Professor of Asian American Studies* (independent ethnic media; cultural studies of ethnicity, space, and globalization; queer theory and racialized sexuality; popular culture studies)
- Sally A. Stein, Ph.D. Yale University, *Associate Professor of Art History* (American art, history of photography, photography and media)

Undergraduate Program

We live in a world in which we are surrounded by electronic media in the form of images and sounds. Whether printed on roadside billboards or broadcast into our homes via television, the media greatly influence our sense of who we are and how we live. Yet so much of our exposure to the sights and sounds of film, TV, video, advertising, and new technologies is taken for granted. Those sights and sounds are so pervasive, and in many cases so enjoyable, that we rarely pause to consider how they act upon us and how we interact with them. An undergraduate education in Film and Media Studies provides students with an opportunity to explore the appeal and to begin to understand the operation of these complex meaning-producing machines we call cinema, television, and new digital technologies, and to interrogate the interrelationships of visual media and sound and music as forms of media.

The course work for the B.A. degree program in Film and Media Studies trains students to read and understand the audio-visual languages of modern media and new technologies and to analyze images from socioeconomic, political, aesthetic, and historical perspectives. Learning these critical viewing skills involves learning new ways of seeing. The Film and Media Studies curriculum is systematic and comprehensive; upper-division courses have between 20 and 70 students and are typically taught by regular faculty. During the 2005-06 academic year, there were more than 275 Film and Media Studies majors enrolled at UCI.

The Department of Film and Media Studies familiarizes students with the history, theory, and art of cinema and other media. Courses focus on a range of topics, including directors, period styles, genres, national cinemas, the history and criticism of television, sound theory and popular music, and developments in new technologies. Additional courses offer students hands-on experience in video production and screenwriting. The program provides its majors with a thorough appreciation of the modern media's roles in contemporary society. Regular course offerings are complemented by film and video screenings and series at the School of Humanities Film and Video Center. Film and Media Studies, in cooperation with other units at UCI, regularly invites scholars, digital artists, directors, producers, and screenwriters to campus to share their work and perspectives with students.

Film and Media Studies at UCI is unique in its concentration on the history, theory, and criticism of cinema, television, popular music and sound, and new technologies. The faculty has published books and articles on topics that include fantastic cinema, avant-garde directors, ethnographic film, film and postmodernism, horror cinema, hip-hop and cinema, television performance, and new technologies.

In order to cover the extra costs generated by the purchase and rental of media and production equipment demanded by the specialized Film and Media Studies curriculum, the School of Humanities charges a laboratory fee of \$20 per course to all students taking Film and Media Studies courses.

Film and Media Studies students can complete professional internships in the fields of film, television, or digital media production, distribution, writing, and related areas for elective course credit.

Film and Media Studies students also have the opportunity to spend their junior year in France studying at the Inter-University Center for Film and Critical Studies in Paris, through the University's Education Abroad Program. Information is available both in the Film and Media Studies Office and the Education Abroad Program Office.

CAREER OPPORTUNITIES

A degree in Film and Media Studies will provide students with a variety of opportunities leading to a career choice or to further

education at the graduate or professional level. Graduates from the program have gone on to a host of different careers. Some have pursued graduate work in critical film studies at leading institutions such as the University of California, Los Angeles, and the University of Iowa. Others have entered M.F.A. programs in production at places like the University of Southern California, UCLA, or San Francisco State University. Many are now at work in various sectors of the entertainment industry as feature film editors, executives in film and video distribution companies, network television producers, and independent filmmakers.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59-64.

School Requirements: See page 254.

Departmental Requirements for the Major

Film and Media Studies 85A-B-C, 101A-B-C, either 110 or 111, either 117A or 120A, 139, and four of the following: 112, 113, 114, 115, 117B*, 117C*, 120B*, 120C*, 130, 141, 142, 143, 144, 160, 161, 185, 190. (*Students may apply only two of the courses marked with an asterisk toward this requirement.)

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

Film and Media Studies 85A, 101A-B-C, and three of the following: 85B, 85C, 110, 111, 112, 113, 114, 115, 130, 141, 142, 143, 144, 160, 161, 185, 190.

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Study

In conjunction with the Department of Art History, the Department of Film and Media Studies offers a graduate program in Visual Studies. A description may be found in the Program in Visual Studies section, toward the end of the School of Humanities section.

Courses in Film and Media Studies

LOWER-DIVISION

85A-B-C Image Culture

85A Visual Media and Contemporary Culture (4) F. An introduction to the study of visual media—such as advertising, movies, television, and video—and analysis of their role in contemporary culture. Introduces students to the critical vocabulary of film and television studies. Formerly Film Studies 85A. (IV)

85B History of Broadcasting (4) W. A history of broadcast media. Social, political, economic, legal, institutional, and cultural perspectives guide analysis. United States commercial TV serves as the primary case study. Prerequisite: Film and Media Studies 85A or consent of instructor. Formerly Film Studies 85B. (IV)

85C New Technologies and Visuality (4) S. The study of electronic communication technologies, such as virtual reality and the Internet, from social, cultural, psychological, and political perspectives. Prerequisites: Film and Media Studies 85A-B or consent of instructor. Formerly Film Studies 85C. (IV)

UPPER-DIVISION

101A-B-C History of Film

101A The Silent Era I (4) W. An investigation of the technological, economic, social, and aesthetic determinants of the cinema in its first 30 years. The formal strategies and historical importance of films by Méliès, the Lumières, Porter, Griffith, Murnau, Lang, Eisenstein, Pudovkin, and others. Prerequisite: Film and Media Studies 85A. Formerly Film Studies 101A.

101B The Sound Era I (4) S. Explores the formal strategies and socio-historical dynamics of films made between 1930 and 1960, concentrating on representative cinemas and works by Lang, Riefenstahl, Renoir, Welles, De Sica, Ophüls, Kurosawa, and others. Prerequisite: Film and Media Studies 101A. Formerly Film Studies 101B.

101C The Sound Era II (4) F. Studies narrative strategies and formal possibilities in films made since 1960, framing aesthetic questions in political, social, and economic terms, using selected features from Western and non-Western countries. Prerequisite: Film and Media Studies 101B. Formerly Film Studies 101C.

110 Film and Media Theory (4) F, W, S, Summer. Survey of major directions in film and media theory. Various theories of mass culture, realism, auteurism, semiotics, feminism, cultural studies, and theories of other media. Offered as a seminar, with an emphasis on developing the student's ability to analyze and articulate a theoretical argument. Prerequisites: Film and Media Studies 85A-B-C and 101A-B-C. Formerly Film Studies 110.

111 Media Theory and Practice (4) F, W, S. Seminar on theory and practice focusing on issues in film and media production and editing. Reading and exercises to understand aspects of film and media production (montage, sound, film movement, directing, and mise en scène), and how ideology works in tandem with style. Prerequisite: Film and Media Studies 101C, 120A, and consent of instructor. Open only to Film and Media Studies majors.

112 Genre Study (4) F, W, S. Critical approaches to the serial productions we call "genre" films, the patterns of recognition known as westerns, weepies, musicals, horror films, and others; televisual genres, such as sitcoms, drama, comedy, news, docudrama, police; Internet categories, such as chat-rooms, listservs, Web pages. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. Formerly Film Studies 112.

113 Narrative/Image (4) F, W, S. What relations do sound, image, and story assume in film, television, video, and Internet narratives? In what ways do these media interact with and borrow from each other and traditional storytelling media, like print and orality? How have the new media explored non-narrative strategies and to what end? Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. Formerly Film Studies 113.

114 Film, Media, and the Arts (4) F, W, S. A synthetic entity, film draws on both established and popular arts. Looks at visual media's exchanges with "high" and "low" culture, exploring its relation to areas such as photography, music, painting, and architecture. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. Formerly Film Studies 114.

115 Authorship (4) F, W, S. Theoretical and analytical discussions of visual media authorship, focusing on case studies of directors, producers, scriptwriters, and film, video, and digital artists. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. Formerly Film Studies 115.

117A Introduction to Screenwriting (4) F, W, S, Summer. Introduction to the technique and format of the screenplay, with a particular focus on its three act structural elements: coverage, treatment, and 60 beat outline. Formerly Film Studies 117A.

117B Intermediate Screenwriting (4) F, W, S. Exercises in the development of screenplays, with emphasis on formal and structural considerations of character development. Students work with the hero structure and other character development methodologies, such as method acting. Prerequisite: Film and Media Studies 117A. Formerly Film Studies 117B.

117C Screenwriting Workshop (4) F, W, S. Continuation and intensification of work initiated in 117B. Students complete a full-length screenplay. Concentrates on both practical and technical concerns, addressing pragmatic and aesthetic questions in intensive small-group discussions. Prerequisite: Film and Media Studies 117B. Formerly Film Studies 117C.

120A Basic Production (4) F, W, S, Summer. Introduction to the basic apparatus of video/film production. The elementary essentials of production, including the use of camera and lenses, lighting, editing, and sound. Prerequisite: Film and Media Studies 85A or consent of instructor. Formerly Film Studies 120A.

120B Intermediate Production (4) W. Students work on individual and group projects, utilizing skills and insights introduced in Film and Media Studies 120A. Prerequisite: Film and Media Studies 120A or consent of instructor. Formerly Film Studies 120B.

120C Production Workshop (4) S. As film and video are collaborative media, students form production groups and ultimately produce final 10–15 minute film/video projects. Prerequisite: Film and Media Studies 120B or consent of instructor. Formerly Film Studies 120C.

130 Multicultural Topics in the Media (4) F, W, S. An investigation of media representations of gender, race, and sexuality in the United States. Topics include media images of and by one or more minority groups in the United States, including African Americans, Asian Americans, Chicano/Latinos, Native Americans, and gays and lesbians. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. Formerly Film Studies 130. (VII-A)

139 Writing on Film and Media (4) F, W, S. Practical exercises in film, TV, and other media criticism as a form of cultural analysis. Requires at least 4,000 words of assigned composition. Prerequisites: Film and Media Studies 85A and 101A; satisfactory completion of the lower-division writing requirement; junior standing. Formerly Film Studies 139.

141 Studies in Television: 1930–1970 (4) F, W, S. Part one of an in-depth sequence in the critical history of television. Focuses thematically on different concerns of the period (the Anthology Drama, Live Television, TV and the Hollywood Studios, and others). Prerequisites: Film and Media Studies 85A-B-C or consent of instructor.

142 Studies in Television: 1971–Present (4) F, W, S. Part two of an in-depth sequence in the critical history of television. Expands on knowledge of broadcast history from 85B and 141. Focuses thematically on different concerns of the period ("Quality Television and the Producer's Medium," TV and Censorship, The Emergence of Cable and Narrowcasting). Prerequisites: Film Studies 85A-B-C or consent of instructor.

143 Critical Theory of Television (4) F, W, S. Introduction to critical, theoretical, scholarly understandings and analyses of television, which offer in-depth analyses of television programming, audience reception practices, and industry strategies of address. Prerequisites: Film and Media Studies 85A-B or consent of instructor.

144 Studies in New Media (4) F, W, S. Analyzes interpretations of the Internet and looks at empirical studies of various features of it. Asks students to explore the Internet and present their own conclusions about it. Prerequisites: Film and Media Studies 85A-B-C or consent of instructor.

160 National Cinemas (4) F, W, S. Period styles, national schools, oppositional movements, e.g., Classical Japanese Cinema, Italian Neorealism, Nouvelle Vague, Weimar Film, Cinema Novo. Same as East Asian Languages and Literatures 160, French 160, German 160, or Spanish 160 when topics are appropriate. May be repeated for credit when topics vary. Formerly Film Studies 160. (VII-B)

161 Global Media (4) F, W, S. Comparative analysis of global media systems focusing on case studies in the development, embrace of, and resistance to media forms and practices from the 1850s to the present. Prerequisites: Film and Media Studies 85A-B-C or consent of instructor. May be repeated for credit as topics vary. (VII-B)

185 Television and New Media (4) F, W, S. An advanced seminar focusing on special issues pertaining to broadcasting and/or new technologies. Topics include, but are not limited to: television criticism; space and new technologies; and broadcast advertising. Prerequisites: Film and Media Studies 85A-B-C or consent of instructor. Formerly Film Studies 185.

190 Special Topics in Film and Modern Media (4) F, W, S. Special issues concerned with film and media history, theory, and criticism. Examples include Gone Primitive (Anglo-American romance with the "primitive" in literature, film, other media); television criticism (review and analysis of models and modes of criticism applied to television since the 1940s). Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. Formerly Film Studies 190.

197 Professional Internship (2 to 4) F, W, S. Professional internship in the broadcast, film, video, or Internet industries designed to provide students with closely supervised professional experience to enhance their understanding of media from industrial, historical, and critical perspectives. Journal and final report required. Prerequisites: Film and Media Studies 117A-B-C or 120A-B-C or consent of instructor. Open only to Film and Media Studies majors and minors with a B average or better in Film and Media Studies course work. May be taken for credit for a total of four units. Formerly Film Studies 197.

198 Creative Project (2 to 4) F, W, S. Creative project in screenwriting, filmmaking, videomaking, or Web or Internet design intended to provide advanced production and creative writing training beyond the Film and Media Studies 117A-B-C or 120A-B-C series. Final project required. Prerequisites: Film and Media Studies 85A and 117A-B-C or 120A-B-C or consent of instructor; 101A recommended. May be taken twice for a credit total of eight units. Formerly Film Studies 198.

199 Directed Research (4) F, W, S. Directed reading and research under supervision of a faculty member in topic areas not covered by regular course offerings. Final research paper required. Prerequisites: upper-division standing and consent of instructor. Formerly Film Studies 199.

GRADUATE

Graduate courses satisfying the requirements of the program in Visual Studies are listed in the Visual Studies section of the *Catalogue*.

399 University Teaching (4) F, W, S. Limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit. Formerly Film Studies 399.

DEPARTMENT OF FRENCH AND ITALIAN

312 Humanities Hall; (949) 824-6407
Ellen Burt, **Department Chair**

Faculty

- Etienne Balibar, Docteur en philosophie, Katholieke Universiteit Nijmegen, *Professor of French and Comparative Literature* (critical theory, political philosophy), *Winter Quarter*
- Philippe A. Barbé, Ph.D. Northwestern University; Doctorate, University of Paris, *Assistant Professor of French* (Francophone studies, twentieth-century French literature)
- Ellen S. Burt, Ph.D. Yale University, *Department Chair of French and Italian and Associate Professor of French and Comparative Literature* (eighteenth-century French literature and nineteenth-century poetry)
- David Carroll, Ph.D. The Johns Hopkins University, *Director of European Studies and Professor of French* (critical theory and twentieth-century French literature)
- James Chiampi, Ph.D. Yale University, *Professor of Italian* (Italian Renaissance)
- Nanette Fornabai, Ph.D. Brown University, *Assistant Professor of French and of Film and Media Studies* (nineteenth- and twentieth-century French literature, film, popular culture)
- Suzanne Gearhart, Ph.D. The Johns Hopkins University, *Professor of French* (seventeenth- and eighteenth-century French literature, philosophy and literature)
- Elizabeth Guthrie, Ph.D. University of Illinois, *Director of the French Language Program and Senior Lecturer with Security of Employment* (second-language acquisition and teaching)
- Sonja Hamilton, Ph.D. The Johns Hopkins University, *Assistant Professor of French* (nineteenth-century literature, politics, and women writers)
- Judd D. Hubert, Ph.D. Columbia University, *Professor Emeritus of French* (seventeenth- and nineteenth-century French literature)
- Alice M. Laborde, Ph.D. University of California, Los Angeles, *Professor Emerita of French* (eighteenth-century French literature)
- Carrie J. Noland, Ph.D. Harvard University, *Co-Director of the Major in Humanities and Arts and Associate Professor of French* (twentieth-century poetry; World War II and literature of the avant-garde)
- Richard L. Regosin, Ph.D. The Johns Hopkins University, *Professor of French* (sixteenth-century French literature)

Undergraduate Program in French

The Undergraduate Program in French offers a broad humanistic course of study designed for students in the liberal arts. The orientation of the program is multidisciplinary, where the study of literature is linked to critical, cultural, and historical concerns. Courses reflect the faculty's interest in the related disciplines of history, philosophy, anthropology, women's studies, cultural studies, and comparative literature, and express its conviction that the study of French literature and culture is enriched by pursuing its relations with other disciplines, fields, and cultures.

Lower-division language courses encourage students to participate in the creative process of language, to think in French as they learn to understand, speak, read, and write. These courses are taught entirely in French, and the approach to teaching stresses the interdependence of the four basic language skills and makes them mutually reinforcing. The Language Laboratory is used to complement classroom activity.

At the intermediate lower-division level, texts of contemporary literary and social interest provide the focus for advanced conversation, reading, and composition. After the second year, advanced courses in conversation and writing enable students to attain a greater degree of proficiency, preparing them for further study in the multidisciplinary upper-division program.

All upper-division offerings are taught in the seminar mode. Because classes are limited in size, they promote and encourage participation and discussion and facilitate direct contact with professors. In the introductory courses in literature, texts are studied in their historical context. The student learns to analyze and interpret different types of creative literature and is introduced to various critical concepts and vocabularies. At the more advanced level, the multidisciplinary courses bring together material and methodologies from the various disciplines in order to address interpretive problems of French literature, culture, and history. In recent years, courses have been offered in literature and political opposition, monsters and madness in Renaissance literature, cubism in painting and poetry, ethnography and literature, French cinema, autobiography, Francophone literature, and Albert Camus and Algeria. The content of courses changes yearly according to the interests of both faculty and students.

Placement examinations are not required, although an optional placement examination is available. Students will be placed in French language courses according to their years of previous study. In general, one year of high school French will be considered equal to one quarter of a UCI French course. Thus, for example, students with two years of high school French language will be placed in 1C, while students who have completed three years in high school will be placed in 2A. Students in 2A will, however, be informed of their level of competency in French by taking a diagnostic test the first day of class. Students who place in 2A but who have scored below what is expected for successful performance in 2A will be informed that they may either remain in 2A or choose to enroll in 1C instead.

Transfer students who have had a previous course (or courses) in French from another college or university who want to enroll in any French 1A through 2C course at UCI must take a copy of their transcript to the Humanities Undergraduate Study Office in order to receive authorization to enroll in the appropriate course.

Student representatives serve on departmental committees. These representatives also participate in Department meetings and are responsible for student evaluation procedures.

CAREERS FOR THE FRENCH MAJOR

The great majority of students who major in French pursue careers in business and commerce, where they can take advantage not only of their proficiency in French language but also of their knowledge

of French literature and culture. Many students also go on to law school, to medical school, and to careers in the diplomatic service. In recent years, graduates have entered the field of education in increasing numbers. The Department's multidisciplinary approach to the study of literature teaches students to think critically and develops analytical skills that can be applied to a wide range of problems. It also helps students to develop the interpretive and writing skills necessary to express their own ideas clearly and persuasively. Whether they enter business or professions such as law, education, or government, French majors acquire the intellectual and communicative skills requisite for success.

The UCI Career Center provides service to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Foreign Language Placement and Progression: See page 253.

Departmental Requirements for the Major

French 100A-B, 101A-B-C, and nine other upper-division courses taught in the Department. Students may take up to two courses from the Department offerings taught in English.

Residence Requirement for the Major: At least five upper-division courses (above 101A-B-C) required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

French 100A-B plus five other French courses, four of which must be upper-division and four of which must be taught in French. Prerequisite: French 2C or equivalent.

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

PLANNING A PROGRAM OF STUDY

Students should consult with the faculty to plan a coherent program of courses to fulfill the major requirements.

The Department encourages students to study in France, either through the University's Education Abroad Program or independently. Information is available in the Department Office.

Students should consult with faculty members concerning career plans in areas such as teaching, industry, journalism, law, and civil service.

Undergraduate Minor in Italian Studies

Foreign Language Placement and Progression: See page 253.

The minor in Italian Studies is an interdisciplinary curriculum that allows students to go beyond second-year Italian and engage in various aspects of Italian culture by taking courses in Italian literature in the Department of French and Italian and other courses related to Italian history and culture in the Departments of Art History, Comparative Literature, English, Film and Media Studies, History, and Philosophy.

Departmental Requirements for the Minor

Italian 1A-B-C, 2A-B-C; and seven upper-division courses selected from the following two lists, when topics are appropriate. At least five of the seven courses must be from list A.

A. Art History 120, 121, 125, 198; Comparative Literature CL 103; Film and Media Studies 160; History 112A; Italian 101A, 101B, 101C, 150; Philosophy 132. (No more than *two* courses may be taken from any department, with the exception of Italian courses.)

B. Art History 107, 198; Classics 140, 150, 170; Comparative Literature CL 104; History 105A, 105B, 105C, 110C, 112D.

Residence Requirement for the Minor: At least four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken at an Italian university through the UC Education Abroad Program, provided they are approved in advance by the Director of the Minor.

Students who complete significant course work on Italian topics while participating in the Education Abroad Program in Italy are encouraged to pursue their interest in Italian studies through the special Humanities interdisciplinary major, leading to a B.A. degree in Humanities. Interested students should consult the Senior Academic Counselor in the Humanities Undergraduate Study Office.

Graduate Program in French

The Department of French and Italian offers a graduate program in French with a strong theoretical, cultural, and multidisciplinary orientation. In addition to their specialties in the traditionally constituted fields of French literature, the faculty is actively involved in related disciplines such as philosophy, psychoanalysis, anthropology, history, women's studies, cultural studies, and comparative literature. A theoretical and multidisciplinary approach to literature is a demanding one requiring, among other things, a restless critique of its own evaluations and concepts.

In small seminars designed to stimulate intellectual exchange, students and faculty explore literature written in French within the context of relevant historical, cultural, or theoretical issues. They raise questions engaged by literary discourse and study critically the theories formulated to account for it. Courses tend to cross lines between disciplines and to emphasize both the close reading of texts and modern theories of history, culture, literature, and criticism. Students are encouraged to pursue their work in related fields outside the Department. They are also strongly encouraged to study abroad at some point during their graduate career.

MASTER OF ARTS IN FRENCH

The Master of Arts degree is considered to be a step toward the Ph.D. degree; only students intending to pursue studies for the doctorate are admitted to the program. Performance on the Master's examination, usually given in the second year of graduate study, determines entrance into the doctoral program. Most candidates take a minimum of 11 graduate courses. All entering graduate students are counseled by the graduate advisor. During the winter quarter of each year, the teaching performance and academic record of each student who is a Teaching Assistant are evaluated. All graduate students are also given a written evaluation of their work on a course-by-course basis. Proficiency in a foreign language in addition to French is required for the M.A. degree (proficiency is defined as the equivalent of the level attained at the end of course 2C).

All M.A. candidates are required to pass the Master's examination. Plan I allows particularly well-prepared students to receive special permission to take nine courses and to write a short thesis, for which

two course credits are given. Under Plan II candidates take a minimum of 11 courses and have the option of taking a written examination or of writing a research paper. The written examination consists of essays that demonstrate skills of literary analysis and an understanding of theoretical concepts and their application to the study of specific literary texts. The research paper involves a carefully developed and well-documented analysis that reflects extensive critical reading. In all cases students also take an oral examination that focuses on the written essays or the research paper and that seeks as well to test the student's broader knowledge.

The Master's examination is normally given at the end of the winter quarter of the second year of studies. Students who are Teaching Assistants normally take the examination in the fifth quarter of their studies.

Students transferring to the program from other graduate institutions may receive credit for up to two courses, subject to the approval of the Department. A maximum of five courses may be transferable from other UC graduate programs, with departmental approval.

DOCTOR OF PHILOSOPHY IN FRENCH

Upon successful completion of the Master's examination and admission to the Ph.D. program, or upon admission with a Master's degree from an accredited institution, a Guidance Committee is appointed in consultation with the student. The Guidance Committee advises the student in the choice of courses to help prepare for the written and oral Qualifying Examinations leading to advancement to candidacy for the Ph.D. degree. The Committee is comprised of five faculty members: three from the Department, one from outside the Department who represents the student's outside area of specialization, and, for the qualifying examination, another faculty member not affiliated with the Department who represents the faculty-at-large. One member of the Committee is expected to direct the dissertation.

Language Requirements: A reading knowledge of two foreign languages relevant to the student's area of specialization and subject to the approval of the Guidance Committee.

Course Requirements: A minimum of 15 graduate courses or seminars in French beyond the B.A. and three graduate courses outside the Department in areas related to the field of specialization are required.

A student may pursue the Ph.D. with particular emphasis in literary theory by taking additional course work in the Department and in the Critical Theory Program beyond the minimum number required.

A student may pursue the Ph.D. with an emphasis in Comparative Literature by taking a minimum of five courses in the Comparative Literature program.

A graduate emphasis in Feminist Studies also is available. Refer to the Women's Studies section of the *Catalogue* for information.

Teaching: Since the overwhelming majority of Ph.D. candidates plan to teach, the Department recognizes its responsibility to train them as teachers. Therefore, as far as it is possible, all candidates without previous teaching experience are required to participate in a program of supervised teaching for at least one year.

Qualifying Examination—Written and Oral: Upon completion of course work, the student takes a series of examinations involving problems of a critical and interpretive nature. The Ph.D. Examination encourages focus and depth at a time when the student's area of specialization and eventual dissertation topic should be taking an increasingly clearer shape. In consultation with the Guidance Committee, the student defines the precise nature and scope of four topics for the examination, which consists of written and oral parts. Upon successful completion of the written and oral Qualifying Examinations, the student is advanced to candidacy for the Ph.D.

degree. The normal time for advancement to candidacy is four years.

Dissertation: The dissertation topic chosen by the candidate will normally, but not necessarily, fall within one of the major fields covered by the Qualifying Examination. The dissertation must be defended in an oral examination and approved by the Doctoral Committee before the candidate is recommended for the degree.

Three faculty members, chosen by the candidate, proposed by the Department, and appointed on behalf of the Dean of Graduate Studies and the Graduate Council, constitute the Doctoral Committee which directs the preparation and completion of the doctoral dissertation. The Doctoral Committee supervises an oral defense, the focus of which is the content of the doctoral dissertation, and certifies that a completed dissertation is satisfactory. The normal time for advancement to candidacy is four years. The normal time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Courses in French

LOWER-DIVISION

1A-B-C Fundamentals of French (5-5-5) 1A (F), 1B (F, W), 1C (W, S). Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language Laboratory attendance is required. French 1A-B-C and S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of French (7.5-7.5) Summer. First-year French in an intensified form. Same as French 1A-B-C during academic year. Prerequisite for S1AB: none; for S1BC: French S1AB or 1B, or two years of high school French. Formerly French S1A-B. French S1AB-BC and 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate French (4-4-4) 2A (F, S), 2B (F, W), 2C (W, S). Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French. Prerequisite: normally three years of high school French or one year of college French. French 2A-B-C and S2AB-BC may not both be taken for credit. (VII-B)

S2AB-BC Intermediate French (6-6) Summer. Second-year French in an intensified form. Same as French 2A-B-C during academic year. For description, see French 2A-B-C. Prerequisite for S2AB: French S1BC or 1C with a grade of C or better, or three to four years of high school French, or the equivalent; for S2BC: French S2AB or 2B with a grade of C or better, or the equivalent. French S2AB-BC and 2A-B-C may not both be taken for credit. (VII-B)

13 Conversation (4) F, W, S. Helps students increase their fluency and enrich their vocabulary. Prerequisite: French 2C or equivalent.

50 French Culture and the Modern World (4) F, W, S. Introductory course for non-majors. Focuses on France's role in the modern world and its cultural connections to Asia, the Middle East, Africa, Europe, and the Americas. Taught in English. May be taken for credit three times as topics vary. (IV, VII-B)

97 Fundamentals of French (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of French, and to facilitate the understanding and translating of French texts dealing with a variety of disciplines. Not open to French majors or minors. Does not serve as a prerequisite for any higher-level French courses or fulfill any undergraduate foreign language requirement.

UPPER-DIVISION

100 Composition and Grammar Review

100A Advanced Grammar and Composition (4) F, W. Systematic review of grammar with written compositions on various topics. Students study and practice forms of descriptive and imitative writing, techniques of translation, and textual analysis including *explication de texte* of prose and poetry passages. Prerequisite: French 2C or equivalent.

100B Essay Writing (4) W, S. Trains students to write about literature in French, and introduces them to specific critical approaches and strategies for utilizing library resources, organizing arguments, and developing a coherent essay. Topics for weekly compositions drawn from texts of literary, historical, and social interest. Prerequisite: French 100A or equivalent.

101A-B-C Introduction to French Literature (4-4-4) F, W, S. Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In French. French 100A and 100B are recommended as prerequisites but may be taken concurrently with French 101A-B-C. (VII-B)

105 Advanced Composition and Style (4). Helps the student attain greater proficiency and elegance in the written language. Prerequisites: French 100B.

110 Problems in French Culture (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

116 Sixteenth-Century French Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

117 Seventeenth-Century French Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

118 Eighteenth-Century French Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

119 Nineteenth-Century French Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

120 Twentieth-Century French Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

125 African Literature of French Expression (4). Introduction to the principal African and Caribbean works written in French. Offers opportunity to study literature and culture in French in a non-European context. Lectures and papers in French. Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

127 Francophone Literature and Culture (4). Literature and cultures of the francophone world. Prerequisites: French 101A-B-C. May be repeated for credit as topics vary. (VII-B)

130 Junior-Senior Seminar in French Literature (4). Provides advanced students in French literature an opportunity to explore in-depth selected topics in French literature and culture in a seminar environment. Class discussion and independent research projects are emphasized. Prerequisites: two upper-division French literature courses beyond French 101A-B-C. May be repeated for credit as topics vary.

139 Literature and Society (4). In English. Readings of masterpieces of French literature in their social, political, and historical contexts. Requires at least 4,000 words of assigned composition based on French works. Several essays required. French majors have admission priority. Prerequisites: satisfaction of lower-division writing requirement; junior standing or consent of instructor. (VII-B)

140 Studies in French Literary Genre (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary.

150 Topics in French Literature and Culture (4). In English. May be repeated for credit as topics vary. (VII-B)

160 French Cinema (4) F, W, S, Summer. In English. May have discussion sections in French. May be repeated when topic varies, but can be taken only twice for credit toward the major. Same as Film and Media Studies 160. (VII-B)

170 History and Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary.

171 Politics and Literature (4). Prerequisites: French 101A-B-C. May be repeated for credit as topics vary.

180 Junior/Senior Seminar in Theory and Criticism (4). Prerequisites: French 101A-B-C. May be repeated for credit once when topics vary.

199 Special Studies in French (1 to 4) F, W, S. Open only to outstanding students. Research paper required. Prerequisites: consent of instructor and of Department Chair; student must submit a written description of the proposed course to the instructor and the Chair prior to the beginning of classes. May be repeated for credit as topics vary.

GRADUATE

The content of these courses changes yearly, and courses numbered 200 and 216–399 (except 280) may be repeated for credit as topics vary. Students should also consult the offerings of the Department of Linguistics.

In addition to the following courses, graduate students in French might find these Humanities courses of special interest: Humanities 200 (History and Theory); Humanities 220 (Literary Theory and Its History); and Humanities 270 (Advanced Critical Theory).

200 Selected Topics in French Linguistics (4)

216 Studies in Renaissance Literature (4)

217 Studies in Seventeenth-Century Literature (4)

218 Studies in Eighteenth-Century Literature (4)

219 Studies in Nineteenth-Century Literature (4)

220 Studies in Twentieth-Century Literature (4)

225 Francophone Literature and Culture (4). Studies in different francophone literatures and cultures (of Canada, the Caribbean, West and North Africa, and Southeast Asia).

231 Studies in Fiction (4)

232 Studies in Nonfictional Prose (4)

233 Studies in Poetry and Poetics (4)

240 Studies on a Major Writer (4)

250 Studies in Theory and Criticism (4)

254 History and Literature (4)

272 Cultural Studies (4)

280 Directed Study in French Literature (4) F, W. Restricted to graduate students taking the Master's examination the same quarter.

290 Research in French Language and Literature (4-4-4) F, W, S. A project proposal must be prepared by the student and approved by the faculty member who will direct the project. This proposal, with the faculty member's signature, must be given to the Chair for approval and will be put in the student's file. This procedure can be completed before or after registration or at the very latest must be completed by the end of the first week of classes. After the end of the first week no 290s can be approved. M.A. candidates may take this course once; Ph.D. candidates may take it twice.

299 Dissertation Research (4 to 12) F, W, S

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. May be repeated for credit.

Courses in Italian

LOWER-DIVISION

1A-B-C Fundamentals of Italian (5-5-5) F, W, S. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily. Language Laboratory attendance is required. (1C: VI)

2A-B-C Intermediate Italian (4-4-4) F, W, S. Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian. Prerequisite: Italian 1C, three years of high school Italian, or one year of college Italian. (VII-B)

13 Italian Conversation (4) F, W, S. Helps students increase fluency and comprehension of spoken Italian. Includes an introduction to Italian culture. Taught in Italian. Prerequisite: Italian 2C or equivalent.

97 Fundamentals of Italian (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Italian, and to facilitate the understanding and translating of Italian texts dealing with a variety of disciplines. Not open to Italian Studies minors. Does not serve as a prerequisite for any higher-level Italian courses or fulfill any undergraduate foreign language requirement.

99 Special Studies in Italian (4) F, W, S. Both student and instructor arrive at the theme of the course and the critical approach to be followed in consultation. Intended to offer courses in Italian otherwise unavailable. Prerequisites: consent of instructor and Department Chair; student must submit a written description of the course to the Chair prior to the first week of classes to obtain consent. May be repeated for credit when topic changes.

UPPER-DIVISION

100A-B Italian Language and Civilization (4-4). Systematic review of grammar with written and oral composition on topics chosen from readings on Italian culture and civilization. Prerequisite: completion of Italian 2C or equivalent. (VII-B)

101A, B, C Introduction to Italian Literature (4, 4, 4). Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In Italian. Prerequisite: Italian 2C or equivalent; Italian 100A-B recommended. (VII-B)

140A-B-C Readings in Medieval and Renaissance Literature (4-4-4). In English.

150 Topics in Italian Literature and Culture (4). Taught in English. May be repeated for credit as topics vary.

199 Tutorial in Italian Literature and Culture (4-4-4) F, W, S. The student must submit a written description of the proposed course to the instructor and the Chair prior to the beginning of the course. Prerequisites: consent of instructor and approval of the Department Chair.

DEPARTMENT OF GERMAN

400 Murray Krieger Hall; (949) 824-6406

E-mail: german@uci.edu

John H. Smith, **Department Chair**

Faculty

- Anke S. Biendarra, Ph.D. University of Washington, *Assistant Professor of German* (twentieth- and twenty-first-century German literature and film; cultural studies)
- Kai Evers, Ph.D. Duke University, *Assistant Professor of German* (twentieth-century German literature and film)
- Gail K. Hart, Ph.D. University of Virginia, *Director, Humanities Core Course and Professor of German* (eighteenth- and nineteenth-century German literature, drama, fictional prose)
- Ruth Kluger, Ph.D. University of California, Berkeley, *Professor Emerita of German* (Kleist, nineteenth-century literature, Stifter, Holocaust literature)
- Meredith Lee, Ph.D. Yale University, *Professor Emerita of German* (lyric poetry, eighteenth-century literature, Goethe, music and literature)
- Herbert Lehnert, Ph.D. University of Kiel, *Research Professor of German* (modern German literature)
- Glenn S. Levine, Ph.D. University of Texas, Austin, *German Language Program Director and Associate Professor of German* (applied linguistics, pedagogy, German-Jewish culture and literature)
- William J. Lillyman, Ph.D. Stanford University, *Research Professor of German* (Romanticism, Goethe, Tieck)
- Jens Rieckmann, Ph.D. Harvard University, *Professor Emeritus of German* (twentieth-century literature, fin-de-siècle Austria, Hofmannsthal, Thomas Mann)
- Thomas P. Saine, Ph.D. Yale University, *Professor Emeritus of German* (eighteenth-century German literature, Enlightenment, French Revolution, Goethe)
- John H. Smith, Ph.D. Princeton University, *Director of the Critical Theory Institute, Department Chair and Professor of German, and Professor of Comparative Literature* (eighteenth- and nineteenth-century literature and intellectual history, literary theory)

The Department of German pursues a program of German studies as part of the humanistic endeavor to understand and evaluate culture. Departmental courses are focused on language, literature, and film *in context*, that is, within the historical, social, intellectual, and political circumstances of their production and continuing reception. Clearly, we come to understand ourselves and our immediate culture much better through the study of different languages and cultural systems. Therefore, university language study is not merely a matter of memorizing vocabulary and practicing pronunciation. It is the serious investigation of a foreign linguistic system and the

cultures which are defined by it. It is difficult—in fact, nearly impossible—for us to scrutinize and analyze something we know as intimately as our native language, and yet this is the order by which we formulate our thoughts and the order which may sometimes formulate our thoughts for us. The “foreignness” of a foreign language allows us to objectify an entire linguistic system, to observe its structure and its usage, and then to make comparisons with our own linguistic situation. This kind of knowledge of one’s *native* language is the foundation of critical reflection on texts of any nature—historical, philosophical, literary, political, legal, journalistic, and others. Thus, serious study of a foreign language is absolutely crucial to a university education. The Department teaches its language courses with this principle in mind and seeks to provide its students with a framework for these linguistic and cultural comparisons.

Department literature and film courses offer a variety of critical perspectives from historical, social, or politically engaged readings to feminist and post-structuralist analysis. Topics range from studies of individual authors, periods, and genres to the history of German-language literature and film, the theory of criticism, and the relations of German-language literature to other literatures.

Undergraduate Program

The Department offers a major and a minor in German Studies. The major can be combined as a double major with any other UCI course of study; see an academic counselor for information.

All courses in the Department are taught in German to the extent compatible with the aim of the course. In the lower-division language courses students develop skills in speaking, listening, reading, and writing through an engaging, collaborative, task-based curriculum. The courses place a great deal of emphasis on meaningful cultural literacy in German, employing a diverse range of authentic texts and materials from the beginning, including avid use of Internet resources. During the second year (intermediate), students benefit from a curriculum based on authentic literary and cultural content (theater, media) and simulation of “real world” situations. These courses have the additional goal of contributing to students’ education in the humanities and developing their skills in critical thinking.

After completion of the intermediate level, students enroll in the German 100 series (Advanced Reading, Writing, Oral Communication) and in Introduction to German Literature and Culture (German 101), which provides an introduction to genre, periodization, and the German terminology used in critical analysis. This course is taken in preparation for the upper-division literature and film courses (German 102, 117, 118, 119, 120), which range historically from the Reformation to the present and cover a variety of topics and approaches. A further series of courses (German 130, 140, 150, 160) is taught in English for both German Studies students and those who do not speak the language, and covers topics in German literature and culture, literary theory, and criticism as well as German-language cinema.

Students are encouraged to participate in work- and study-abroad programs in German-speaking countries. The Department recommends the University’s Education Abroad Program (EAP) in Göttingen, Germany. Göttingen is an old university city in central Germany, where EAP students complete an advanced language program and enroll in university courses with great success, usually achieving native or near-native fluency during this exciting year abroad. EAP also offers semester- and year-long programs in Berlin and Bayreuth. All EAP courses are accepted for UCI graduation credit and many contribute to fulfillment of the German Studies major and minor requirements. More information is available from the academic counselors.

German placement tests are recommended but not required for students who have successfully completed foreign language classes in high school or elsewhere. To obtain information about the German placement test, please contact the UCI Testing Office at (949) 824-6207. Students with college-level course work should present their transcript to an academic counselor in the Humanities Undergraduate Study Office, 143 Humanities Instructional Building, or call (949) 824-5132 for assistance in determining which UCI course to take.

Apart from the optional placement test, students are placed in German language courses according to the number of years of previous study. In general, one year of high school German is considered equal to one quarter of a UCI German language course.

CAREERS FOR THE GERMAN STUDIES MAJOR

The ability to speak and write German can open up opportunities in communications, foreign trade and banking, transportation, government, science and technology, tourism, library services, and teaching. Because German plays such an important role in modern technology, employers in international law, business, the foreign service, the airline industry, journalism, professional translating, and all levels of education increasingly seek students with a knowledge of German. German is excellent preparation for professional schools. It can be combined successfully with work in the natural sciences, business and management, and the computer sciences, and it is invaluable for advanced work in the humanities and the arts.

Recent graduates of the German Department have begun careers in international law, business, the foreign service, the airline industry, journalism, and all levels of education, including university teaching.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Foreign Language Placement and Progression: See page 253.

Departmental Requirements for the Major

Fourteen upper-division courses are required, which must include: German 100A, B, C; German 101; eight upper-division courses in German literature and culture; and two courses selected from German 140, 150, 160, Linguistics 3, Comparative Literature CL 50A, B, C, courses in German history, German philosophy, or German political science, as approved by the advisor for the major. The upper-division writing requirement must be met by additional course work either within or outside the Department.

Residence Requirements for the Major: At least five of the upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

Seven upper-division courses are required, which must include: German 100A, B, C and German 101. Not more than one course from German 140, 150, or 160 may be counted for the minor. German 139 may not be used to satisfy minor requirements.

Residence Requirement for the Minor: Four upper-division courses are required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Distinguished Visiting Professors

The Department's Distinguished Visiting Professors program brings students into direct contact with some of the outstanding scholars in the field of German Studies. Distinguished Visiting Professors typically visit for one quarter, during which they teach a graduate course and an undergraduate course and present a lecture to which students, faculty, and other members of the University community are invited. Program participants include Bengt Algot Sørensen (Odense), Uwe Ketelsen (Bochum), Peter Pütz (Bonn), Leslie Adelson (Ohio State), Hans Wysling (Zürich), Hans-Wolf Jäger (Bremen), Norbert Oellers (Bonn), Hans Rudolf Veget (Smith College), Heinrich Detering (Göttingen), Wolfgang Martens (Munich), Anna Kuhn (UC Davis), Renate Möhrmann (Köln), Ülker Gökberk (Reed College), Stephanie Hammer (UC Riverside), Helmut Schneider (Bonn), Richard Gray (University of Washington), Ursula Mahlendorf (UC Santa Barbara), Sander Gilman (Emory University), and Irmela von der Lühe (Freie Universität, Berlin).

Graduate Program

In its graduate courses the Department stresses theoretical understanding of the nature of literature and culture. Seminars focus on German literary and cultural development after 1700. An emphasis in Critical Theory is available to graduate students in all departments of the School of Humanities. A graduate emphasis in Feminist Studies also is available. Refer to the Women's Studies section of the *Catalogue* for information. In addition, graduate students in German may choose to complete an emphasis in Comparative Literature.

The graduate program in German is essentially a Ph.D. program. The M.A. requires a minimum of one year in academic residence and must be completed in no more than two years of full-time graduate study. The Department will decide after completion of the M.A., at the latest, whether or not to permit the student to continue in the Ph.D. program. The M.A. thus may be in some cases a terminal degree. In those cases where the student enters the UCI graduate program in German with an M.A. from another institution, the Department will evaluate the student's progress during the first year of study before deciding to allow continuation toward the Ph.D.

Students who enter with normal academic preparation and pursue a full-time program of study ordinarily should be able to earn the Ph.D. degree within six years or less.

MASTER OF ARTS IN GERMAN

Before entering the program, a candidate is expected to have the equivalent of our undergraduate major. Students with a bachelor's degree in another subject may be considered for admission. Normally their course of studies will have to be extended in order to make up for the deficiency. However, each case is considered individually by the faculty. The minimum course requirement for the M.A. degree is nine courses, eight of which must be taken within the Department of German. Reading knowledge of a foreign language other than German also is required for the M.A. degree. Whenever possible, a candidate is urged to complete this requirement before entering the program. Further requirements follow.

The Preparation of a Reading List. All candidates should prepare as early as possible a list of works read in the field of German literature, both primary texts and critical works. This list should preferably be augmented by critical texts and by works from other literatures which, in the candidate's opinion, relate to the German works on the list. Since it should ultimately contain representative selections from various eras of German literature and some works of criticism, a tentative list must be discussed with the graduate advisor before the end of the fall quarter of the year in which the

candidate expects to receive the M.A. Candidates should indicate on the list a number of works with which they are especially familiar. In its final form (including works read during the course of study both in and out of class) the list will be submitted together with the essay two weeks before the oral examination. It is the student's responsibility to keep the reading list current.

The Master's Essay. The purpose of the written part of the M.A. comprehensive examination is to show the candidate's methodological progress in interpreting German literature. It consists of an essay in which a text is elucidated and related to: (a) pertinent works by the same author, (b) its social and historical context, and (c) other works of German or other literatures with which the candidate is familiar. The level of the discussion will normally be enhanced by the candidate's knowledge of the relevant secondary literature. The topic of the essay should be tentatively formulated and reported to the graduate advisor before the end of the second quarter of the student's residence.

The Oral Examination. During the oral examination the following items will be discussed: (a) the essay, (b) the reading list. The discussion based on the reading list will focus on works which the student knows well, but may broaden into other areas.

One Year of Residence.

DOCTOR OF PHILOSOPHY IN GERMAN

The Department requires a minimum of 22 approved courses from students entering with a bachelor's degree. These may include courses in philosophy, history, comparative literature, and others suitable for the individual student's program of study. The student also will participate in each of the German Department's colloquia. The student will augment the reading list and keep it current during the whole course of study. At least two years of residence are required.

Students entering with the master's degree will be advised individually as to remaining course requirements.

Since the majority of Ph.D. candidates choose careers as teachers, the German Department recognizes its obligation to offer them preparatory experience. Therefore, all candidates for the Ph.D. are required to teach under the supervision of a faculty member at least one course in each of three quarters (for which they will receive credit as German 399). Three of these courses may be counted toward the 22 courses required for the Ph.D.

Comprehensive Examination. There are two parts to the examination. In order to fulfill the written examination requirement the student will choose either (1) to present a lecture to the faculty and to the other graduate students, or (2) to write a three-part examination (one part on a significant author, one on a major genre, and one on an historical period) within a period of two weeks. The examination essays or the lecture will be on a text or texts selected by the faculty from a reading list submitted by the student for the comprehensive examination. The second part of the comprehensive examination is the formal oral qualifying examination of up to three hours duration ranging over the whole field of the student's studies, to be taken within two weeks after completion of the written examination. The student will submit the reading list at least two weeks before the written examination after consultation with the members of the examination committee.

Language Requirements. The candidate must demonstrate reading knowledge of two languages or extensive competence in one language other than German or English. Choice of language(s) depends on the student's area of specialization. French and Latin are recommended. For the various ways in which these requirements may be fulfilled, the student should see the graduate advisor.

Dissertation. Toward the end of the second year of study, the student should formulate a tentative dissertation topic. Three faculty

members proposed by the Department and appointed on behalf of the Dean of Graduate Studies and the Graduate Council constitute the Doctoral Committee which directs the preparation and completion of the dissertation. The Doctoral Committee certifies that a completed dissertation is satisfactory through the signature of the Committee members on the signature page of the dissertation.

Time to degree. The normal time for advancement to candidacy is four years. The normal time for completion of the Ph.D. is six years, and the maximum time permitted is eight years.

Courses in German

LOWER-DIVISION

1A-B-C Fundamentals of German (5-5-5) F, W, S. Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, the courses help students develop speaking, listening, reading, writing, and cultural skills and knowledge. Prerequisite for 1A: none; for 1B: German 1A with a grade of C or better, one to two years of high school German, or equivalent; for 1C: German 1B or S1AB with a grade of C or better, two to three years of high school German, or equivalent. German 1A-B-C and S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of German (7.5-7.5) Summer. First-year German in a time-intensive form. Equivalent to German 1A-B-C during the academic year. For description, see German 1A-B-C. Prerequisite for S1AB: none; for S1BC: German S1AB or 1B with a grade of C or better, or equivalent. German S1AB-BC and 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate German (4-4-4) F, W, S. Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, the courses help students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded. Prerequisite for 2A: German 1C or S1BC with a grade of C or better, three to four years of high school German, or equivalent; for 2B: German 2A with a grade of C or better, or equivalent; for 2C: German 2B or S2AB with a grade of C or better, or equivalent. German 2A-B-C and S2AB-BC may not both be taken for credit. (VII-B)

S2AB-BC Intermediate German (6-6) Summer. Second-year German in a time-intensive form. Equivalent to German 2A-B-C during the academic year. For description see German 2A-B-C. Prerequisite for S2AB: German S1BC or 1C, three to four years of high school German, or equivalent; for S2BC: German 2B or S2AB with a grade of C or better, or equivalent. German S2AB-BC and German 2A-B-C may not both be taken for credit. (VII-B)

50 Science, Society, and Mind (4) F, W, S. Historical, philosophical, and literary reflections by German writers on the rise of the modern sciences. In English. Designed primarily for nonmajors. May be taken three times for credit as topics vary. (IV, VII-B)

53 Advanced Conversation (2) S. Includes reading of political and cultural material. Conducted in German. May be repeated for credit. Prerequisite or corequisite: German 2C or consent of instructor.

97 Fundamentals of German (with Emphasis on Reading) (4) F, W, S. Designed primarily for students interested in acquiring a solid reading knowledge of German, and to facilitate the understanding and translating of German texts dealing with a variety of disciplines. Not open to German majors or minors. Does not serve as prerequisite for any higher-level German courses or fulfill any undergraduate foreign language requirement.

99 Special Studies German (1 to 5) F, W, S. Consultation with instructor necessary prior to enrollment. Prerequisite: consent of instructor.

UPPER-DIVISION

NOTE: Upper-division courses normally are taught in German. Exceptions are German 103, 139, 140, 150, and 160.

100 German Language and Culture. Expands and deepens German cultural literacy and interpretive skills by focusing on issues of cultural and political significance in German-speaking countries. Enhances German grammar knowledge and vocabulary and develops sophisticated speaking, writing, and reading skills. Prerequisite: German 2C with a grade of C or better or the equivalent, or consent of instructor.

100A Emphasis on Reading (4). Develops students' reading skills with an emphasis on vocabulary expansion, complex sentence structures, and cultural literacy. (VII-B)

100B Emphasis on Writing (4). Develops writing skills through numerous genres, such as letter-writing, expository writing, prose narration. (VII-B)

100C Emphasis on Verbal Communication (4). Develops conversation and public speaking skills, verbal negotiation strategies, pronunciation and diction through numerous genres, such as informal and formal conversation, the job interview, public address. (VII-B)

101 Introduction to German Literature and Culture (4) F. Sample interpretations of texts in their cultural and historical contexts. Introduction to critical language in German. Prerequisite: German 2C. (VII-B)

102A Literature and Society Since World War II (4). Interdisciplinary introduction to recent German literature not only as an aesthetic phenomenon but also as a social and political force. Methodological problems arising from an analysis of literature in its historical context. Prerequisite: German 2C or consent of instructor. (VII-B)

102B Literature and Society 1918–1945 (4). See above description. Prerequisite: German 2C or consent of instructor. (VII-B)

104 Topics in German Linguistics (4). Explores linguistic, sociolinguistic, or ethnography-of-communication topics of German or other Germanic languages (Swedish, Icelandic, Yiddish, and others). Taught in English. Intermediate knowledge of a Germanic language assumed. May be repeated for credit as topics vary.

117 Topics in German Literature and Culture 750–1750 (4). Specific course content determined by individual faculty members. Example: Luther and the European Renaissance. Prerequisite: German 101 or consent of instructor. May be repeated for credit as topics vary. (VII-B)

118 Studies in the Age of Goethe (4). Individual authors such as Lessing, Goethe, Schiller, Kleist, and Hölderlin, or the drama of the "angry young men" of the German 1770s. Prerequisite: German 101 or consent of instructor. May be repeated for credit as topics vary. (VII-B)

119 Studies in Nineteenth-Century German Literature and Culture (4). Individual authors such as Büchner, Grillparzer, Keller, and Nietzsche, or broader social-literary phenomena. Prerequisite: German 101 or consent of instructor. May be repeated for credit as topics vary. (VII-B)

120 Studies in Twentieth-Century German Literature and Culture (4). Individual authors such as Thomas Mann, Brecht, and Kafka, or topics addressing questions of genre and/or social-literary problems. Prerequisite: German 101 or consent of instructor. May be repeated for credit as topics vary. (VII-B)

130 Topics in German Literature and Culture (4). Literary and cultural topics not fully contained within the periods listed above, such as "German Comedy" and "Turn-of-the-Century Vienna." Prerequisite: German 101. May be repeated for credit as topics vary.

139 Writing about Literature and Culture (4). In English. Requires at least 4,000 words of assigned composition based upon readings in Germanic literatures and cultures. Several essays required. Topics vary. German majors given admission priority. Prerequisites: satisfactory completion of the lower-division writing requirement; junior standing or consent of instructor.

140 Topics in Literary Theory and Criticism (4). In English. Theoretical dimensions of literary criticism and the German philosophical tradition. Topics such as Marxism, Freudian thought, the German Idealistic tradition of aesthetics, Historicism, twentieth-century hermeneutics, Frankfurt School, and *Rezeptionsästhetik* are explored in a selection of theoretical, critical, and literary texts. May be repeated for credit as topics vary.

150 German Literature and Culture in Translation (4). In English. Major works in Germanic literature and culture in context. Prerequisite applicable only when offered as an upper-division writing course: upper-division standing and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

160 German Cinema (4). Historical, theoretical, and comparative perspectives on German cinema. Same as Film and Media Studies 160 when topic is appropriate. May be repeated for credit as topics vary. (VII-B)

199 Individual Study (1 to 4) F, W, S. May be repeated for credit as topics vary.

GRADUATE

All graduate courses offered in the Department fall under the generic titles German 200, 210, 220, and 230. Course titles and contents change according to the instructor teaching them; courses offered under these numbers may be repeated for credit provided the content has changed. Complete course descriptions are available quarterly from the Department at <http://www.humanities.uci.edu/german/courses.php>. Course offerings for the entire School of Humanities are available at <http://www.humanities.uci.edu/SOH/students/graduate.html>.

200 Literary Criticism (4)

210 Literary Theory (4)

220 Selected Topics in German Linguistics (4)

230 Literary and Cultural History (4)

290 Independent Study (4). Counted toward course requirements for the M.A. or Ph.D. A term paper or project is required. Letter grade only. May be repeated for credit.

298 Independent Directed Reading (4 to 12). For students preparing for doctoral examination. Satisfactory/Unsatisfactory only.

299 Dissertation Research (4 to 12). For students who have been admitted to doctoral candidacy. Satisfactory/Unsatisfactory only.

398A-B The Teaching of German (2-2) F, W. Required of all Teaching Assistants in the German Department. Also open to present and prospective teachers of German who are not Teaching Assistants.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

UNDERGRADUATE PROGRAM IN GLOBAL CULTURES

168 Humanities Instructional Building; (949) 824-8119

Douglas M. Haynes, **Director**

Core Faculty

Sharon B. Block, Ph.D. Princeton University, *Associate Professor of History*
Ana Paula Ferreira, Ph.D. New York University, *Professor of Portuguese and Comparative Literature*

James Fujii, Ph.D. University of Chicago, *Associate Professor of Japanese and Comparative Literature*

David Theo Goldberg, Ph.D. City University of New York Graduate School and Center, *Director of the UC Humanities Research Institute and Professor of Comparative Literature and of Criminology, Law and Society*

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Professor of History*

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English*
Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Asian American Studies, English, and Comparative Literature*

Keith L. Nelson, Ph.D. University of California, Berkeley, *Professor Emeritus of History*

Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature*

Mark S. Poster, Ph.D. New York University, *Professor of History, Film and Media Studies, and Comparative Literature*

Brook Thomas, Ph.D. University of California, Santa Barbara, *UCI Chancellor's Professor of English*

Armin Schwegler, Ph.D. University of California, Berkeley, *Professor of Spanish*

Jacobo Sefami, Ph.D. University of Texas at Austin, *Acting Department Chair of Spanish and Portuguese and Professor of Spanish*

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History*

The major in Global Cultures provides UCI students with an opportunity to explore the stimulating ways in which local and global processes are intertwined. In recent decades, the intensified processes of globalization have meant that cultural practices, symbolic systems, and the intersectional formations of gender, sexuality, race, ethnicity, and class have increasingly spanned national

boundaries. But, on the other hand, this feature of the world today was shaped by and is as much a feature of the past. The aim of the Global Cultures major is to provide students with a humanistic framework for understanding the problem and processes of globalization in relationship to change across time and space, the formation and contestation of identity, and theoretical and discursive practices that shape philosophical speculation and belief. Students may choose one of the following approved emphases or may define their own emphasis in consultation with a program advisor and with the approval of the Global Cultures Committee.

Atlantic Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Atlantic Ocean, including, among others, west Africa, the Americas, the Caribbean, and western and northern Europe, as well as the British archipelago.

Hispanic, U.S. Latino/Latina, and Luso-Brazilian Cultures: Examines the historical, political, and cultural formations of regions where Spanish and Portuguese are spoken, including Spain, Portugal, Spanish- and Portuguese-speaking countries in the Western Hemisphere, and the Latino/Latina population in the United States.

Locating Africas (Nation, Culture, and Diaspora): Examines Africa as a diverse geographical and political expression, including its historical, political, and cultural formation locally, regionally, and globally.

Locating Asias (Nation, Culture, and Diaspora): Examines Asia as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Locating Europes and European Colonies: Examines Europe as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Pacific Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Pacific Ocean, including, among others, India, China, Japan, Korea, Vietnam, the United States, Central and South America, and Malaysia.

Inter-Area Studies: Includes comparative studies of the geographical regions outlined in the above six emphases, for instance, the analysis of Africans in Asia, or the cultural, historical, and political connections between the Atlantic and the Pacific Rim.

Because there are so many emphasis options within the major, students will be assigned for academic advising to a member of the Global Cultures Committee or a Core faculty member and are required to consult with their advisor on a quarterly basis.

CAREER OPPORTUNITIES

Students in this major will be well prepared to do what other Humanities majors do after graduation: work in business, law, education, politics, public policy, academia, and print and television media. Global Cultures majors will be especially qualified for careers in the foreign service and international business. Students majoring in Humanities are particularly well prepared for careers in all fields in which analysis, judgment, and argument are important. The Global Cultures major will equip students with a knowledge and understanding of the complexities of the diverse world in which they live. Perhaps nowhere more than in the State of California, the contemporary workforce is constituted by people who have crossed geographic and cultural boundaries and who are embodiments of the forces of globalization that this major will help students to understand better. Global Cultures majors will thus be particularly sensitive to the challenges and opportunities presented by the multicultural society of which they are a part.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59-64.

School Requirements: See page 254.

Requirements for the Major

Fourteen courses are required: History 21A-B-C; Humanities 103A-B; eight upper-division courses from an approved emphasis list (see sample below), six of which must be selected from one emphasis and two from a second emphasis (three of the eight courses must focus on representation, i.e., Art History, Film, Media, Literature, History, French, Italian, Spanish, Russian); and Humanities 191. Quarterly consultation with a faculty advisor is also required.

Students are encouraged to augment their foreign language competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

History 21A-B-C, Humanities 103A-B, four courses selected from one emphasis; and one course selected from a second emphasis.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Emphases and Approved Courses: The following list includes a few examples of courses that have been approved for each emphasis. The complete list is extensive and varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information about approved courses, students should consult the School of Humanities Web site at <http://www.humanities.uci.edu/>.

Atlantic Rim: The Black Protest Tradition (African American Studies 141), American Art: 1800-1900 (Art History 165B), Black Britain (History 190).

Hispanic, U.S. Latino/Latina, and Luso-Brazilian Cultures: Women, Race, and Social Movements in Latin America (Anthropology 121E), Chicana/Chicano History: Twentieth Century (History 151B), Introduction to Portuguese and Brazilian Literature (Portuguese 120B).

Locating Africas (Nation, Culture, and Diaspora): Race and Medicine in the United States: 1870-1990 (African American Studies 110), African American Art: 1900-Present (Art History 164B), The African American Civil Rights Movement (History 142B).

Locating Asias (Nation, Culture, and Diaspora): Japanese Art: 1868-1945 (Art History 162B), Asian Americans and Education in a Multicultural Society (Asian American Studies 150), Asian American Writers: Ethnicity and the Politics of Location (Comparative Literature 105).

Locating Europes and European Colonies: European Art: 1851-1907 (Art History 134C), Classics and History: The Ancient World (Classics 140), The Holocaust (History 190).

Pacific Rim: Asian American Labor (Asian American Studies 111), Japan as Spectacle at the End of the Century (East Asian Languages and Literatures 155), America and the Third World (History 158C).

Inter-Area Studies: Nationalism and Ethnicity in the Contemporary World (Anthropology 136A), Film and Media Theory (Film and Media Studies 110), Cross-Cultural Studies of Gender (Women's Studies 180).

DEPARTMENT OF HISTORY

200 Murray Krieger Hall; (949) 824-6521

Carolyn P. Boyd, **Department Chair**

Faculty

Marc Baer, Ph.D. University of Chicago, *Assistant Professor of History* (Ottoman and Islamic history, Middle East history, and history of religion)
 Sharon B. Block, Ph.D. Princeton University, *Associate Professor of History* (early American, feminist theory and gender studies)
 Carolyn P. Boyd, Ph.D. University of Washington, *Department Chair and Professor of History* (Europe, Spain)
 Dickson D. Bruce, Jr., Ph.D. University of Pennsylvania, *Professor of History* (American culture, African American history)
 Vinayak Chaturvedi, Ph.D. University of Cambridge, *Assistant Professor of History* (South Asia, postcolonial studies)
 Yong Chen, Ph.D. Cornell University, *Associate Professor of History and Asian American Studies* (Asian American history)
 Mike Davis, C.Phil. University of California, Los Angeles, *Professor of History* (U.S., urban, cultural history)
 Alice Fahs, Ph.D. New York University, *Associate Professor of History* (U.S. intellectual/cultural history)
 Sarah Farmer, Ph.D. University of California, Berkeley, *Associate Professor of History* (twentieth-century European cultural)
 Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics* (Roman empire, Classics)
 Dorothy Fujita-Rony, Ph.D. Yale University, *Associate Professor of Asian American Studies and History* (U.S. history, Asian American studies)
 James B. Given, Ph.D. Stanford University, *Professor of History* (medieval Europe)
 Qitao Guo, Ph.D. University of California, Berkeley, *Associate Professor of History* (Late Imperial China, social and cultural)
 Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Professor of History* (social and cultural history of modern Britain, social history of modern medicine)
 Lamar M. Hill, Ph.D. University of London, *Professor of History* (Tudor-Stuart Britain)
 Karl G. Hufbauer, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (social history of science)
 David Igler, Ph.D. University of California, Berkeley, *Associate Professor of History* (U.S. environmental, American West, Pacific)
 Jon S. Jacobson, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (European international)
 Winston James, Ph.D. London School of Economics and Political Science, *Professor of History* (Caribbean, African American, and African diaspora)
 Michael P. Johnson, Ph.D. Stanford University, *Professor Emeritus of History* (American social and political)
 Mark A. LeVine, Ph.D. New York University, *Associate Professor of History* (modern Middle Eastern history, Islamic studies, histories of empire and globalization)
 Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History* (modern Russian and Soviet)
 Samuel C. McCulloch, Ph.D. University of California, Los Angeles, *Professor Emeritus of History* (British empire and commonwealth)
 Laura Mitchell, Ph.D. University of California, Los Angeles, *Assistant Professor of History* (sub-saharan Africa, colonial southern Africa, environmental history, transregional networks of exchange)
 Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History* (modern Germany, European women)
 J. Michelle Molina, Ph.D. University of Chicago, *Assistant Professor of History* (trans-regional religious history, seventeenth-century European women and Jesuits, Latin American history)
 Keith L. Nelson, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (American foreign relations)
 Spencer C. Olin, Ph.D. Claremont Graduate School, *Edward A. Dickson Professor Emeritus of History* (American social and political)
 Rachel O'Toole, Ph.D. University of North Carolina, Chapel Hill, *Assistant Professor of History* (Latin America; ancient, colonial, national, and contemporary)
 Eugene Y. Park, Ph.D. Harvard University, *Assistant Professor of History* (Korea)
 Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History and of East Asian Languages and Literatures* (modern Chinese)

Mark S. Poster, Ph.D. New York University, *Professor of History, Film and Media Studies, and Comparative Literature* (modern European intellectual)
 Jaime E. Rodriguez, Ph.D. University of Texas, *Director of Latin American Studies and Professor of History* (Latin America, Mexico)
 Vicki L. Ruiz, Ph.D. Stanford University, *Professor of Chicano/Latino Studies and History* (women, Chicano/Chicana labor)
 Sharon V. Salinger, Ph.D. University of California, Los Angeles, *Dean of the Division of Undergraduate Education and Professor of History*
 Daniel Schroeter, Ph.D. University of Manchester, *Professor of History and Teller Family Chair in Jewish History* (Jewish history, Middle East and North Africa)
 Patricia Seed, Ph.D. University of Wisconsin, Madison, *Professor of History* (world history, cartography)
 Ulrike Strasser, Ph.D. University of Minnesota, *Associate Professor of History* (early modern continental Europe)
 Timothy Tackett, Ph.D. Stanford University, *Professor of History* (Old Regime Europe, French Revolution)
 Heidi Tinsman, Ph.D. Yale University, *UCI Chancellor's Fellow and Associate Professor of History* (Latin America)
 Steven C. Topik, Ph.D. University of Texas, *Professor of History* (Latin America)
 Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies and Professor of History and of East Asian Languages and Literatures* (early modern and modern Japan)
 Jeffrey Wasserstrom, Ph.D. University of California, Berkeley, *Professor of History* (modern China, student movements and comparative revolutions)
 Charles J. Wheeler, Ph.D. Yale University, *Assistant Professor of History* (Southeast Asia, Vietnam, Chinese overseas, cross-cultural trade)
 Jonathan M. Wiener, Ph.D. Harvard University, *Professor of History* (recent American, theory and history)

Undergraduate Program

The undergraduate program in History is designed to develop critical intelligence and to foster an awareness of ourselves and our world through the study of the past. The Department presents a variety of approaches to history, and each emphasizes basic disciplinary skills: weighing evidence, constructing logical arguments, and exploring the role of theory in historical analysis and human action.

The Department offers a number of lower-division courses open to nonmajors as well as majors, most of which fulfill part of the UCI breadth requirement. The Department requires all majors to take an introductory course in three of five regional histories—United States history, European history, Latin American history, East Asian history, or Middle East and African history. These courses are also open to nonmajors.

Students who are interested in the study of history but are majoring in other disciplines may minor in History. The minor incorporates elements of the Department's program for majors but allows students enough flexibility to pursue programs in other departments and schools.

Upper-division courses range from the examination of individual nation-states (e.g., Chinese history), to studies of the relations among nation-states (e.g., Emergence of the Modern Middle East), to historical analyses of political, socio-economic, and cultural factors (e.g., Women in the United States). Students are also provided the opportunity for small-group learning experiences in a series of colloquia in social history, political history, international history, intellectual history, social thought, and comparative history. The colloquia are conducted as discussion groups and involve close reading and analysis of secondary texts. The research seminar is a one-quarter seminar in primary materials that culminates in the writing of a research paper.

The faculty strongly encourages History majors and minors to take advantage of the University's study abroad programs and to experience a different culture for a quarter or longer while making

progress toward their UCI degree. Moreover, students who are interested in the history of a particular country or region should seriously consider participation in University of California programs within that country or area. UCI's Center for International Education, which includes both the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of the many worldwide opportunities. See the Center for International Education section of the *Catalogue* or an academic counselor for additional information.

CAREERS FOR THE HISTORY MAJOR

The training and discipline derived from historical studies provide a valuable experience for all educated persons seeking to understand themselves and their world. Many students who complete undergraduate degrees in the Department of History go on to graduate school in a variety of fields, including history, law, business, international relations, and teacher education. Students interested in teaching history at the intermediate and high school levels should consult with an academic advisor in the Department of History, School of Humanities Undergraduate Counseling Office, or Department of Education about course work and enrollment requirements for the state-approved history/social science subject matter preparation program.

The study of history is valuable preparation for many other careers as well. The strong academic and professional orientation acquired by History majors is necessary to pursue successful careers in such diverse fields as advertising, banking, journalism, management, public relations, publishing, and government service.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Departmental Requirements for the Major

Fourteen courses are required: three courses from the History 70 series, Problems in History (History 70A Asia, 70B Europe, 70C United States, 70D Latin America, 70E Middle East and Africa, 70F Transregional History); three upper-division History courses with a regional or thematic focus decided upon in consultation with a faculty advisor, at least one of which is devoted to the period prior to 1800; two colloquia (History 190), one of which is followed by a research seminar (History 192); two additional upper-division History courses outside the regional or thematic focus area; and three additional lower- or upper-division History courses.

Residence Requirement for the Major: A colloquium (History 190), a research seminar (History 192), and three upper-division History courses must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Departmental Requirements for the Minor

Seven courses are required: a year-long survey in world history (History 21A, 21B, 21C), United States history (History 40A, 40B, 40C), or three courses in problems of history (History 70A Asia, 70B Europe, 70C United States, 70D Latin America, 70E Middle East and Africa, 70F Transregional History); and four upper-division History courses.

Residence Requirement for the Minor: At least four upper-division History courses must be completed successfully at UCI. By

petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Chair of the Undergraduate Program Committee.

Graduate Program

The M.A. and Ph.D. degree programs in History are designed to provide students with both advanced historical skills and a rigorous grounding in historical theory. This combination of theoretical study with training in historical method reflects the Department's conviction that scholars should be encouraged to deal with significant questions about the past and to approach these questions in a methodologically sophisticated way. This approach requires that the student develop the critical abilities necessary to deal with primary sources, secondary syntheses, and the interrelationship of history and theory. Candidates for a Ph.D. in History are expected to gain teaching experience as an integral part of their graduate training. Ordinarily this is accomplished through service as a teaching assistant.

Basic to the curriculum is the Department's course in History and Theory which deals with both theoretical texts and historical studies that have utilized theoretical concepts and models. The course directs attention to the diverse implications of modernity, to the groups who dominated and were dominated by it, and to the costs and benefits of the process. These matters can be studied most satisfactorily by the historian whose theoretical self-consciousness and methodological facility have been systematically and carefully developed.

The colloquium, a reading course that examines a field's chief historical works, enriches the student's knowledge of the main areas of historical research and develops critical reading skills. A colloquium series is offered annually in American history; biannually (depending on demand) in modern European history, early modern European history, Latin American history, South and Southeast Asian history, East Asian history, world history, Middle Eastern and North African history, and ancient history; and occasionally in medieval history. A student may prepare a dissertation in any of these fields.

In addition to the History and Theory sequence and the major field colloquia, students also take a proseminar/research seminar sequence during their first year. The proseminar provides an orientation to the literature on a broad historical subject, and the associated seminar offers guidance in research and writing on problems within this broad area. Students awarded M.A. degrees at other institutions before entering the graduate program at UCI may be exempted from this requirement, subject to evaluation of their M.A. theses.

During the second year of study, Ph.D. students normally take a colloquium series in their second field. They also take a two-quarter research seminar where they have an opportunity to work on problems of their own choosing; students who entered the program with an M.A. degree must also take this seminar. In addition, independent reading and research courses are provided for advanced, specialized study in tutorial form.

The immediate objective for the doctoral student is to develop two fields of competence in addition to History and Theory. Competence in the two fields is demonstrated by the satisfactory completion of three courses in each of these areas. A comprehensive oral examination on the student's major field follows fulfillment of all degree requirements. However, those students who elect a second field administered by another program or department (e.g., Critical Theory, Asian American Studies, Feminist Studies) must complete requirements, which sometimes include a written examination, for that field. Competence in History and Theory is demonstrated by satisfactory completion of History 200A and 200B. History 200C may be taken as an elective.

The subsequent objective, to write a distinctive dissertation, is of crucial importance. To assist in accomplishing both objectives, the Department offers intensive consultation with the faculty as well as a lively intellectual atmosphere. Students have long shared in the decision-making processes of the Department, which engages the entire historical community at UCI in the collective pursuit of excellence. Students profit also from a vigorous visiting speakers program that brings scholars from other campuses and other nations to meet and interact with UCI students and faculty.

Requirements for Admission. Although it is desirable that an applicant have the equivalent of an undergraduate major in History, the Department also considers students who have previously specialized in other subject areas and who show promise of sustained and self-disciplined work in history. Typically, a minimum undergraduate grade point average of 3.3 (B+) is required for admission, with evidence of better work in history. In addition, all applicants are asked to submit three letters of recommendation and scores from the Graduate Record Examination. An example of written work in history from undergraduate courses is also required. A departmental interview may also be required. Students are accepted for admission for fall quarter only, and the deadline for application for fall admission is January 2.

MASTER OF ARTS IN HISTORY

Program of Study. The M.A. program emphasizes the theoretical and historiographical dimensions of history. Each candidate for the M.A. will choose a graduate advisor who will supervise the student's program. Nine courses are required for the degree: three in a colloquium series, a proseminar and related first-year research seminar, a secondary emphasis of two related courses (History and Theory 200A and 200B, or other), a thesis course or preparation class for the written examination in the major field (taken as 291), and another elective course. Students who decide to pursue the Ph.D. after completion of the M.A. program need to consider Ph.D. course requirements when selecting courses.

Language Requirement. Students in the M.A. program whose major field requires use of foreign language sources demonstrate competence in a foreign language in the process of writing the first-year research paper and thesis. Other M.A. students do not have to meet a foreign language or alternative skills requirement.

Plan I: Thesis. The master's thesis represents a revision of the first-year research paper, equivalent to a scholarly article of 40-50 typescript pages, under the supervision of a professor in the student's major field and reviewed and approved by a three-member thesis committee, at least two of which must be History faculty members.

Plan II: Comprehensive Examination. At the end of the final quarter the M.A. candidate must pass a comprehensive written examination administered by three faculty members covering the student's major field (e.g., America, Early Modern Europe) and focused upon material assigned in the three-quarter colloquium series.

Time Limits. The M.A. requires a minimum of one year in academic residence and can be completed during that term if full-time study is undertaken. However, it is expected that many M.A. students are employed and need to enroll on a part-time basis. Therefore, students are allowed up to three years of graduate study to complete the degree.

DOCTOR OF PHILOSOPHY IN HISTORY

Ph.D. students are advised to begin their graduate work at UCI, since those who have taken the M.A. elsewhere will be expected to enroll in the same courses that are required of all incoming students, with the exception of the First-Year Research Seminar. Subject to evaluation of their M.A. theses, these students will be

exempted from this requirement. In the second and third years, the greater experience of those who enter with an M.A. may work to their advantage in speeding them to the qualifying examination.

First-Year Review. To be admitted formally into the doctoral program, students must satisfactorily pass a departmental evaluation at the end of their first year of study; this includes students who entered with an M.A. from another institution.

Emphasis in Creative Nonfiction. In addition to meeting admission requirements, applicants must submit an additional writing sample that demonstrates aptitude for the program. During their program of study, students take three of the writing workshops or their equivalents that are offered through the International Center for Writing and Translation. They also write a dissertation that meets traditional intellectual standards for academic rigor and is accessible to an audience beyond the academy.

Emphasis in the History of Gender and Sexuality. To complete this emphasis, students take three courses emphasizing feminist studies and/or queer theory in three different fields. At least two of these courses must be taken in the History Department; the third course may be either a History Department course or one of the three core graduate seminars offered through the Program in Women's Studies.

Program of Study. The Department requires doctoral students to prepare themselves in three different areas:

1. History and Theory.
2. The first field (such as Modern Europe), which is designed as a teaching field as well as the focus of the student's dissertation.
3. The second field (such as American History or Critical Theory), which is designed as a second teaching field.

The courses required in this preparation include the History and Theory sequence, colloquium series in both fields, First-Year Proseminar/Research Seminar sequence, and the Second-Year Research Seminar. The normal academic load is three courses per quarter. However, students may be eligible for approved part-time status, which allows them to take a lighter course load at reduced fees for a maximum of two academic years.

Every doctoral student will be assisted by a departmental advisor in the student's general area of study who will be responsible for approving defined fields, guiding the student to consultant faculty, and supervising the examination.

Ph.D. students can be awarded an M.A. after fulfilling requirements for residence and one language and successfully completing 36 units, including 28 in required courses. They also take a two-hour oral examination with an advisor.

Language Requirements. All students, except as specified below, must demonstrate a reading knowledge of two foreign languages prior to taking the Ph.D. candidacy qualifying examination. Competency in a language may be established either by passing a departmental examination (proctored in the department office) or through extensive language use in one of the research seminars. The specific languages that may be used to satisfy this requirement depend on the students' first fields, subject to their advisors' approval.

Students may substitute for one of their language requirements one or a sequence of two graduate courses in an allied discipline or relevant methodology (e.g., critical theory, political theory, cultural anthropology, Asian American studies, feminist theory, art history, linguistics, statistics, quantitative methods), at the discretion of their major field advisors. Students choosing this option are normally expected to write a substantial paper and must demonstrate that the allied discipline or methodology used to fulfill the requirement is of value to historical inquiry. The course(s) taken to satisfy a language requirement may not count toward fulfilling the requirement for the second field.

Qualifying Examination and Dissertation. In preparation for the oral Qualifying Examination, the student will present to the Ph.D. Candidacy Committee a portfolio of three papers totaling at least 45 pages on subjects related to the major field (but not from required colloquia courses). Successful completion of this examination results in the student's advancement to Ph.D. candidacy. The normal time for advancement to candidacy is four years for students who need two foreign languages and three years for those who opt for courses in an allied discipline to fulfill their second language requirement. Within one academic quarter of the oral examination, new candidates must meet in a colloquy with their Doctoral Committee to present their dissertation proposal. Once the Doctoral Committee approves the proposal, the student begins intensive work on the dissertation. The research and writing involved in this effort may require from one to four years. At the end of this period an oral defense of the dissertation, focusing on the adequacy of the student's research and thesis, is normally held.

Students who enter with normal academic preparation and pursue a full-time program of study should be able to earn the Ph.D. degree within seven years. The maximum time permitted is nine years. For students who substitute courses in an allied discipline for their second language requirement, the normal time to the degree is six years, and the maximum permitted is eight years.

Courses in History

LOWER-DIVISION

INTRODUCTORY COURSES

Courses of general interest for all students. No prerequisites. Designed to survey particular fields or themes and to introduce methods and premises of historical study. Many of these courses fulfill part of the UCI breadth requirement.

11 Introduction to Peace and Conflict (4). Examines the causes and effects of international violence, focusing on World War I, World War II, and the Cold War. Relates what is known about the dynamics of war to what is understood by conditions of peace. Required for the minor in Conflict Resolution. (VII-B)

12 Introductory Topics in History (4). Introduces methods and premises of historical study. Topics include introductions to cultural, political, economic, social, and religious history. May be repeated for credit as topics vary.

15 American Ethnic History

15A Native American History (4). Introduction to multiple topics: indigenous religious beliefs and sociopolitical organization, stereotypic "images," intermarriage, the fur trade, Native leaders, warfare, and contemporary issues. (VII-A)

15B African American Studies I (4). Introduction to the main contours of the African American experience from the importation of Africans into the Americas to the present. Focuses on the unique expressions of African American society and culture. Same as African American Studies 40A. (IV, VII-A)

15C Introduction to Asian American Studies I (4). Examines and compares the diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include: origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Same as Asian American Studies 60A and Social Sciences 78A. (III, VII-A)

21 World History

21A World History: Beginnings to 1650 (4). Treats major themes of world historical development through the mid-seventeenth century, focusing on the Eurasian world, but with secondary emphasis on Africa and the Americas. (IV, VII-B)

21B World History: 1650–1870 (4). Examines three major transformations that made the world of 1870 dramatically different from that of 1650: e.g., the scientific revolution, industrialization, and the formation of modern states and nations. (IV, VII-B)

21C World History Since 1870 (4). Considers several major currents of modern history: technological change and its social effects; changes in gender relations; totalitarianism; peasant revolutions and the crisis of colonization; international migration; and ecological problems. (IV, VII-B)

36 The Formation of Ancient Greek Society. An overview of ancient Greek civilization and its interactions with other cultures of the Mediterranean world. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion. Same as Classics 36A, B, C.

36A Early Greece (4). (IV)

36B Late Archaic and Classical Greece (4). (IV)

36C Fourth-Century and Hellenistic Greece (4). (IV)

37 The Formation of Ancient Roman Society. A survey of the principal aspects of Roman civilization from its beginnings to the so-called Fall of the Roman Empire in C.E. 476. Focuses on political history and ideology, social history, literature, art and architecture, and religion. Same as Classics 37A, B, C.

37A Origins to Roman Republic (4). (IV)

37B Roman Empire (4). (IV)

37C The Roman Legacy (4). (IV)

40 The Formation of American Society. An introduction to the social, economic, political, and cultural development of the United States from the fifteenth century to the present. Any one quarter of history 40A, 40B, or 40C satisfies the American History portion of the UC American History and Institutions requirement.

40A The Formation of American Society: 1492–1790 (4). (IV)

40B The Formation of American Society: The Nineteenth Century (4). (IV)

40C The Formation of American Society: The Twentieth Century (4). (IV)

50 Crises and Revolutions (4). Study of turning points in world history, illustrating themes and methods of historical analysis. May be taken for credit three times as topics vary. (VII-B)

60 Revolving Ideas: An Introduction to the History of Science (4). The emergence of modern science since 1500. Case studies to illuminate revolutionary change in science and the impact of science-based technology on society. History 60 and Education 130 may not both be taken for credit.

70 Problems in History. An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Asia, Europe, the U.S., Latin America, the Middle East, and Africa, as well as transregional history, with an emphasis on developing skills in historical essay-writing.

70A Problems in History: Asia (4). (IV, VII-B)

70B Problems in History: Europe (4). (IV, VII-B)

70C Problems in History: United States (4). (IV)

70D Problems in History: Latin America (4). (IV, VII-B)

70E Problems in History: Middle East and Africa (4). (IV, VII-B)

70F Problems in History: Transregional History. May be repeated for credit as topics vary. (IV, VII-B)

UPPER-DIVISION

HISTORICAL STUDIES

Courses in which students gain experience in analysis, interpretation, and writing. No prerequisites.

100C War and Society in the Twentieth Century (4). Examination of war, military systems, and technology and their interaction with politics, economics, societies, and cultures in the twentieth century. (VII-B)

101 History of the World Economy (4). Beginning with a discussion of different economic "worlds" of the 1400s, traces the complex processes by which these worlds began to influence each other, ending with the twentieth-century world economy. Topics include imperialism, industrial revolution, migration, slave trade. (VII-B)

102A Environmental History of the Victorian Age (4). Explores the "secret" environmental history of world agriculture, from the famous "year without summer" (1816) to the droughts that devastated Indian and Chinese peasantries at century's end. (VII-B)

102B Topics in Environmental History (4). Explores the many historical interfaces between climate change, modes of production, and culture. Topics include the environmental history of warfare, imperialism, and famine in the nineteenth century and the history of environmental thought. (VII-B)

103A Gender and Politics in the Early Modern World (4). Explores the relationship between politics and gender in a variety of societies and historical moments between 1400 and 1800. Topics include: definitions of male and female throughout the world, state formation, empire-building and marriage; religion and women's enclosure. (VII-B)

ANCIENT HISTORY

105 The Roman Empire. Creation of a bureaucratic empire; rule by gentry and officers; official culture and rise of Christianity; social conflict and political disintegration.

105A Early Roman Empire (4)

105B Later Roman Empire (4)

105C The Classical Tradition (4)

EUROPEAN HISTORY

110 Medieval Europe

110A Europe in the Early Middle Ages (4). Survey of Europe between 300 A.D. and 900 A.D. Topics include the breakup of the Roman Empire, barbarian invasions, spread of Christianity, rise of Islam, the Carolingian Empire, and the Vikings. (VII-B)

110B Europe in the Central Middle Ages (4). Survey of European history from ca. 900 to ca. 1300. Topics discussed include the growth of the economy, feudalism, the crusades, the rise of towns, the development of the church, popular heresy, and the rise of large-scale polities. (VII-B)

110C Europe in the Later Middle Ages (4). Survey of European history from ca. 1300 to ca. 1500. Topics include the Black Death, the crisis of the economy, the Hundred Years' War, peasant and urban uprisings, and the Great Schism. (VII-B)

110D Topics in Medieval Europe (4). May be repeated for credit as topics vary.

112 Early Modern Europe

112A Renaissance Europe (4). Survey of the Renaissance in Italy and northern Europe.

112B Reformation Europe (4). Survey of the Protestant and Catholic Reformations in sixteenth- and seventeenth-century Europe.

112C Europe of the Old Regime (4). Survey of the social, cultural, and political history of Europe from the middle of the seventeenth century to the French Revolution. (VII-B)

112D Topics in Early Modern Europe (4). Theme-based approach to the main social, political, and cultural developments in Europe between the fifteenth and eighteenth centuries. Topics include Renaissance humanism, Reformation and Counter-Reformation, scientific revolution, court culture and nation building, interactions with non-European peoples, and cities and commerce. May be repeated for credit as topics vary. (VII-B)

114 Topics in Modern European History (4). Course content changes with instructor. Topics include the Inquisition; science and religion in modern Europe; sex and society in modern Europe; French revolutions; culture in interwar Europe; the Holocaust; the fall of communism in Eastern Europe. May be repeated for credit as topics vary. (VII-B)

115 Survey of European History

115A Europe: 1350–1750 (4). The period 1350–1750 begins with the devastation of the Great Plague and ends with a renewed "enlightened" Europe invested in global colonial ventures. In short, an exploration of the emergence of the modern world. (VII-B)

115B Europe: 1750–1870 (4). A study of Europe from the end of the Old Regime to the beginning of World War I, with emphasis on the origins of the "modern age": the political, economic, and cultural patterns characteristic of our own society. (VII-B)

115C Europe: Twentieth Century (4). Europe from World War I to the collapse of the U.S.S.R. World War I and its impact on the modern world; rise of an international Communist movement; regimes created by Mussolini, Hitler, Stalin; World War II; the killing of Europe's Jews; Cold War and collapse of communism. (VII-B)

116 Medieval England

116A England in the Early Middle Ages (4). Survey of English history from ca. 400 to ca. 1200. Topics include the Anglo-Saxons, the Viking settlement, the Norman Conquest, the Angevin Empire, and the development of royal, legal, and administrative mechanisms. (VII-B)

116B Later Medieval England (4). Survey of English history between ca. 1200 and ca. 1500. Topics include the Magna Carta, the Barons' War, the Welsh and Scottish wars, the development of Parliament, the Hundred Years' War, and the Wars of the Roses. (VII-B)

117 Early Modern England

117A Tudor England (4). Survey of English history from the fifteenth century until the early seventeenth century. Concentrates on the formation of Tudor political, social, and economic institutions. (VII-B)

117B Stuart England (4). Survey of English history from the early-seventeenth century until the early-eighteenth century. Concentrates on the causes of the English Revolution and the Revolution itself, the Restoration, and the Protestant ascendancy. (VII-B)

118 Great Britain

118A Modern Britain: 1700 to 1850 (4). Examines the major developments in British politics, socioeconomic structure, and culture from 1700–1850. The development of the British nation-state and the fashioning of a national identity. Explores basic questions about British national identity. (VII-B)

118B Modern Britain: 1850 to 1930 (4). Examines the social, economic, and political history of Britain from 1850–1930. Post-industrialism, urbanization, population and economic change, increased political participation by working classes and women, consolidation of the empire and the breakup of the United Kingdom. (VII-B)

118C Modern Britain: 1930 to Present (4). Explores Britain from the Second World War to the resignation of Margaret Thatcher. Examines Britain's devolution from world power to member of the European Community; transition from a manufacturing to service-based economy; changing demographic and racial composition in light of decolonization. (VII-B)

120 France. Emphasis on social, economic, and cultural history of France since the Great Revolution.

120A Early Modern France: 1500–1774 (4). Formerly History 124. (VII-B)

120B The French Revolution and Napoleon: 1774–1815 (4). (VII-B)

120C France in the Nineteenth Century (4). (VII-B)

120D France in the Twentieth Century: 1914 to Present (4). (VII-B)

120E History of Paris (4). The development of Paris from the beginnings through the present, with emphasis on the last three centuries. The city is examined from the political, social, ecological, and architectural points of view as well as through the perspective of urban planning. (VII-B)

122 Germany. Political, social, and economic history from 1815 to the present.

122A Emergence of the German Nation: 1815–1890 (4). (VII-B)

122B Hitler and the Germans (4). Focuses on Hitler's rise to power and Nazi society. Examines Germany's defeat in World War I; the political and cultural experimentation of the 1920s; the causes of Hitler's success; and life in Germany under the Nazis. (VII-B)

122C World War, Cold War, and Reunification: 1939– (4). (VII-B)

123 Spain

123A Medieval Spain: 711–1469 (4). Examines the history of the Iberian Peninsula after the Arab invasion of 711, with emphasis on the gradual territorial and political unification of the Christian monarchies and the social and cultural interaction of Christians, Muslims, and Jews. (VII-B)

123B Imperial Spain: 1469–1808 (4). Overview of Spanish political, social, economic, and cultural history from the reign of Ferdinand and Isabel, to the invasion of Napoleon in 1808. (VII-B)

123C Twentieth-Century Spain: 1898–Present (4). Examination of political, social, and cultural conflict under the parliamentary monarchy and the II Republic; the Spanish Civil War and the popular revolution of 1936; Spanish fascism and the Francoist dictatorship; and the transition to constitutional democracy after 1975. (VII-B)

123D Topics in Spanish History (4). Topics include Spain in the nineteenth century, the Spanish Civil War, and dictatorship and democracy in modern Spain. May be repeated for credit as topics vary. (VII-B)

124 Russia. Political and social developments from traditional Russia to the present Soviet society.

124A Imperial Russia: 1689–1905 (4). (VII-B)

124B Twentieth-Century Russia (4). (VII-B)

126 The World Wars

126A The Era of World War I: 1900–1939 (4). (VII-B)

126B The Era of World War II: 1933–45 (4). (VII-B)

126C The Cold War and After: Europe and the World, 1945–91 (4). (VII-B)

127 European Cultural and Intellectual History. Main currents of Western thought, emphasizing English, French, and German thinkers.

127A Enlightenment Europe (4). (VII-B)

127B Hegel to Nietzsche (4). (VII-B)

127C Freud to Sartre (4). (VII-B)

127D Contemporary European Thought (4)

128 European Women and Gender History

128A Women and Gender in Early Modern Europe: 1400–1700 (4).

Explores what it meant to be a woman in early modern Europe. Students examine women's lives in early modern Europe while developing skills of historical interpretation. Topics include: notions of masculinity and femininity; "proto-feminism"; marriage and sexuality; female piety and witchcraft. (VII-B)

128B Sex and Society in Early Modern Europe (4). Examines the role of sexuality in early modern European society. Explores the emergence of modern notions of sexuality and their connection to European imperialism. Topics include: biological notions of sexual difference and human reproduction; marriage and family; prostitution, lesbian and transvestitism. (VII-B)

128C Topics in the History of Women in Europe (4). May be repeated for credit as topics vary. Formerly History 128. (VII-B)

JEWISH, MUSLIM, MIDDLE EAST, AND AFRICAN HISTORY

130 Jewish History

130A Jewish History, Ancient to Early Modern Times (4). The history of the Jewish people from their origins in the ancient world to the 1700s. Social, religious, and intellectual life of Jewish communities in the Middle East, North Africa, and Europe. (VII-B)

130B Modern Jewish History (4). History of the Jews in Europe, the Middle East, North Africa, and the United States from the early-eighteenth century to recent times. Emancipation, assimilation, religious reform, antisemitism, Zionism, socialism, the Holocaust, and modern Israel are the major themes. (VII-B)

130C Topics in Jewish History (4). May be repeated for credit as topics vary. (VII-B)

131 Topics in Islamic History (4). Examines the evolution of Islam as a religion within the social, political, and economic histories of various Muslim societies throughout its 14 centuries. Introduction to major concepts, practices, and texts of Islam, and key historical events associated with them. (VII-B)

132 Israel and Palestine (4). Origins of Zionism in the nineteenth century, Arab-Jewish conflicts in Palestine, emergence of Palestinian nationalism, the formation of the Israeli nation after 1948, and the development of the Palestinian movement. Focus on Palestinian and Israeli society and culture. Formerly History 177. (VII-B)

133A The Emergence of the Modern Middle East (4). Offers a survey of the history of the Middle East from the nineteenth century to the present time. (VII-B)

133B North Africa Since 1500: Islam and Colonialism (4). Examines the history of the Maghrib (Morocco, Algeria, Tunisia, and Libya) from the time of Ottoman expansion and the Sa'dian and Alawid dynasties in Morocco in the sixteenth and seventeenth centuries. (VII-B)

134 Africa

134A Africa: Societies and Cultures (4). Introduction to the variety of cultures, political organizations, social structures, and artistic expressions created by Africans over a broad time span. The indigenous development of African societies in distinct regions of the continent. Issues, themes, processes for understanding history of Africa. (VII-B)

134B Modern Africa (4). Explores the last 200 years of history in Africa, from the end of the Atlantic slave trade through colonization to independence. (VII-B)

134C Topics in the History of Africa (4). May be repeated for credit as topics vary. (VII-B)

134D Topics in South African History (4). Introduction to important historical events and processes in Southern Africa. Focuses on particular themes and explores how those themes change over time. Topics include: changing ideas about race, the development of class structures, identity formation, the role of gender. (VII-B)

HISTORY OF SCIENCE AND TECHNOLOGY

135 History of Science and Medicine

135A The Scientific Revolution (4). An examination of early modern European science from 1500 to 1700. Includes readings from central figures (Copernicus, Harvey, Bacon, Descartes, et al.); themes include the impact of printing, humanism, patronage, technology, and discussion of the term "revolution" in this context.

135B Science and Religion (4). Historical analysis of two episodes in the interaction between science and religion in the West: Galileo's defense of heliocentrism and Darwin's theory of evolution. Emphasizes historical context for each case and changes in definitions of science, religion, and their relationship.

135C Exploring the Cosmos (4). After briefly considering the invention of astronomy in antiquity and the Copernican revolution, examines the development of solar science; the triumph of the view of the expanding universe; and a medley of themes in post-1945 astrophysics and cosmology.

135D Science and the Environment (4). Science and ideas about ecology, the exploitation of natural resources, and the protection of nature since the Enlightenment.

135E Topics in the History of Science and Technology (4). May be repeated for credit as topics vary.

HISTORY OF MEDICINE AND HEALTH CARE

136 History of Medicine and Health Care

136A The Making of Modern Medicine (4). Examination of medical care in Britain from the 1660 plague to establishment of the National Health Service Act in 1946. Structured around meanings of health and disease, the organization of medicine, and the politics of health care.

136B Race and Medicine (4). Examines racial politics in the development of American medicine from 1870 to 1990s. Racial subordination and the American Medical Association, discrimination in medical education and black medical schools, the National Medical Association, black doctors and war, health care inequities and AIDS.

136C Health Care in the United States Since 1900 (4). Explores the rise of health care since 1900. Themes include the politics of professional authority, the political economy of health care, and the cultural meaning of disease and illness in society.

136D Topics in the History of Medicine and Health Care (4). May be repeated for credit as topics vary.

139 History and Prose Composition (4). Requires at least 4,000 words of assigned composition based upon historical works. History majors are given admission priority. Prerequisites: satisfaction of the lower-division writing requirement; junior standing or consent of instructor. May be repeated for credit as topics vary.

AMERICAN HISTORY

140 The Development of the American Nation. Growth of a distinctively American society out of the colonial heritage, with emphasis on social and economic bases of culture and politics, sectionalism, industrialization, and the United States as a world power.

140A Early America: 1492–1740 (4). Examines the history of the land that became the first 13 states of the United States, from early attempts at exploration and discovery to the economic growth and demographic heterogeneity that marked the white settlements of the early 1700s.

140B Revolutionary America: 1740–1790 (4). An exploration of why 13 continental colonies, whose commercial and cultural connections with Britain far exceed their interaction with one another, resisted imperial reform after 1763 to the point of war in 1775 and independence the following year.

140C Coming of the Civil War (4). Investigates the social, political, economic, cultural, and constitutional changes that transformed antebellum America and culminated in civil war.

140D Civil War and Reconstruction (4). Focuses upon the social, economic, political, cultural, and constitutional changes that transformed the United States during the Civil War era.

140F The United States in the 1890s (4). A social, cultural, political history of U.S. in 1890s. Topics include racial politics of Jim Crow; Spanish-American War and conquest of the Philippines; "New Women" and gendering of modern culture; rise of cities, urban reform, labor resistance to new capitalist order.

140G The Cold War and After (4). Explores topics in gender, race, and class in American history since 1945, considering politics and popular culture, domestic issues, and foreign policy. Topics include McCarthyism and the civil rights, anti-war, and feminist movements. Formerly History 140E.

142 American Social and Economic History

142A California in Modern America (4). California as a case study of national trends and as a unique setting: its specific problems and culture. Major themes include: colonization, immigration, race relations, agricultural development, industrialization, urbanization, working class movements, social conflict, and political reform.

142B Topics in American Social and Economic History (4). May be repeated for credit as topics vary.

144 American Intellectual and Cultural History

144A Early American Cultural and Intellectual History (4). Examination of ideas and culture during the early American period, with emphasis on the relationship of ideas to their social, political contexts. From contact to Puritanism to the Revolutionary era, with attention to constructions of class, race, gender.

144B Nineteenth-Century American Cultural and Intellectual History (4). Topics include religious revivals; antislavery thought; theories of the body; Transcendentalism; feminism and suffrage; the meanings of the Civil War; corporatism; realism; forms of racism and nativism.

144C Twentieth-Century American Cultural and Intellectual History (4). Topics include modernism and anti-modernism; Pragmatism; the Harlem Renaissance; theories of sexuality; mass culture and consumer culture; the rise of social science; Marxism; McCarthyism; the civil rights movement; the New Left; feminism, postmodernism.

144F Utopian Experiments in American History (4). Focus on the cooperative dimension of the American experience; the large number of intentional experiments in community living and alternative lifestyles in the nineteenth and twentieth centuries. Examination of both the ideological foundations of communitarianism and specific historical case studies. Formerly History 142B.

144G Topics in American Cultural and Intellectual History (4). May be repeated for credit as topics vary.

145 American Working-Class History (4). Traces formation of the American working-class and examines its response to the changing structures of economic/political power determined by nineteenth-century industrial capitalism and twentieth-century imperialism. Issues/intersections of race, culture, and gender are examined.

146 Women and Gender Relations in the United States. An examination of changes in gender relations and in the conditions of women's lives from the 1700s on. Emphasis on race and class, cultural images of women and men, sexuality, economic power, and political and legal status.

146D Sex in the U.S. to 1860 (4). Perspectives on sexual behavior in colonial and U.S. history to c. 1860. Mainstream and non-mainstream sexual practices, beliefs, identities. Asks why various ideas of sexual behavior developed and how they related to religious, racial, ethnic, political, cultural belief systems. (VII-A)

146E Gender in Nineteenth-Century America (4). A social and cultural history of women's lives in nineteenth-century America, examining how racial, sexual, class identities were constructed by women themselves and by their surrounding culture. Topics include slavery, anti-slavery movement, domesticity, experience of the Civil War. (VII-A)

146F American Women to 1820 (4). Formerly History 146A. (VII-A)

146G United States Women: 1820–1980 (4). Formerly History 146B. (VII-A)

146H Topics in Women and Gender Relations in the United States (4). May be repeated for credit as topics vary. Formerly History 146C. (VII-A)

148B Topics in Multicultural U.S. History (4). Examines the variety of cultural expressions through which the people who came to inhabit the United States historically signify their collective identities. May be repeated for credit as topics vary. (VII-A)

150 Topics in African American History (4). May be repeated for credit as topics vary. (VII-A)

151 Chicana/Chicano History

151A Chicana/Chicano History: Pre-Colonial to 1900 (4). Examines social history of the southwest region from antiquity to 1900. Discusses major questions, theory and research methods pertinent to Chicanas/Chicanos. Themes include: indigenous empires, conquest, colonialism, social stratification, ideology, marriage, sexuality, industrial capitalism, accommodation and resistance. Same as Chicano/Latino Studies 132A. (VII-A)

151B Chicana/Chicano History: Twentieth Century (4). Examines social history of the Southwest with emphasis on Mexican-origin people. Discusses major questions, theory and research methods pertinent to Chicana/Chicano history. Themes explored include: immigration, xenophobia, class struggle, leadership, generational cohorts, unionization, education, barrioization, ethnicity, patriarchy, sexuality. Same as Chicano/Latino Studies 132B. (VII-A)

151C Latinas in the Twentieth Century U.S. (4). Latinas in the U.S. from 1900 to present, offering a diversity of their cultures, regional histories, sexualities, generations, and classes. Same as Chicano/Latino Studies 135. (VII-A)

152 Topics in Asian-American History (4). Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present. May be repeated for credit as topics vary. (VII-A)

153 American Legal History (4). Introduction to American legal case materials, to legal categories and ways of thinking, and to selected topics in U.S. legal history. Does *not* offer a chronological survey of the development of law in the United States.

154 American Urban History (4). A study of urban communities in the United States, from colonial times to the present. Traces the impact of industrialization and urbanization on social and cultural life and investigates the significance of urban life for U.S. democratic culture.

155 Street Gangs in American History (4). Surveys the history of the street gang (1830–2000) in its three classic urban settings—New York, Chicago, and Los Angeles. Looks at the gang's popular culture, social science, and state policy. (VII-A)

158 History of American Foreign Relations

158A U.S. Foreign Relations Since World War II (4). An examination of relations between the United States and the world since the early twentieth century, with special attention to America's role in successive wars, its growing economic and cultural involvement abroad, and its connection with global problems of justice and development. (VII-B)

158B Imperialism in American History (4). To what extent has the United States (either consciously or unconsciously) dominated, used, and/or exploited other countries and nations in the years since its founding? Examines the causes and effects of American behavior toward less powerful peoples, from seventeenth century encounters to contemporary interventions. (VII-B)

158C America and the Third World (4). Introduction to the mounting problems of the underdeveloped, or "Third" World: population pressure, hunger, exploitation, ethnic struggle, political instability. Attention to the ways in which the industrialized "North" and, particularly, the United States affect and are affected by these difficulties. (VII-B)

LATIN AMERICAN HISTORY

161 Mexico

161A Indian and Colonial Societies in Mexico (4). Examines the history of Colonial Mexico from prehistoric times to the eighteenth century. Focuses on the social, economic, and political evolution of the new Mexican society which resulted from the "meeting" of two cultures. (VII-B)

161B Nineteenth-Century Mexico (4). Examines the history of Mexico in the nineteenth century. Focuses on the social, economic, political, and cultural transformation of Mexico in the 1800s. Same as Chicano/Latino Studies 133A. (VII-B)

161C Twentieth-Century Mexico (4). Examines the history of contemporary Mexico beginning with the Mexican Revolution and concluding with the present administration. Social, economic, and political effects of the Revolution; formation of a "one-party democracy"; economic transformation of the nation; the present crisis. Same as Chicano/Latino Studies 133B. (VII-B)

162 Brazil (4). Overview of social, economic, and political developments since 1500.

163 The World of Coffee (4). History of consumption and production of coffee over the centuries and coffee's cultural, economic, social, political consequences. Coffee's social life as a drug, symbol of hospitality, religious rite, sociability and bourgeois lifestyle, commodity, and source of livelihoods, imperial revenues, corporate profits. (VII-B)

168 Overview of Latin American History

168A Precolumbian Civilizations and European Colonialism (4). An overview of Native American peoples such as the Aztecs, Inca, Maya, and Spanish and Portuguese Conquest and Colonialism (1400–1700). Topics include: new religion, disease, African slavery, exports, gender, relations, and how colonial regimes shaped a new world. (VII-B)

168B Nineteenth-Century Iberian America (4). Examines the history of Iberian America in the nineteenth century. Focuses on Chile, Mexico, and Brazil as areas representative of the trends occurring in the region. Considers the social, economic, political, and cultural transformation of Iberian America in the last century. (VII-B)

168C History of Modern Latin America (4). Explores modern Latin American social, political, and cultural history. The Mexican Revolution; Eva Peron and populism; U.S. foreign policy; women and the Cuban Revolution; liberation theology and civil war in Guatemala; student radicalism; socialism and dictatorship in Chile; the Zapatista rebellion in Chiapas. (VII-B)

169 Topics in Latin American History (4). May be repeated for credit as topics vary. (VII-B)

ASIAN HISTORY

170 East Asia: Traditions and Transformations

170D Premodern East Asia (4). Introduction to the histories of China, Korea, and Japan from the earliest states to about 1600. Topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations. Formerly History 178A. (VII-B)

170E East Asia: 1600–1895 (4). Introduction to China, Korea, and Japan from about 1600 to 1895. Establishment of Qing Chinese, late Choson Korean, and Tokugawa Japanese sociopolitical orders and their characteristics, plus major cultural developments. Responses to Western impact and the rise of Meiji Japan. Formerly History 178B. (VII-B)

170F East Asia Since 1895 (4). Introduction to the turbulent modern histories of China, Korea, and Japan since 1895. An overarching concern is to understand the evolution of modern East Asia and its place for humankind's future. Formerly History 178C. (VII-B)

170G Topics in the History of Asia (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Asia. May be repeated for credit as topics vary. (VII-B)

171 China

171D Chinese History to 1800 (4). A survey of the history of China to 1800. Formerly History 170A. (VII-B)

171E Chinese History: 1800–1949 (4). An examination of Chinese society and thought from the late-eighteenth century to the 1949 revolution. Focuses on the role of intellectuals; popular culture; women in Chinese society; developments in commerce and urban life; rebellion; foreign imperialism. Formerly History 170B. (VII-B)

171F Chinese History: 1949–Present (4). A discussion of major themes in the social, cultural, political, economic and intellectual history of China since the founding of the People's Republic in 1949. Emphases will vary from year to year. Formerly History 170C. (VII-B)

171G Topics in the History of China (4). Topics include the cultural, political, economic, social, intellectual, and religious history of China. May be repeated for credit as topics vary. (VII-B)

172 Japan

172D Age of the Samurai (4). Topics include the simultaneous elaboration of a civilian aristocratic tradition and the military ethos, the conflict between martial and economic values in the context of an expanding economy, and the development of Japan's indigenous religions, art, and literature. Formerly History 171A. (VII-B)

172E Imperial Japan (4). Topics in the rise of modern Japan include the relationship between centralization and imperialism, democracy and fascism, industrialization and feminism in the context of the complex and competing forces that shaped Japan's experience in the modern world. Formerly History 171B. (VII-B)

172F Postwar Japan (4). From the ashes of defeat to economic superpower, from poverty to material consumerism, from the ethic of diligence and fortitude to hedonism. Addresses what these changes have meant for ordinary people, as well as government policy and Japan's international position. Formerly History 171C. (VII-B)

172G Topics in the History of Japan (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Japan. May be repeated for credit as topics vary. (VII-B)

173 Korea

173D Korean History to 1800 (4). A general survey of the history of Korea to 1800. Focuses on internal sociopolitical development, major cultural trends, and foreign relations. Students are introduced to various interpretive approaches in the historiography. Formerly History 172A. (VII-B)

173E Korean History: 1800–1945 (4). An examination of Korean society and culture in tumultuous transition, focusing on some new challenges for the Choson Dynasty and its abortive reform effort, external imperialist pressures, and the Japanese colonial rule. Formerly History 172B. (VII-B)

173F Korean History Since 1945 (4). Topics include the national liberation, origins of conflict between two rival regimes, South Korea's emergence as a major player in the international political economy, some salient characteristics of the North Korean Marxist state, triumph of democracy, and prospect for reunification. Formerly History 172C. (VII-B)

173G Topics in the History of Korea (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Korea. May be repeated for credit as topics vary. (VII-B)

SOUTH AND SOUTHEAST ASIA

174 South Asia

174E Nations and Nationalities of India (4). Examines multiple definitions of nation, nationality, and nationalism. Assesses the seeming "successes" of anti-colonial nationalism, while addressing the seeming "failures" of the "freedom movement" in making of the modern nation-states. (VII-B)

174G Topics in the History of South Asia (4). Topics include the cultural, political, economic, social, intellectual, and religious history of South Asia. May be repeated for credit as topics vary. (VII-B)

175 Southeast Asia

175D Southeast Asia to 1900 (4). Describes the development of indigenous states and societies from earliest times, to the crises they face with growth of European power. Topics include migrations, trading and raiding, religious "crossroads," temple states, the growth of commercial economies, state growth, changing cultural definitions. (VII-B)

175E Twentieth-Century Southeast Asia (4). Issues include legacies of colonialism, rise of nationalism and communism, role of religion in politics, creation of nation-states, development and its dislocations, globalization, changing cultural definitions, genocide and war crimes, human rights, ethnic conflicts, continuing impact of U.S. on region. (VII-B)

175F War in Vietnam (4). A comprehensive view of Vietnamese and American perspectives on the U.S. war in Vietnam, offering an in-depth historical background to Vietnam's internal dynamics, American perceptions of Vietnam, military and political strategies, and the experiences of Vietnamese and Americans directly involved. (VII-B)

175G Topics in the History of Southeast Asia (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Southeast Asia. May be repeated for credit as topics vary. (VII-B)

SPECIAL STUDIES

Topics with particular methodological foci. Content varies; departmental office has quarterly list of topics. May be repeated for credit as topics vary.

180 Special Studies in Social History (4)

181 Special Studies in Economic History (4)

182 Special Studies in Intellectual-Cultural History (4)

183 Special Studies in International History (4)

184 Special Studies in Comparative History (4)

185 Special Studies in Social Theory (4)

HISTORICAL RESEARCH FOR HISTORY MAJORS

190 Colloquium (4). Specialized courses dealing primarily with close reading and analysis of secondary works; required reports and papers (critical essays). Each colloquium reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 15 students. Prerequisites: junior/senior standing and history major, or consent of instructor. May be repeated for credit as topics vary.

192 Research Seminar (4). Specialized courses that require analysis of a historical problem through research in primary sources and the preparation of an original research paper. Each research seminar is offered in a quarter following a History 190 colloquium and is related to the colloquium's subject. Prerequisites: History 190 in the preceding quarter; junior or senior standing; and History major or consent of instructor. May be taken for credit six times as topic varies.

198 Directed Group Study (4). Special topics through directed reading. Paper required. Prerequisite: consent of instructor.

199 Independent Reading (1 to 4). Investigation of special topics through directed reading. Paper required. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE COURSES

In addition to the following courses, graduate students in History might find Humanities 220 (Literary Theory and Its History) and Humanities 270 (Advanced Critical Theory) to be of interest.

HISTORY AND THEORY

200A, B, C History and Theory (4, 4, 4) F, W, S. Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. Completion of History 200A and 200B is required for all History Ph.D. students. History 200C is optional. Same as Humanities 200A, B, C.

202 Proseminar (4). Topical courses devoted to the literature of a broad historical subject, e.g., the absolutist state, the French Revolution, comparative industrialization, women's history. May be repeated for credit as topics vary.

203 First-Year Research Seminar (4). Course devoted to research and writing on questions connected with proseminar topics. Normally required of all entering graduate students. Includes review of the current state of the literature and practical experience in conducting research and writing a research paper. Prerequisite: History 202.

204A-B Second-Year Research Seminar (4-4). Two-quarter sequence required of all Ph.D. students. Normally taken during the second year of the Ph.D. program; not required for M.A. students. Includes review of the current state of the literature and practical experience in conducting research and writing a research paper.

COLLOQUIA

220 The Literature and Interpretations of Early-Modern Europe. Not offered every year.

220A Society and Economy (4)

220B Political History (4)

220C Intellectual and Cultural History (4)

230 The Literature and Interpretations of Modern European History. Not offered every year.

230A Europe: 1789-1848 (4)

230B Europe: 1850-1914 (4)

230C Europe: 1914-1989 (4)

240 The Literature and Interpretations of World History. Not offered every year.

240A Approaches to World History (4)

240B Topics in World History (4)

240C Advanced Research in World History (4)

250 The Literature and Interpretations of Latin American History. Not offered every year.

250A Colonial Period (4)

250B Nineteenth Century (4)

250C Twentieth Century (4)

260 The Literature and Interpretations of American History

260A Seventeenth and Eighteenth Centuries (4)

260B Nineteenth Century (4)

260C Twentieth Century (4)

265 The Literatures and Interpretations of South and Southeast Asian History. Not offered every year.

265A Globalization in South and Southeast Asia (4)

265B Colonialism in South and Southeast Asia (4)

265C Nationalism in South and Southeast Asia (4)

270 The Literature and Interpretations of East Asian History. Not offered every year.

270A Early East Asia (4)

270B China Since 1600 (4)

270C Japan Since 1600 (4)

270D Korea (4)

275 The Literature and Interpretations of Middle Eastern and North African History. Not offered every year.

275A Approaches to Islam in the Middle East/Maghrib (4)

275B Ottoman and Modern Middle East (4)

275C The Maghrib Since 1500 (4)

282 Seminar in Medieval and Early Modern British History. (4) F, W, S. An intercampus seminar in Medieval and Early Modern British history that is taught both at the Huntington Library in San Marino and at UCI. Focuses on the development of thesis statements, thesis chapters, and/or publishable articles. May be repeated for credit.

284A, B, C Seminar in French History (4, 4, 4) F, W, S. The development of French society and culture from the Old Regime to the present. May be used to fulfill the First-Year Research Seminar requirement. Prerequisite for 284C: 284A and 284B. *Not offered every year.*

SPECIAL STUDIES

290 Special Topics (4) F, W, S. Lectures, readings, and discussion on subjects more limited in scope than those included in the year-long colloquium series. May be repeated for credit as topics vary.

291 Directed Reading (4 to 12) F, W, S. Reading courses focused on specialized topics. Prerequisite: consent of instructor.

295 Special Methods (4). Development of particular research skills.

298 Experimental Group Study (4). Open to four or more students. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

299 Dissertation Research (4 to 12) F, W, S. Specifically designed for students researching and writing their dissertations. Prerequisite: consent of instructor; advancement to Ph.D. candidacy.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

UNDERGRADUATE PROGRAM IN HUMANITIES AND ARTS

150 Humanities Instructional Building: (949) 824-8119

Carrie J. Noland, **Co-Director (Humanities)**

James Penrod, **Co-Director (Arts)**

Faculty

Kei Akagi, B.A. International Christian University, Tokyo, *UCI Chancellor's Professor of Music* (history of jazz)

Luis F. Avilés, Ph.D. Brown University, *Associate Professor of Spanish* (Golden Age literature and literary theory)

Stephen Barker, Ph.D. University of Arizona, *Professor of Drama* (post-modern theatre, Beckett, critical theory)

David Brodbeck, Ph.D. University of Pennsylvania, *Department Chair and Professor of Music, and The Robert and Marjorie Rawlins Chair in Music* (history, criticism)

Rae Linda Brown, Ph.D. Yale University, *Associate Professor of Music* (history, American musics)

Juan Bruce-Novoa, Ph.D. University of Colorado, *Professor of Spanish* (Latin American and Chicano literatures)

James Chiampi, Ph.D. Yale University, *Professor of Italian* (Italian Renaissance)

Michael P. Clark, Ph.D. University of California, Irvine, *Vice Provost for Academic Programs and Professor of English* (Colonial American literature, critical theory)

Robert Cohen, D.F.A. Yale University, *Claire Trevor Professor of Drama* (acting, directing, dramatic literature)

Mary Corey, M.A. University of California, Riverside, *Certified Professional Labanotator, Professor of Dance* (dance history, modern dance, notation and reconstruction, dance and digital technology)

Christopher Dobrian, Ph.D. University of California, San Diego, *Associate Professor of Music and Informatics* (electronic music)

Alice Fahs, Ph.D. New York University, *Associate Professor of History* (U.S. intellectual/cultural history)

Nohema Fernández, D.M.A. Stanford University, *Dean of the Claire Trevor School of the Arts, Professor of Music, and Claire Trevor Dean's Endowed Chair* (Latin American musics, piano)

Jennifer Fisher, Ph.D. University of California, Riverside, *Assistant Professor of Dance* (dance history, philosophy, and criticism)

Natalia Freeland, Ph.D. Yale University, *Assistant Professor of English* (Victorian literature, the novel, cultural studies and criticism)

Edward Fowler, Ph.D. University of California, Berkeley, *Department Chair of East Asian Languages and Literatures and Professor of Japanese* (modern Japanese literature, cultural studies, film)

Alexander Gellay, Ph.D. Yale University, *Professor of Comparative Literature* (eighteenth- and nineteenth-century European novel, critical theory, comparative literature)

Bernard Gilmore, D.M.A. Stanford University, *Professor of Music* (composition, theory)

Inderpal Grewal, Ph.D. University of California, Berkeley, *Professor of Women's Studies* (feminist theories of internationalism and transnationalism, cultural studies, British nineteenth-century studies, South Asia and its diasporas)

Gail K. Hart, Ph.D. University of Virginia, *Director, Humanities Core Course and Professor of German* (eighteenth- and nineteenth-century German literature, drama, fictional prose)

James D. Herbert, Ph.D. Yale University, *Department Chair and Professor of Art History* (modern European art, critical theory)

Lamar M. Hill, University of London, *Professor of History* (Tudor-Stuart Britain)

Branden W. Joseph, Ph.D. Harvard University, *Associate Professor of Art History* (modern and contemporary American art and visual studies)

Laura H.-Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (feminist visual cultures)

Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Asian American Studies, English, and Comparative Literature* (Asian American literature, post-colonial literature)

Susan B. Klein, Ph.D. Cornell University, *Director of Religious Studies and Associate Professor of Japanese* (premodern and modern theatre and dance, Japanese religions, feminist critical theory)

Richard W. F. Kroll, Ph.D. University of California, Los Angeles, *Professor of English* (rhetoric, Restoration and eighteenth-century British literature, literary theory)

Anthony Kubiak, Ph.D. University of Wisconsin, Milwaukee, *Department Vice Chair and Professor of Drama* (American and modern drama, modern poetry, critical theory, philosophy)

Meredith Lee, Ph.D. Yale University, *Professor Emerita of German* (lyric poetry, eighteenth-century literature, Goethe, music and literature)

Daphne Lei, Ph.D. Tufts University, *Assistant Professor of Drama* (Asian theatre, Asian American theatre, intercultural theatre, gender theory, performance theory)

Simon Leung, B.A. University of California, Los Angeles, *Assistant Professor of Studio Art* (queer theories, modernism and post-modern theories)

Catherine Lord, M.F.A. State University of New York, Buffalo, *Professor of Studio Art* (critical theory, feminism)

Julia Reinhard Lupton, Ph.D. Yale University, *Professor of English and Education* (Renaissance literature, literature and psychology)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History* (modern Russian and Soviet history)

Daniel Martinez, B.F.A. California Institute of the Arts, *Professor of Studio Art* (public art, installation, performance)

David McDonald, Ph.D. Stanford University, *Professor Emeritus of Drama* (dramatic theory, Irish drama, theatre history, and playwriting)

James McMichael, Ph.D. Stanford University, *Director of Poetry, Programs in Writing, and Professor of English and Creative Writing* (contemporary poetry, poetry writing, prosody, Joyce)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Professor of Asian American Studies* (independent film and video, theory and methods, and popular culture)

Yong Soon Min, M.F.A. University of California, Berkeley, *Department Chair and Associate Professor of Studio Art* (diaspora and post-colonial theories, race and representation)

Ian Munro, Ph.D. Harvard University, *Associate Professor of Drama* (European drama and performance, early modern popular culture, theatrical performance of wit)

Margaret Murata, Ph.D. University of Chicago, *Professor of Music* (history, analysis, criticism)

Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish* (eighteenth- through twentieth-century Spanish literature, film and visual arts, aesthetics and contemporary cultures)

Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature* (sixteenth- and seventeenth-century German literature, contemporary theory and criticism, feminism)

Robert Nideffer, M.F.A., Ph.D. University of California, Santa Barbara, *Associate Professor of Studio Art and Informatics* (interface theory and design, technology and culture, contemporary social theory)

Carrie J. Noland, Ph.D. Harvard University, *Co-Director of the Major in Humanities and Arts and Associate Professor of French* (twentieth-century poetry, literature of the avant-garde, and performance studies)

Margot Norris, Ph.D. State University of New York, Buffalo, *Professor of English and Comparative Literature* (modern British literature)

Simon Penny, Graduate Diploma in Sculpture, Sydney College of the Arts, New South Wales (Australia), *Professor of Electrical Engineering and Computer Science, Studio Art, and Informatics* (robotic sculpture, interactive environments, electronic media, art practice history, and critical theory)

James Penrod, M.F.A. University of California, Irvine; C.M.A. Laban Institute of Movement Studies, *Associate Dean of the Claire Trevor School of the Arts, Co-Director of the Arts and Humanities Major, and Professor Emeritus of Dance* (ballet, modern, dance notation, choreography, movement analysis)

Janelle Reinelt, Ph.D. Stanford University, *Professor of Drama* (political theory and performance)

Bryan Reynolds, Ph.D. Harvard University, *UCI Chancellor's Fellow, Professor of Drama, and Head of Doctoral Studies in Drama* (Shakespeare, Renaissance drama, critical theory, feminist theory, performance theory, cultural studies)

Jens Rieckmann, Ph.D. Harvard University, *Professor Emeritus of German* (twentieth-century literature, fin-de-siècle Austria, Hofmannsthal, Thomas Mann)

Nancy Lee Ruyter, Ph.D. Claremont Graduate School, *Professor of Dance* (dance history, research methods)

Connie Samaras, M.F.A. Eastern Michigan University, *Professor of Studio Art* (photography, media and film criticism, gender studies, culture and technology)

Martin Schwab, Ph.D. University of Bielefeld, *Professor of Philosophy and Comparative Literature* (philosophy, aesthetics, comparative literature)

- Sally A. Stein, Ph.D. Yale University, *Associate Professor of Art History* (American art, history of photography, feminist theory)
- James Steintrager, Ph.D. Columbia University, *Associate Professor of English* (eighteenth-century Associate, German, and English literature and aesthetics)
- Dana F. Sutton, Ph.D. University of Wisconsin, *Professor Emeritus of Classics* (Greek and Latin drama, Greek poetry, Anglo-Latin literature)
- Alan Terriciano, M.A. Eastman School of Music, *Department Chair and Professor of Dance* (musical resources)
- David Trend, Ph.D. School of Education, Miami University, *Professor of Studio Art* (visual studies)
- Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Assistant Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)
- Hu Ying, Ph.D. Princeton University, *Associate Professor of Chinese* (narrative literature, translation theory, feminist theory)
- Bruce Yonemoto, M.F.A. Otis Art Institute, *Professor of Studio Art* (video, multimedia, film theory)

The major in Humanities and Arts provides students with a broad exposure to a range of disciplinary and methodological opportunities in the Humanities and Arts. It insists on the productive intersection of these two fields as the focus of each student's program. Students improve their critical and historical sophistication while learning about the process of performance and creative work, a combination that equips them to participate more effectively in a society that increasingly joins critique and creation just as closely as it fuses image and information.

Humanities and Arts students investigate the symbolic dimension of human behavior and identity, an interest shared by many critics and artists alike. Often, this interest is expressed in the context of interdisciplinary programs designed to facilitate contact among faculty and students from a wide range of different academic disciplines. This major's focus on the connection between practice and analysis distinguishes it from the broader and more diverse scope of more general interdisciplinary programs. The scholarly work of many UCI faculty in the Humanities and Arts lies at an intersection between the two academic units, and the major translates this intellectual and creative activity into a coherent curriculum and projects current forms of scholarship and artistic practice into the classroom.

CAREER OPPORTUNITIES

Graduates of this program will be very attractive to teacher-training programs. There is also a steadily growing market in private industry for students whose training combines skills sharpened by both the Humanities and Arts. Business demands graduates with strong writing and analytic skills, talents stressed in the Humanities. They also desire people with creativity and visual skills who have experience putting their original ideas into practice, something emphasized in the Arts. Graduates will have special skills that will enable them to work in professional fields directly allied with the Arts, including museum work, art foundations, art criticism, journalism, theatre, and the entertainment industry.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

Application Process for the Humanities and Arts Major

New students are not admitted directly to the Humanities and Arts major. Continuing students apply to change their major to Humanities and Arts no earlier than the fall quarter of their sophomore year. Complete information about changing majors to Humanities and Arts is available at http://www.due.uci.edu/Change_of_Major.html. Students must submit a transcript and meet the change-of-major criteria for each of the two departments they propose to combine. In addition, a program of study, approved by the designated faculty member in the Claire Trevor School of the Arts and in the School

of Humanities, is required for admission to Humanities and Arts. Students are strongly encouraged to consult with the Humanities Student Affairs Office early in their decision to apply to Humanities and Arts.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Requirements for the Major

Humanities 1A-B-C; one lower-division survey in a specialization in the Arts, chosen from Dance 90A-B-C, Drama 40A, B, C, Music 14A-B-C, Studio Art 9A, B, C; six units of "studio courses" in Dance, Drama, or Studio Art or six units of "ensemble courses" in Music; Humanities and Arts 100, 101; 16 additional units of upper-division Humanities courses and 16 additional units of upper-division Arts courses focusing on a specific theme, region, or period, chosen with the approval of the Humanities and Arts faculty advisors. (Students must have their proposed program of study approved by their advisors each year.)

It is expected that students will choose their courses from one major in the Humanities and one major in the Arts. Students with well-developed interests can shape their curriculum more precisely to their needs.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Courses in Humanities and Arts

100 The Arts in Theory and Practice (4). Writing seminar explores writings on art from different times and cultures. How have artists and critics in different cultural contexts tried to explain the principles and theories that guide their work? How can students use their concepts to assess art works? Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Arts and Humanities 100.

101 Topics in Arts and Humanities (4). This interdisciplinary course examines themes relevant to both the Arts and the Humanities. May be repeated for credit as topics vary. Same as Arts and Humanities 100.

SPECIAL PROGRAMS

Undergraduate Major in Humanities

The interdisciplinary major in Humanities is one of the many options available to a student who wants to select a major in the School of Humanities. As such, the major in Humanities is on a par with the major in Spanish, the major in Classics, the major in Philosophy, and other majors in the School. The major in Humanities accommodates students who want to organize their undergraduate education around a humanistic perspective on a topic, a field, or a problem which is interdisciplinary in scope (e.g., Literature and Politics in Twentieth-Century America; The Problem of Community; Social and Religious Thought in the Age of the Reformation; Italian Society and Culture). The student enters the program at the end of the sophomore year and, in consultation with the Humanities Major Committee, devises an individually tailored set of "major requirements," not all of which need be offered in the School of Humanities. The Committee will assign an advisor on the basis of the student's own preference, if possible. At the end of the senior year the student will prepare, under the advisor's supervision, a long paper (40–50 pages) in the area of the special major. This requirement is satisfied by taking Humanities 199. A student majoring in Humanities must also meet the regular School,

UCI, and University requirements for graduation. Inquiries by third-quarter sophomores should be addressed to the Senior Academic Counselor in the School's Office of Undergraduate Study.

Residence Requirement: At least five upper-division courses in Humanities required for the major must be completed successfully at UCI.

Minor in Humanities and Law

150 Humanities Instructional Building; (949) 824-8119
Martin Schwab, **Director**

Participating Faculty

Ermanno Bencivenga, *Professor of Philosophy*
Yong Chen, *Associate Professor of History and Asian American Studies*
James B. Given, *Professor of History*
Gail K. Hart, Ph.D. University of Virginia, *Director, Humanities Core Course and Professor of German*
Lamar M. Hill, *Professor of History*
Bonnie Kent, *Associate Professor of Philosophy*
Richard W. F. Kroll, *Professor of English*
Steven Mailloux, *UCI Chancellor's Professor of Rhetoric*
Alejandro Morales, *Professor of Spanish and Chicano/Latino Studies*
Martin Schwab, *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature*
Victoria Silver, *Associate Professor of English*
Preston Kyle Stanford, *Associate Professor of Logic and Philosophy of Science*
Brook Thomas, *UCI Chancellor's Professor of English*

The minor in Humanities and Law is based on courses in the humanities that UCI graduates have found to be useful in developing skills that prepare them for law-related careers. One set of courses develops skills in critical reading, writing, and analysis that are necessary in dealing with legal issues. Another set presents theoretical and analytical perspectives on ethical, political, and social issues relevant to the law. A final set focuses on specific legal issues from a humanistic perspective. Lower-division requirements primarily develop foundational skills in the first set, whereas upper-division requirements build on these skills by addressing the concerns from the other sets. The minor does not include how-to courses on particular legal practices.

Requirements for the Minor

Lower-Division: Philosophy 29 or Classics 75; either one of the following four-course combinations: Humanities 1A-B-C (or the Humanities Core substitution) and one course from Philosophy 4, 5, or 9 or Philosophy 1, 4, and either 5 or 9, plus one course from Philosophy 10, 11, 12, 13, or 9 (if not taken above).

Upper-Division: Six courses from among a list of quarterly approved courses, at least one each from philosophy, history, and literature or classics. Consult the School of Humanities Web site (<http://www.humanities.uci.edu>) or an academic counselor for currently approved courses.

Students considering a career in law are strongly encouraged to take advantage of other law-related courses offered across the campus and of extracurricular activities such as the Pre-Law Society.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Asian Studies

5285 Social Science Plaza B; (949) 824-7521
Dorothy J. Solinger, **Co-Director**

259 Murray F. Krieger Hall; (949) 824-3111
Anne Walthall, **Co-Director**

Participating Faculty

Tom Boellstorff, Ph.D. Stanford University, *Assistant Professor of Anthropology* (sexuality, postcoloniality, HIV/AIDS, mass media and popular culture, language and culture, Indonesia, Southeast Asia)
Vinayak Chaturvedi, Ph.D. University of Cambridge, *Assistant Professor of History* (South Asia, postcolonial studies)
Chuansheng Chen, Ph.D. University of Michigan, *Professor of Social Ecology and Education* (cross-cultural psychology, socialization of achievement, adolescent development)
Chungmoo Choi, Ph.D. Indiana University, *Associate Professor of Korean Culture* (modern Korea, post-colonial and colonial discourse, popular culture, anthropology)
Edward Fowler, Ph.D. University of California, Berkeley, *Department Chair of East Asian Languages and Literatures and Professor of Japanese* (modern Japanese literature, cultural studies, film)
James Fujii, Ph.D. University of Chicago, *Associate Professor of Japanese and Comparative Literature* (modern Japanese literature; critical theory and cultural studies)
Michael A. Fuller, Ph.D. Yale University, *Associate Professor of Chinese* (Chinese poetry and poetics, the cultural and intellectual contexts for poetry, aesthetic theory, linguistic issues in classical Chinese)
Susan Greenhalgh, Ph.D. Columbia University, *Professor of Anthropology* (political economy, transnational studies, feminism/gender, politics of reproduction, critical demography, disciplinarity, China, Taiwan, Pacific Rim)
Judy C. Ho, Ph.D. Yale University, *Associate Professor of Art History* (Chinese art, archaeology, common religion, Buddhist art)
Hu Ying, Ph.D. Princeton University, *Associate Professor of Chinese* (narrative literature, translation theory, feminist theory)
Martin W. Huang, Ph.D. Washington University, *Professor of Chinese* (narrative theories and traditional Chinese fiction)
Kyung Hyun Kim, Ph.D. University of Southern California, *Associate Professor of Korean Culture* (East Asian China, modern Korea, cultural theory)
Susan B. Klein, Ph.D. Cornell University, *Director of Religious Studies and Associate Professor of Japanese* (premodern and modern theater and dance, Japanese religions, feminist critical theory)
Karen Leonard, Ph.D. University of Wisconsin, *Co-Director of the Center for Asian Studies and Professor of Anthropology* (social history of India, caste, ethnicity and gender, Asian-Americans in the United States)
Eugene Y. Park, Ph.D. Harvard University, *Assistant Professor of History* (Korea)
Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History and of East Asian Languages and Literatures* (modern Chinese)
Kamal Sadiq, Ph.D. University of Chicago, *Assistant Professor of Political Science* (comparative politics, immigration in developing countries, India and South East Asia, Asian security)
David A. Smith, Ph.D. University of North Carolina, Chapel Hill, *Professor of Sociology and Social Ecology* (urbanization, comparative historical sociology, political sociology, world-system analysis)
Dorothy J. Solinger, Ph.D. Stanford University, *Co-Director of the Center for Asian Studies, Co-Director of the Minor in Asian Studies, and Professor of Political Science* (Chinese domestic politics and political economy, comparative politics)
Yang Su, M.A. The Catholic University of America, *Assistant Professor of Sociology* (social movements and collective action, political sociology, China's political transition)
Robert Uriu, Ph.D. Columbia University, *Associate Professor of Political Science* (international relations, international political economy, Japanese political economy)
Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies and Professor of History and of East Asian Languages and Literatures* (early modern and modern Japan)
Wang Feng, Ph.D. University of Michigan, *Associate Professor of Sociology* (demography, social change, economy and society)
Charles J. Wheeler, Ph.D. Yale University, *Assistant Professor of History* (Southeast Asia, Vietnam, Chinese overseas, cross-cultural trade)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History* (Modern Japanese art, Asian American art, East/West discourses in modern visual culture)

Mei Zhan, Ph.D. Stanford University, *Assistant Professor of Anthropology* (medical anthropology, cultural and social studies of science, globalization, transnationalism, gender, China, the United States)

The countries and cultures of Asia are significant participants in the world community. They present compellingly different models for social organization, historical development, and cultural commitments. The many countries of this large and complex region provide challenges and opportunities whether one plans to be a scholar, a business person, or a diplomat. The minor in Asian Studies draws upon the expertise of faculty throughout UCI to create opportunities for students to explore Asian topics in a variety of fields, to develop advanced language skills, and to acquire a broader perspective as they apply the disciplinary training of their major field to effective and informed studies of Asian subjects. The minor is open to all UCI students.

Requirements for the Minor

Students choose one country and language of specialization. At the present, due to language limitations at UCI, the Asian Studies minor can focus only on China, Japan, or Korea.

Requirements for the minor are met by taking eight courses (of which no more than four may be lower-division) as specified below:

- A. One course selected from History 170D, 170E, 170F (Premodern East Asia, East Asia 1600–1895, East Asia Since 1895). Students may petition to substitute other History courses that focus on Asia.
- B. Three quarters of course work in one Asian language of specialization beyond the first-year level. Approved courses are:
 1. Second-, third- or fourth-year language: Chinese 2A-B-C, 3A-B-C, 101A, B, C; Japanese 2A-B-C, 3A-B-C, 101A, B, C; Korean 2A-B-C, 3A-B-C, 101A, B, C; other sequences in Asian languages as available. NOTE: These courses require placement examinations given by the Department of East Asian Languages and Literatures. Students who, for example, place out of Chinese 2B would then take Chinese 2C, 3A-B to meet the requirement.
 2. Classical Chinese (Chinese 100A-B-C), or Classical Japanese (100A-B) plus a third quarter of Japanese language study.
 3. Literature courses taught in the original language: Chinese 115, Japanese 115, Korean 115, or graduate seminars. NOTE: These courses have a prerequisite of completion of the fourth-year language sequence or its equivalent.
- C. Four additional courses selected from an approved list available in the Center for Asian Studies and on the World Wide Web at <http://www.humanities.uci.edu/cas/minor.htm#2>.
 1. At least two of these courses must be taken in one (or more) department(s) other than the student's major department.
 2. The courses must cover at least two different Asian countries, one of which is the country of language specialization.
 3. No more than two of the courses may be lower-division.

NOTE: A maximum overlap of two courses is permitted between this minor and a student's major.

Residence Requirement for the Minor: Four upper-division (or graduate) courses must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Representative Courses. The following courses are representative of those appearing on the approved list: Anthropology 135H (Religion in South Asia), 138P (Music of Asia), 163K (Korean Society and Culture); Art History 42A, B, C (History of Asian Art), 150 (Studies in Asian Art), 152 (Studies in Chinese Art and Religion), 153 (Studies in Early Chinese Painting), 154 (Studies in Later Chinese Painting), 159 (Japanese Buddhist Art), 161 (Studies in Early Japanese Painting), 162A, B, C (Later Japanese Art and Design); Chinese 100A-B-C (Classical Chinese), 115 (Chinese Literature: Advanced Texts), 180 (Topics in Chinese Literature); East Asian Languages and Literatures 55 (Introduction to East Asian Cultures), 110 (Topics in Chinese Literature and Society), 113 (Linguistic Structure of Chinese), 117 (Topics in East Asian Philosophy), 120 (Topics in Japanese Literature and Society), 123 (Linguistic Structure of Japanese), 130 (Korean Society and Culture), 133 (Linguistic Structure of Korean), 150 (Topics in East Asian Literature in Translation), 160 (East Asian Cinema); History 171D, E, F, G (Chinese History), 172D, E, F, G (Japanese History), and 173D, E, F, G (Korean History); Japanese 100A-B-C (Classical Japanese), 115 (Japanese Literature: Advanced Texts), 180 (Topics in Japanese Literature); Korean 115 (Korean Literature: Advanced Texts), 180 (Topics in Korean Literature); Linguistics 165A (Linguistic Structure of Chinese), 165B (Linguistic Structure of Japanese), 165C (Linguistic Structure of Korean); Political Science 142C (International Relations of Japan), 151A (East Asian Politics), 151B (Introduction to Chinese Politics), 151C (Chinese Politics: Policy, Leadership, and Change), 151D (Japanese Politics: State and Economy in Modern Japan), 151F (Korean Politics and Society); Psychology and Social Behavior P124D (Human Development in Cross-Cultural Perspective); Sociology 77 (Social Change in East Asia), 175A (Korean Society and Culture), 175B (Comparative Societies: China), 175C (Japanese Society).

Interdisciplinary Minor in Latin American Studies

300 Murray Krieger Hall; (949) 824-4767
Jaime E. Rodríguez, **Director**

Faculty

Ana María Amár Sánchez, *Associate Professor of Spanish*
Stanley Bailey, *Assistant Professor of Sociology*
Frank D. Bean, *Professor of Sociology*
Carolyn P. Boyd, *Department Chair and Professor of History*
Susan K. Brown, *Assistant Professor of Sociology*
Juan Bruce-Novoa, *Professor of Spanish*
Alison Brysk, *Professor of Political Science*
Teresa Caldeira, *Associate Professor of Anthropology*
Frank Cancian, *Professor Emeritus of Anthropology*
Leo Chávez, *Director of Chicano/Latino Studies and Professor of Anthropology*
Raúl Fernández, *Professor of Chicano/Latino Studies and Social Sciences*
Ana Paula Ferreira, *Professor of Portuguese and Comparative Literature*
Robert Garfias, *Professor of Anthropology*
Lucía Guerra-Cunningham, *Professor of Spanish*
Ivette N. Hernández-Torres, *Associate Professor of Spanish*
Helen Ingram, *Professor of Social Ecology and Political Science, and Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation*
Winston James, *Professor of History*
Adriana M. Johnson, *Assistant Professor of Comparative Literature*
José Rodrigo Lazo, *Assistant Professor of English*
Horacio Legrás, *Assistant Professor of Spanish*
William M. Maurer, *Associate Professor of Anthropology*
Seymour Menton, *Research Professor of Spanish and Portuguese*
J. Michelle Molina, *Assistant Professor of History*
Michael J. Montoya, *Assistant Professor of Anthropology and Chicano/Latino Studies*
Alejandro Morales, *Professor of Spanish and Chicano/Latino Studies*
Rachel O'Toole, *Assistant Professor of History*
Jaime E. Rodríguez, *Director of Latin American Studies and Professor of History*

John Carlos Rowe, *Professor Emeritus of Comparative Literature*
 Vicki L. Ruiz, *Professor of Chicano/Latino Studies and History*
 Rubén Rumbaut, *Professor of Sociology*
 Nancy Lee Ruyter, *Professor of Dance*
 Armin Schwegler, *Professor of Spanish*
 Patricia Seed, *Professor of History*
 Jacobo Sefamí, *Acting Department Chair of Spanish and Portuguese and Professor of Spanish*
 Caesar D. Sereseres, *Associate Dean for Undergraduate Studies, School of Social Sciences, and Associate Professor of Political Science*
 Etel Solingen, *Professor of Political Science*
 Luis Suárez-Villa, *Professor of Social Ecology*
 Heidi Tinsman, *UCI Chancellor's Fellow and Associate Professor of History*
 Steven C. Topik, *Professor of History*
 Luis P. Villarreal, *Director of the Center for Virus Research and Professor of Molecular Biology and Biochemistry and of Virology*
 Roberto Villaverde, *Professor Emeritus of Civil and Environmental Engineering*
 Juan Villegas, *Research Professor of Spanish*
 Douglas R. White, *Professor of Anthropology*

The minor in Latin American Studies is an interdisciplinary curriculum designed to provide for an awareness, knowledge, and appreciation of Latin American issues in the areas of language, history, culture, literary studies, sociology, anthropology, political science, social ecology, health, folk medicine, and creative (art, dance, drama, music) accomplishments. The minor is open to all UCI students.

Requirements for the Minor

Spanish 2A-B-C (Intermediate Spanish) or Portuguese 120A, B, C (may not overlap with other minor requirements), or demonstrated equivalent knowledge of Spanish or Portuguese.

Humanities 100 (Latin America and the Caribbean).

One course in Latin American literature (Spanish-American or Luso-Brazilian) selected from: Comparative Literature CL 103 (when topic is on Latin American literature and history); Spanish 100C (Introduction to Latin American Literature: Pre-Hispanic to Nineteenth Century), 100D (Introduction to Latin American Literature: Nineteenth and Twentieth Centuries), 130A (Latin American Colonial Literature), 130B (Latin American Literature of the Nineteenth Century), 130C (Latin American Literature of the Twentieth Century), 150 (Literature in Translation), 160 (Topics in Luso-Hispanic Film Studies, when topic is on Latin America), 186 (Selected Topics in Latin American Literature and Culture); Portuguese 120A, B, C (Introduction to Portuguese and Brazilian Literature), 121 (Topics in Luso-Brazilian Literature), 190 (Individual Studies).

One course in Latin American history selected from: History 161A (Indian and Colonial Societies in Mexico), 161B (Nineteenth-Century Mexico), 161C (Twentieth-Century Mexico), 162 (Brazil), 166 (United States–Latin America Relations), 168A (Precolumbian Civilizations and European Colonialism), 168B (Nineteenth-Century Iberian America), 168C (History of Modern Latin America), 169 (Topics in Latin American History), 190 (Colloquium, when topic is on Latin America).

One course in Latin American social sciences selected from: Anthropology 125A (Economic Anthropology), 125X (Immigration in Comparative Perspective), 162A (Peoples and Cultures of Latin America); Political Science 145A (Central America and U.S. Policy), 153A (Latin American Politics), 153D (Mexican Politics); Social Science 172F (Latin American Culture I).

One course in Chicano studies selected from: Chicano/Latino Studies 111A (Critical Issues in Chicano Studies); Environmental Analysis and Design E143U (Social Ecology of the Borderlands); Political Science 126A (Mexican-Americans and Politics); Spanish 100E (Introduction to Chicano and U.S. Latino Literature), 110C

(U.S. Latino Cultures), 140A, B (Chicano Literature), 142 (Chicano Culture), 186 (Selected Topics in Latin American Literature and Culture, when topic is on Chicano literature).

Four courses in Latin American studies selected from: any of the courses listed above in the literature, history, and social sciences requirements; Spanish 110A (Peninsular Cultures, when topic is on Latin America), 110B (Latin American Cultures); Portuguese 122 (Topics in Luso-Afro-Brazilian Culture); Anthropology 121J (Urban Anthropology, when the topic is on Latin American countries); Biological Sciences 199A-B-C (Independent Study in Biological Sciences Research, when topic is medicinal biology and herbs in Mexico).

With the approval of the director, other relevant courses also may satisfy the requirements for the minor.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Additional Interdisciplinary Minors

Information about the **minor in Conflict Resolution** is available in the School of Social Sciences section. This minor provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels.

Information about the minors noted below is available in the Interdisciplinary Studies section of the *Catalogue*.

The minor in Chicano/Latino Studies is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, film, drama, music) accomplishments in the Chicano/Latino communities.

The minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

The minor in the History and Philosophy of Science explores how science is actually done and how it has influenced history, and is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences.

The minor in Native American Studies focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis.

Concentration in Medieval Studies

174 Murray Krieger Hall; (949) 824-5441
 Linda M. Georgianna, **Coordinator**

The concentration in Medieval Studies allows undergraduate students in the Schools of Humanities and the Arts to augment their major by completing a coherent program of courses in the area of medieval studies. The concentration is available to students in any major offered by the Schools and is particularly well-suited to majors in English, Comparative Literature, European Studies, History, Philosophy, and the Arts.

Students in the concentration must complete at least two quarters of Humanities 110, the Core Course in Medieval Studies. These courses are interdisciplinary, examinations of such topics as Medieval Cities, The Dark Ages, Medieval Liturgy and Theater,

Medieval Women, and The Plague. In addition, students must complete at least four additional courses in medieval studies selected from an approved quarterly list. One of these four courses may be satisfied by completing a senior essay in some area of medieval studies.

3-2 Program with The Paul Merage School of Business

Outstanding students who are interested in a career in management may wish to apply for entry into The Paul Merage School of Business' 3-2 Program. Students normally apply for this program early in their junior year. See The Paul Merage School of Business section for additional information.

Academic English/English as a Second Language Program

200 Humanities Instructional Building; (949) 824-6781

Robin Scarella, Ph.D. University of Southern California, *Director of the Academic English/English as a Second Language Program and Professor of Humanities and Education* (linguistics, language development emphasis)

Humanities 20A-B-C-D through 29 are for students who have been admitted to UCI and whose scores on the Academic English/ESL Placement Test indicate the need for additional work in Academic English/English as a second language. Students may receive up to 12 baccalaureate credits for AE/ESL course work. Students may receive workload credit for courses taken beyond this 12-unit limit but will not receive additional credits applicable to the bachelor's degree.

Humanities 20A-B-C-D Essentials of Academic Writing (4-4-4-4). Grammar, sentence structure, paragraph and essay organization of formal written English. Pass/Not Pass only. Corequisite: Humanities 22A, if indicated by results of the AE/ESL Placement Test. Prerequisite: AE/ESL Placement Test.

Humanities 21A ESL Speaking and Listening (2). Basic listening and speaking skills in five fundamental areas: pronunciation, lecture comprehension and discussion, academic oral reporting, informal interviewing, and non-verbal communication. Pass/Not Pass only. Primarily for graduate students.

Humanities 21B ESL Speaking and Listening (2). Further development of listening and speaking skills: oral reporting, panel presentation, functional/situational dialogue, and public argumentation and debate. Primarily for graduate students. Pass/Not Pass only. Prerequisite: Humanities 21A or consent of instructor.

Humanities 22A Essentials of Academic English Reading and Vocabulary (2). Intensive reading exercises with occasional practice in extensive reading, focusing on comprehension, development of vocabulary, syntax, rhetorical features, reading strategies, and study skills. Pass/Not Pass only. Corequisite: concurrent enrollment with Humanities 20A-B-C-D if indicated by results of AE/ESL Placement Test. Prerequisite: AE/ESL Placement Test.

Humanities 22B ESL Reading and Vocabulary (2). Extensive reading and discussion with emphasis on journal articles, textbook chapters, notetaking, and the interpretation of charts, diagrams, tables, and figures. Primarily for graduate students. Pass/Not Pass only. Prerequisite: consent of instructor.

Humanities 29 Special Topics in ESL (1 to 2). Directed and individualized work in English as a second language not covered in the Humanities 20, 21, 22 sequence. Pass/Not Pass only. Prerequisite: consent of AE/ESL Director.

Humanities 139 Advanced Academic Writing Across the Curriculum (4). Designed for transfer students who speak English and another or other languages at home and who experienced English language difficulties in a college composition course. Focuses on developing academic reading and writing skills including essay content and organization, vocabulary, grammar instruction. Academic content also covered. Prerequisite: satisfactory completion of the lower-division writing requirement.

Courses in Humanities

LOWER-DIVISION

The following set of courses has no necessary relation to the undergraduate interdisciplinary major in Humanities. Most of the courses are open to any UCI student. Humanities 1A-B-C is required for the major in Humanities, as it is a requirement of any student majoring in the School of Humanities. Also, Humanities 199 is required of any undergraduate in the School who is approved to complete an interdisciplinary major in Humanities.

1A-B-C The Humanities Core Course (8-8-8) F, W, S. This course is restricted to students who are beginning their first year of college-level work. Each year it deals with problems of concern to the humanistic disciplines including interdisciplinary perspectives on major themes in history, literature, and philosophy. Focuses on major texts and works of art from a range of different cultural traditions. A writing program is integral to the course and counts for half the grade each quarter. Students are taught to think, speak, and write clearly about the issues raised in the texts and addressed in lectures. Students held for the UC Entry Level Writing requirement will earn an additional two units of workload credit, and *must* take the course for a letter grade. 1A is prerequisite to 1B, and 1B is prerequisite to 1C. (1A-B-C: I, IV; 1C: VII-A)

3A, B, C Humanities Interdisciplinary Course. Designed for non-Humanities majors who wish to learn about the nature of humanistic inquiry from a variety of disciplinary perspectives. Offered in year-long series united by a theme (e.g., "Inventing the Americas," "Truth and Skepticism"). Each quarter of each series takes a different disciplinary approach (listed below) to the theme. The order of the disciplinary rubrics (A, B, and C) may vary according to the specific theme. Students must take one each of A, B, and C to complete the series. Additionally, they are strongly encouraged to complete the series within one thematic offering, and ideally in the order in which the rubrics are offered for that theme. Humanities 3A, 3B, 3C and Humanities H3A, H3B, H3C may not both be taken for credit. *Not offered 2006-07.*

3A Representation, Verbal and Visual (4). Explores the various devices that texts and images employ manipulating their own internal structures and making reference to things outside themselves to form or reshape meaning in the world. (IV)

3B Confronting the Past (4). Concerns itself with the various techniques that scholars have developed to retrieve events and ways of life from the past, as well as the problems encountered evaluating those reconstructions and their implications for the present. (IV)

3C Philosophy, Rhetoric, Belief (4). Examines the social and cultural processes, such as rhetorical persuasion and religious faith, through which ideas transmogrify from mere thought to firm conviction. It asks the question: what is required to make something "true" or at least to make it appear as such? (IV)

H3A, B, C Honors Humanities Interdisciplinary Course (4, 4, 4). For non-Humanities majors in the Campuswide Honors Program. Same description as Humanities 3A, B, C. Humanities 3A, 3B, 3C and Humanities H3A, H3B, H3C may not both be taken for credit. (IV)

UPPER-DIVISION

100 Latin America and the Caribbean (4). This foundational course in Latin American and Caribbean studies begins with discussions of the social, cultural, economic, and political process tracing the events from Pre-Conquest to present which have circumscribed the insertion of this region into the world economy. (VII-B)

101A-B European Studies Core I, II (4-4). Introduces students to multidisciplinary approaches to important themes in European society, culture, literature, art, and politics, encouraging students to see points of intersection among disciplines. Possible themes: Subjects, Citizens, and Representation; Europe in the World; European Revolutions in Art and Society. **101A:** Early modern Europe (about 1500-1750); **101B:** Modern Europe (1750-present). Prerequisite: satisfactory completion of the lower-division writing requirement.

103A-B Global Cultures I, II (4-4). Introduction to the processes by which economies, cultural practices, national entities, groups, individuals, and personal identities have undergone globalization. **103A:** General background and methodological tools for understanding problems and processes of globalization. **103B:** Explores how globalization has manifested itself in specific topics, periods, or societies. (VII-B)

110 Core Course in Medieval Studies (4). A seminar in selected topics in medieval studies. Interdisciplinary, ordinarily team-taught. Open to all students, and designed especially for those electing the concentration in Medieval Studies. May be taken for credit four times as topic varies. Same as Comparative Literature CL 104 and Art History 114 when topic is appropriate.

H120 Honors Proseminar (4) F, W, S. Interdisciplinary Honors courses organized each year around a single topic or problem designed to compare and contrast modes of analysis in history, literary studies, and philosophy. Required of participants in the Humanities Honors Program. Prerequisites: consent of instructor and the Humanities Honors Program Committee. May be taken three times for credit as topics vary.

H140 Senior Honors Seminar (4) F. Directed by the Humanities Honors Thesis Advisor and required of students in the Humanities Honors program and Humanities majors in the Campuswide Honors Program. Designed to facilitate the exchange of ideas and research strategies among Honors students and to begin the process of writing the senior honors thesis. Prerequisites: senior standing and consent of the Honors Program Committee.

H141 Senior Honors Thesis (4) W. Directed independent research required of participants in the Humanities Honors Program and Humanities majors in the Campuswide Honors Program. Prerequisites: Humanities H140; consent of Honors Program Committee.

H142 Senior Honors Colloquium (4) S. Completion, presentation, and discussion of Senior Honors Theses. Satisfies upper-division writing requirement. Prerequisites: Humanities H141 and consent of Humanities Honors Program Committee.

183A International Studies Forum (2). A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. Pass/Not Pass only. May be taken for credit four times. Same as Social Ecology 183A and Social Science 183A.

183B Senior Seminar in Conflict Resolution (4). Designed for seniors (juniors may also enroll) who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students will refine skills and theory in the study of cooperation and conflict, from local to global arenas. Same as Social Ecology 183B and Social Science 183B. (VII-B)

183C Senior Seminar in Conflict Resolution (4). Continuation of Humanities 183B. Students write a senior research paper. Prerequisite: Humanities 183B and satisfaction of the lower-division writing requirement. Same as Social Ecology 183C and Social Science 183C.

190 Senior Seminar in European Studies (4). Capstone research seminar. Students engage in rigorous, in-depth, interdisciplinary exploration of specific topics, periods, or themes, investigating and analyzing the intersection of material and discursive culture in different historical periods and geographical locations. Topics vary. Prerequisites: Humanities 101A-B and consent of instructor; satisfactory completion of the lower-division writing requirement.

191 Global Cultures Senior Seminar (4). Students explore a topic(s) concerning the processes and/or problems of globalization from an interdisciplinary perspective and build on their critical and analytical skills when investigating cultural and other phenomena that cut across national borders. Research assignments, class presentations, final seminar paper. Prerequisites: Humanities 103A-B and upper-division standing. May be repeated for credit as topics vary.

195 Humanities Out There (H.O.T.) Practicum (0 to 2) F, W, S. H.O.T. sponsors five-week workshops on selected topics in the humanities. Each workshop sends out a team of undergraduates to a K-12 classroom to develop college skills for Santa Ana students. Requirements: five training sessions; five tutoring sessions; two electronic journals; short paper. Pass/Not Pass only. May be taken for credit for a total of eight units.

197 Individual Field Study (varying credit) F, W, S. Individually arranged field study. Prerequisite: consent of instructor.

198 Directed Group Study (1 to 4) F, W, S. Directed group study on special topics. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

199 Directed Research (1 to 4) F, W, S. Directed research for senior Humanities students. Prerequisite: senior standing and consent of instructor. May be repeated for credit as topics vary.

GRADUATE

Graduate courses in Humanities are under the direction of the School's Associate Dean for Graduate Study and are designed for all graduate students in the School of Humanities.

Humanities 200 and 220 introduce study in various disciplinary areas, either to students planning a degree in history or one of the literature departments or to those seeking familiarity with disciplines other than their own.

200A, B, C History and Theory (4, 4, 4) F, W, S. Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. Same as History 200A, B, C.

220A, B, C Studies in Literary Theory and Its History (4, 4, 4) F, W, S. Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists. Restricted to graduate students only. Same as English CR 220A, B.

260A-B-C Critical Theory Workshop (4) F, W, S. A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

270 Advanced Critical Theory (4) F, W, S. Seminars on various topics in critical theory. Students should have taken introductory courses before enrolling in these seminars. May be repeated for credit as topics vary.

298 Group Study (4) F, W, S. Open to four or more students. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

399 University Teaching (4) F, W, S. Limited to Teaching Associates in the Humanities Core Course. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

Additional Language Courses

Foreign Language Placement and Progression: See page 253.

Arabic 1A-B-C Fundamentals of Arabic (5-5-5) F, W, S, Summer. Using the latest pedagogical materials as well as real world texts (newspapers, poetry, literatures), provides students with a firm foundation in the orthography, grammar, syntax, and vocabulary of written and spoken Modern Standard Arabic. Prerequisites: for 1B, Arabic 1A; for 1C, Arabic 1B. (1C: VI)

Arabic S2AB-BC Intermediate Arabic Language and Culture (6-6) Summer. Students learn the standard Arabic writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy. Prerequisite for S2AB: Arabic 1C with a grade of C or better, or equivalent. Prerequisite for S2BC: Arabic S2AB with a grade of C or better, or equivalent. (VII-B)

Hebrew 1A-B-C Fundamentals of Hebrew (5-5-5) F, W, S, Summer. Speaking, understanding, reading, and writing modern Israeli Hebrew with an introduction to Biblical Hebrew. Topics in Israeli culture. Conducted in Hebrew. Prerequisites: for 1B, Hebrew 1A; for 1C, Hebrew 1B. (1C: VI)

Persian 1A-B-C Fundamentals of Persian (5-5-5) F, W, S. Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture. Prerequisites: for 1B, Persian 1A; for 1C, Persian 1B. (1C: VI)

Persian S2AB-BC Intermediate Persian Language and Culture (6-6) Summer. Students learn the modern Persian writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level literacy in Persian culture. Prerequisite for S2AB: Persian 1C with a grade of C or better, or equivalent. Prerequisite for S2BC: Persian S2AB with a grade of C or better, or equivalent. (VII-B)

Tagalog 1A-B-C Elementary Tagalog (5-5-5) F, W, S, Summer. Coverage of basic Tagalog grammar, with equal emphasis on reading, writing, conversation, and comprehension. Prerequisites: for 1B, Tagalog 1A; for 1C, Tagalog 1B. (1C: VI)

Ph.D. with Interdisciplinary Emphasis in Humanities

Graduate students enrolled in Ph.D. programs in the School of Humanities may elect an interdisciplinary modification of their major degree program with the permission of the departments and/or programs concerned. Such students would do 60 percent of their graduate work in the Ph.D. program in which they are already enrolled and 40 percent in another Ph.D. program in the School of Humanities. Those interested in an interdisciplinary degree should contact the Associate Dean for Graduate Study and the graduate advisors in both departments in which they wish to pursue their studies.

Emphasis in Critical Theory

435 Humanities Instructional Building; (949) 824-6718
World Wide Web: <http://www.hnet.uci.edu/cte/>

Participating Faculty

Dina Al-Kassim, *Department of Comparative Literature*
Etienne Balibar, *Department of French and Italian*
Stephen Barker, *Department of Drama*
Lindon Barrett, *Program in African American Studies and Department of Comparative Literature*
Ermanno Bencivenga, *Department of Philosophy*
William Bristow, *Department of Philosophy*
Juan Bruce-Novoa, *Department of Spanish and Portuguese*
Ellen S. Burt, *Department of French and Italian*
David Carroll, *Department of French and Italian*
Juli Carson, *Department of Studio Art*
Vinayak Chaturvedi, *Department of History*
Chungmoo Choi, *Department of East Asian Languages and Literatures*
Michael P. Clark, *Department of English*
Nanette Fornabai, *Department of French and Italian*
Suzanne Gearhart, *Department of French and Italian*
Alexander Gelley, *Department of Comparative Literature*
David Theo Goldberg, *Departments of Comparative Literature and of Criminology, Law and Society*
Inderpal Grewal, *Program in Women's Studies*
Lucia Guerra-Cunningham, *Department of Spanish and Portuguese*
Jonathan M. Hall, *Department of Comparative Literature*
James D. Herbert, *Department of Art History*
Wolfgang Iser, *Department of English*
Laura H. Y. Kang, *Program in Women's Studies*
Kyung Hyun Kim, *Department of East Asian Languages and Literatures*
Bliss (Felicidad) Cua Lim, *Department of Film and Media Studies*
Julia Reinhard Lupton, *Department of English and Education*
Steven Mailloux, *Department of English*
William M. Maurer, *Department of Anthropology*
J. Hillis Miller, *Departments of English and Comparative Literature*
Yong Soon Min, *Department of Studio Art*
Carrie J. Noland, *Department of French and Italian*
Margot Norris, *Departments of English and Comparative Literature*
Laura O'Connor, *Department of English*
Mark S. Poster, *Department of History and of Film and Media Studies*
R. Radhakrishnan, *Departments of Asian American Studies, English, and Comparative Literature*
Fatimah Tobing Rony, *Department of Film and Media Studies*
Annette Schlichter, *Department of Comparative Literature*
Gabriele Schwab, *Department of Comparative Literature*
Martin Schwab, *Department of Philosophy*
David W. Smith, *Department of Philosophy*
John H. Smith, *Department of German*
Sally A. Stein, *Department of Art History*
James Steintrager, *Department of English*
Ulrike Strasser, *Department of History*
Rei Terada, *Departments of English and Comparative Literature*
Brook Thomas, *Department of English*
Andrzej Warminski, *Department of English*

Affiliated Faculty

Philippe A. Barbé, *Department of French and Italian*
Stephen A. Barney, *Department of English (Emeritus)*
James Fujii, *Department of East Asian Languages and Literatures*
Susan Jarratt, *Department of Comparative Literature and Education*
Karen R. Lawrence, *Departments of English and Comparative Literature and Dean of the School of Humanities*
Juliet Flower MacCannell, *Department of Comparative Literature (Emerita)*
Glen Mimura, *Asian American Studies*
Jane O. Newman, *Department of Comparative Literature*
Janelle Reinelt, *Department of Drama*
John Carlos Rowe, *Department of Comparative Literature (Emeritus)*
Shawn Rosenberg, *Department of Political Science*
Heidi Tinsman, *Department of History*
Meng Yue, *Department of East Asian Languages and Literatures*
Andrew Zissos, *Department of Classics*

An emphasis in Critical Theory, under the supervision of the Committee on Critical Theory, is available for doctoral students in all departments at UCI upon approval of the student's faculty advisor or associate dean in accordance with departmental policy. Ph.D. students may, with Committee approval, complete the emphasis in addition to the degree requirements of their graduate program. Although there is no change in the existing Ph.D. program requirements or procedures, if the student wishes to have a letter (signed by the Dean and by the Director of Critical Theory) testifying that the student has satisfactorily added this theoretical dimension to the graduate program, then additional requirements must be met. Critical theory at UCI is understood in the broad sense as the study of the shared assumptions, problems, and commitments of the various discourses in the humanities. The faculty regards critical theory not as an adjunct to the study of one of the traditional humanistic disciplines but as a necessary context for the study of any humanistic discipline.

Admission to the emphasis may be granted by the Critical Theory Committee in response to the student's petition. The petition normally is submitted by the middle of the second year of graduate study, after completion of the Critical Theory Workshop, and upon the recommendation of the Workshop's instructor or a faculty representative of the student's department.

Requirements: (1) a three-quarter Critical Theory Workshop, conducted preferably by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class. No term papers are required, and the course is graded Satisfactory/Unsatisfactory only. Students receive credit for this course only in the spring quarter. For the first two quarters, the course is 0 units with IP grading; (2) three Humanities 270 courses offered under the supervision of the Committee. At least three such courses will be offered each quarter; (3) participation in two mini-seminars (six-eight hours) offered by visiting scholars (and sponsored by the Committee) on the visiting scholar's ongoing research; and (4) a research paper written under the guidance of a three-member committee (selected by each individual student in consultation with the Director of the Emphasis), with at least one member from outside the student's own department. The paper may (but need not) be part of the student's dissertation.

DEPARTMENT OF PHILOSOPHY

220 Humanities Office Building II; (949) 824-6525

E-mail: philos@uci.edu

S. Nicholas Jolley, **Department Chair**

Faculty

- Ermanno Bencivenga, Ph.D. University of Toronto, *Professor of Philosophy* (logic, history of philosophy, philosophy of language)
 William Bristow, Ph.D. Harvard University, *Assistant Professor of Philosophy* (Kant, nineteenth-century European philosophy)
 Aaron James, Ph.D. Harvard University, *Assistant Professor of Philosophy* (ethics, political philosophy)
 S. Nicholas Jolley, Ph.D. Cambridge University, *Department Chair and Professor of Philosophy* (early modern philosophy, political philosophy)
 Bonnie Kent, Ph.D. Columbia University, *Associate Professor of Philosophy* (ethics, medieval philosophy)
 J. Karel Lambert, Ph.D. Michigan State University, *Professor Emeritus of Philosophy* (logic, philosophy of science, metaphysics)
 Michelle Montague, Ph.D. University of Colorado, Boulder, *Assistant Professor of Philosophy* (philosophy of mind, philosophy of language, metaphysics)
 Alan Nelson, Ph.D. University of Illinois at Chicago, *Professor of Philosophy* (history of philosophy, philosophy of science)
 Philip Nickel, Ph.D. University of California, Los Angeles, *Assistant Professor of Philosophy* (moral psychology, applied ethics, epistemology)
 Nelson C. Pike, Ph.D. Harvard University, *Professor Emeritus of Philosophy* (philosophy of religion, history of philosophy)
 Gerasimos Santas, Ph.D. Cornell University, *Professor of Philosophy* (ancient philosophy, history of philosophy, ethics)
 Martin Schwab, Ph.D. University of Bielefeld (Germany), *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature* (nineteenth- and twentieth-century continental philosophy)
 David W. Smith, Ph.D. Stanford University, *Professor of Philosophy* (phenomenology, Husserl, ontology, philosophy of mind)
 Nicholas White, Ph.D. Harvard University, *Professor of Philosophy and Classics* (Greek philosophy, ethics, epistemology)
 Peter Woodruff, Ph.D. University of Pittsburgh, *Professor Emeritus of Philosophy* (philosophy of logic, metaphysics)

Affiliated Faculty

- Francisco J. Ayala, Ph.D. Columbia University, *University Professor and Donald Bren Professor of Biological Sciences*
 Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and Philosophy*
 Donald Hoffman, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
 Paul Hoffman, Ph.D. University of California, Los Angeles, *Professor of Philosophy, UCR* (history of early modern philosophy, moral psychology, philosophy of mind)
 Kristen R. Monroe, Ph.D. University of Chicago, *Professor of Political Science*
 Terence Parsons, Ph.D. Stanford University, *Professor of Philosophy, UCLA* (philosophy of language, Medieval philosophy)
 Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland, *Professor of Psychiatry and Human Behavior*

Philosophy addresses itself to questions that arise insistently in every area of human experience and in every discipline within the university. Each discipline inevitably poses problems concerning the nature of the standards appropriate to it and the place of its subject matter within the total framework of human knowledge. If we are to understand science or art or literature, or such human practices as religion and moral thought, we are bound to address ourselves to philosophical issues relating to their nature, the uses of reason appropriate to them, and the contributions they make to our understanding and appreciation of ourselves and the world in which we live.

CAREERS FOR THE PHILOSOPHY MAJOR

The study of argument and the precision and clarity of thought and writing required of Philosophy majors are excellent preparation for a variety of careers. Many undergraduates trained in Philosophy go

on to professional schools in medicine, business, or law. The analytical skills developed in Philosophy courses are especially useful in legal education; indeed, many UCI Philosophy graduates have been successful at top law schools. Former Philosophy students have also used their skills to advantage in careers in government, business, teaching, law enforcement, and computer programming. Many Philosophy majors also continue their education at the graduate level, either in philosophy or a related discipline.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

Undergraduate Program

Instruction in philosophy relies essentially upon discussion in which students are active participants. Wherever possible, therefore, classes are limited in size in order to permit sustained interchanges between students and instructor.

Some of the courses offered are of general interest to all students. Others are designed to explore issues that arise in selected and special disciplines such as art or science. The undergraduate advisor should be consulted for advice about courses best suited to the specialized needs of particular students.

The program of course offerings is also designed for those Philosophy majors whose intention may be either to enter some professional school upon graduation (e.g., law) or to engage in graduate work in philosophy.

The faculty encourages Philosophy majors and minors to seriously consider expanding their perspective through an experience of study abroad. The Center for International Education, which includes the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of many worldwide opportunities for study and research. Specifically, those interested in analytic philosophy could consider the EAP programs in the United Kingdom, Canada, Sweden, Australia, and New Zealand, and those interested in Continental philosophy could consider the EAP programs in France, Germany, and Italy. See the Center for International Education section of the *Catalogue* or an academic counselor for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Departmental Requirements for the Major

Philosophy 30 or 104; 10, 12, and either 11 or 13; Philosophy 101, 102, 103, and five additional quarter courses from Philosophy 100, 105–199. Students planning to go on to graduate school are strongly advised to take Philosophy 105A and 105B.

Residence Requirement: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

Three courses selected from Philosophy 1, 4, 5, 30 or from 10, 11, 12, 13, 30 or from 20, 21, 22, 23, 30; and four additional upper-division courses selected from Philosophy 100–157.

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Program

The Ph.D. program in Philosophy is jointly and cooperatively administered by the Department of Philosophy in the School of Humanities and the Department of Logic and Philosophy of Science (LPS) in the School of Social Sciences. The graduate program has two distinct tracks—the Philosophy track and the LPS track—both of which begin from a common core of shared requirements in history of philosophy, logic, ethics, and metaphysics/epistemology. Students are advised to apply to the track whose faculty, areas of specialization, and curriculum most closely correspond to their interests. The Philosophy track is described here. See the Department of Logic and Philosophy of Science for a description of the LPS track.

UCI's Philosophy Department is committed to providing students a well-rounded graduate education, including central areas of contemporary philosophy and a solid foundation in the history of philosophy. While many of our students choose to specialize in the history of Philosophy or the Continental tradition; areas in which the Department enjoys international recognition, students with other areas of specialization are welcome and well represented. Those with interests in mathematics, the natural sciences, or the social sciences are encouraged to take courses in Logic and Philosophy of Science and to include LPS faculty members on their dissertation committees. The cooperative two-track program provides students the benefits of faculty expertise in a host of areas.

Every year the Philosophy Department invites distinguished philosophers from other universities to present their work to faculty and graduate students. Participation in this colloquium series, though not mandatory, contributes significantly to graduate education. Colloquia sponsored by Logic and Philosophy of Science might also be of interest to Philosophy track students.

Every new graduate student is assigned a faculty member whose purpose is to oversee the student's progress through the major requirements for the advanced degree. The student consults with this faculty member each quarter about progress and any administrative or academic difficulties. Each student's overall record is evaluated by the Philosophy Department each year, customarily during the first two weeks of April. When the student has satisfied the residency requirement and the history, logic, field, tools of research, and portfolio requirements, the Candidacy Committee supervises the qualifying examination and the development of a dissertation project, and the subsequent writing of the dissertation itself. The Chair of this committee is the principal person with whom the graduate student will consult on the dissertation.

MASTER OF ARTS IN PHILOSOPHY

There is no list of courses required for the M.A. degree. The M.A. program in Philosophy takes one year at a minimum. The student may elect to follow either of the following routes to the degree: write a thesis on a subject to be chosen in consultation with an advisor and defend the thesis in an oral examination, or satisfy the logic and portfolio requirements for the Philosophy track. Refer to the Office of Graduate Studies section for information on the minimum number of courses required for the M.A. degree.

Advancement to candidacy for the M.A. degree is not automatic, but requires formal application to the Dean of Graduate Studies via the Philosophy Department Office. Application must be made with the recommendation of the Philosophy Department and must take place before the beginning of the quarter in which the student expects to receive the degree.

DOCTOR OF PHILOSOPHY IN PHILOSOPHY

There is no set number of courses required for the Philosophy track, so that work can be tailored to the individual student's needs

and interests. However, as a prerequisite for the Ph.D. degree, every student is required to have some experience in teaching.

The Philosophy track is designed to take six years for the normally qualified student, and the maximum time permitted is nine years. A master's degree is not a prerequisite for the Ph.D. The following items are requirements for the Ph.D. degree.

Distribution Requirements. Students are required to take a range of courses designed to expose them to the various historical periods and fields of philosophy. No particular courses are required; when course offerings are announced, students are notified about which courses can be used to satisfy which requirements. In some cases, the requirement satisfied will ultimately depend on the content of the student's term paper(s).

The Distribution Requirements are:

1. History. To satisfy this requirement, students must receive a grade of B or better in at least four courses covering at least three of the following areas: Ancient, Medieval, Modern Empiricism, Modern Rationalism, Kant, Nineteenth Century, and Twentieth Century.
2. Field. To satisfy this requirement, students must receive a grade of B or better in two courses in value theory, one course in logic, and one course in metaphysics/epistemology.

These requirements must be completed by the end of the seventh quarter in residence.

Tools of Research. This requirement allows students to pursue the tool which they and their advisors deem most useful for their area of concentration, either a foreign language or some course of study outside philosophy. To satisfy this requirement, a student must pass an examination in a single appropriate foreign language or receive a grade of B or better in each of three appropriate graduate-level courses in a discipline other than philosophy.

The two-hour foreign language examination (administered by the Philosophy Department) requires students to translate, with the aid of a dictionary, passages from one or two philosophical authors. For the second option, courses of study outside philosophy will be approved (by the Philosophy Department Director of Graduate Studies) when they bear on a student's area of philosophical concentration. Though the courses must be in a discipline other than philosophy, they may in fact be taught in the Philosophy Department or the LPS Program (e.g., a course in mathematical logic taught by an LPS faculty member).

This requirement must be completed by the end of the ninth quarter in residence.

The Portfolio. A portfolio is an extended writing sample designed to demonstrate a student's ability (a) to understand, analyze, and evaluate positions and arguments in classical and contemporary philosophical literature, and (b) to formulate and defend an original philosophical thesis. These virtues must be displayed at a level of sophistication that indicates the student's ability to write a Ph.D. dissertation.

The portfolio must be submitted to the Graduate Coordinator at the end of the fourth week of the student's seventh quarter in residence. Portfolios will be evaluated by the entire faculty of the Philosophy Department. (Philosophy track students may request that relevant LPS faculty also be present at the evaluation meeting.)

Candidacy Examination. In preparation for the candidacy examination, students consult with their thesis advisor and other appropriate faculty to prepare a reading list on their area of concentration and a brief dissertation proposal. Students apply for candidacy by filing appropriate forms, including a list (devised in consultation with their advisor) of appropriate members for their Candidacy Committee; one of these, the External Examiner, must come from outside the School of Humanities. The Committee is then appointed

by the Philosophy Department, on behalf of the Dean of Graduate Studies and the Graduate Council, to administer the oral candidacy examination on the reading list and proposal to determine whether or not the student is prepared to begin work on the dissertation.

This requirement must be completed by the end of the tenth quarter in residence. The Philosophy Department Chair, on behalf of the Dean of Graduate Studies and the Graduate Council, then appoints a Doctoral Committee (typically taken from the Candidacy Committee and naturally including the dissertation advisor) to supervise the writing of the dissertation.

Dissertation Defense. Students must defend their dissertation during an oral examination administered by their Doctoral Committee.

THE SALZBURG EXCHANGE PROGRAM

The Department of Philosophy and the Department of Logic and Philosophy of Science jointly administer an Exchange Program with the University of Salzburg. The program has two parts. The Scholarly Exchange provides opportunities for faculty and graduate students in Philosophy and LPS to visit Salzburg and for faculty and graduate students from Salzburg to visit one or the other of the UCI units. The Program also sponsors joint conferences, held alternately in Irvine and in Salzburg; these are co-sponsored by Salzburg and the UCI Interdisciplinary Program in the History and Philosophy of Science.

To be eligible for the Salzburg Exchange, a graduate student must have advanced to candidacy. The selected student spends one semester in Salzburg, usually teaching one course in the general area of the thesis topic. An upper-division course may be taught in English, but lower-division courses must be taught in German. (Some previous visitors have learned serviceable German by attending a Goethe institute during the preceding summer.) Typically, a Salzburg visitor will receive a Salzburg Fellowship intended to cover travel expenses, and a stipend; those who teach while in Salzburg will also receive a salary intended to cover living expenses (including health and dental insurance).

Application should be made to the Philosophy Department's Salzburg Exchange Director by November 1 and should include a curriculum vita and syllabi for possible courses to be taught. The Director and/or the Philosophy Department Graduate Coordinator should be consulted for further information.

OPTIONAL EMPHASIS IN CRITICAL THEORY

The School of Humanities offers an emphasis in Critical Theory that can be appended to the Philosophy track. A student interested in the emphasis begins by taking the three-quarter Critical Theory Workshop. With the recommendation of a workshop instructor or a Critical Theory faculty member in the Philosophy Department, the student may then apply to the Critical Theory Committee for admission to the emphasis. Emphasis students must complete the following requirements in addition to the usual Philosophy track requirements.

The Critical Theory Workshop. Students must successfully complete the three-quarter Critical Theory Workshop. This sequence is conceived as a reading group, normally conducted by a team of instructors, and developed with the input of all participants. Significant texts are discussed and analyzed in class; no term papers are required. (Students receive 0 units and In-progress grades for the fall and winter quarters; passing students receive 4 units and a Satisfactory grade for the spring quarter.

Advanced Critical Theory Requirement. Students must receive a grade of B or better in three Humanities 270 courses offered under the supervision of the Critical Theory Committee. At least three such courses will be offered each year. With the approval of the Philosophy Department, these courses can be used to satisfy the tools of research requirement.

Mini-Seminar Requirement. Students must participate in two committee-sponsored mini-seminars (six–eight hours each) offered by visiting scholars on their ongoing research.

Research Paper Requirement. Students must complete a research paper under the guidance of a three-member committee, selected in consultation with the Director; at least one member must be from outside of the Philosophy Department. This paper may (but need not) be part of the portfolio or dissertation.

Upon completion of the emphasis requirements, a letter certifying that fact, signed by the Dean of Humanities and the Director of the Critical Theory Emphasis, will be added to the student's dossier.

OPTIONAL EMPHASIS IN FEMINIST STUDIES

A graduate emphasis in Feminist Studies also is available. Refer to the Women's Studies section of the *Catalogue* for information.

Courses in Philosophy

LOWER-DIVISION

1 Introduction to Philosophy (4). A selection of philosophical problems, concepts, and methods, e.g., free will and cause and substance, personal identity, the nature of philosophy itself. (IV)

4 Introduction to Ethics (4). Selected topics from the history of ethics, e.g., the nature of the good life and the moral justification of conduct. (IV)

5 Contemporary Moral Problems (4). Selected moral issues of current interest, e.g., abortion, sexual morality, euthanasia, capital punishment, reverse discrimination, civil disobedience, or violence. (IV)

6 Philosophy and Psychoanalysis (4). An analysis of Freudian psychoanalytic theory and therapy, and its significance for such classical philosophical problems such as the mind-body problem, self-identity and self-deception, psyche and consciousness, innatism, and the origins of moral behavior.

7 Introduction to Existentialism (4). An analysis of themes in phenomenology and existentialism and their philosophical origins, e.g., consciousness, self and other, freedom and individuality.

9 Feminist Moral and Political Philosophy (4). Selected topics in moral and political philosophy analyzed from feminist perspectives, e.g., gender-based differences in moral attitudes and virtues, hidden in traditional accounts of political obligation, and feminism and sexual orientation. Prerequisite: Philosophy 4 recommended. (IV)

10 History of Ancient Philosophy (4). Examination of the central philosophical themes developed by the pre-Socratics, Socrates, Plato, Aristotle, the Stoics, the Epicureans, and the Skeptics. (IV)

11 History of Medieval Philosophy (4). A study of some of the major theological and philosophical texts from the Medieval period. Philosophy 10 recommended as background. (IV)

12 History of Modern Philosophy (4). A study of major developments in western philosophy from Descartes to Kant with readings from Descartes, Leibniz, Locke, Berkeley, Hume, and Kant. Philosophy 10 or 11 recommended as background. (IV)

13 History of Contemporary Philosophy (4). A study of recent philosophical developments in Anglo-American and Continental philosophy with readings from such figures as Russell, Moore, Wittgenstein, Quine, Heidegger, and Sartre. Philosophy 12 recommended as background. (IV)

20 Introduction to Human Nature (4). Is our nature determined by how we are created or by what we want to be? Attempts to answer these questions by looking at stories of human origins and scientific accounts of human nature. (IV)

21 Introduction to Philosophy and Religion (4). What is religion? What is its relation to philosophy? Must one be religious in order to be a moral or good person? In examining these issues, attends to both Eastern and Western traditions and perspectives. (IV)

22 Introduction to Law and Society (4). What constitutes a legal system? What does it mean for a society to have a system as a part of the social fabric. Examines the social status of law and its use as a tool for fashioning society. (IV)

23 Introduction to Problems of Self and Mind (4). A study of basic problems in metaphysics, such as: What am I? A mind, a soul, a body? A social being? A bioorganism? Am I the same person today, yesterday, and tomorrow? Is there a story of my life that captures my essence? (IV)

29 Critical Reasoning (4). Introduction to analysis and reasoning. The concepts of argument, premise, and conclusion, validity and invalidity, consistency and inconsistency. Identifying and assessing premises and inferences. Deductive versus inductive reasoning, and introduction to the probability calculus. Evaluating definitions. Informal fallacies. Same as Logic and Philosophy of Science 29. (V)

30 Introduction to Symbolic Logic (4). An introduction to the symbolism and methods of the logic of statements, including evaluation of arguments by truth tables, the techniques of natural deduction and semantic tableaux. Same as Logic and Philosophy of Science 30. (V)

31 Introduction to Inductive Logic (4). Philosophical questions concerning the foundations of scientific inference, e.g., the traditional problem of induction, the Goodman paradox, the concept of cause, Mill's method of inductive reasoning, probability calculus, different interpretations of probability, and their interaction in inductive reasoning. Prerequisite: Philosophy 30 or 104. Same as Logic and Philosophy of Science 31. (V)

40 Special Topics in Philosophy (4). Lectures on selected topics at the lower-division level. May be repeated for credit as topics vary.

UPPER-DIVISION

100 Writing Philosophy (4). Discussion of those aspects of writing of special importance in philosophy, e.g., philosophical terminology, techniques for evaluating arguments, philosophical definitions and theories. At least 4,000 words of assigned composition based on philosophical readings. Prerequisites: satisfaction of lower-division writing requirement; junior standing or consent of instructor. Philosophy majors given admission priority.

101 Introduction to Metaphysics (4). A study of one or more of the problems of "first philosophy," e.g., substance, free will, causation, abstract entities, identity.

102 Introduction to the Theory of Knowledge (4). A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty. Same as Logic and Philosophy of Science 102.

103 Introduction to Moral Philosophy (4). A study of one or more of the problems of contemporary moral philosophy, e.g., the nature of justice, liberalism versus conservatism, happiness and its relation to virtue and right conduct, the objectivity of moral standards.

104 Introduction to Logic (4). Introduction to sentence logic, including truth tables and natural deduction; and to predicate logic, including semantics and natural deduction. Same as Logic and Philosophy of Science 104.

105A Elementary Set Theory (4). An introduction to the basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n -tuples, relations, functions, ordinal and cardinal numbers. Prerequisite: Logic and Philosophy of Science 104, Mathematics 6B, an upper-division course in Mathematics, or consent of instructor. Philosophy 105A and Mathematics 151 may not both be taken for credit. Same as Logic and Philosophy of Science 105A.

105B Metalogic (4). Introduction to formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Löwenheim-Skolem theorems. Prerequisites: Philosophy 105A or consent of instructor. Philosophy 105B and Mathematics 150 may not both be taken for credit. Same as Logic and Philosophy of Science 105B.

105C Undecidability and Incompleteness (4). Introduction to the formal theory of effective processes, including recursive functions, Turing machines, Church's thesis, and proofs of Gödel's incompleteness theorem for arithmetic, and Church's undecidability theorem for first-order logic. Prerequisite: Philosophy 105B or consent of instructor. Philosophy 105C and Mathematics 152 may not both be taken for credit. Same as Logic and Philosophy of Science 105C.

106 Topics in Logic (4). Selected topics in mathematical or philosophical logic. Prerequisite: Philosophy 105B or consent of instructor. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 106.

108 Topics in Induction, Probability, and Decision Theory (4). Selected topics in induction, probability, and decision theory. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 108.

110 Topics in Ancient Philosophy (4). Selected topics from the writings of Plato and Aristotle, e.g., Aristotle's criticisms of Plato's metaphysics, ethics, or politics. May be taken for credit twice as topics vary.

111 Topics in Medieval Philosophy (4). Studies of some of the major issues of concern to Medieval philosophers, e.g., universals, the nature and existence of God, faith, and reason. May be taken for credit twice as topics vary.

112 Topics in Renaissance Philosophy (4). Studies of such authors as Bruno and Montaigne. May be taken for credit twice as topics vary.

113 Topics in Modern Philosophy (4). Focuses on the works of one or more of the central philosophical figures of the modern period (e.g., Descartes, Leibniz, Hobbes, Locke, Hume, Kant) or on the treatment of one or more central philosophical problems by a number of these figures. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 113.

114 Topics in Nineteenth-Century Philosophy (4). Studies of some of the major figures after Kant (e.g., Hegel, Nietzsche, Marx, Kierkegaard), especially in German idealism and social thought. May be repeated for credit as topics vary.

115 Topics in History of Analytic Philosophy (4). Review of one or more central theories or figures in the history of analytic philosophy. Emphasis is on the study of original sources, especially writings of Frege, Russell, Schlick, Carnap, and Quine. Topics include the nature of meaning and truth, the synthetic/analytic distinction, and scientific knowledge. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 115.

116 Topics in Continental Philosophy. Studies of some of the major figures (e.g., Husserl), movements (e.g., phenomenology, existentialism) in early twentieth-century continental European thought. May be repeated for credit as topics vary.

117 Topics in East Asian Philosophy (4). Selected topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto. Same as East Asian Languages and Literatures 117. May be repeated for credit as topics vary. (VII-B)

120 Topics in Metaphysics (4). Examines central philosophical questions concerning our own fundamental nature and that of the world around us (e.g., causation and necessity, determination, free will, personal identity, the mind-body problem). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 120.

121 Topics in the Theory of Knowledge (4). One or more topics in the theory of knowledge, e.g., the nature of rational justification, of perceptual knowledge, of a priori knowledge. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 121.

122 Topics in Philosophy of Mind (4). Selected topics involving the concept of mind, e.g., the relation between mind and body, the self, personal identity, consciousness, the unconscious. May be repeated for credit as topics vary.

123 Topics in Philosophy of Religion (4). Critical examination of concepts involved in the theological literature, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics. May be repeated for credit as topics vary.

130 Topics in Moral Philosophy (4). Selected topics in ethics. May be repeated for credit as topics vary.

131 Applied Ethics. Application of moral theories and arguments to important problems facing contemporary society.

131A Applied Ethics (4). Topics may include capital punishment, world hunger, obligations to future generations, environmental ethics, animal rights, economic justice, sexual morality, affirmative action, racism and sexism, or legalization of drugs.

131C Medical Ethics (4). Analysis of moral issues concerning health care. Topics may include: just allocation of scarce medical resources, the doctor/patient relationship, genetic engineering, surrogate motherhood, abortion, euthanasia, or social policy concerning AIDS.

131E Race and Gender (4). Investigation of philosophical issues concerning race and gender, e.g., the grounding of these concepts (is it scientific or social?); race, gender, and individual self-conception; race and ethnicity; "color-blind" society; group solidarity versus racism; affirmative action; multiculturalism. (VII-A)

132 Topics in Political and Social Philosophy (4). Selected topics in social and political philosophy, e.g., the functions of government, the justification of political authority, the nature of democracy, the varieties of liberty, and social justice. Readings from classical and contemporary sources. May be repeated for credit as topics vary.

133 Topics in Philosophy of Law (4). Selected topics concerning legal systems and the concept of law, e.g., the nature and purpose of law, the nature of authority, the relationship between law and morality, law and political-economic systems. May be repeated for credit as topics vary.

140 Topics in Philosophy of Science (4). Selected topics in contemporary philosophy of science, e.g., the status of theoretical entities, the confirmation of theories, the nature of scientific explanation. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 140.

141A Topics in Philosophy of Physics (4). Selected topics in the philosophy of physics, e.g., the interpretation of quantum mechanics, the nature of space-time, the problem of quantum field theories. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 141A.

141B Geometry and Spacetime (4). An examination of the foundations of the special theory of relativity, with emphasis on the geometry of Minkowski spacetime, and its relation to both Euclidean and non-Euclidean (hyperbolic) plane geometries. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Logic and Philosophy of Science 141B.

141C Philosophy of Quantum Mechanics (4). An examination of the standard von Neumann-Dirac formulation of quantum mechanics. The quantum measurement problem is discussed along with several proposed solutions, including GRW, many-worlds, man-minds, and Bohm's theory. Same as Logic and Philosophy of Science 141C.

141D Probability and Determinism (4). An examination of a cluster of interrelated issues concerning probability, determinism, logic, and the foundations of quantum mechanics. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Logic and Philosophy of Science 141D.

142 Writing/Philosophy of Biology (4). Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Biological Sciences E142 and Logic and Philosophy of Science 142.

143 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 143 and Psychology 123P.

144 Topics in Philosophy of Social Science (4). Selected topics in the philosophy of the social sciences, e.g., is their goal to understand behavior or to predict and control it?; are they normative and the natural sciences not?; do they incorporate philosophical doctrines about language and mind? May be repeated for credit as topics vary.

145 Topics in Philosophy of Language (4). Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts. May be repeated for credit as topics vary. Same as Linguistics 141 and Logic and Philosophy of Science 145. May be repeated for credit as topics vary.

146 Topics in Philosophy of Logic (4). Selected topics in the philosophy of logic, e.g., the nature of logical truth and our knowledge of it, the status of propositions, definite descriptions, and existential presuppositions. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 146.

147A Introduction to Philosophy of Mathematics (4). Historical background (e.g., Kant), the three great schools at the turn of the century (logicism, formalism, intuitionism), the positivists and their critics (Carnap, Quine), contemporary views and problems (e.g., Quine, Benacerraf). Same as Logic and Philosophy of Science 147A.

147B Topics in Philosophy of Mathematics (4). Further historical or contemporary issues in the philosophy of mathematics. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 147B.

150 Phenomenology (4). A study of the foundations of phenomenology in Husserl and its background in Bolzano, Frege, Brentano, Meinong, Kant, and Descartes. Topics include phenomenological method, theory of intentionality, meaning, perception, evidence, ego, other minds, intersubjectivity, and life-world. May be repeated for credit as topics vary.

151 Existentialism (4). A study of such central existentialist thinkers as Heidegger and Sartre. Philosophy 7 or 150 recommended as background. Formerly Philosophy 128.

152 Topics in Feminism (4). A study of selected topics in feminist theory and/or gender studies. May be repeated for credit as topics vary.

190 Special Topics in Philosophy (4). Lectures on selected topics to be given by regular faculty and visiting faculty. May be repeated for credit as topics vary.

199 Directed Special Studies (2 to 4). Independent study on a research topic supervised by a faculty member. May be repeated for credit as topics vary.

GRADUATE COURSES

200 Special Topics in Philosophy (4). Seminars on selected topics to be given by regular faculty and visiting faculty. May be repeated for credit as topics vary.

201 First-Year Seminar (4). Examination of some standard works in history of philosophy, value theory, metaphysics, or epistemology. Open to and strongly recommended for all first-year Philosophy graduate students.

205A Set Theory (4). The basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers. Same as Logic and Philosophy of Science 205A.

205B Metalogic (4). Formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Loewenheim-Skolem theorems. Prerequisite: Philosophy 205A. Same as Logic and Philosophy of Science 205B.

205C Undecidability and Incompleteness (4). Formal theory of effective processes, including recursive function, Turing machines, Church's thesis, and proofs of Goedel's incompleteness theorem for arithmetics, and Church's undecidability for first-order logic. Prerequisite: Philosophy 205B. Same as Logic and Philosophy of Science 205C.

206 Topics in Logic (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 206.

210 Topics in Ancient Philosophy (4). May be repeated for credit as topics vary.

211 Topics in Medieval Philosophy (4). May be repeated for credit as topics vary.

212 Topics in Renaissance Philosophy (4). May be repeated for credit as topics vary.

213 Topics in Modern Philosophy (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 213.

214 Topics in Nineteenth-Century Philosophy (4). May be repeated for credit as topics vary.

215 Topics in Analytic Philosophy (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 215.

216 Topics in Continental Philosophy (4). May be repeated for credit as topics vary.

218 Topics in Contemporary Philosophy (4). May be repeated for credit as topics vary.

220 Topics in Metaphysics (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 220.

221 Topics in Epistemology (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 221.

222 Topics in Mind and Action (4). May be repeated for credit as topics vary.

230 Topics in Ethics (4). May be repeated for credit as topics vary.

232 Topics in Political and Social Philosophy (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 232.

234 Topics in Aesthetics (4). May be repeated for credit as topics vary.

240 Topics in Philosophy of Science (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 240.

241 Topics in Philosophy of Physics (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 241.

242 Topics in Philosophy of Biology (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 242.

243 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 243 and Psychology 231P.

244 Topics in Philosophy of Social Science (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 244.

245 Topics in Philosophy of Language (4). May be repeated for credit as topics vary. Same as Linguistics 241 and Logic and Science of Philosophy 245.

246 Topics in Philosophy of Logic (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 246.

247 Topics in Philosophy of Mathematics (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 247.

248A-B-C Continental Philosophy Workshop (0-0-4). A three-quarter long workshop, conceived as a reading group and developed with the input of all participants, where significant texts are discussed and analyzed in class. 248A-B: In-progress grading. 248C: Satisfactory/Unsatisfactory only.

249 Logic and Philosophy of Science Workshop (1 to 4). A two- or three-quarter long workshop on selected topics in logic and philosophy of science. In-progress grading, Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 289.

250 Topics in Existentialism and Phenomenology (4). May be repeated for credit as topics vary.

298 Independent Study (4 to 12). May be repeated for credit.

299 Directed Research (4 to 12). May be repeated for credit.

399 University Teaching (4). Limited to Teaching Assistants. May be repeated for credit.

UNDERGRADUATE PROGRAM IN RELIGIOUS STUDIES

168 Humanities Instructional Building; (949) 824-8119

Susan B. Klein, *Director*

Core Faculty

Marc David Baer, Ph.D. University of Chicago, *Assistant Professor of History* (Islamic and Middle Eastern history; Ottoman Empire and Turkey; religious conversion, crypto-religion)

William Bristow, Ph.D. Harvard University, *Assistant Professor of Philosophy* (Kant; nineteenth-century idealist tradition)

Carol Burke, Ph.D. Maryland University, *Associate Professor of English* (folk belief, folklore; creative non-fiction)

James T. Chiampì, Ph.D. Yale University, *Professor of Italian* (Italian Renaissance)

Susan Bibler Coutin, Ph.D. Stanford University, *Associate Professor of Criminology, Law and Society* (immigration and border issues; law; Central America; political and religious activism; human rights)

Lara Deeb, Ph.D. Emory University, *Assistant Professor of Women's Studies* (Islam, gender, and notions of modernity; religious social movements; gender and the social sphere)

James B. Given, Ph.D. Stanford University, *Professor of History* (medieval Europe; social and political history)

Michelle Hamilton, Ph.D. University of California, Berkeley, *Assistant Professor of Spanish* (medieval Spanish literature)

Lamar M. Hill, Ph.D. University of London, *Professor of History* (Tudor-Stuart England; early modern Europe)

Bonnie Kent, Ph.D. Columbia University, *Associate Professor of Philosophy* (ethics; medieval philosophy)

Susan B. Klein, Ph.D. Cornell University, *Director of Religious Studies and Associate Professor of Japanese* (premodern and modern theater and dance; medieval commentaries; Japanese religions; new historicism and feminist critical theory)

Karen Leonard, Ph.D. University of Wisconsin, *Co-Director of the Center for Asian Studies and Professor of Anthropology* (social history of India; caste ethnicity and gender; Asian-Americans in the United States)

Mark LeVine, Ph.D. New York University, *Associate Professor of History* (modern Middle East and Islam; globalization; popular culture)

Steven Mailloux, Ph.D., University of Southern California, *UCI Chancellor's Professor of Rhetoric* (American literature; contemporary theory; cultural studies and criticism; history and theories of rhetoric)

Keith L. Nelson, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (American foreign relations; Soviet-American relations; war and society)

Daniel J. Schroeter, Ph.D. University of Manchester, *Professor of History and Teller Family Chair in Jewish History* (Jewish history; North Africa and the Middle East)

Victoria Silver, Ph.D. University of California, Los Angeles, *Associate Professor of English* (Renaissance studies; feminist and gender studies; cultural studies and criticism; history of literary theory; histories and theories of rhetoric)

Affiliated Faculty

Elizabeth Allen, Ph.D. University of Michigan, *Associate Professor of English* (medieval literature; theories of reception; exemplary and didactic literature; literature and ethics; literature and affect; history of English language; Old English)

Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor of Art History* (Renaissance and Baroque art)

Victoria Bernal, Ph.D. Northwestern University, *Associate Professor of Anthropology* (feminist theory and gender; civil society, globalization, cyberspace, transnationalism; the Islamic revival; peasants, labor migration; Africa, Muslim societies)

Dickson D. Bruce, Jr., Ph.D. University of Pennsylvania, *Professor of History* (American culture; African American history of the South)

Yong Chen, Ph.D. Cornell University, *Associate Professor of History and Asian American Studies* (Asian-American history; late-nineteenth and twentieth-century American social and cultural history; immigration history)

Chungmoo Choi, Ph.D. Indiana University, *Associate Professor of Korean Culture* (Modern Korea; post-colonial and colonial discourse; Marxism and Christianity; popular cultures and anthropology)

Edward Fowler, Ph.D. University of California, Berkeley, *Department Chair of East Asian Languages and Literatures and Professor of Japanese* (Modern literature; cultural studies; film)

Michael A. Fuller, Ph.D. Yale University, *Associate Professor of Chinese* (Classical Chinese poetry and poetics; the cultural and intellectual contexts for poetry; aesthetic theory; linguistic issues in classical Chinese)

Alexander Gellay, Ph.D. Yale University, *Professor of Comparative Literature* (eighteenth-century English and comparative literature; nineteenth-century English and comparative literature and philosophy; German-Jewish literature and culture)

Linda Georgianna, Ph.D. Columbia University, *Professor of English* (medieval literature and culture; nineteenth-century medievalism)

Anna Gonosová, Ph.D. Harvard University, *Associate Professor of Art History* (Byzantine and Medieval art and architecture)

Judy C. Ho, Ph.D. Yale University, *Associate Professor of Art History* (Chinese art and archaeology; Buddhist art and popular religions)

S. Nicholas Jolley, Ph.D. Cambridge University, *Department Chair and Professor of Philosophy* (seventeenth and eighteenth-century philosophy; political philosophy)

Richard W. F. Kroll, Ph.D. University of California, Los Angeles, *Professor of English* (eighteenth-century English and comparative literature; history of literary theory; literature and philosophy; cultural studies and criticism; history and theories of rhetoric)

Jayne Lewis, Ph.D. Princeton University, *Professor of English* (Restoration/eighteenth-century British literature; natural philosophy and the supernatural; early modern meteorology, historical fiction)

Julia Reinhard Lupton, Ph.D. Yale University, *Professor of English and Education* (Shakespeare; Renaissance literature; religious studies; Jewish studies; humanities and the public sphere)

Cecilia Lynch, Ph.D. Columbia University, *Director of the Center for Global Peace and Conflict Studies and Associate Professor of Political Science* (international relations theory; international organization and law; international ethics and political philosophy; social movements in world politics; peace and security)

Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, *Professor of Social Ecology* (environmental design research: cultural aspects, environmental psychology; architecture, planning, organizational studies; work environments, home environments, ethnic neighborhoods)

- Michael T. McBride, Ph.D. Yale University, *Assistant Professor of Economics* (game theory; economics of religion; political economy of development; social networks; experimental economics)
- Margaret M. Miles, Ph.D. Princeton University, *Associate Professor of Art History and Classics* (Greek and Roman art, architecture and archaeology)
- J. Michelle Molina, Ph.D. University of Chicago, *Assistant Professor of History* (Colonial Latin America; global religious networks; Jesuits; comparative colonialism)
- Alan Nelson, Ph.D. University of Illinois at Chicago, *Professor of Philosophy* (early modern rationalism and empiricism; philosophy and history of science; history of analytic philosophy)
- Maria C. Pantelia, Ph.D. Ohio State University, *Department Chair and Professor of Classics and Director, Thesaurus Linguae Graecae®* (Greek epic poetry, Hellenistic poetry, computer applications to Classics)
- Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History and of East Asian Languages and Literatures* (Modern China; origins of world economy; global context of environmental change; peasant protest and collective violence; popular religions)
- Gary Richardson, Ph.D. University of California, Berkeley, *Assistant Professor of Economics* (medieval economy and religion; economics and immigration; banking and the Great Depression)
- Michael Ryan, Ph.D. University of Iowa, *Professor of English and Creative Writing* (American literature; creative writing; poetry, poetics; autobiography)
- Thomas P. Saine, Ph.D. Yale University, *Professor Emeritus of German* (eighteenth-century German literature; Goethe; Germany and the French Revolution; eighteenth-century popular philosophy and theology)
- Martin Schwab, Ph.D. University of Bielefeld, *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature* (nineteenth and twentieth-century continental philosophy; literature and other arts, literature and philosophy)
- John H. Smith, Ph.D. Princeton University, *Director of the Critical Theory Institute and Department Chair and Professor of German, and Professor of Comparative Literature* (eighteenth- and nineteenth-century literature and intellectual history; literary theory)
- Daniel Stokols, Ph.D. University of North Carolina, Chapel Hill, *Professor of Social Ecology* (theory development in environmental psychology and social ecology; environmental design research; community and worksite health promotion; effects of environmental stressors on behavior and health; environmental psychology of the Internet)
- Ulrike Strasser, Ph.D. University of Minnesota, *Associate Professor of History* (Early Modern Europe and Germany; comparative women's history; social and cultural history)
- Timothy Tackett, Ph.D. Stanford University, *Professor of History* (The Old Regime and the French Revolution; social, religious, and cultural history; violence and terror)
- Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland (Australia), *Professor of Psychiatry and Human Behavior* (Asian psychologies, philosophies, and religions; ecology; meditation; exceptional psychological well-being; post-conventional development; transpersonal psychology)

Religious Studies includes an interdisciplinary major and minor that focus on the comparative understanding of the various ways different peoples, across space and through time, have developed their religious ideas, values, systems, beliefs, rituals, and traditions in response to fundamental questions of human existence. The curriculum seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society through study in the Schools of Humanities, Social Sciences, and Social Ecology, and the Claire Trevor School of the Arts. As an interdisciplinary academic discipline, the study of religion offers a rigorous, systematic, and dispassionate intellectual inquiry into various aspects of religious systems, their practitioners and outlooks, and their goals and expressions. It employs a wide variety of approaches and methods in order to understand the role of religion in both human experience and thought.

Students in the Religious Studies major complete an emphasis in either Judaism/Christianity/Islam or in World Religious Traditions.

CAREERS FOR THE RELIGIOUS STUDIES MAJOR

Majoring in Religious Studies is an excellent preparation for living in a multicultural society and for a variety of careers in counseling, teaching, commerce, writing, government, the arts, and professional religious leadership. The major's emphasis on broad understanding, critical thinking skills, and clear written expression provides an effective springboard for graduate study in the humanities and social science or professional schools in medicine, law, or business.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Requirements for the Major

- A. Three core courses: Religious Studies 5A, 5B, 5C.
- B. Religious Studies 110.
- C. Six upper-division electives, two selected from each of the following three categories. One relevant lower-division course may be substituted for an upper-division course, with prior approval.
 1. *Judaism/Christianity/Islam:* Religious Studies 130, 140, 141; Anthropology 125Z; Art History 112, 114, 118; English 102A, 103*; History 110*, 123A, 130A, B, C, 131, 132, 133B, 144D; International Studies 179*; Philosophy 11, 111, 123; Spanish 116; Women's Studies 166A*.
 2. *World Religious Traditions:* Religious Studies 91, 120; Anthropology 135H, 135I; Art History 152, 175; Asian American Studies 150*; Classics 45A, 151; East Asian Languages and Literatures 20, 116, 117; Environmental Analysis and Design E15; Philosophy 117; Sociology 136.
 3. *Thematic Approaches to Religion:* Religious Studies 100, 103, 106, 170; Anthropology 134E, 135A; Comparative Literature 104*; English 106*; History 135B, 180*; Philosophy 21, 123; Political Science 149*; Social Science 170H, 170P; Sociology 56; Women's Studies 60C.
- D. Completion of an emphasis in either Judaism/Christianity/Islam or in World Religious Traditions: select two additional upper-division courses from either category 1 or 2 above.

*with prior approval, when topic is appropriate

Other courses will be approved for each category on a quarterly basis; see http://www.humanities.uci.edu/religious_studies/.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

Religious Studies 5A, 5B, 5C, 110; four upper-division electives selected from the three categories above, including at least one course from both categories 1 and 2. Two of the four courses must be outside of the student's major. One relevant lower-division course may be substituted for an upper-division course, with prior approval.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Courses in Religious Studies

LOWER-DIVISION

5A World Religions I (4). An introduction to the history, doctrine, culture, and writing of the three "religions of Abraham": Judaism, Christianity, and Islam. Formerly Humanities 5A. (IV, VII-B)

5B World Religions II (4). An introduction to various religious traditions in selected areas of the world—including India and South Asia, East Asia, Africa, and the Americas. Formerly Humanities 5B. (IV, VII-B)

5C World Religions III (4). A thematic comparison of selected structures and activities that characterize religious traditions. Comparative features may include, for example, holy scriptures, symbolizations of the sacred, attitudes toward afterlife, collective religious behavior, and religious dissent. Formerly Humanities 5C. (IV, VII-B)

21 Philosophy and Religion (4). Examines the intersection of religion and philosophy from a standpoint that does not presuppose previous academic study of either. Both Western and Eastern traditions and perspectives may be explored. May be taken for credit three times as topics vary.

56 Society and Religion (4). A critical and personal examination of the varieties of religious and spiritual experience human beings are undergoing in contemporary society. The role of conscious understanding and unconscious conditioning regarding religion and spirituality. May be taken for credit three times as topics vary.

60 Gender and Religion (4). Introduces the topic of religion in a feminist context by performing cross-cultural exploration of gender, authority, and faith in various traditions. Study includes (but is not limited to) writings of contemporary Jewish, Christian, and Muslim feminists. May be taken for credit three times as topics vary.

90 Aspects of Religion (4). A presentation of selected issues in the study of religion. May be taken for credit three times as topics vary.

91 Aspects of Asian Religions (4). A survey course of a specific Asian religious tradition such as Hinduism, Buddhism, Taoism, Confucianism, or Shinto in its manifestation in Asia or in its transmission to the Americas. May be taken for credit three times as topics vary.

UPPER-DIVISION

100 Topics in the Study of Religion (4). The intersection of religious belief and practices with selected subjects of continuing interest. May be taken for credit three times as topics vary.

103 Topics in the Philosophy of Religion (4). Critical examination of philosophical concepts in religious scripture and theology, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics. May include both Eastern and Western religious traditions. May be taken for credit three times as topics vary.

106 Topics in Gender and Religion (4). Critical examination of how religious beliefs and practices have shaped (and been shaped by) attitudes toward gender and sexuality in modern and/or premodern society. May be taken for credit three times as topics vary.

110 Theory and Methodologies in the Study of Religion (4). Introduction to major thinkers, theories, and methodologies in the study of religions. Includes paper on relevant Religious Studies topic; emphasis on developing the student's ability to analyze and articulate theoretical arguments. Prerequisite: Religious Studies major or consent of instructor. May be taken for credit three times as topics vary.

120 Asian Religious Traditions (4). Studies involving (but not limited to) Hinduism, Buddhism, Confucianism, Taoism, Shinto, and Shamanism, including both elite and doctrinal aspects and forms of more popular religiosity. May be taken for credit three times as topics vary.

130 Jewish, Islamic, and Middle Eastern Religious Traditions (4). Character and evolution of Egyptian, Jewish, Zoroastrian, Muslim, and other religious communities of the region from their formative periods to the present era. May be taken for credit three times as topics vary.

140 Early Western Religious Traditions (4). Religious perspectives of the Mediterranean and European regions from the earliest times to approximately 1500 C.E. May be taken for credit three times as topics vary.

141 Recent Western Religious Traditions (4). Studies related to Catholic, Protestant, and Orthodox Christianity as well as alternative belief systems in Europe of the early modern and modern eras. May be taken for credit three times as topics vary.

150 Religion in the Americas (4). Religious belief and social context in North and South America from the earliest human societies to the present. May be taken for credit three times as topics vary.

160 Diaspora Religions (4). Examination of what happens to belief and practice as religious communities are scattered geographically. May be taken for credit three times as topics vary.

170 Comparative Studies in Religion (4). Systematic comparisons of different religious and quasi-religious traditions, their beliefs, and practices. May be taken for credit three times as topics vary.

190 Senior Colloquium (4). Reading and group discussion of selected texts under the direction of an instructor. Paper required. Prerequisite: consent of instructor; a minimum of two students must enroll. May be taken for credit three times as topics vary.

PROGRAM IN RUSSIAN STUDIES

Humanities Office Building II; (949) 824-6735

Faculty

Guy de Mallac, Ph.D. Cornell University, *Professor Emeritus of Russian* (modern Russian literature, peace studies, philosophy of nonviolence, Tolstoy's thought, Gandhi's thought, religious studies, Russian intellectual thought, Pasternak's life and work)

Michael A. Green, Ph.D. University of California, Los Angeles, *Professor Emeritus of Russian* (eighteenth-century Russian theatre and literary theory, Pushkin, Chekhov, Kuzmin, Russian Symbolist theater, cabaret theatre, Russian literature and theater of the 1920s)

Victorina Lefebvre, Ph.D. Lomonosov Moscow State University, *Lecturer in Russian* (methods of teaching, comparative study of Soviet and American culture, Russian language and literature)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History* (modern Russian and Soviet history)

Lora Mjolsness, Ph.D. University of Southern California, Los Angeles, *Lecturer in Russian* (nineteenth- and twentieth-century and contemporary children's literature; Soviet and Russian animation; Russian folklore)

Spanning both Europe and Asia, Russia is one of the world's dominant political entities. Its rich cultural traditions have enhanced world literature, theater, art, and dance. As the world's first socialist state, it became a major political rival of the United States after the Second World War. In the past decade, Russians have abandoned their socialist system and are now in the process of making a rocky transition to capitalism. Although Russia lost sizeable amounts of territory in this transition, the Russian language now serves as the *lingua franca* throughout many areas formerly controlled by the Soviet Union.

While the demand for specialists in various sectors of government has eased, relationships between our countries at other levels of society are growing more active and business opportunities are exciting and rewarding. Other areas in which the need for Russian language competence is evident right now include trade, environmental protection, social services, law, medicine, and technology.

All students in Russian language courses are encouraged to take part in the UC Education Abroad Program and spend a portion of their junior or senior year studying in Russia. Additional information is available in the Center for International Education section of this *Catalogue*.

The Russian Studies minor is a multidisciplinary curriculum combining the Humanities, Social Sciences, and Social Ecology. It is designed to introduce students to the rich history and culture of Russia and provide them with the intellectual and linguistic tools necessary for sustained engagement with this area of the world.

Requirements for the Minor

Foreign Language Placement and Progression: See page 253.

Russian 1A-B-C, 2A-B-C, 50 (three different topics); 16 units of upper-division courses selected from the following: Russian 140, 150, 199, appropriate Comparative Literature courses, History 124A, 124B, 190 (when topics are related to Russia), Anthropology 136D, and Political Science 152D-E. (A maximum of four units may be chosen from the following courses devoted in part to Russian themes: History 126A, 126B, 126C, 158A, and Environmental Analysis and Design E113.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Courses in Russian**LOWER-DIVISION**

1A-B-C Fundamentals of the Russian Language (5-5-5) F, W, S. Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene. (1C: VI)

2A-B-C Intermediate Russian (5-5-5) F, W, S. Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue. Prerequisite for 2A: Russian 1C with a grade of C or better, or three years of high school Russian; or equivalent; for 2B: Russian 2A with a grade of C or better, or equivalent; for 2C: Russian 2B with a grade of C or better, or equivalent. (VII-B)

50 Russian Culture (4) F, W, S. Study of varied topics in Russian culture, area studies, and society, both in the present and in historical perspective. Topics are not normally repeated for a two-year period. May be taken four times for credit as topics vary. (IV, VII-B)

97 Fundamentals of Russian (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Russian, and to facilitate the understanding and translating of Russian texts dealing with a variety of disciplines. Not open to Russian Studies minors. Does not serve as prerequisite for any higher-level Russian courses or fulfill any undergraduate foreign language requirement.

99 Special Studies Russian (1 to 5). Prerequisite: consultation with instructor necessary prior to enrollment.

UPPER-DIVISION

140 Topics in Russian Literary Theory (4). Examines the work of individual theorists and schools of literary theory in the nineteenth and twentieth centuries. May be repeated for credit as topics vary. (VII-B)

150 Topics in Russian Literature (4) F, W, S. Examines major themes in Russian literature, film, and other media from the eighteenth to twenty-first centuries. Taught in English. May be repeated for credit as topics vary. (VII-B)

198 Directed Group Study (4) F, W, S. Group independent study under direct faculty supervision. Prerequisite: consent of instructor. May be taken two times for credit.

199 Independent Study (1 to 4) F, W, S. Independent study under direct faculty supervision. Prerequisite: consent of instructor. May be taken two times for credit.

DEPARTMENT OF SPANISH AND PORTUGUESE

322 Humanities Hall; (949) 824-6901

Jacobo Sefamí, **Acting Department Chair**

Faculty

Ana María Amár Sánchez, Ph.D. Universidad de Buenos Aires (Argentina), *Associate Professor of Spanish* (Latin American literature, mass culture studies and critical theory)

Luis F. Avilés, Ph.D. Brown University, *Associate Professor of Spanish* (Golden Age literature and critical theory)

Juan Bruce-Novoa, Ph.D. University of Colorado, *Professor of Spanish* (Latin American and Chicano literatures)

Anne J. Cruz, Ph.D. Stanford University, *Professor Emerita of Spanish* (Golden Age Spanish and comparative literature)

Ana Paula Ferreira, Ph.D. New York University, *Professor of Portuguese and Comparative Literature* (Portuguese and Brazilian literatures, women's studies, and critical theory)

Lucía Guerra-Cunningham, Ph.D. University of Kansas, *Professor of Spanish* (Latin American literature, literary theory, and women's studies)

Michelle M. Hamilton, Ph.D. University of California, Berkeley, *Assistant Professor of Spanish* (medieval Spain, including Hebrew and Arabic literature of al-Andalus)

Ivette N. Hernández-Torres, Ph.D. Brown University, *Associate Professor of Spanish* (colonial literature and Caribbean literature)

Juergen Kempff, Ph.D. University of California, Santa Barbara, *Lecturer with Security of Employment and Language Curriculum Director* (theoretical and applied linguistics, Spanish as a foreign language, technology and instruction)

Horacio Legrás, Ph.D. Duke University, *Assistant Professor of Spanish* (Latin American literature and culture)

Seymour Menton, Ph.D. New York University, *Research Professor of Spanish and Portuguese* (Latin American novel and short story)

Alejandro Morales, Ph.D. Rutgers University, *Professor of Spanish and Chicano/Latino Studies* (Latin American and Chicano literature, film studies, creative writing)

Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish* (eighteenth- through twentieth-century Spanish literature; film and visual arts; aesthetics and contemporary cultures)

Héctor Orjuela, Ph.D. University of Kansas, *Professor Emeritus of Spanish* (Latin American literature, poetry and essay)

Julian Palley, Ph.D. University of New Mexico, *Professor Emeritus of Spanish* (modern Spanish literature)

Jill Robbins, Ph.D. University of Kansas, *Associate Dean of the School of Humanities and Associate Professor of Spanish* (contemporary Spanish literature, gender theory, and cultural studies)

Armin Schwegler, Ph.D. University of California, Berkeley, *Professor of Spanish* (history of Spanish, dialectology, historical linguistics, typology, Creoles)

Jacobo Sefamí, Ph.D. University of Texas at Austin, *Acting Department Chair of Spanish and Portuguese and Professor of Spanish* (Latin American literature, contemporary poetry)

Dayle Seidenspinner-Núñez, Ph.D. Stanford University, *Professor Emerita of Spanish* (medieval Spanish and comparative literature)

Juan Villegas, Ph.D. Universidad de Chile, *Research Professor of Spanish* (literary theory, modern Spanish literature, Latin American theatre and poetry)

Zidia Webb, M.A. Michigan State University, *Lecturer with Security of Employment Emerita, Spanish and Portuguese*

Undergraduate Program

The main objectives of the program in Spanish and Portuguese are to develop competence in the ability to understand, speak, read, and write Spanish and Portuguese, and to provide through the knowledge of these two languages an understanding and appreciation of their literatures and cultures.

Spanish Placement

To enroll in Spanish 1A or any Spanish course through the 2C (or 5) level: Students without previous background in Spanish must take a copy of their high school transcript to the Humanities Undergraduate Counseling Office in 143 Humanities Instructional Building (HIB), open daily 9 a.m.–noon and 1–4 p.m., to activate their eligibility to enroll in Spanish 1A. Any student with a previous course (or courses) in Spanish from another college or university who wants to enroll in any Spanish 1A through Spanish 5 course at UCI, must take a copy of their college transcripts to the Humanities Undergraduate Counseling Office in order to receive authorization to enroll in the next course. Students who graduated from a high school in a Spanish-speaking country, or who graduated from a Spanish Academy, must take a copy of their transcripts to the Spanish Department in 322 Humanities Hall to determine where they should be placed.

Students with previous high school background in Spanish wanting to enroll in any Spanish 1A through Spanish 5 course at UCI for the first time must take the placement test. Eligibility to enroll in any Spanish 1A through Spanish 5 course at UCI will be based on the result of that placement test. Students who have already met the UCI language other than English breadth requirement for graduation with SAT Subject Test scores, International Baccalaureate (IB) scores, or Advanced Placement (AP) examinations, and plan to enroll in a Spanish course at UCI, are still required to take the Spanish placement test. Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of IB or AP credit, even if the placement test result recommends enrollment in such a level.

Students currently enrolled in any Spanish 1A through Spanish 2B course at UCI will be eligible to enroll for the next course within the series without having to take the placement test, provided they receive a C or better in the previous course within the series.

Native or near-native speakers who place into Spanish 2C and whose home language is Spanish are encouraged to enroll in Spanish 5, Spanish for Native Speakers, instead.

Placement testing is offered throughout the summer and the academic year. For information about registering for the placement test, contact the Testing Office, 2200 Student Services II; telephone (949) 824-6207; e-mail: testoff@uci.edu; World Wide Web: <http://www.testingoffice.uci.edu/plti/>.

To enroll in Spanish 10A, 10B, or beyond: An active prerequisite check system is in place for Spanish 10A and 10B. In order to enroll in Spanish 10A a student must have passed Spanish 2C or 5. The prerequisite for Spanish 10B is 10A.

Students who have satisfied the required prerequisite at another college or university, or who graduated from a high school in a Spanish-speaking country, or who graduated from a Spanish Academy must take a copy of their transcript to the Humanities Undergraduate Study Office in order to receive authorization to enroll in the appropriate course.

All courses in Spanish and Portuguese, unless specifically stated, are taught in the foreign language. By the end of the first year, students attain mastery of the basic structure of the language and ability to converse on everyday topics, as well as to read and write at an elementary level.

In the second year, emphasis is put on gradually raising the level of the student's ability to read and write. A third-year two-quarter sequential course stresses composition and introduces literary analysis. Further, a course in phonetics aims to perfect pronunciation and presents historical and dialect variants of Spanish. In addition to giving students a sense of literary history, the introductory

courses in literature, also to be taken in the third year, introduce students to elements of literary research and writing. The courses in Hispanic culture combine a panoramic overview with a close look at a specific country or topic, and require a final research project. Upper-division literature and film courses offer a more detailed analysis of specific texts and require a final research paper.

Although a major in Portuguese is not offered, advanced literature courses are available. In addition, an undergraduate minor is offered.

The faculty encourages Spanish majors or minors who are serious about improving their Spanish language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the Spanish language by studying in Chile, Costa Rica, Mexico, Spain, or other Spanish-speaking countries through the Education Abroad Program (EAP) or through the International Opportunities Program (IOP). Programs are available for the summer, one quarter, one semester, or one year. While studying abroad, students can continue to make progress toward their UCI degree. See the Center for International Education section of the *Catalogue* or an academic counselor for additional information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 254.

Foreign Language Placement and Progression: See page 253.

Departmental Requirements for the Major

Spanish 2C (or Spanish 5, for native speakers) or the equivalent is a prerequisite to Spanish 10A. Spanish 10A is a prerequisite to Spanish 10B and to major requirements. Students may take 10B concurrently with 100-level Spanish grammar or linguistics courses. Students must, however, complete 10B before taking upper-division literature courses.

Students must choose one or both of the following emphases:

Language and Culture: Spanish 10A-B; 15*; 100A or 100B; 100C or 100D; 100E; 107; 110A or 110B or 110C; 113A; 113B; and five additional upper-division courses, three of which must be taught in Spanish.

* For non-native speakers only; semi-native and native speakers must substitute another upper-division course in either literature or culture for Spanish 15.

Literature and Culture: Spanish 10A-B; 100A, 100B, 100C, 100D, 100E; 110A or 110B or 110C; 113A; 119; and five upper-division Spanish courses in literature, two of which may be substituted by culture, film, and/or creative writing courses offered by the Department. NOTE: The Spanish 100A–E series must be completed before enrolling in upper-division literature courses numbered above 100.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Spanish Minor

Spanish 2C or 5 (or equivalent) is a prerequisite to minor requirements.

Seven courses in Spanish, including Spanish 10A and 10B and at least four upper-division courses.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Departmental Requirements for the Portuguese Minor

Foreign Language Placement and Progression: See page 253.

Prerequisite: Portuguese 1C or the equivalent. Requirements: Portuguese 120A, B, C and four courses from Portuguese 121 and 122.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

CAREER OPPORTUNITIES

Spanish is particularly useful in international business or trade, community or social service, and in foreign service. Spanish majors interested in writing may look to publishing, writing, or editing positions.

Majoring in Spanish is excellent preparation for graduate and professional study in law, medicine, social welfare, library science, business or public administration, education, international relations, journalism, or advanced study in Spanish. An option available to Spanish majors is UCI's 3-2 Program offered by The Paul Merage School of Business, in which students may earn a bachelor's degree in Spanish and a master's degree in Management in five years rather than the usual six.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. Visit <http://www.career.uci.edu> for additional information.

Distinguished Visiting Professors

The Department's Distinguished Visiting Professors program brings students in direct contact with some of the outstanding intellectuals in the field of Spanish, Latin American, and Chicano/United States Latino literatures and cultures. Distinguished visiting professors teach both graduate and undergraduate courses during one or two quarters and give one public lecture. Past program participants have included: Elias J. Rivers (1990-91), State University of New York at Stonybrook, Spanish Golden Age literature; Alfonso Sastre (1991-92), Spanish playwright and intellectual; Hernán Vidal (1992-93), University of Minnesota, Latin American literature and culture; John Kronik (1993-94), Cornell University, modern Spanish literature; José Agustín (1994-96), leading Mexican novelist and cultural critic; Alan D. Deyermond (1997-98), Queen Mary and Westfield College, London, medieval Spanish literature; Noé Jitrik (1999), leading critic in Latin American literature; José Miguel Oviedo (2000), University of Pennsylvania, Latin American literature; Wolfgang Binder (2001), University of Erlangen, Germany, Caribbean and Chicano/U.S. Latino literatures; Paul Julian Smith (2002), University of Cambridge, Spanish and Latin American film and Spanish cultural studies; and Homero Aridjis (2002), Universidad Nacional Autónoma de México, author, poet, environmental activist.

Graduate Program

All graduate courses in the Department are taught in either Spanish or Portuguese, unless otherwise indicated in the course description.

MASTER OF ARTS IN SPANISH

The Master of Arts degree in Spanish is a two-year program of study designed to expose the beginning graduate student to all periods of peninsular, Latin American, and Chicano/Latino literature and culture. The degree is awarded upon the successful completion

of course work and written and oral comprehensive examinations. A minimum of 10 courses must be completed with a letter grade; at least eight of these must be graduate seminars. Required course work includes one course in Theory (239A or B), and one course in Chicano/Latino literatures. Proficiency (defined as the equivalent of completing 2C) in a foreign language other than Spanish is required; it is recommended that master's students take Portuguese as their foreign language, although other languages are accepted. Students may choose a focus in literature, linguistics, or creative writing. Master's candidates must complete a minimum of three quarters of course work in the Department; the maximum time to complete the master's program is two years. Students entering with a bachelor's degree must satisfy the requirements for a master's degree before they proceed toward a Ph.D. This includes the master's level examinations and course work. Normally only students intending to work toward the Ph.D. are admitted to the graduate program.

DOCTOR OF PHILOSOPHY IN SPANISH

The Department of Spanish and Portuguese offers a Ph.D. degree in Spanish with a specialization in Spanish, Spanish-American, or Chicano/Latino literatures and cultures. The program integrates period and genre studies with work in literary and critical theory, linguistics, sociohistorical studies, and cultural studies. The Department seeks to professionalize its Ph.D. candidates not as narrow specialists but rather as scholars and critics acquainted with a range of fields that relate to and enhance their discipline. Graduate emphases in Comparative Literature, Critical Theory, and Feminist Studies are available; other areas of study (for example, film, history) may be designed with approval from the student's Ph.D. guidance committee. The Department has been traditionally committed to excellence in teaching, both in its own practice and in the formation of its graduates.

Language Requirements

In addition to Spanish and English, all doctoral candidates should have the necessary command of Portuguese to successfully complete a graduate course in Portuguese. An additional foreign language (with proficiency equivalent to the 2C level) is also required; this requirement may be satisfied by examination or course work. The selection of a second foreign language must be approved by the student's guidance committee and is based on the specific research interests and field of study of the candidate.

Course Requirements

A minimum of 20 courses beyond the B.A. or 10 beyond the M.A. are required. One course in linguistics (diachronic or synchronic), and one graduate course in Luso-Brazilian literature are required at the Ph.D. level. Note that these requirements may include course work completed in the master's program; the remaining elective courses are selected with the approval of the student's guidance committee to prepare for the doctoral examination and the dissertation. Students are encouraged to take more than the minimum number of required courses.

A student who transfers into the doctoral program from elsewhere must take a minimum of 10 graduate courses at UCI, of which seven must be in the Department of Spanish and Portuguese. With regard to students who enter the Ph.D. program with their master's degree from another institution, the Ph.D. guidance committee will determine the number of courses that will be accepted.

A student may pursue the Ph.D. with an emphasis in Comparative Literature by taking a minimum of five courses in the Comparative Literature program.

The Department offers an emphasis in Critical Theory designed to focus upon theoretical issues considered within the contextual realities of the Iberian Peninsula, Latin America, and U.S. Latino communities. Ph.D. students may earn a certificate in critical theory by

taking four courses in theory, one of which should be taken outside the Department. To obtain all necessary application materials and for further information, contact the Emphasis Coordinator.

Teaching

The Department recognizes its responsibility to train all Ph.D. candidates as teachers and requires that all doctoral students with no prior teaching experience complete a minimum of three quarters of language teaching (Spanish 399). Moreover, all doctoral students are encouraged to complete a teaching practicum by co-teaching an upper-division course with a professor and enrolling in Spanish 292, which is graded Satisfactory/Unsatisfactory only.

Qualifying Examination

Upon completion of course work, the Ph.D. student advances to candidacy by passing the written and oral qualifying examinations by unanimous decision. The qualifying examination requires the student to develop two topics in close consultation with the examination committee. One topic must present a critical problem from a historical perspective, while the other may focus on a more specific area within the student's major field of interest. Students are encouraged to incorporate theoretical and interdisciplinary components into the formulation of their topics. A two-hour oral examination that includes discussion of the written examinations is also required. The normal time for advancement to candidacy is four years.

Dissertation

A dissertation topic is chosen by the candidate in consultation with the dissertation director and committee, and normally falls within the major field covered by the qualifying examinations. The candidate presents a study plan to the dissertation committee, which approves the proposal and a preliminary research outline. The student submits drafts of chapters to the dissertation director who corrects and approves the drafts and circulates them to other committee members for commentary. The normal time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Courses in Portuguese

LOWER-DIVISION

1A-B-C Fundamentals of Portuguese (4-4-4) F, W, S. Basic grammar, conversation, and composition with an initial exposure to the varied cultures of the Portuguese-speaking world. (1C: VI)

2A Intermediate Portuguese (4). Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar and review. Prerequisite: Portuguese 1C. (VII-B)

UPPER-DIVISION

120A, B, C Introduction to Portuguese and Brazilian Literature (4, 4, 4) F, W, S. General introduction to selected authors and works in relation to literary currents and to specific historical and cultural contexts. Taught in Portuguese. **120A:** Middle ages to eighteenth century. **120B:** Nineteenth century. **120C:** Twentieth century. Prerequisite: Portuguese 1C with a grade of C or better, or one year of college Portuguese, or equivalent. (VII-B)

121 Topics in Luso-Brazilian Literature (4) F, W, S. In English. Contextualized study of a major author, current, or genre in Brazilian, Portuguese, and/or Lusophone African literature. Examples: Gender, Race, and Sexualities in Post-Colonial Lusophone Literatures; Women and Writing in Brazil and Portugal; The Short Story. May be repeated for credit as topics vary. (VII-B)

122 Topics in Luso-Afro-Brazilian Culture (4) F, W, S. In English. Diachronic or synchronic study of a topic in the cultures of Portuguese expression through the use of printed media, music, art, and films. Examples: Africa in Brazil; From Dictatorship to Revolution. May be repeated for credit as topics vary. (VII-B)

190 Individual Studies (4-4-4) F, W, S

GRADUATE

243 Studies in Luso-Brazilian Literature and Culture (4) F. May be repeated for credit as topics vary.

290 Individual Study (4) F, W, S

Courses in Spanish

LOWER-DIVISION

NOTE: Spanish 1A and S1AB are open only to students who do not have prior knowledge of Spanish. Students must take a copy of their high school transcript to the Humanities Undergraduate Study Office, 143 Humanities Instructional Building, to activate their eligibility to enroll in Spanish 1A or S1AB.

1A-B-C Fundamentals of Spanish (5-5-5) 1A (F), 1B (W), 1C (S). Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced. Prerequisite for Spanish 1A: see NOTE above; for 1B: 1A or placement into 1B; for 1C: 1B or placement into 1C. Spanish 1A-B-C and Spanish S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of Spanish (7.5-7.5) Summer. First-year Spanish in an intensified form. Same as Spanish 1A-B-C during academic year. Prerequisite for Spanish S1AB: see NOTE above; for S1BC: S1AB or 1B, or placement into 1C. Spanish S1AB-BC and Spanish 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate Spanish (4-4-4) 2A (F), 2B (W), 2C (S). Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review. Prerequisite for 2A: Spanish 1C or S1BC with a grade of C or better or placement into 2A; for 2B: Spanish 2A with a grade of C or better or placement into 2B; for 2C: Spanish 2B or S2AB with a grade of C or better or placement into 2C. Spanish 2A-B-C and Spanish S2AB-BC may not both be taken for credit. (VII-B)

S2AB-BC Intermediate Spanish (6-6) Summer. Second-year Spanish in a time-intensive form. Equivalent to Spanish 2A-B-C during academic year. For description, see Spanish 2A-B-C. Prerequisite for S2AB: Spanish 1C or S1BC with a grade of C or better, three to four years of high school Spanish, or equivalent; for S2BC: Spanish 2B or S2AB with a grade of C or better, or equivalent. Spanish S2AB not open to native or near-native speakers of Spanish; those students should take Spanish 5 instead. Spanish S2AB-BC and Spanish 2A-B-C may not both be taken for credit. (VII-B)

5 Spanish for Spanish Speakers (4) F, W, S. Workshop for writing concise compositions in Spanish with emphasis on contrastive features and interferences from English. Learning by doing approach to teaching of Spanish grammar, vocabulary, and orthography. Equivalent to Spanish 2C. Prerequisite: Spanish 2B, or placement into 2C, and advanced (native-like) oral proficiency in Spanish. (VII-B)

10A-B Advanced Composition (4-4) F, W, S. 10A: Compositions on a variety of themes and types of writing, motivated and prepared in the classroom and arranged in order of difficulty. Review of selected grammatical topics. Prerequisite: Spanish 2C or 5, or authorization to enroll in 10A. **10B:** Includes introduction to literary analysis. Prerequisite: Spanish 10A. (VII-B)

15 Advanced Spanish Conversation (4) W, S. Primarily designed to improve the fluency of non-native speakers of Spanish. Concentrates on the active expansion of vocabulary, as well as listening and speaking skills in general. Introduction to Spanish dialect variations of both American and Peninsular Spanish. Not open to native or semi-native speakers of Spanish. Prerequisite: Spanish 10B.

44 Hispanic Literatures for Nonmajors (4). Focuses on major Spanish and Latin American literary texts within a historical and theoretical perspective. Taught in English with literary texts read in the original language. Prerequisites: Spanish 2C or 5 or equivalent; English majors only. (VII-B)

50 Latin America, U.S. Latino, and Iberian Cultures (4) F, W, S, Summer. Introduction (for non-majors) to the culture of the Spanish- and Portuguese-speaking worlds (Europe, Latin America, U.S., Africa). May focus on any time period. Taught in English. May be taken for credit three times as topics vary. (IV, VII-B)

97 Fundamentals of Spanish (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Spanish, and to facilitate the understanding and translating of Spanish texts dealing with a variety of disciplines. Not open to Spanish majors or minors. Does not serve as prerequisite for any higher-level Spanish courses or fulfill any undergraduate foreign language requirement. Prerequisite: consent of instructor.

UPPER-DIVISION

100A, B, C, D, E Introduction to Spanish, Latin American, and Chicano/Latino Literatures. Studies of works representative of historical periods of Peninsular, Latin American, and Chicano/Latino literature. Students also are introduced to literary analysis, research methods, and cultural critique. Prerequisite: Spanish 10B.

100A Introduction to Medieval and Golden Age Spanish Literature (4). (VII-B)

100B Introduction to Modern Spanish Literature: Eighteenth–Twentieth Centuries (4). (VII-B)

100C Introduction to Latin American Literature: Pre-Hispanic to Nineteenth Century (4). (VII-B)

100D Introduction to Latin American Literature: Nineteenth and Twentieth Centuries (4). (VII-B)

100E Introduction to Chicano and U.S. Latino Literature (4). (VII-A)

106A Methods for Elementary Bilingual Teachers (4). Direct observation of bilingual classrooms in local elementary schools, classroom lectures, discussions, and presentations on the culture and language of the bilingual student. Prerequisite: Spanish 10A or equivalent. Same as Education 140A.

106B Methods for Secondary Teachers of Spanish (4). Communicative approaches to teaching Spanish at the secondary school level. Theory and practice of oral proficiency acquisition techniques. Requires field work. Emphasis placed on training differences for native versus nonnative Spanish speakers. Prerequisite: Spanish 10A or equivalent. Same as Education 140B.

107 Advanced Spanish Grammar (4). Designed primarily for students who have demonstrated a substantial level of proficiency in their studies of the Spanish language. Takes a thorough approach to advanced grammatical problems, in order to assist students in their mastery of the elements of the Spanish language. Prerequisite: Spanish 10A or equivalent.

110A Peninsular Cultures (4). Prerequisite: Spanish 10B or equivalent. May be repeated for credit as topics vary. (VII-B)

110B Latin American Cultures (4). Prerequisite: Spanish 10B or equivalent. May be repeated for credit as topics vary. (VII-B)

110C U.S. Latino Cultures (4). Focuses on some aspect—literature, art, cultural production, history—of the multifaceted Latino cultures that have developed within the United States. Can focus on one group, such as Caribbean Americans, Chicanos, Central American, or take a comparative perspective of several groups. Prerequisite: Spanish 10B or equivalent. Same as Chicano/Latino Studies 134. (VII-A)

113A Spanish Phonetics (4). Introduction to basic notions of Spanish phonetics. Particular attention is paid to problems of pronunciation that arise in native and non-native speakers of Spanish due to interference between Spanish and English. Phonology (the system that underlies phonetics) and Spanish dialectology also included. Prerequisite: Spanish 10A or equivalent.

113B Introduction to Spanish Linguistics (4). Application of basic notions of linguistics to Spanish. Spanish phonology, morphology, syntax, and semantics. Special attention to the application of linguistics to the teaching of Spanish. Prerequisite: Spanish 10A or equivalent; Linguistics 3 recommended.

116 Medieval Spanish Literature (4). Medieval literature in Spain from ninth century to 1500. Works of lyric and epic poetry, prose fiction, and non-fiction. Substantial historical and cultural background explored. Prerequisite: Spanish 10B or equivalent. May be repeated for credit as topics vary. (VII-B)

119 Textual Analysis and Interpretation (4). Focus on analysis and interpretation of literary texts, with emphasis on narrative, poetry, theater/performance, and visual media. Also introduces students to the major currents in theoretical thought, such as cultural studies, postmodernism, and others. Oral presentations and short essays are required. Taught in Spanish. Prerequisite: Spanish 10B. (VII-B)

121 Golden Age Literature (4). Golden Age literature in Spain including the Renaissance and Baroque periods. Works of poetry, narrative, and theater. Historical and cultural background. Prerequisite: two courses from Spanish 100A, 100B, 100C, 100D, or 100E. May be taken for credit three times as topics vary. (VII-B)

122 Eighteenth- and Nineteenth-Century Spanish Literature (4). The main literary and ideological trends in eighteenth- and nineteenth-century Spain, including the enlightenment, romanticism, realism, and naturalism. Prerequisite: Spanish 10B or equivalent. May be taken for credit three times as topics vary.

123 Twentieth-Century Spanish Literature (4). Twentieth-century Spanish authors. Works of poetry, narrative, or theater. Historical context of the period and principles of literary theory. Prerequisite: Spanish 10B. May be taken for credit three times as topics vary.

130A Latin American Colonial Literature (4). Prerequisite: Spanish 10B. May be repeated for credit as topics vary. (VII-B)

130B Latin American Literature of the Nineteenth Century (4). Prerequisite: Spanish 10B. May be repeated for credit as topics vary. (VII-B)

130C Latin American Literature of the Twentieth Century (4). Prerequisite: Spanish 10B. May be repeated for credit as topics vary. (VII-B)

140A, B Chicano Literature (4, 4). Focus on contemporary Chicano literature, in relation to Chicana literature, women's literature, American literature, and Latino literature. Prerequisite: Spanish 10B or consent of instructor. Same as Chicano/Latino Studies 110A, B. (VII-A)

142 Chicano Culture (4). Current research and perspectives on different aspects of Chicano culture: political, economic, sociological, artistic, and folkloric. Prerequisite: Spanish 10B or equivalent. May be taken twice for credit as topics vary. Same as Chicano/Latino Studies 111B. (VII-A)

150 Literature in Translation (4). Study of texts by modern and contemporary Peninsular, Latin American, and/or U.S. Latino writers in translation. Taught in English. Not applicable toward Spanish major or minor requirements. May be repeated for credit as topics vary. (VII-B)

160 Topics in Luso-Hispanic Film Studies (4). Study of Peninsular, Latin American, and/or U.S. Latino film. In English or Spanish. Prerequisite: Spanish 10B when course taught in Spanish. May be taken for credit three times as topics vary. Same as Film and Media Studies 160. (VII-B)

185 Selected Topics in Peninsular Literature and Culture (4). Selection of representative topics in Spanish and/or Portuguese literature and culture. Prerequisite: Spanish 10B. May be repeated for credit as topics vary. (VII-B)

186 Selected Topics in Latin American Literature and Culture (4). Selection of representative topics in the history of Latin American literature and culture. Prerequisite: Spanish 10B or equivalent. May be repeated for credit as topics vary.

187 Selected Topics in Spanish Linguistics (4). Major topics in Spanish linguistics. Prerequisite: Spanish 10A or equivalent. May be repeated for credit as topics vary.

190 Colloquium (4). Specialized, discussion-based course dealing primarily with a research topic that reflects the instructor's current intellectual interests. Required oral presentation(s) and final research paper. Limited to 15 students. Prerequisite: junior or senior Spanish major or consent of instructor.

199 Independent Study (1 to 4) F, W, S. Research paper required. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE

The content of most courses changes every year. In addition to the following courses, graduate students might find Humanities 200A, B, C (History and Theory) and Humanities 220A, B, C (Studies in Literary Theory and Its History) of special interest.

201 History of the Spanish Language (4) W. Diachronic survey of phonological changes from Latin to Old Spanish to Modern Spanish. Focuses on Castilian including Romance languages and other peninsular dialects for comparative purposes. Morphological changes.

202 Spanish in the United States (4) S. Focuses on sociolinguistic functions of the various social and stylistic varieties of Spanish in the U.S. in spoken and written forms. Study of phonological, morphological, syntactical, and lexical differences and similarities with the standard Latin American and peninsular Spanish. Emphasis on recent work in Chicano discourse, and examination of relevant research on various dialects.

205 Spanish Dialectology (4) S. Phonological, morphological, and syntactic variations in Spanish as spoken in the Hispanic world, from synchronic and diachronic points of view. The study of Spanish as spoken in the United States.

212 Studies in Medieval Iberia (4) F. May be repeated for credit as topics vary.

214 Studies in Golden Age Literature and Culture (4) W. May be repeated for credit as topics vary.

218 Studies in Enlightenment and Romanticism (4) F. May be repeated for credit as topics vary.

219 Studies in Nineteenth Century (4) S. May be repeated for credit as topics vary.

220 Studies in Twentieth Century (4) W. May be repeated for credit as topics vary.

221 Topics in Iberian Studies (4) S. Cross-cultural connections and interactions between different ethnicities in the Iberian Peninsula. May be repeated for credit as topics vary.

231 Studies in Colonial Latin America (4) W. May be repeated for credit as topics vary.

232 Studies in Nineteenth-Century Latin America (4) S. May be repeated for credit as topics vary.

233 Studies in Twentieth-Century Latin America (4). May be repeated for credit as topics vary.

234 Topics in Latin America (4) S. Special topics in Latin American literatures and cultures. Topics may cover areas such as gender, national literatures, mass culture, ethnicity, and others. May be repeated for credit as topics vary.

235 Topics in Trans-Oceanic Studies (4) F. Focuses on meaningful connections between different geographical and cultural areas. May be repeated for credit as topics vary.

239A-B Introduction to Literary Theory I-II (4-4) F. May be repeated for credit as topics vary.

239C Special Topics in Theory (4). F, W, S. Focus on issues related to critical theory, theory of literature, cultural criticism and visual arts as they pertain specifically to Latin America, Spain, Portugal, and Brazil. Topics vary. Examples: Latin American cultural studies; theory, film, and media in post-war Spain.

245 Studies in Luso-Hispanic Film (4) F. May be repeated for credit as topics vary.

251 Studies in Chicano Literature and Culture (4) W. May be repeated for credit as topics vary.

252 Studies in U.S. Latino Literature and Culture (4) F. May be taken for credit as topics vary.

260 Seminar in Spanish (4) W. Topics vary. May be repeated for credit when topic changes.

270 Creative Writing Workshop in Spanish/English (4) F, W, S. Discussion of theory and practice of creative writing. Focus on critical analysis of participant's work in progress. Texts may be written in Spanish and/or English and may be written in poetry or prose format. May be repeated for credit as topics vary. Prerequisite: consent of graduate advisor.

290 Individual Study (4) F, W, S. May be repeated for credit as topics vary.

291 Directed Reading (4) F, W, S. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

292 Teaching Practicum (4) F, W, S. Satisfactory/Unsatisfactory only.

293 Creative Writers' Project Consultation (4) F, W, S. May be repeated for credit as topics vary.

299 Dissertation Research (4 to 12) F, W, S. Satisfactory/Unsatisfactory only.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. May be repeated for credit.

GRADUATE PROGRAM IN VISUAL STUDIES

(949) 824-4873

Edward Dimendberg, Graduate Advisor

Faculty

- Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)
- George Bauer, Ph.D. Princeton University, *Professor of Art History* (Renaissance and Baroque art and architecture)
- Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor of Art History* (Renaissance and Baroque art)
- Sohail Daulatzai, Ph.D. University of Southern California, *Assistant Professor of African American Studies and of Film and Media Studies* (cultural studies, postcolonial theory, race, internationalism, cultural politics of hip-hop, sports, cinema)
- Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Associate Professor of Film and Media Studies and Visual Studies Program Graduate Advisor* (film history, audio-visual media and the built environment, contemporary architecture and urbanism, avant-garde cinema, modernism and modernity)
- Nanette Fornabai, Ph.D. Brown University, *Assistant Professor of French and of Film and Media Studies* (early French film, detective film, film noir, science and cinema)
- Anna Gonosová, Ph.D. Harvard University, *Associate Professor of Art History* (Byzantine and Medieval art and architecture)
- Jonathan M. Hall, Ph.D. University of California, Santa Cruz, *Assistant Professor of Comparative Literature and of Film and Media Studies* (Japanese film, East Asian Cinemas, queer and psychoanalytic theory, experimental and avant-garde film)
- James D. Herbert, Ph.D. Yale University, *Department Chair and Professor of Art History* (Modern European art, critical theory)
- Judy C. Ho, Ph.D. Yale University, *Associate Professor of Art History* (Chinese art, archaeology, common religion, Buddhist art)
- Victoria E. Johnson, Ph.D. University of Southern California, *Assistant Professor of Film and Media Studies and of African American Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)
- Branden W. Joseph, Ph.D. Harvard University, *Associate Professor of Art History* (contemporary art and critical theory)
- Peter O. Krapp, Ph.D. University of California, Santa Barbara, *Associate Professor of Film and Media Studies* (digital culture, media history, critical theory, visual studies and cultural memory)
- Bliss (Felicidad) Cua Lim, Ph.D. New York University, *Assistant Professor of Film and Media Studies* (Filipino and Hong Kong cinema, Third World and postcolonial studies, Fantastic cinema and the philosophy of history, politics of genre)
- Margaret M. Miles, Ph.D. Princeton University, *Associate Professor of Art History and Classics* (Greek and Roman art, archaeology)
- Mark S. Poster, Ph.D. New York University, *Professor of History, Film and Media Studies, and Comparative Literature* (modern European intellectual history, media studies)
- Fatimah Tobing Rony, Ph.D. Yale University, *Associate Professor of Film and Media Studies* (documentary and ethnographic film, race and representation, postcolonial studies, film history and theory, film production)
- Felicity D. Scott, Ph.D. Princeton University, *Assistant Professor of Art History* (modern and contemporary architecture)
- Jared Sexton, Ph.D. University of California, Berkeley, *Assistant Professor of African American Studies and of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)
- Sally A. Stein, Ph.D. Yale University, *Associate Professor of Art History* (American art, photography and mass media, feminist theory)
- Dickran Tashjian, Ph.D. Brown University, *Professor Emeritus of Art History* (American art and literature, American and European avant-garde, art and technology)

Cécile Whiting, Ph.D. Stanford University, *Associate Dean for Humanities Graduate Study and Research and Professor of Art History* (American art and culture, feminist theory)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History* (Modern Japanese art, Asian American art, art and nationalism)

Affiliated Faculty

Philippe Barbé, Ph.D. Northwestern University; Doctorate, University of Paris, *Assistant Professor of French* (Francophone studies, twentieth-century French literature)

David Carroll, Ph.D. The Johns Hopkins University, *Director of European Studies and Professor of French* (literary theory and twentieth-century French literature)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (feminist epistemologies and theories, cultural studies, ethnic studies)

Susan B. Klein, Ph.D. Cornell University, *Director of Religious Studies and Associate Professor of Japanese* (premodern and modern theatre and dance, Japanese religions, feminist critical theory)

Catherine Lord, M.F.A. State University of New York, Buffalo (Visual Studies Workshop), *Professor of Studio Art* (critical theory, feminism, photography)

Julia Reinhard Lupton, Ph.D. Yale University, *Professor of English and Education* (Renaissance literature, literature and psychology)

William M. Maurer, Ph.D. Stanford University, *Department Chair and Associate Professor of Anthropology* (anthropology of law, globalization, transnationalism, citizenship and nationalism, finance capital, identity, Caribbean)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Professor of Asian American Studies* (Asian American film and video, migrant and indigenous media in the Pacific, queer media)

Alejandro Morales, Ph.D. Rutgers University, *Professor of Spanish and Chicano/Latino Studies* (Latin American and Chicano literature, film studies, creative writing)

Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish* (eighteenth- through twentieth-century Spanish literature; film and visual arts; aesthetics and contemporary culture)

Robert F. Nideffer, Ph.D. University of California, Santa Barbara, *Associate Professor of Studio Art and Informatics* (virtual environments and behavior, interface theory and design, technology and culture, contemporary social history, gaming studies)

Nancy Lee Ruyter, Ph.D. Claremont Graduate School, *Professor of Dance* (dance history, Spanish dance, choreography, and research methods)

Jonathan M. Wiener, Ph.D. Harvard University, *Professor of History* (recent American history, theory and history)

The graduate program in Visual Studies, administered jointly by the faculties of the Department of Art History and the Department of Film and Media Studies, offers students the opportunity to pursue a doctorate in the cultural analysis of visual artifacts and experiences. Visual Studies synthesizes methodological insights from both component disciplines in order to examine the social practices of visual representation and visibility itself. The program leads to a Ph.D. degree in Visual Studies. While the program (in certain instances) grants an M.A. to students on route to their Ph.D., it admits only those students intending to complete their doctorate at UCI.

In addition, an emphasis in Visual Studies, described later in this section, is available to Ph.D. and M.F.A. students in all departments at UCI.

ADMISSION

The program is open to students applying with either a bachelor's or a master's degree, and applicants must meet the general requirements for admission to graduate study at UCI. A recent sample of academic writing—such as a representative undergraduate paper, or the master's thesis or a major research paper written at the master's level—should be submitted with the application packet.

The deadline for application is January 15, and the program accepts applicants for admission during the fall quarter only. Additional information is available from the Graduate Advisor for the Visual Studies program.

LANGUAGE REQUIREMENTS

All students are required to demonstrate a reading knowledge of at least one foreign language and are strongly encouraged to develop competence in a second. Students consult with the Graduate Advisor and/or their principal advisor(s) to determine the appropriate language to be tested, based on their interests and program of study. Advisors, moreover, may require the demonstration of reading knowledge in additional languages according to the scholarly demands of the student's specific field. All language requirements must be satisfied before students are awarded a master's degree or, if they enter with an M.A., before they are advanced to candidacy for the Ph.D. degree.

COURSE REQUIREMENTS

Beyond the core series (Visual Studies 291, 292, 293A), students admitted with a B.A. are required to complete an additional 11 courses for a total of 14 courses. Out of this total, at least 10 courses (including the core series) must be within the program in Visual Studies (i.e., bearing Visual Studies, Art History, or Film and Media Studies course numbers) and at least two courses are to be from outside the Visual Studies discipline. In order to establish a level of expertise in one conventionally defined discipline, students entering with a B.A. must take (among their 10 courses noted above), at least three courses that have a strong component of art history or at least three courses that have a strong component of film studies. Courses bearing Art History or Film and Media Studies numbers automatically satisfy this requirement for their respective fields. In addition, particular seminars offered as Visual Studies 295 may satisfy either the art history or film studies requirement; a list of qualifying seminars is available in the program office.

Students admitted with an M.A. must complete an additional five courses beyond the core series, for a total of eight courses. While students may accrue units both for University Teaching (Art History 399 or Film and Media Studies 399) and Reading for the Qualifying Examination (Visual Studies 298), these do not count toward the required number of courses.

QUALIFYING EXAMINATION

By the end of the second year for students entering with a B.A., or the end of the first year for those entering with an M.A., students must reach agreement with one of the program's professors to serve as principal advisor. During the fall quarter of the following year—in most cases, the final quarter of standard course work—the student will work informally with the principal advisor who will supervise one examination field; two additional faculty members supervising examination fields, at least one of whom must be a member of the Visual Studies faculty; a fourth member from the Visual Studies faculty who will not supervise an examination field but will participate in the oral examination; and a designated “outside” member who must be a member of the UCI faculty but cannot hold either a primary or joint appointment in Visual Studies, Art History, or Film and Media Studies. Except in extraordinary circumstances (to be adjudicated by the program's Graduate Committee), students are required to include at least one member from Art History and one from Film and Media Studies among the three faculty members supervising the examination fields.

The student and principal advisor define three fields to be examined by the faculty. The fields should combine historical breadth and some variety in media. Over the course of the following two quarters, students normally enroll in eight to twelve units per quarter of Reading for the Qualifying Examination (Visual Studies 298) during which time they prepare reading lists in close consultation with their principal advisor and field supervisors, and complete the reading of those lists. The examination takes place near the end of those two quarters of study, normatively at the end of the academic year.

The first part of the examination consists of a written component, in which the student is called upon to respond to questions posed in the three examination fields. The student's written responses are circulated to all committee members. An oral examination follows, normally within two weeks, and consists of questions prompted both by the student's reading lists and by the written examinations. Based on the student's written and oral performance, the committee will determine whether the student has successfully passed the examination; if so (and provided all language requirements have been satisfied), the student is then advanced to candidacy for the Ph.D. degree. The normal time for advancement to candidacy is three years. If the committee is not satisfied with the student's performance, it may also decide to reexamine the student on one or more fields after a specific interval. Except in extraordinary circumstances, no student will be given more than two chances to pass any given section of the examination.

DISSERTATION

Within six months of advancement to candidacy, each student must submit a prospectus that defines the scope, approach, and rationale for a proposed dissertation. The student and the principal advisor consult to determine the composition of a doctoral committee of three members including the principal advisor, which then must unanimously approve the prospectus before the student proceeds with the dissertation. The doctoral committee, on the basis of the candidate's past academic performance and proposed dissertation topic, may require additional course work or other forms of preparation for the dissertation. The doctoral committee, under the direction of the principal advisor, supervises the student's research program and ultimately approves the dissertation. The normative time for completion of the Ph.D. program is six years, and the maximum permitted is eight years.

GRADUATE EMPHASIS IN VISUAL STUDIES

In addition to the doctoral program in Visual Studies described above, the Program in Visual Studies also offers an emphasis in Visual Studies available to Ph.D. and M.F.A. students in all departments at UCI. Satisfactory completion of the emphasis is certified by the Graduate Advisor in Visual Studies and is noted in the student's dossier.

Admission to the Program

Students must first be admitted to, or currently enrolled in, a Ph.D. or M.F.A. program at UCI. Applicants must submit to the Graduate Advisor in Visual Studies a summary of prior undergraduate and graduate course work related to Visual Studies, institutions attended, and major(s), together with a brief statement of purpose, including career objectives, areas of interest and research, record of research, teaching, professional accomplishments, and/or creative work. Lack of prior course work does not preclude admission, so long as a compelling statement of research interests congruent with the emphasis makes the case. Admission to the emphasis is on a rolling basis. The Graduate Advisor tracks students' progress toward fulfillment of the emphasis requirements and meets with students to advise them on a program of study, as required.

Emphasis Requirements

Minimum course work for the graduate emphasis in Visual Studies consists of four courses: Visual Studies 291 and three additional elective Visual Studies seminars.

For doctoral students, the qualifying examination and dissertation topic should incorporate Visual Studies as a central concern. One area of the Ph.D. qualifying examination should be on a Visual Studies topic, and one member of the candidate's qualifying examination committee and dissertation committee is normally a member of the Visual Studies faculty. There are no requirements concerning qualifying examinations or theses for M.F.A. students.

Graduate Courses in Visual Studies

Graduate students may also enroll concurrently in any upper-division lecture course with the approval of the instructor.

291 Theories of Vision and Visuality (4). Introductory seminar surveys the key theories of vision and visuality. Examines the theoretical texts that have, over the past several decades, enabled the emergence of the hybrid discipline of Visual Studies and addresses the recent polemics written in support of and opposition to this new disciplinary practice.

292 Visual Studies and Historiography (4). History of art history and film studies to 1980. Examines the ways in which the visual has been constructed and places these constructions in their institutional and cultural contexts. Examines historiographic questions by interrogating the evidentiary power of visual artifacts.

293A Visual Studies Practicum (4). Visual Studies combines competencies from several fields and therefore requires a different kind of writing. This seminar is designed to apply theoretical and methodological insights (explored in Visual Studies 291 and 292) to a research paper on a specific topic in Visual Studies. Prerequisite: Visual Studies 291 or 292.

294 Getty Consortium Seminar (4). Special graduate seminar offered at the Getty Research Institute in Los Angeles, involving faculty and graduate students from the five graduate programs in Art History or Visual Studies located in southern California (UCI, UCLA, UCR, UCSB, and USC). May be repeated for credit as topics vary.

295 Graduate Seminar in Visual Studies (4). May be repeated for credit as topics vary.

296 Directed Reading (4). Directed reading on a specific topic agreed upon by student and instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

298 Reading for the Comprehensive Examination (4 to 12). Directed reading in preparation for the qualifying examination. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor. May be repeated for credit.

299 Dissertation Research (4 to 12). Research and writing of the dissertation. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor. May be repeated for credit.

INTERDISCIPLINARY PROGRAM IN WOMEN'S STUDIES

352 Murray Krieger Hall; (949) 824-4234

Jennifer Terry, **Director**

Core Faculty

Lara Deeb, Ph.D. Emory University, *Assistant Professor of Women's Studies* (gender, modernity, and public spheres; religious and social movements; Islamic feminisms; Middle East studies)

Inderpal Grewal, Ph.D. University of California, Berkeley, *Professor of Women's Studies* (feminist theories of internationalism and transnationalism, cultural studies, British nineteenth-century studies, South Asia and its diasporas)

Susan Jarratt, Ph.D. University of Texas, Austin, *Campus Writing Coordinator and Professor of Comparative Literature and Education* (rhetoric, composition pedagogy, feminist theory)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (feminist epistemologies and theories, cultural studies, ethnic studies)

Kavita Philip, Ph.D. Cornell University, *Associate Professor of Women's Studies* (science and technology studies, South Asian studies, political ecology, critical studies of race, gender, colonialism, new media, and globalization)

Connie Samaras, M.F.A. Eastern Michigan University, *Professor of Studio Art* (photography, media, film criticism, gender studies, culture and technology)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Director of the Program in Women's Studies and Associate Professor of Women's Studies and Comparative Literature* (cultural studies, social theory; science and technology studies, formations of gender and sexuality; critical approaches to modernity; American studies in transnational perspective)

Linda Trinh Võ, Ph.D. University of California, San Diego, *UCI Chancellor's Fellow and Associate Professor of Asian American Studies* (Southeast Asian Americans, Asian American women, race relations)

Affiliated Faculty

Dina Al-Kassim, Ph.D. University of California, Berkeley, *Assistant Professor of Comparative Literature*
 Victoria Bernal, Ph.D. Northwestern University, *Associate Professor of Anthropology*
 Sharon B. Block, Ph.D. Princeton University, *Associate Professor of History*
 Tom Boellstorff, Ph.D. Stanford University, *Assistant Professor of Anthropology*
 Kitty C. Calavita, Ph.D. University of Delaware, *Professor of Social Ecology and Sociology*
 Teresa Caldeira, Ph.D. University of California, Berkeley, *Associate Professor of Anthropology*
 Francesca M. Cancian, Ph.D. Harvard University, *Professor Emerita of Sociology*
 Chungmoo Choi, Ph.D. Indiana University, *Associate Professor of Korean Culture*
 Alice Fahs, Ph.D. New York University, *Associate Professor of History*
 Susan Greenhalgh, Ph.D. Columbia University, *Professor of Anthropology*
 Elizabeth Guthrie, Ph.D. University of Illinois, *Director of the French Language Program and Senior Lecturer with Security of Employment*
 Jonathan M. Hall, Ph.D. University of California, Santa Cruz, *Assistant Professor of Comparative Literature and of Film and Media Studies*
 Helen Ingram, Ph.D. Columbia University, *Professor of Social Ecology and Political Science, and Drew, Chace and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation*
 Valerie Jenness, Ph.D. University of California, Santa Barbara, *Chair of the Department of Criminology, Law and Society and Professor of Social Ecology and Sociology*
 Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Asian American Studies, English, and Comparative Literature*
 Susan B. Klein, Ph.D. Cornell University, *Director of Religious Studies and Associate Professor of Japanese*
 Karen R. Lawrence, Ph.D. Columbia University, *Dean of the School of Humanities and Professor of English and Comparative Literature*
 Bliss (Felicidad) Cua Lim, Ph.D. New York University, *Assistant Professor of Film and Media Studies*
 Catherine Lord, M.F.A. State University of New York, Buffalo (Visual Studies Workshop), *Professor of Studio Art*
 William M. Maurer, Ph.D. Stanford University, *Department Chair and Associate Professor of Anthropology*
 Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Professor of Asian American Studies*
 Laura Mitchell, Ph.D. University of California, Los Angeles, *Assistant Professor of History*
 Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History*
 Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature*
 Carrie J. Noland, Ph.D. Harvard University, *Co-Director of the Major in Humanities and Arts and Associate Professor of French*
 Margot Norris, Ph.D. State University of New York, Buffalo, *Professor of English and Comparative Literature*
 Rachel O'Toole, Ph.D. University of North Carolina at Chapel Hill, *Assistant Professor of History*
 Jen'nan G. Read, Ph.D. University of Texas, *Assistant Professor of Sociology*
 Amelia C. Regan, Ph.D. University of Texas, Austin, *Associate Professor of Computer Science and Civil Engineering*
 Janelle Reinelt, Ph.D. Stanford University, *Professor of Drama*
 Bryan Reynolds, Ph.D. Harvard University, *UCI Chancellor's Fellow, Professor of Drama, and Head of Doctoral Studies in Drama*
 Jill Robbins, Ph.D. University of Kansas, *Associate Dean of the School of Humanities and Associate Professor of Spanish*
 Belinda Robnett, Ph.D. University of Michigan, *Associate Professor of Sociology*
 Judy B. Rosener, Ph.D. Claremont Graduate School, *Senior Lecturer with Security of Employment Emerita, Management*
 Annette Schlichter, Ph.D. Humboldt University of Berlin, *Assistant Professor of Comparative Literature*
 Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature*
 John H. Smith, Ph.D. Princeton University, *Director of the Critical Theory Institute, Department Chair and Professor of German, and Professor of Comparative Literature*
 Sally A. Stein, Ph.D. Yale University, *Associate Professor of Art History*

Ulrike Strasser, Ph.D. University of Minnesota, *Associate Professor of History*
 Katherine Tate, Ph.D. University of Michigan, *Professor of Political Science*
 Heidi Tinsman, Ph.D. Yale University, *UCI Chancellor's Fellow and Associate Professor of History*
 Deborah R. Vargas, Ph.D. University of California, Santa Cruz, *Assistant Professor of Chicano/Latino Studies*
 Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies and Professor of History and of East Asian Languages and Literatures*
 Hu Ying, Ph.D. Princeton University, *Associate Professor of Chinese*
 Mei Zhan, Ph.D. Stanford University, *Assistant Professor of Anthropology*

UCI's Program in Women's Studies is dedicated to the study of women, gender, and sexuality in their complex articulation with race, ethnicity, class, religion, and nationality. The Program's goal is to foster both critical and creative analysis of the various disciplinary perspectives—historical, political, economic, representational, technological, and scientific—that have (or have not) constituted women, gender, and sexuality as objects of study. By emphasizing a rigorous interdisciplinary perspective in their teaching and research, the Women's Studies faculty seek to produce new knowledge about the social meanings of gender, race, class, and sexuality, and to equip students with a range of analytical and methodological skills.

The field of women's studies has developed at a phenomenal rate from a handful of student-initiated courses in the early 1970s to more than 600 programs in colleges and universities across the United States offering degrees at the B.A., M.A., and Ph.D. levels. UCI's Program in Women's Studies was founded in 1975 and has grown significantly since that time. The program offers a B.A. degree in Women's Studies, a minor in Women's Studies, a minor in Queer Studies, and a graduate emphasis in Feminist Studies.

Women's Studies provides a unique intellectual community for undergraduate and graduate students, where faculty and students share a commitment to interactive teaching and learning. Students work closely with faculty and the program's academic coordinator to plan a coherent program of study and to anticipate work toward advanced degrees and a wide variety of career options.

CAREER OPPORTUNITIES

A degree in Women's Studies prepares students for the expanding opportunities available in graduate programs and in numerous careers in both the public and private sectors. As more women work, business and corporations find the need for increased knowledge about women, and the growth of women's organizations and agencies—at the local, national, and global levels—is creating new opportunities for graduates with specializations in Women's Studies. Graduates bring unique skills and knowledge to the professions of law, medicine, social work, teaching, counseling, and to government service, all of which increasingly require expertise on issues concerning women and gender. A background in Women's Studies develops critical and analytical skills which prove valuable in the full range of life choices.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. In addition, the Women's Studies Office provides more specialized career counseling and information on graduate programs in Women's Studies and related fields.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN WOMEN'S STUDIES

University Requirements: See pages 59–64.

School Requirements: See page 254.

Requirements for the Major

- A. Three introductory core courses: Women's Studies 50A, plus two selected from 50B, 50C, 60A, 60B, 60C.
- B. Three advanced core courses (one each from the Women's Studies 100, 110, and 120 series) and Women's Studies 197.
- C. Four elective advanced core courses selected from Women's Studies 139–168.
- D. Two additional advanced elective courses selected from Women's Studies 170–190. Students may request, by petition, one lower-division course to count in this category. This course should be primarily centered on the study of women, gender, and/or feminism.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

Completion of seven courses including: three lower-division courses selected from Women's Studies 50A, 50B, 50C, 60A, 60B, 60C; two courses selected from Women's Studies 100, 110, 120, 139, 155, 156, 157, 158, 165, 166, 167, 168; and two courses selected from Women's Studies 170–190.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

MINOR IN QUEER STUDIES

The Program in Women's Studies offers a minor in Queer Studies as the critical inquiry into sexuality has emerged to be a vital area of intellectual production, bringing together scholars and students from a variety of disciplines and interdisciplinary fields. Taking as a point of departure that sexuality is a complex historical and cultural phenomenon, Queer Studies assumes that thoughtful examination of this complexity is an important and compelling undertaking. Queer Studies draws upon methods from anthropology, history, psychology, sociology, literature, philosophy, biology, art, and art history. It also combines theory and methods from women's studies, gender studies, ethnic studies, critical legal studies, religious studies, science and technology studies, visual studies, area studies, and cultural studies.

Requirements for the Minor

- A. Two lower-division introductory courses: Women's Studies 20 plus one course selected from Women's Studies 50A, 50B, 50C, 60A, 60B, 60C, and Sociology 69 (when topics address the sociology of sexuality).
- B. Two upper-division core courses: Women's Studies 157A and 157B.
- C. Three upper-division courses selected from: Women's Studies 100A, 100B, 100C, 110A, 110B, 110C, 120A, 120B, 120C, 165A, 165B, 167B, 168B, 190; History 128B, 146E, 146D, 169 (when topics address gender and sexuality in Latin America); Film and Media Studies 190 (when topics address issues on sexuality in representation and theory), 112 (when topics address

issues on sexuality in representation and theory); Anthropology 129 (when topics address issues on sexuality and gender), 139 (when topics address issues on sexuality and HIV/AIDS); Drama 103 (when topics cover the representation of gays and lesbians in drama); Spanish 185 (when topics cover issues on sexuality in peninsular Spain and/or Portugal), 186 (when topics cover issues on sexuality in Latin American literature and culture).

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

GRADUATE EMPHASIS IN FEMINIST STUDIES

The Program in Women's Studies offers an emphasis in Feminist Studies, which is available in conjunction with the Ph.D. programs in the Departments of Anthropology, Comparative Literature, East Asian Languages and Literatures, English, French and Italian, German, History, Philosophy, Political Science, Sociology, Spanish and Portuguese; the program in Visual Studies; and the M.F.A. programs in Drama and Studio Art. Satisfactory completion of the emphasis is certified by the Director of Women's Studies and is noted in the student's dossier.

Admission to the Program

Applicants must first be admitted to, or currently enrolled in, one of the participating programs noted above. Applicants must submit to the Women's Studies Graduate Program Committee: (1) an application form listing prior undergraduate and graduate course work related to Feminist Studies, institutions attended, and majors(s); and (2) a one- to two-page statement of purpose, including career objectives, areas of interest and research, record of research, teaching, community, and/or creative work.

The Committee determines admissions, in consultation with the Women's Studies Core Faculty, based upon the extent to which the applicant's research interests relate to Feminist Studies, the applicant's previous course work, and research or other experience related to Feminist or Women's Studies. Lack of prior course work does not preclude admission, so long as a compelling statement of research interests congruent with the graduate emphasis makes the case.

Emphasis Requirements

Minimum course work for the graduate emphasis in Feminist Studies consists of four courses: two core courses, Women's Studies 200A-B, a coherent sequence normally taken in consecutive quarters; and any two courses selected from the list of courses in Feminist Studies approved by the Committee, as long as one of these is a graduate course in the student's own department or area of interest. In keeping with the interdisciplinary focus of this emphasis, it is highly recommended that the other be a course from a discipline outside that department or area. The course requirements for Ph.D. and M.F.A. candidates are the same.

For doctoral students, the qualifying examination and dissertation topic should incorporate gender as a central category of analysis. One member of the candidate's qualifying examination committee and of the candidate's dissertation committee is normally a member of the Women's Studies and affiliate faculty. There are no requirements concerning qualifying examinations or theses for M.F.A. students.

Courses in Women's Studies

LOWER-DIVISION

INTRODUCTORY CORE COURSES

Courses of general interest for all students. No prerequisites. Designed to survey and to introduce methods and premises of interdisciplinary studies. Many of these courses fulfill part of the UCI breadth requirement.

20 Introduction to Queer Studies (4). Study of sexuality from the perspective of lesbian, gay, queer, transgender scholarship spanning humanities, social sciences, arts. (VII-A)

50A Gender and Feminism in Everyday Life (4). What is gender? Why does studying it matter? Explores how feminism has understood not only gender as a category of social analysis, but how gender structures personal identities, family, citizenship, work and leisure, social policy, sexuality, and language. (IV, VII-A)

50B Reproducing and Resisting Inequality (4). From bedroom to boardroom to voting booth to international division of labor, how are societal institutions and politics "gendered"? Examines relationships of gender, race, ethnicity, class, and region in sexual and reproductive experiences, households, education, work, and politics, including community activism. (IV, VII-A)

50C Gender and Popular Culture (4). An investigation of gender, race, and sexuality in film, TV, video, music, and advertising, with attention to the ways that popular culture shapes understandings of technology, national identities, leisure and work, historical memory, international communication, and multicultural representation. (IV, VII-A)

60A Gender and Science (4). Examines science from a variety of feminist viewpoints in order to explore how science influences everyday life. Special attention is given to the ways science shapes our understanding of gender, race, and sexuality. (III)

60B Gender and Law (4). Introduction to the relationship between gender, race, sexuality, and the law. Critical thinking about how law defines citizenship, political representation, and democracy, focusing on the history of legal reform undertaken in the name of women as a social group. (III)

60C Gender and Religion (4). Introduces the topic of religion in a feminist context by performing cross-cultural exploration of gender, authority, and faith in various traditions. Study includes (but is not limited to) writings of contemporary Jewish, Christian, and Muslim feminists. (III)

UPPER-DIVISION

Courses in which students gain experience in analysis, interpretation, and writing.

ADVANCED CORE COURSES

100: THEORY, KNOWLEDGE, CULTURE

100A Producing Feminist Knowledge (4). Explores alternative ways that feminist scholars frame research questions, conduct research or creative activity. Examines challenges that feminist scholarship poses to the academy and the challenges the academy poses to feminist scholars. Formerly Women's Studies 159.

100B Feminist Theory (4). Introduction to historical traditions in theory and various conceptual frameworks informing Women's Studies' scholarship. Concepts include (but are not limited to) identity, representation, and political economy. Formerly Women's Studies 140.

100C Key Concepts in Feminist Cultural Studies (4). Investigation of the theories and methods that inform the feminist study of culture. Focuses on the interpretation of the visual arts and literature created by, and predominantly for, women.

110: UNDERSTANDING POWER AND GENDER

110A Gender, State, and Nation (4). Examination of gender and sexuality in relation to the production of identities created through participation in state and nation. Examines complexity of relationship between feminism and nationalism, feminism and state. (VII-B)

110B Money, Sex, and Power (4). Examination of gender and sexuality in relation to the emergence of the modern world, modernity, and capitalism; commodification, circulation, and transnational exchanges relating to race, gender, class, sexuality, religion, and nationality.

110C Producing Gender Transnationally (4). Examination of how ideas and formations of gender cross national and international boundaries; encounters between feminist and sexual identity movements; how terms such as "sex" and "gender" change meanings according to time and place. (VII-B)

120: INTERPRETING BODIES AND PLEASURES

120A Modern Pleasures: Bodies and Practices (4). Focus on the theory and history of pleasure within academic disciplines as well as in social and cultural processes and networks.

120B Image Problems: Stereotypes and Representations (4). Examination of scholarly approaches to gender stereotypes and politics of representation as they present possibilities for critical analysis and produce problems and limitations; how powerful ideas of gender intersect with other forms of social differentiation such as race and class. (VII-A)

120C Engendering Colonial Bodies (4). Examination of the production of gender and sexuality in the contexts of colonialism and modernization; representations of colonialist and nationalist struggles over gender and race; female bodies as sites of contestation. (VII-B)

ADVANCED ELECTIVE CORE COURSES

139 Topics in Gender Studies (4). Various topics in gender studies. Includes issues of gender, culture, race and class, including issues of sexualities and social justice. Prerequisite: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. (VII-A)

155 Special Topics in Women's Studies (4). Designed to provide students with an opportunity to do advanced work in women's studies. May be repeated for credit as topics vary. Formerly Humanities 155.

156: GENDER AND RACE STUDIES

156A Race and Gender (4). Examines the roles and intersections of racism, sexism, and heterosexism in U.S. culture and society. Through history and literature, explores the process of immigration, colonization (of identity, language, and the body), and cultural interaction. (VII-A)

156B Gender, Race, and the Built Environment (4). Examination of the ways in which houses, buildings, streets, cities, and indeed all social spaces reveal cultural conceptualizations of gender and sexuality in relation to other social relations and processes. (VII-A)

157: QUEER STUDIES

157A Topics in Lesbian and Gay Studies (4). Explores issues in lesbian and gay studies from one or more of the following perspectives: theoretical, historical, legal, economic, political, sociological, and representation in the arts. May be repeated for credit as topics vary. Formerly Women's Studies 161. (VII-A)

157B Queer Lives and Knowledges (4). Explores the emergence and historical elaboration of non-normative sexual identities, practices, and communities; focuses on medical, legal, literary, aesthetic, scientific, and religious notions about homosexuality and appropriations and subversions of these notions by queer people. Formerly Women's Studies 161B. Women's Studies 161B/157B and Studio Art 122 may not both be taken for credit.

158: GENDER AND THE PRODUCTION OF KNOWLEDGE

158A Gender and the Politics of Information (4). Investigates from feminist perspectives the challenges in the "information age" and its embedded gender and political dimensions. Examines the increasingly complex identification, evaluation, application, and transmission of information. Formerly Women's Studies 160. (VII-A)

158B Defining Women of Color (4). Examination of women of color as a historical movement emerging as a result to anti-racist struggle in the late twentieth century; who counts as a woman of color, who is included and excluded, the advantages and limitations of this approach to racism. (VII-A)

165: GENDER AND SCIENCE

165A Gender, Biology, and Environmental Ethics (4). What is "nature" and how do we know and represent it? Introduces students to the history of "nature" produced within scientific knowledge, as well as historical developments.

165B HIV/AIDS (4). Explores HIV/AIDS from a feminist perspective focusing on cultural and political-economic analysis and representations of the disease both within the U.S. and globally. (VII-B)

165C New Reproductive Technologies (4). Examination of representation, implication, and bioethics of new reproductive technologies in different cultures; effects of new reproductive technologies on identities and bodies.

165D Gender and Science in Colonial India (4). Examination of British colonial policies and politics of science and gender in India; comparison of British India with other colonial contexts; importance of science for colonial rule and history of colonial science and technology. (VII-B)

165E Gender and Cyberspace (4). How has gender and sexuality been produced in the cyberspace frontier during its brief but volatile history? Takes an interdisciplinary approach to this question that engages with debates in urban studies, history of science, anthropology, and political ecology.

165F Gender and Technology (4). Using a variety of disciplinary methods, examines how various technological processes and products produce culturally complex meanings associated with gender and technology.

166: GENDER AND RELIGION

166A Contemporary Issues in Gender and Islam (4). Exploration of lives of Muslim women in different cultural contexts; critical examination of various Islamic constructions and interpretations of gender, sexuality, and human nature. (VII-B)

167: THE POLITICAL ECONOMY OF GENDER

167A Militarism and Gender (4). Feminist approach to militarism, war, and political violence drawing on representations of women as both victims of and participants in military violence; effects of militarism on formations of gender; effects of military industrial complex on nationalism and identity. (VII-B)

167B Sexual Traffic (4). Interdisciplinary approaches to understanding the concept of "sexual traffic" as it impacts the formation of sexualized bodies and sexual subjects within and across national boundaries. (VII-B)

168: GENDER AND CULTURAL STUDIES

168A Music and Audio Cultures (4). Examination of the significance of gender, power, and identity in music and audio cultures; changing technologies and connections to gender; political economy of music and audio cultures; representation of women in popular music; performance and reception across different cultures. (VII-A)

168B The Politics of Style (4). Examination of the emergence of style and lifestyle in relation to gender and sexuality; analysis of subcultures, politics, and representation of style in relation to formation of social identities.

ADVANCED ELECTIVE COURSES

170 Gender, Feminism, Literature, and Language (4). Topics cover issues in language and literature which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

171 Gender, Feminism, and History (4). Topics cover issues in history which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

173 Gender, Feminism, and Philosophy (4). Topics cover issues in philosophy which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

174 Gender, Feminism, and the Arts (4). Topics cover issues in the arts which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

180 Gender, Feminism, and Anthropology (4). Topics cover issues which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

181 Gender, Feminism, and Cognitive Psychology (4). Topics cover issues in cognitive psychology which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

182 Gender, Feminism, and Economics (4). Topics cover issues in economics which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

183 Gender, Feminism, and Sociology (4). Topics cover issues in sociology which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

184 Gender, Feminism, and Political Science (4). Topics cover issues in political science which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

185 Gender, Feminism, and Social Sciences (4). Topics cover issues in social sciences which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

187 Gender, Feminism, and Social Ecology (4). Topics cover issues in social ecology which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

188 Gender, Feminism, and Science (4). Topics cover issues in science which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

189 Gender, Feminism, and Interdisciplinary Studies (4). Topics cover issues in interdisciplinary studies which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

190 Topics in Queer Studies (4). Topics cover issues in the humanities, social sciences, sciences, and arts that relate to critical inquiry of sexuality. May be repeated for credit as topics vary.

197 Senior Seminar in Women's Studies (4) S. Students read advanced scholarship in Women's Studies and complete a major seminar paper. Prerequisite: Women's Studies 139. (VII-A)

198 Directed Group Study (4). Special topics through directed reading. Paper required. Prerequisite: consent of instructor.

199 Directed Research (1 to 4) F; W, S. Directed reading and research in consultation with a faculty member. Substantial written work required. Prerequisite: consent of sponsoring faculty member.

GRADUATE

200A Feminist Knowledge and Social Change (4). Provides a broad and introductory overview of Women's Studies and feminist knowledges, including key concepts, theoretical frameworks, disciplinary approaches and methods, and critical debates that have shaped the field. May be taken for credit twice.

200B Problems in Feminist Research (4). Colloquium on analytic approaches to interdisciplinary feminist research in Women's Studies and exploration of how feminist knowledges are produced in different academic disciplines. Prerequisite: Women's Studies 200A or consent of instructor. May be taken twice for credit as topics vary.

201 Special Topics in Feminist Theory (4). Seminars on various topics in feminist theory. Prerequisite: Women's Studies 200A-B. May be repeated for credit as topics vary.

210A Graduate Feminist Theory (4). In-depth introduction to various theoretical frameworks that have and continue to inform scholarship in Women's Studies including (but not limited to) identity, representation, and political economy.

260A Advanced Seminar in Women's Studies (4). Covers various areas of research within Women's Studies as an interdisciplinary field. Recommended for advanced graduate students.

290 Directed Research (2 to 12). Directed graduate study/research in Women's Studies. May be taken for credit for a total of 24 units.

399 University Teaching (4). Limited to Teaching Assistants. Must be admitted to the graduate emphasis in Feminist Studies. Satisfactory/Unsatisfactory only. May be taken for credit six times.

DONALD BREN SCHOOL OF INFORMATION AND COMPUTER SCIENCES

Debra J. Richardson, **Dean**

444 Computer Science Building

Faculty

Thomas Alspaugh, Ph.D. North Carolina State University, *Assistant Professor of Informatics*

James Arvo, Ph.D. Yale University, *Associate Professor of Computer Science and of Electrical Engineering and Computer Science*

Nader Bagherzadeh, Ph.D. University of Texas at Austin, *Professor of Electrical Engineering and Computer Science, and of Computer Science*

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and Professor of Computer Science, Biomedical Engineering, Developmental and Cell Biology, and Biological Chemistry*

Lichun Bao, Ph.D. University of California, Santa Cruz, *Assistant Professor of Computer Science*

Lubomir Bic, Ph.D. University of California, Irvine, *Department Co-Chair and Professor of Computer Science, and Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*

Alfred M. Bork, Ph.D. Brown University, *Professor Emeritus of Computer Science*

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, *Assistant Professor of Computer Science*

Pai Chou, Ph.D. University of Washington, *Assistant Professor of Electrical Engineering and Computer Science, and of Computer Science*

Rina Dechter, Ph.D. University of California, Los Angeles, *Professor of Computer Science*

Michael Dillencourt, Ph.D. University of Maryland, *Professor of Computer Science*

Christopher Dobrian, Ph.D. University of California, San Diego, *Professor of Music and of Informatics*

J. Paul Dourish, Ph.D. University College, London, *Associate Professor of Informatics and of Computer Science*

Nikil Dutt, Ph.D. University of Illinois, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Magda El Zarki, Ph.D. Columbia University, *Director of the Graduate Program in Networked Systems and Professor of Computer Science, Informatics, and Electrical Engineering and Computer Science*

David Eppstein, Ph.D. Columbia University, *Professor of Computer Science*

Julian Feldman, Ph.D. Carnegie Institute of Technology, *Professor Emeritus of Informatics*

Stephen Franklin, Ph.D. University of Chicago, *Lecturer in Computer Science and Informatics*

Michael Franz, D.Sc. Techn. Swiss Federal Institute of Technology (ETH), Zurich, *Associate Professor of Computer Science*

Daniel Frost, Ph.D. University of California, Irvine, *Lecturer in Computer Science and Informatics*

Daniel D. Gajski, Ph.D. University of Pennsylvania, *Director of the Center for Embedded Computer Systems, Professor of Electrical Engineering and Computer Science and of Computer Science, and The Henry Samuelli "Turing" Chair in Computer Systems Design*

Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Electrical Engineering and Computer Science, and Professor of Computer Science*

Daniel L. Gillen, Ph.D. University of Washington, *Assistant Professor of Statistics*

Tony Givargis, Ph.D. University of California, Riverside, *Assistant Professor of Computer Science and Informatics*

Michael T. Goodrich, Ph.D. Purdue University, *Professor of Computer Science*

Richard H. Granger, Ph.D. Yale University, *Professor of Computer Science and of Cognitive Sciences*

Vijay Gurbaxani, Ph.D. University of Rochester, *Professor of Management and of Informatics*

Ian G. Harris, Ph.D. University of California, San Diego, *Associate Professor of Computer Science*

Wayne Hayes, Ph.D. University of Toronto, *Assistant Professor of Computer Science*

Daniel Hirschberg, Ph.D. Princeton University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Sandra S. Irani, Ph.D. University of California, Berkeley, *Department Co-Chair and Professor of Computer Science and Professor of Civil and Environmental Engineering*

Norman Jacobson, B.S. University of California, Irvine, *Senior Lecturer in Computer Science*

Ramesh C. Jain, Ph.D. Indian Institute of Technology, *Donald Bren Professor of Information and Computer Sciences*

Stanislaw Jarecki, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*

Stephen F. Jenks, Ph.D. University of Southern California, *Assistant Professor of Electrical Engineering and Computer Science and of Computer Science*

Wesley O. Johnson, Ph.D. University of Minnesota, *Professor of Statistics*

Scott Jordan, Ph.D. University of California, Berkeley, *Associate Professor of Electrical Engineering and Computer Science and of Computer Science*

David G. Kay, J.D. Loyola Law School, Los Angeles; M.S. University of California, Los Angeles, *Lecturer with Security of Employment, Informatics and Computer Science*

Falko Kuester, Ph.D. University of California, Davis, *Assistant Professor of Electrical Engineering and Computer Science, Biomedical Engineering, and Computer Science*

Dennis F. Kibler, Ph.D. University of California, Irvine, and Ph.D. University of Rochester, *Professor of Computer Science*

K. H. (Kane) Kim, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science and of Informatics*

Alfred Kobsa, Ph.D. University of Vienna, *Professor of Informatics and of Computer Science*

Kenneth L. Kraemer, Ph.D. University of Southern California, *Director of the Center for Research on Information Technology and Organizations, Professor of Management and Informatics, and Taco Bell Chair in Information Technology Management*

Fadi Kurdahi, Ph.D. University of Southern California, *Professor of Electrical Engineering and Computer Science, and of Computer Science*

Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Chen Li, Ph.D. Stanford University, *Assistant Professor of Computer Science*

Gang Liang, Ph.D. University of California, Berkeley, *Assistant Professor of Statistics*

Cristina Videira Lopes, Ph.D. Northeastern University, *Assistant Professor of Informatics and Computer Science*

George S. Lueker, Ph.D. Princeton University, *Associate Dean for Undergraduate Education and Professor of Computer Science*

Aditi Majumder, Ph.D. University of North Carolina, Chapel Hill, *Assistant Professor of Computer Science*

Gloria Mark, Ph.D. Columbia University, *Associate Professor of Informatics*

Gopi Meenakshisundaram, Ph.D. University of North Carolina, *Assistant Professor of Computer Science*

Sharad Mehrotra, Ph.D. University of Texas at Austin, *Professor of Computer Science*

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Associate Professor of Computer Science and Mathematics*

Bonnie Nardi, Ph.D. University of California, Irvine, *Associate Professor of Informatics*

Alexandru Nicolau, Ph.D. Yale University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Robert Nideffer, M.F.A., Ph.D. University of California, Santa Barbara, *Associate Professor of Studio Art and of Informatics*

Renato B. Pajarola, Dr. sc. techn. Swiss Federal Institute of Technology (ETH), Zurich, *Assistant Professor of Computer Science and of Electrical Engineering and Computer Science*

Donald J. Patterson III, Ph.D. University of Washington, *Assistant Professor of Informatics*

Natasa Przulj, Ph.D. University of Toronto, *Assistant Professor of Computer Science*

Simon Penny, Graduate Diploma in Sculpture, Sydney College of the Arts, New South Wales (Australia), *Professor of Electrical Engineering and Computer Science, Studio Art, and Informatics*

David F. Redmiles, Ph.D. University of Colorado, *Department Chair and Associate Professor of Informatics*

- Amelia C. Regan, Ph.D. University of Texas, Austin, *Associate Dean for Undergraduate Education for the Donald Bren School of Information and Computer Sciences and Associate Professor of Computer Science and Civil Engineering*
- Debra J. Richardson, Ph.D. University of Massachusetts, Amherst, *Ted and Janice Smith Family Foundation Dean of the Donald Bren School of Information and Computer Sciences and Professor of Informatics*
- Isaac Scherson, Ph.D. Weizmann Institute of Science (Israel), *Professor of Computer Science and of Electrical Engineering and Computer Science*
- Alice Silverberg, Ph.D. Princeton University, *Professor of Mathematics and of Computer Science*
- Susan Elliott Sim, Ph.D. University of Toronto, *Assistant Professor of Informatics*
- Padhraic Smyth, Ph.D. California Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*
- Thomas A. Standish, Ph.D. Carnegie Institute of Technology, *Professor Emeritus of Informatics*
- Hal S. Stern, Ph.D. Stanford University, *Department Chair and Professor of Statistics*
- Mark Steyvers, Ph.D. Indiana University, *Associate Professor of Cognitive Sciences, Psychology and Social Behavior, and Computer Science*
- Tatsuya Suda, Ph.D. Kyoto University, *Professor of Computer Science and of Electrical Engineering and Computer Science*
- Shannon Tauro, M.S. University of California, Irvine, *Lecturer in Computer Science*
- Richard Taylor, Ph.D. University of Colorado, *Director of the Institute for Software Research and Professor of Informatics*
- Alex Thornton, B.S. University of California, Irvine, *Lecturer in Computer Science and Informatics*
- Bill Tomlinson, Ph.D. Massachusetts Institute of Technology; M.F.A. California Institute of the Arts, *Assistant Professor of Informatics and of Drama*
- Gene Tsudik, Ph.D. University of Southern California, *Associate Dean for Research and Graduate Studies for the Donald Bren School of Information and Computer Sciences and Professor of Computer Science*
- Andre van der Hoek, Ph.D. University of Colorado, Boulder, *Associate Professor of Informatics*
- David van Dyk, Ph.D. University of Chicago, *Professor of Statistics*
- Alexander V. Veidenbaum, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*
- Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Associate Professor of Computer Science*
- Alladi Venkatesh, Ph.D. Syracuse University, *Professor of Management and of Informatics*
- Mark Warschauer, Ph.D. University of Hawaii, *Associate Professor of Education and Informatics*
- Max Welling, Ph.D. Utrecht University, Netherlands, *Assistant Professor of Computer Science*
- Xiaowei Yang, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*
- Yaming Yu, Ph.D. Harvard University, *Assistant Professor of Statistics*
- Hong-Kai Zhao, Ph.D. University of California, Los Angeles, *Associate Professor of Mathematics and Computer Science*
- Hadar Ziv, Ph.D. University of California, Irvine, *Lecturer in Informatics*

Overview

By establishing the University of California's flagship computer science school in 2002, UC Irvine made an investment in the future that reflects its historical commitment of raising the bar of excellence. From pioneering computer science courses more than three decades ago to the creation of the Donald Bren School of Information and Computer Sciences (ICS), UCI continues to be an institute that leads information technology education and research across the globe.

The Bren School of ICS began as a department in 1968 and has given creation to some of computing's most significant advancements including revolutionizing computer-aided drafting techniques; the creation of the current Hypertext Transfer Protocol (HTTP/1.1); development of the Internet standards for HTTP and Uniform Resource Identifiers (URI); the founding of the Apache HTTP Server Project that produces the software for over 60 percent of public Internet Web sites; and the creation of the Domain

Name System (DNS) that translates Web and e-mail addresses into the numeric system used to route information along the Internet.

The vibrant ICS community continues to explore innovative topics ranging from building complete computer systems on chips smaller than a human fingernail to developing user interface systems that allow engineers on opposite sides of the world to collaborate effectively. From improving how first responders communicate during a crisis situation, to applying computer science to analyze biological data and thereby expediting biological research, ICS continues to focus on how to bring computing and information technology to bear in solving a diverse set of problems from across the University and throughout the industry.

Named a school in December 2002, and renamed in honor of philanthropist Donald Bren for his visionary leadership and generous gift in June 2004, ICS has created three departments that, when combined with the School's natural interdisciplinary nature, give way to the creation of new areas of study and research. ICS is one of less than 40 computer-specific schools in the country and one of only a handful to have established a department dedicated to the study of informatics alongside a more traditional department of computer science and a forward-thinking partnership with its department of statistics. This three-department structure affords ICS a unique perspective of the information technology disciplines and allows the flexibility to build educational programs that explore the many applications of the computing discipline: computer architecture and embedded systems; security, privacy, and cryptography; programming languages and compilers; artificial intelligence and machine learning; visual computing; biomedical informatics; scientific computing; theory of computing; statistics; information access and management; software and information systems design, and engineering; interactive and collaborative technology; ubiquitous computing; arts computation engineering; and computer science education.

By blending research with education in multiple disciplines, ICS is leading interdisciplinary efforts that provide students with an education for the future of computer science, now.

COMPUTING RESOURCES

The School offers a wide range of instructional machines, including UNIX servers and workstations, G5 iMacs, more than 300 high-performance Pentium IV PCs, and several specialized labs. There are more than 700 varying types of UNIX workstations, servers, and PCs that support research ranging from computational biology, ubiquitous computing, and homeland security, to visualization, graphics, and multimedia research initiatives. The School's wireless network follows the IEEE 802.11b/g standards and employs access points deployed throughout the ICS complex for 100 percent signal coverage.

DEGREES

Computer Science	B.S.
Computer Science and Engineering*	B.S.
Informatics	B.S.
Information and Computer Science	B.S., M.S., Ph.D.
Networked Systems*	M.S., Ph.D.

* Offered jointly with The Henry Samueli School of Engineering. See the Interdisciplinary Studies section of the *Catalogue* for information.

Honors

Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately 12 percent of the graduating seniors. Students are nominated for honors based on criteria such as grade point average (including overall and in courses required for the major); number of upper-division Bren School of ICS courses completed beyond the minimum; courses taken outside the Bren School of ICS beyond required breadth; and research

activities. To be eligible for honors, a general criterion is that students must have completed at least 72 units in residence at a University of California campus by the end of the winter quarter of the academic year in which they graduate. Other important factors are considered (see page 55).

CAREERS

Graduates of the Donald Bren School of Information and Computer Sciences pursue a variety of careers. Many graduates specify, design, and develop a variety of computer-based systems comprised of software and hardware in virtually every application domain, such as aerospace, automotive, biomedical, consumer products, engineering, entertainment, environmental, finance, investment, law, management, manufacturing, and pharmacology. Graduates also find jobs as members of research and development teams, developing advanced technologies, designing software and hardware systems, and specifying, designing, and maintaining computing infrastructures for a variety of institutions. Some work for established or start-up companies while others work as independent consultants. After a few years in industry, many move into management or advanced technical positions. Many students also use the undergraduate major as preparation for graduate study in computer science or another field (e.g., medicine, law, engineering, management).

UNDERGRADUATE PROGRAM

The School's undergraduate program prepares students for professions and careers in industry and provides students with the tools for advanced education at the graduate level. Many graduates follow career paths immediately after graduation; others go on to advanced study in a variety of fields, including computer science, management, engineering, law, and medicine. An ICS undergraduate education is a blend of scholarship, science, technology, and practical application that forms an excellent foundation for professional life in the twenty-first century and prepares a student with serviceable skills useful for a lifetime.

The basis of the undergraduate program is a set of fundamental courses in mathematics and computer science, supplemented by breadth requirements from other academic disciplines. A premium is placed on writing and quantitative skills. Students start early with hands-on experience with advanced computing systems, and intense use of computer and network technologies continues throughout the undergraduate program. Students study data organization, algorithm design and analysis, design and organization of hardware and network systems, software engineering, artificial intelligence, social aspects of system design and use, and management of technology. In the process, students work with state-of-the-art hardware and software technologies, learn several contemporary programming languages, and make extensive use of computer-based utilities such as electronic mail.

The Donald Bren School of Information and Computer Sciences offers four majors: Information and Computer Science (ICS); Computer Science (CompSci); Computer Science and Engineering (CSE), offered jointly with the Henry Samueli School of Engineering; and Informatics. There are also programs of study leading to minors in Information and Computer Science and in Informatics.

B.S. in Information and Computer Science. The overall field of information and computer science spans a vast spectrum of topics. At the one end, it includes computer system design and networking, detailing how modern computer hardware and networks operate on a day-to-day basis. At the other end are human factors, such as how software should be structured to facilitate cooperative work among groups of people. The B.S. in Information and Computer Science (ICS) provides students with a broad introduction to these topics. Through the selection of elective courses, students may choose to specialize in one or more of six areas: artificial intelligence, computer systems, implementation and analysis of

algorithms, information systems, networks and distributed systems, or software systems. See page 335.

B.S. in Computer Science. Computer science as an area of study has been around for over four decades now. During that time, the field has evolved and grown considerably. The Computer Science (CS) major provides students with an education that focuses on the operation of computers and the software that runs them. Additionally, students may take a variety of courses to broaden their knowledge and/or specialize in particular areas. For instance, the major is well-suited for a more in-depth study in traditional topics such as artificial intelligence, advanced data structures, expert systems, and computer graphics, as well as more modern topics such as computational biology and computer games. See page 338.

B.S. in Computer Science and Engineering. This program is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The Computer Science and Engineering major gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include systems view, manufacturing and economic issues, and multidisciplinary engineering applications. The program is administered jointly by the Department of Computer Science in the Bren School of ICS and the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering. See page 362 in the *Catalogue's* Interdisciplinary Studies section.

B.S. in Informatics. Within the overall discipline of information and computer science, the Informatics major is concerned with the relationship between what is inside the computer and what is outside. The Informatics major addresses the broad set of issues surrounding design, ranging from initial requirements gathering to estimating and measuring the impact of alternative solutions—all from a multidisciplinary perspective that includes computer science, information science, organizational science, social science, and cognitive science. See page 342.

Major and Minor Restrictions

The major or minor in Information and Computer Science (ICS) cannot be combined with the majors in Computer Science (CS), Computer Science and Engineering (CSE), or Informatics.

The major in Computer Science (CS) cannot be combined with the major in Computer Science and Engineering (CSE).

The major in Computer Science and Engineering (CSE) cannot be combined with the major in Computer Engineering (offered by The Henry Samueli School of Engineering).

Bren School of ICS majors may not minor in Informatics.

Students who have completed both ICS 21 and 22 with grades of C or better and who wish to change majors to Informatics may use ICS 21 and 22 in satisfaction of the requirements of Informatics 41 and 42, and similarly with ICS 52 and Informatics 43.

Students who have completed both Informatics 41 and 42 with grades of C or better and who wish to change majors to Information and Computer Science or Computer Science may use Informatics 41 and 42 in satisfaction of the requirement of ICS 21 and 22, and similarly with Informatics 43 and ICS 52.

Students enrolled in other degree programs who are interested in the field of computer science may pursue the introductory course sequences (ICS 21 and 22 or Informatics 41 and 42) followed by

other courses (such as ICS 23 or Informatics 43) as far as their interests require and their programs permit.

The ICS Student Affairs Office is staffed by professional academic counselors and peer advisors. These individuals are available to assist students with program planning, questions on University and School policies and procedures, progress toward graduation, and other questions that arise in the course of a student's education.

Faculty also are available for advising, generally for suggestions of additional course work in the student's area of specialization and on preparation for graduate school.

ADMISSIONS

To ensure admission consideration for the fall quarter, students should be sure to file their application by November 30 of the prior year. The selection criteria include grades, test scores, and other considerations.

Transfer Student Policy

Transfer requirements vary by major.

Information and Computer Science: See page 336.

Computer Science: See page 339.

Computer Science and Engineering: See page 362.

Informatics: See page 342.

NOTE TO TRANSFER APPLICANTS: These majors require a series of lower-division courses, and prerequisites constrain the order in which they can be taken. Junior-level transfer students who must complete a significant part of this sequence may find that it will take longer than two years to complete their degree.

Change of Major

Students interested in changing their major to one offered by the School should contact the ICS Student Affairs Office for more information and assistance. Information is also available at http://www.due.uci.edu/Change_of_Major.html.

Major and minor restrictions: See page 334.

SPECIAL PROGRAMS AND COURSES

The Bren School of ICS Honors Program

The Bren School of ICS Honors Program provides selected upper-division students an opportunity to carry out a research project under the direction of a faculty member in the School. Students who have completed the necessary course work and meet academic eligibility guidelines must submit a formal application. Eligible students participate in the ICS Honors Seminar (ICS H197), which provides an introduction to the range of current faculty research. Each student then affiliates with an ICS faculty advisor who agrees to supervise a minimum of two quarters of independent research. The Honors Program student prepares a final written report of the independent research and submits a copy for review to both the faculty advisor and the Honors Program advisor. If each advisor verifies that the conducted research was of honors quality, the student is deemed to have successfully completed the Bren School of ICS Honors Program. Successful completion of the Honors Program earns the student a certificate and medal from the School. Further, a notation of successful completion is added to the student's transcript. For more information about course requirements, application procedures, and deadlines (which may be different for students who enter UCI as freshmen or transfers), visit <http://www.ics.uci.edu/ugrad/honors/index.php>, or contact the Student Affairs Office at (949) 824-5156.

Concentration in Game Culture and Technology

The concentration in Game Culture and Technology is available to students majoring in Information and Computer Science, Informatics, Computer Science, and Studio Art. It exposes advanced students to an influential and expanding sector of media culture and

contemporary art and technology practice, facilitates students' media literacy in relation to an increasingly prevalent art and entertainment form, and enables students to be more critical consumers and producers of new media art and culture.

Admission Criteria. Admission will be by review at the end of each spring quarter. Students will be notified of acceptance by the beginning of the following fall quarter at latest. Acceptance will be based on: (1) written statement of purpose; (2) portfolio; (3) prior course work; and (4) transcripts. The application packet should be sent to Professor Robert Nideffer, Studio Art Department. A maximum of 12 students will be admitted per year in an effort to ensure access to Game Culture and Technology Laboratory research and development facilities in Claire Trevor School of the Arts, Calit2, and the Institute for Software Research (ISR), all of which may be used to support student projects. The earliest students may apply for admission is at the end of their freshman year, and the latest they may apply is at the end of their junior year.

Requirements. Students must complete a total of eight courses (32 units) from within the two schools, which may also be used to satisfy existing requirements.

- A. Three courses (12 units): Studio Art 135 (Gaming Studies), 166 (Advanced Collaborative Projects), and Computer Science 113/Informatics 125 (Computer Game Development).
- B. Three courses (12 units) chosen from: Studio Art 106 (Interactive Digital Media), 110 (Interdisciplinary Digital Arts), 138 (World Building), 175 (Digital Art Aesthetics), Informatics 43 (Informatics Core Course III) or ICS 52 (Introduction to Software Engineering), Informatics 121 (Software Design I), 131 (Human-Computer Interaction), 132 (Project in Human-Computer Interaction and User Interfaces), Computer Science 112 (Computer Graphics), 171 (Introduction to Artificial Intelligence), 175 (Project in Artificial Intelligence).
- C. Two courses (8 units) chosen from: Studio Art 197 (Internship), 199 (Independent Study), Computer Science H198 (Honors Research), 199 (Individual Study), Informatics H198 (Honors Research), and 199 (Individual Study).

The 3-2 Program with The Paul Merage School of Business

Outstanding students who are interested in a career in management may wish to apply for entry into The Paul Merage School of Business' 3-2 Program. Students normally apply for this program early in their junior year. See The Paul Merage School of Business section for additional information.

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; telephone (949) 824-5461; e-mail: honors@uci.edu; World Wide Web: <http://www.honors.uci.edu/>.

Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. Additional information is available in the Center for International Education section.

Undergraduate Major in Information and Computer Science

The Information and Computer Science (ICS) major provides students with a broad introduction to topics ranging from computer

system design and networking to software design and computer-supported cooperative work. Through the completion of four elective courses, students may choose to specialize in one or more of six areas (see below under Major Requirements). ICS majors may also choose to complete the Game Culture and Technology concentration, an interdisciplinary course of study requiring a total of eight courses (32 units) from the Bren School of ICS and Claire Trevor School of the Arts (Department of Studio Art); admission criteria and course requirements are described on page 335.

ADMISSIONS

Freshman Applicants: See pages 38–42.

Transfer Applicants:

Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission. Applicants must satisfy the following requirements:

1. One year of discrete mathematics if available; if not, first-year calculus. (A semester of pre-calculus and a semester of calculus may not be used to fulfill this requirement.)
2. One year of computer science courses, including a UC-transferable programming course involving concepts such as found in C++, Java*, Eiffel, or another object-oriented high-level language; programming-only courses such as Basic, Fortran, Cobol, Pascal, and C are not acceptable. Students should select UC-transferable courses that do not focus strictly on learning a programming language but instead focus on topics such as object-oriented design, data structures, algorithms, and computer architecture, if such courses are available. *Java is strongly recommended as it is used in most programming-related courses.

The lower-division requirements consist of five quarters of ICS courses and six quarters of math courses which must be taken in a certain order and which are prerequisites for upper-division courses. Students who transfer to UCI in need of completing any part of this sequence may find that it will take longer than two years to complete their degree.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN INFORMATION AND COMPUTER SCIENCE

University Requirements: See pages 59–64.

Major Requirements

Lower-division (some or all of these are prerequisites for required upper-division ICS courses):

- A. ICS 6A/Mathematics 6A, Mathematics 6B, Mathematics 6C or 3A, Mathematics 2A-B, Statistics 67/Mathematics 67.
- B. ICS 21, 22, 23, 51, 52.

Upper-division:

- A. *ICS Core requirements:* CSE121/Informatics 111, Informatics 161, CS 141/CSE141/Informatics 101, CS 142A/CSE142, CS 143A/CSE104, CS 151, CS 152, CS 161/CSE161, CS 171.
- B. One intermediate course in each of two areas, selected from Informatics 113; Informatics 115, Informatics 123, Informatics 131; Informatics 162; CS 131, 144; CS 132; Engineering EECS143, EECS151; CS 134, CS 162, CS 163, CS 164; CS 172, CS 173, Engineering EECS136; Engineering EECS104 or CS 112; CS 122A/EECS 116.
- C. Three project courses selected from Informatics 117, Informatics 118A-B, Informatics 119, Informatics 132, Informatics 163, CS 113/Informatics 125, CS 114, CS 122B, CS 133, CS 142B, CS 143B, CS 153, CS 154, CS 165, CS 175, CS 176, Engineering EECS151L. NOTE: Informatics 119 may not be used to satisfy any part of the project course requirement in conjunction with Informatics 118A-B.

- D. Two additional courses chosen from this list that have not been used to satisfy another ICS major requirement: Mathematics 105A-B, 114A-B, 118A-B, 120A-B, 121A-B, 130B-C, 131B-C, 132B-C, 140A-B, 141, 150, 151, 152, 161, 162A-B, 171A-B-C, 173A-B, 180; CS 162, CS 163, CS 177; Philosophy 105A-B-C.

Specializations: Students may elect to complete one or more specializations within the major in Information and Computer Science. Courses taken for a specialization must be taken for a letter grade and may be used to satisfy upper-division requirements for the major. Courses may also be used to satisfy requirements of more than one specialization, subject to the following limitation: separate specializations may share at most one course.

One individual study course (CS H198 or CS 199) in the area of specialization may be substituted for one designated course (indicated by *) in the specialization requirements, upon prior approval of the Bren School Associate Dean for Undergraduate Education.

Artificial Intelligence: four courses* selected from CS 163 or CS 165, CS 172-179.

Computer Systems: four courses selected from Informatics 123, CS 112, CS 131–134, CS 142B, CS 143B, CS 144, CS 153–155.

Implementation and Analysis of Algorithms: two courses selected from CS 163, CS 164, CS 165; two courses* selected from Informatics 117, CS 133, CS 142B, CS 143B, CS 175, CS 176.

Information Systems: three courses selected from Informatics 113, Informatics 117, Informatics 132, Informatics 162, Informatics 163; one course* selected from Informatics 123, Informatics 131, Informatics 153, CS 122A, CS 132, CS 176.

Networks and Distributed Systems: four courses selected from Informatics 123, CS 131, CS 132, CS 133*, CS 134, CS 143B*.

Software Systems: two courses selected from Informatics 113, Informatics 115, Informatics 123, Informatics 131, Informatics 132; two software project courses, either Informatics 117 and Informatics 119* or Informatics 118A-B.

Major and minor restrictions: See page 334.

Sample Program of Study — Information and Computer Science

Breadth (III/VII)	Breadth (III/VII)	

NOTE: ICS upper-division core, intermediate, and project requirements may be satisfied by specific Computer Science and Informatics courses. See the requirements listed above.

Students also may wish to consult the list of courses offered by the School of Engineering. Some Engineering courses can count toward intermediate-level and project course requirements for the ICS major. See the upper-division requirements for details.

Minor in Information and Computer Science

Students outside the School may also pursue a minor in Information and Computer Science. The minor provides a focused study of Information and Computer Science to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which computer science is an integral part but is not the primary focus. The ICS minor contributes to students' competence in computing technology and proficiency in programming as well as exposing them to the fundamentals of computer science. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.

Requirements for the Minor: ICS 21, 22, 23; ICS 6A or Mathematics 6A; ICS 51 or 52; two upper-division courses from CS 111–144, CS 151–177, Informatics 101, Informatics 111–119, Informatics 123, Informatics 125, Informatics 131, Informatics 132, Informatics 141, Informatics 153, and Informatics 161–163. CS 190–199 and Informatics 190–199 may not be applied to the minor.

Courses in Information and Computer Science

BREADTH COURSES FOR NONMAJORS

Nonmajors may also take other Bren School of ICS courses for which they have the prerequisites.

10A Information: Presentation and Representation (4). Kinds of information, including quantitative, probabilistic, textual, graphic, audio. Locating information, evaluating reliability. Representing information on paper, in computer systems, in other media. Organization into hierarchies, networks, tables. Effectiveness and efficiency of alternative representations and organizations. Measuring information; redundancy, compression. Open to nonmajors only. Formerly ICS 10. (V)

10B Computer-Based Information Systems (4). The analysis, design, implementation, quality assurance, deployment, and ongoing management of computer-based information systems, and related software, hardware and networking issues; end-user customization of applications and interfaces, and selection of information, via query macro and scripting languages. Prerequisite: ICS 10A. Open to nonmajors only. Formerly ICS 11. (V)

10C Networked Information Discovery and Retrieval (4). Network-based communication and information resources, including electronic mail, news, and other sources. Technical, personal, and social aspects of their development, access, and use. Extensive use of a wide range of established and developing technologies. Prerequisite: ICS 10B. Open to nonmajors only. Formerly ICS 1C. (V)

LOWER-DIVISION

COURSES FOR MAJORS AND NONMAJORS

6A Discrete Mathematics for Computer Science (4). Covers essential tools from discrete mathematics used in computer science with an emphasis on the process of abstracting computational problems and analyzing them mathematically. Topics include: combinatorics, mathematical induction, elementary probability, and asymptotic analysis. Prerequisite: high school mathematics through trigonometry. Same as Mathematics 6A. (V)

21 Introduction to Computer Science I (6). First of a three-quarter introductory course. Introduces fundamental concepts related to computer software design and construction. Develops initial design and programming skills using a high-level programming language (primarily C++/Java). Introduces useful computer-based tools for analysis, expression, discovery. Same as CSE21. Only one course from ICS 21/CSE21 and ICS H21 may be taken for credit. (V)

H21 Honors Introduction to Computer Science (6). First of a three-quarter introductory sequence. Introduces basic concepts, fundamental laws and principles of software and hardware organization, program construction, applications, and policy and social issues. Develops initial programming skills using

a high-level programming language (primarily C/C++/Java). Introduces useful computer-based tools for analyses, expression, and discovery. Prerequisite: enrollment open to ICS majors in the Campuswide Honors Program or by consent of the Donald Bren School of Information and Computer Sciences. Only one course from ICS H21 and ICS 21/CSE21 may be taken for credit. (V)

22 Introduction to Computer Science II (6). Second of a three-quarter introductory sequence. Abstract behavior of classic data structures (stacks, queues, priority queues, tables, trees), alternative implementations, analysis of time and space efficiency. Recursion. Object-oriented and functional programming. Models of computation. Prerequisite: ICS 21/CSE21 with a grade of C or better. Same as CSE22. Only one course from ICS 22/CSE22, ICS H22, or Informatics 42 may be taken for credit. (V)

H22 Honors Introduction to Computer Science II (6). Second of a three-quarter introductory sequence. Covers in-depth concepts of programming and mathematical tools for analyzing programs. Topics include: combinatorics, program analysis and correctness, advanced structures, system design techniques, and programming paradigms. Prerequisite: ICS H21 with a grade of B- or better or ICS 21/CSE 21 with a grade of A or better. Only one course from ICS H22 and ICS 22/CSE22 may be taken for credit. (V)

23 Fundamental Data Structures (4). Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques. Prerequisites: ICS 22/CSE22 with a grade of C or better, or Informatics 42 with a grade of C or better, or Engineering EECS40; Mathematics 6A or ICS 6A. Same as CSE23. Only one course from ICS 23/CSE23 and ICS H23 may be taken for credit. (V)

H23 Introduction to Computer Science III (4). Third of a three-quarter introductory course. Builds on ICS H22 with respect to mathematical tools and analysis. Focuses on fundamental algorithms in computer science, basic data structures for primary and secondary memory, storage allocation and management techniques, data description, and design techniques. Prerequisites: ICS H22 with a grade of B- or better or ICS 22 with a grade of A or better; Mathematics 6A or ICS 6A. Only one course from ICS H23 and ICS 23/CSE23 may be taken for credit. (V)

51 Introductory Computer Organization (6). Multilevel view of system hardware and software. Operation and interconnection of hardware elements. Instruction sets and addressing modes. Virtual memory and operating systems. Laboratory work using low-level programming languages. Prerequisites: ICS 21 with a grade of C or better; Mathematics 6B.

52 Introduction to Software Engineering (6). Introduction to the concepts, methods, and current practice of software engineering. The study of large-scale software production; software life cycle models as an organizing structure; principles and techniques appropriate for each stage of production. Laboratory work involves a project illustrating these elements. Prerequisite: ICS 23 with a grade of C or better. ICS 52 and Informatics 43 may not both be taken for credit.

54 Programming for Multitasking Operating Systems (4). In-depth study of principles and concepts embodied in modern Internet-connected, multi-user, multitasking operating systems, including shells, filters, pipelines, programmability and scripting, extensibility, concurrent processing, and inter-process communication. Several integral tools and utilities are presented. UNIX used to provide concrete examples. Prerequisite: ICS 23 with a grade of C or better.

80 Special Topics in Information and Computer Science (2 to 4). May be repeated for credit if title or topic varies.

92 Introduction to University Success (0). Survey of the attitudes and skills required for academic success. Designed primarily for new freshmen in technical fields who are first-generation college students, low-income students, or students with disabilities. Focus on specific tools and proven methods to improve academic performance. Study planning and independent studies. Students may receive a maximum of four units of workload credit only. Pass/Not Pass only.

93 Strategies for Success in ICS (0). Develops students' study skills for ICS and breadth requirement courses through instruction, small group activities, and application assignments. Topics include goal setting, note taking, text reading, examination preparation, memory and concentration, and problem solving. Pass/Not Pass only. Two units of workload credit only.

UPPER-DIVISION

139 Technical Writing and Communication Skills (4). Study and practice of critical and technical writing as it applies to the field of computer science. Each student writes essays of varying lengths, totaling at least 4,000 words. Prerequisite: satisfactory completion of the lower-division writing requirement; upper-division standing; Bren School of Information and Computer Sciences majors only.

H197 Honors Seminar (2). An overview of computer science and selected recent trends in research. Students attend talks on current faculty research, with opportunities for discussion. Prerequisite: participation in the Bren School of ICS Honors Program or Campuswide Honors Program. Pass/Not Pass only. Formerly ICS 197.

DEPARTMENT OF COMPUTER SCIENCE

360 Computer Science Building, (949) 824-0016

Lubomir Bic, **Department Co-Chair**

Sandra Irani, **Department Co-Chair**

Faculty

James Arvo: Computer graphics, global illumination, human-computer interaction
 Nader Bagherzadeh: Parallel processing, computer architecture, computer graphics, VLSI design
 Pierre Baldi: Bioinformatics, machine learning
 Lichun Bao: Protocol design and performance evaluation of wireless and mobile communication networks
 Lubomir Bic: Parallel and distributed computing, mobile agents
 Alfred Bork: Computer-based learning; production systems for computer-based learning; screen design; simulation; computer graphics
 Elaheh Bozorgzadeh: Design automation and synthesis for embedded systems, VLSI CAD, and reconfigurable computing
 Pai Chou: Hardware/software co-design, embedded systems, component-based design, specification methodology, interface synthesis, real-time systems
 Rina Dechter: Complexity of automated reasoning models, constraint-based reasoning, distributed connectionist models, causal models, probabilistic reasoning
 Michael Dillencourt: Computational geometry, analysis of algorithms, data structures
 Nikil Dutt: Design modeling, languages and synthesis, CAD tools, computer architecture
 Magda El Zarki: Telecommunications, networks, wireless communication, video transmission
 David Eppstein: Analysis of algorithms, computational geometry, graph theory
 Stephen Franklin: Computer- and network-based educational technology, IT resource management
 Michael Franz: Programming languages and their implementation; extensible systems; software architectures, component-ware and portable software that migrates across computer networks
 Daniel Frost: Artificial intelligence, software engineering, computer graphics, teaching of programming
 Daniel Gajski: Computer and information systems, software/hardware codesign, algorithms and methodologies for embedded systems, CAD environments, science of design
 Jean-Luc Gaudiot: Parallel processing, computer architecture, processor architecture
 Tony Givargis: Embedded systems, platform-based system-on-a-chip design, low-power electronics
 Michael Goodrich: Computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing
 Richard Granger: Computational and cognitive neuroscience
 Ian Harris: Hardware/software covalidation, manufacturing test
 Wayne Hayes: High-performance scientific computing, dynamical systems and chaos, applied mathematics, graph theory, optimization
 Sandra Irani: Analysis of algorithms; online algorithms; graph theory and combinatorics
 Norman Jacobson: Computer science education, ethics in computing, forensic computing
 Ramesh C. Jain: Computer vision, media information systems, experimental environments
 Stanislaw Jarecki: Cryptography, security, fault-tolerant distributed computing

Stephen F. Jenks: Parallel and distributed processing, multithreading, embedded systems
 Scott Jordan: Modeling and analysis of behavior, control, and pricing in computer/telecommunication networks
 David G. Kay: Computer law, computer science education
 Dennis Kibler: Machine learning, genomic analysis
 Alfred Kobsa: User modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science
 Falko Kuester: Biomedical engineering
 Fadi Kurdahi: VLSI system design, design automation of digital systems
 Richard Lathrop: Modeling structure and function, machine learning, intelligent systems and molecular biology, protein structure/function prediction
 Chen Li: Database systems, data integration, multimedia information systems, Web-based database systems, semi-structured data systems
 Cristina Videria Lopes: Systems software: operating systems, compilers, programming languages, ubiquitous computing
 George Lueker: Computational complexity; probabilistic analysis of algorithms; data structures
 Aditi Majumder: Computer graphics and visualization, large area displays, human-computer interaction
 Gopi Meenakshisundaram: Geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence
 Sharad Mehrotra: Multimedia information systems, multidimensional databases, uncertainty processing in databases, data structures, information retrieval, distributed databases, workflow automation
 Eric Mjolsness: Neural networks, computational biology, bioinformatics, artificial intelligence, machine learning
 Alexandru Nicolau: Architecture, parallel computation, and programming languages and compilers
 Renato Pajarola: 3D computer graphics, scientific visualization, real-time rendering, image-based rendering, remote visualization, geometry and image compression
 Amelia Regan: Operations research, network optimization, data mining
 Natasa Przulj: Biomedical informatics, computational biology
 Isaac Scherson: Parallel computing architectures, massively parallel systems, parallel algorithms, complexity, orthogonal multiprocessing systems
 Alice Silverberg: Theory of abelian varieties, application of arithmetic algebraic geometry to cryptography
 Padhraic Smyth: Statistical pattern recognition, automated analysis of large data sets, applications of probability and statistics to problems in artificial intelligence
 Tatsuya Suda: Computer networks; distributed systems; performance evaluation
 Shannon Tauro: Embedded computer systems
 Alex Thornton: Computer science education, programming languages, compilers
 Gene Tsudik: Security and cryptography, networks and operating systems
 Alexander Veidenbaum: Computer architecture, interconnection networks, compilers, embedded systems
 Nalini Venkatasubramanian: Parallel and distributed systems, multimedia servers and applications, internetworking, high-performance architectures, resource management
 Max Welling: Statistical machine learning and probabilistic inference with applications to pattern recognition and computer vision
 Xiaowei Yang: Networks, distributed systems, protocol design, performance analysis, and security
 Hong-Kai Zhao: Computational applied mathematics

Undergraduate Major in Computer Science

The undergraduate major in Computer Science provides a solid foundation in computer science, focusing especially on algorithms and data structures, programming languages and compilers, operating systems, and digital logic and computer architecture. This major can serve as preparation for either graduate study or a career in industry. Computer Science majors may also choose to complete the Game Culture and Technology concentration, an interdisciplinary course of study requiring a total of eight courses (32 units) from the Bren School of ICS and Claire Trevor School of Arts (Department of Studio Art); admission criteria and course requirements are described on page 335.

The Department also offers a joint undergraduate degree in Computer Science and Engineering, in conjunction with The Henry Samueli School of Engineering; information is available in the Interdisciplinary Studies section of the *Catalogue*.

Admissions

Freshman Applicants: See pages 38–42.

Transfer Applicants:

Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission. Applicants must satisfy the following requirements:

1. One year of discrete mathematics if available; if not, first-year calculus. (A semester of pre-calculus and a semester of calculus may not be used to fulfill this requirement.)
2. One year of computer science courses, including a UC-transferable programming course involving concepts such as found in C++, Java*, Eiffel, or another object-oriented high-level language; programming-only courses such as Basic, Fortran, Cobol, Pascal, and C are not acceptable. Students should select UC-transferable courses that do not focus strictly on learning a programming language but instead focus on topics such as object-oriented design, data structures, algorithms, and computer architecture, if such courses are available. *Java is strongly recommended as it is used in most programming-related courses.

The lower-division requirements consist of five quarters of ICS courses, seven quarters of math courses, and three quarters of either physics, chemistry, or biology which must be taken in a certain order and which are prerequisites for upper-division courses. Students who transfer to UCI in need of completing any part of this sequence may find that it will take longer than two years to complete their degree.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN COMPUTER SCIENCE

University Requirements: See pages 59–64.

Major Requirements

Lower-division (some or all of the items listed in A and B are prerequisites for required upper-division ICS courses):

- A. Mathematics 6A/ICS 6A, Mathematics 6B, Mathematics 6C or 3A, Mathematics 2A-B, Statistics 67/Mathematics 67, Philosophy 29 or 30 or Mathematics 13.
- B. ICS 21, 22, 23, 51, 52.
- C. A three-quarter science sequence chosen from Physics 3A-B-C and 3LB-LC; Physics 7A-B and 7D or 7E, with corresponding laboratories where available; Chemistry 1A-B-C and 1LB-LC; or two from Biological Sciences 94, 97, and E106, and completion of Biological Sciences 100L (Biological Sciences 194S is a prerequisite for this course).

Upper-division:

- A. ICS 139.
- B. *CS Core requirements:* CS 132; CS 141; CS 142A; CS 143A; CS 151; CS 152; CS 161*, 162, or 163; CS 171.
- C. Three project courses selected from the following list: CS 113, CS 114, CS 122B, CS 133, CS 142B, CS 143B, CS 153, CS 154, CS 165, CS 175.
- D. Two additional upper-division courses selected from the following list: CS 111–144, CS 151–177, Informatics 101, Informatics 111–119, Informatics 123, Informatics 125, Informatics 131, Informatics 132, Informatics 141, Informatics 153, and Informatics 161–163. CS 190–199 and Informatics 190–199 may not be applied to the CS major.

No course may be counted toward more than one of the above categories.

*CS majors must enroll in CS 161 no later than the second quarter after they have earned 90 units.

Major and minor restrictions: See page 334.

Courses in Computer Science

UPPER-DIVISION

111 Digital Image Processing (4). Introduction to the fundamental concepts of digital signal and image processing as applicable in areas such as multimedia, graphics, AI, data mining, databases, vision, or video games. Topics include image representation, space- and frequency-domain transformations, filters, segmentation, and compression. Prerequisites: ICS 23/CSE23, ICS 6A/Mathematics 6A, and Mathematics 6C or 3A with grades of C or better. CS 111 and EECS107 may not both be taken for credit. Formerly ICS 181.

112 Computer Graphics (4). Introduction to the fundamental principles of 3D computer graphics including polygonal modeling, geometric transformations, visibility algorithms, illumination models, texturing, and rasterization. Use of an independently-learned 3D graphics API to implement these techniques. Prerequisite: ICS 52 with a grade of C or better. Formerly ICS 183.

113 Computer Game Development (4). Introduction to the principles of interactive two- and three-dimensional computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work. Prerequisites: CS 112 and Informatics 111/CSE121 or CS 161/CSE161 or CS 171; or Music 151; or Studio Art 106; or consent of instructor. Same as Informatics 125. Formerly ICS 187.

114 Projects in Advanced 3D Computer Graphics (4). Projects in advanced 3D graphics such as illumination, geometric modeling, visualization, and animation. Topics may include physically based and global illumination, solid modeling, curved surfaces, multiresolution modeling, image-based rendering, basic concepts of animation, and scientific visualization. Prerequisite: CS 112 or equivalent; recommended: CS 161/CSE161, CS 164, CS 165. Formerly ICS 188.

121 Information Retrieval (4). An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents. Prerequisites: ICS 23/CSE23/ICS H23 or Informatics 43; Statistics 7/Mathematics 7 or Statistics 67/Mathematics 67. Same as Informatics 141. Formerly ICS 177.

122A Introduction to Data Management (4). Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming. Prerequisites: either ICS 52 or Informatics 43 with a grade of C or better (for ICS or Informatics majors); either ICS 23/ICS H23 or EECS114 with a grade of C or better (for Computer Engineering majors). Same as Engineering EECS116. Formerly ICS 184.

122B Project in Database Management (4). Introduces students to advanced database technologies. Students gain experience in programming complex applications using database management systems. Topics include object-oriented and object-related technologies, XML, and Internet databases. Prerequisite: CS 122A/EECS116. Formerly ICS 185.

131 Distributed Computing (4). Introduction to systems implemented within network-based computer architectures. Issues in distributed programming, operating systems, and applications. Specific topics covered include programming constructs, timing/coordination problems, data/service replication, transactions/concurrency control, fault-tolerance, recovery, file systems, security. Prerequisite: CS 141/CSE141/Informatics 101. Recommended: CS 132. Formerly ICS 148.

132 Computer Networks (4). An introductory course on computer network architectures. Layering approach of communication protocols is introduced, and the function of each layer is explained. Various examples are shown from long-haul networks and local area networks to B-ISDN and high speed networks. Prerequisites: ICS 23 and 51 with grades of C or better; Mathematics 6A or ICS 6A; Mathematics 6B; Mathematics 6C or 3A. Formerly ICS 153.

133 Advanced Computer Networks (4). Fundamental principles in computer networks are applied to obtain practical experience and skills necessary for designing and implementing computer networks, protocols, and network applications. Various network design techniques, simulation techniques, and UNIX network programming are covered. Prerequisite: CS 132 or equivalent, or consent of instructor. Formerly ICS 156.

134 Computer and Network Security (4). Overview of modern computer and networks security, attacks, and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials. Prerequisites: ICS 6A/Mathematics 6A, ICS 23/CSE23, and CS 143A/CSE104. Both CS 132 and CS 161/CSE161 are recommended. Formerly ICS 168.

141 Concepts in Programming Languages I (4). In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Prerequisites: Informatics 43 with a grade of C or better; or ICS 23/CSE23/ICS H23 with a grade of C or better and either ICS 51 or CSE31/EECS31 with a grade of C or better. Same as CSE141/Informatics 101. Formerly ICS 141.

142A Compilers and Interpreters (4). Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support. Prerequisite: CS 141/CSE141/Informatics 101. Prerequisite for Computer Engineering majors only: EECS40. Same as CSE142. Formerly ICS 142.

142B Language Processor Construction (4). Project course which provides working laboratory experience with construction and behavior of compilers and interpreters. Students build actual language processors and perform experiments which reveal their behaviors. Prerequisite: CS 142A/CSE104. Formerly ICS 145A.

143A Principles of Operating Systems (4). Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems. Prerequisites: ICS 23/CSE23, and ICS 51 or EECS31/CSE31 with grades of C or better. Same as CSE104. Only one course from CS 143A/CSE104 and EECS111 may be taken for credit. Formerly ICS 143.

143B Project in Operating System Organization (4). Detailed specification and design of critical components of an actual operating system including a memory manager, a process server, and a file/I/O subsystem. Hardware/software tradeoffs. Emphasis on logical organization of system and communication. Prerequisite: CS 143A/CSE104. Formerly ICS 145B.

144 High-Performance Computers and Program Optimization (4). Analyzes the relationship between computer architecture and program optimization. High-performance and parallelizing compilers for RISC, Superscalar, and VLIW architectures are discussed. Prerequisite: ICS 51 with a grade of C or better. Recommended: CS 142A. Formerly ICS 144.

145A Embedded Computing Systems (4). Principles of embedded computing systems: embedded systems architecture, hardware/software components, system software and interfacing, real-time operating systems, hardware/software co-development, and communication issues. Examples of embedded computing in real-world application domains. Simple programming using an embedded systems development environment. Prerequisites: ICS 21/CSE21, ICS 22/CSE22, ICS 23/CSE23, ICS 51. Formerly ICS 53.

145B Embedded Computing System Laboratory (2). Laboratory to accompany CS 145A. Corequisite: CS 145A. Formerly ICS 53L.

151 Digital Logic Design (4). Boolean algebra. Design/analysis of combinational and sequential systems using SSI/MSI/LSI modules. Number systems. Error detecting and correction codes. Arithmetic algorithms. Hardware/firmware implementation of algorithms. Prerequisites: ICS 23/CSE23 and 51 with grades of C or better; Mathematics 6A/ICS 6A; Mathematics 6B. Formerly ICS 151.

152 Computer Systems Architecture (4). Design of computer elements: ALU, control unit, and arithmetic circuits. Memory hierarchy and organization. Caches. Function unit sharing and pipelining. I/O and interrupt processing. RTL and behavioral modeling using hardware description languages. Microprocessor organization and implementation techniques. Prerequisite: CS 151. Only one course from CS 152, CSE132/EECS112, and CSE132/EECS112 may be taken for credit. Formerly ICS 152.

153 Logic Design Laboratory (4). Introduction to standard integrated circuits: gates, flip-flops, shift registers, counters, latches. Construction and debugging techniques. Design of digital systems using LSI and MSI components. Practical use of circuits in a laboratory environment, including implementation of small digital systems such as arithmetic modules, displays, and timers. Prerequisites: CS 151 or concurrent enrollment; satisfactory completion of the lower-division writing requirement. Formerly ICS 155A.

154 Computer Design Laboratory (4). Design of basic computer components and small complete digital systems. Emphasis on practical use of Computer-Aided Design (CAD) tools, modeling of computer systems, and design practices in a laboratory environment. Prerequisite or corequisite: CS 151. Formerly ICS 155B.

161 Design and Analysis of Algorithms (4). Time and space complexity of algorithms. Models of computation, techniques for efficient algorithm design, effect of data structure choice on efficiency of an algorithm. Fast algorithms for problems such as sorting, set manipulation, graph problems, matrix multiplication, Fourier transforms, and pattern matching. NP-complete problems. Prerequisites: ICS 23/CSE23 and ICS 51 or CSE31/EECS31 with grades of C or better; ICS 6A/Mathematics 6A; Mathematics 6B; Mathematics 6C or 3A; Mathematics 2B; satisfactory completion of the lower division writing requirement. Same as CSE161.

162 Formal Languages and Automata (4). Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turing machines, random access machines, undecidable problems, NP-completeness. Prerequisites: ICS 23/CSE23 and ICS 51 with grades of C or better; Mathematics 2A-B and Statistics 67/Mathematics 67; Mathematics 6A/ICS 6A; Mathematics 6B; Mathematics 6C or 3A. Same as Linguistics 102. Formerly ICS 162.

163 Graph Algorithms (4). Algorithms for solving fundamental problems in graph theory. Graph representations, graph traversal, network flow, connectivity, graph layout, matching problems. Prerequisite: CS 161/CSE161. Formerly ICS 163.

164 Principles of Computational Geometry (4). Algorithms and data structures for geometric computation and graphics programming. Fundamental problems of computational geometry such as convex hulls, Voronoi diagrams, Delaunay triangulations, polygon partitioning, arrangements, geometric searching, hidden surface elimination, motion planning. Prerequisite: CS 161/CSE161 or equivalent. Formerly ICS 164.

165 Project in Algorithms and Data Structures (4). Design, implementation, execution, and analysis of algorithms for problems such as sorting, searching, data compression, and data encryption. Time-space-structure trade-offs. Prerequisite: CS 161/CSE161. Formerly ICS 165.

167 Introduction to Applied Cryptography (4). An introduction to the essential aspects of applied cryptography, as it is used in practice. Topics include classical cryptography, block ciphers, stream ciphers, public-key cryptography, digital signatures, one-way hash functions, basic cryptographic protocols, and digital certificates and credentials. Prerequisites: ICS 6A/ Mathematics 6A; ICS 22/CSE22 or Informatics 42; CS 161/CSE161 and/or upper-division standing.

171 Introduction to Artificial Intelligence (4). Different means of representing knowledge and uses of representations in heuristic problem solving. Representations considered include predicate logic, semantic nets, procedural representations, natural language grammars, and search trees. Prerequisites: ICS 52 with a grade of C or better; Mathematics 2A-B and Statistics 67/Mathematics 67. Formerly ICS 171.

172 Programming Techniques in Artificial Intelligence (4). The study of methods for implementing artificial intelligence programs in high-level languages. Exercises on implementation of data structures for representing rules, frames, grammars, networks, and algorithms for search, inference, language processing, and learning. Prerequisite: CS 171. Formerly ICS 172.

173 Neural Networks (4). An introduction to the rapidly growing field of neural networks, i.e., algorithms derived from brain circuitry. Models covered include the Hopfield model, delta rule, perceptrons, backpropagation, competitive learning. Mathematical analysis, applications, and biological bases of neural network algorithms. Prerequisites: ICS 52 with a grade of C or better; Mathematics 2A-B and Statistics 67/Mathematics 67; Mathematics 6C or 3A. Formerly ICS 173.

174 Bioinformatics (4). Introduces fundamental problems in biology that lend themselves to computational approaches. The lectures present the necessary biological background to understand the importance of the problem and the data available for algorithmic analysis. Prerequisites: ICS 21/CSE21, ICS 22/CSE22, and ICS 23/CSE23; CS 171 with a grade of C or better. Formerly ICS 174.

175 Project in Artificial Intelligence (4). Construction of a working artificial intelligence system. Evaluation of capabilities of the system including impact of knowledge representation. Prerequisite: CS 171. Formerly ICS 175A.

176 Introduction to Expert Systems (4). Introduction to the methodology of design and implementation of expert systems. Laboratory work uses expert system shells to construct knowledge-based systems. Emphasis on techniques for representing and organizing domain and control knowledge as opposed to the theory and implementation of inference engines. Prerequisite: CS 171. Formerly ICS 175B.

177 Applications of Probability in Computer Science (4). Application of probability to real-world problems in computer science. Typical topics include analysis of algorithms and graphs, probabilistic language models, network traffic modeling, data compression, and reliability modeling. Prerequisites: Mathematics 2A-B and Statistics 67/Mathematics 67; ICS 6A/Mathematics 6A; Mathematics 6B; and either Mathematics 6C or 3A. Formerly ICS 178.

190 Special Topics in Information and Computer Science (4). May be repeated for credit if title or topic varies. Prerequisites vary. Formerly ICS 180.

196 Tutoring in ICS (1 to 4). Offers opportunities to tutor both on an individual, as needed basis and as part of regularly scheduled courses. Specific tutoring assignments depend on the courses with which the student is working, as determined by the instructor in charge. In most cases includes time in individual tutoring and a term paper or project. May be taken for credit for a total of eight units. Pass/Not Pass only. Formerly ICS 196.

H198 Honors Research (4). Directed independent research in computer science for honors students. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement; participation in the Bren School of ICS Honors Program or Campuswide Honors Program; consent of instructor.

199 Individual Study (2 to 5)

Undergraduate Major in Computer Science and Engineering (CSE)

This program is administered jointly by the Department of Computer Science in the Bren School of ICS, and the Department of Electrical Engineering and Computer Sciences (EECS) in The Henry Samueli School of Engineering. For information, see the Interdisciplinary Studies section of the *Catalogue*, page 362.

DEPARTMENT OF INFORMATICS

221 Computer Science II Building; (949) 824-2901

David F. Redmiles, **Department Chair**

Faculty

Thomas Alspaugh: Software development, requirements engineering

Christopher Dobrian: Electronic music, composition

Paul Dourish: Human-computer interaction, computer-supported cooperative work

Magda El Zarki: Telecommunications, networks, wireless communication, video transmission

Julian Feldman: Management of computing resources; problems involved in managing the computer resources of an organization, including resource allocation and financing organizations; the teaching of programming, and development of techniques which will facilitate the learning of programming

Stephen Franklin: Computer- and network-based educational technology, IT resource management

Daniel Frost: Artificial intelligence, software engineering, computer graphics, teaching of programming

Tony Givargis: Embedded systems, platform-based system-on-a-chip design, low-power electronics

Vijay Gurbaxani: Economics of information systems management, impact of information technology on organization and market structure

David G. Kay: Computer law, computer science education

K. H. (Kane) Kim: Distributed real-time computer systems, fault-tolerant computer systems, real-time learning systems

Alfred Kobsa: User modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science

Kenneth L. Kraemer: Economics and management of computing; organizational and social impacts of computing; information technology and public policy; management information systems/decision support systems

Cristina Videira Lopes: Programming languages, acoustic communications, operating systems, software engineering

Gloria Mark: Computer-supported cooperative work, human-computer interaction

Bonnie Nardi: Computer-supported collaborative work, human-computer interaction, computer-mediated communication, user studies methods, activity theory, cultural responses to technology development

Robert Nideffer: Electronic intermedia, interface theory and design, technology and culture, contemporary social theory

Donald J. Patterson: Ubiquitous computing, pervasive computing, human-computer interaction, artificial intelligence, intelligent context for situated computing

Simon Penny: Robotic sculpture, interactive environments, electronic media, art practice history, and critical theory

David F. Redmiles: Design environments, human-computer interaction, usability engineering, knowledge-based support

Debra J. Richardson: Software engineering; program testing; life-cycle validation; software environments

Susan E. Sim: Software engineering, research methodology, program comprehension

Thomas A. Standish: Software testing and analysis, software semantics and epistemology, programming and cognition, and software comprehension

Richard Taylor: Software engineering, user interfaces, environments, team support

Alex Thornton: Computer science education, programming languages, compilers

Bill Tomlinson: Autonomous characters, computational social behavior, interactive media, real-time animation

Andre van der Hoek: Software engineering

Alladi Venkatesh: Social impacts of information technology, Internet and the New Economy, Smart Home technologies, children and multimedia

Mark Warschauer: Language, literacy, technology

Hadar Ziv: Software testing, requirements engineering, Bayesian modeling

The faculty in the Department of Informatics also contribute to the following concentrations in the ICS graduate program: Software track, Interactive and Collaborative Technology track, and Informatics in Biology and Medicine.

Informatics is the interdisciplinary study of the design, application, use, and impact of information technology. It goes beyond technical design, to focus on the relationship between information system design and use in real-world settings. These investigations lead to new forms of system architecture, new approaches to system design and development, new means of information system implementation and deployment, and new models of interaction between technology and social, cultural, and organizational settings.

Undergraduate Major in Informatics

Within the overall discipline of information and computer science, the Informatics major is the most outward looking. Traditional computer science concerns itself primarily with the internal features, structure, and behavior of computer systems; the Informatics major focuses more on the relationship between what is inside the computer and what is outside. So, courses in the Informatics major study software architecture; software development, design, and analysis; programming languages; ubiquitous computing; information retrieval and management; human-computer interaction; computer-supported cooperative work; and other topics that address the relationship between information technology design and use in social and organizational settings. As such, the Informatics major addresses the broad set of issues surrounding design, ranging from initial requirements gathering to estimating and measuring the impact of alternative solutions—all from a multidisciplinary perspective that includes computer science, information science, organizational science, social science, and cognitive science.

Courses in the degree program are carefully designed to offer extensive treatment of the conceptual underpinnings of the discipline and provide in-depth practical experiences, often performed on real-world examples and involving outside organizations sponsoring the project. Students completing the major will be exceptionally suited for advanced careers in information technology or for further study at the graduate level. Specific careers include, but certainly are not limited to: software engineer; software architect; system, software, and information analyst; system, software, and information designer; project manager; and interface and interaction designer. Career choices include new start-ups, multinational corporations, small software houses, consultancy, and game companies.

Informatics majors may also choose to complete the Game Culture and Technology concentration, an interdisciplinary course of study requiring a total of eight courses (32 units) from the Bren School of ICS and Claire Trevor School of the Arts (Department of Studio Art); admission criteria and course requirements are described on page 335.

More information is available online at <http://www.ics.uci.edu/informatics/ugrad>.

ADMISSIONS

Freshmen Applicants: See pages 38–42.

Transfer Applicants:

Students transferring into the major must satisfy the following requirements:

1. Completion of one year of college mathematics. Courses equivalent to ICS 6A/Mathematics 6A (discrete mathematics), Statistics 7/Mathematics 7 or Statistics 67/Mathematics 67, and Philosophy 29 or Philosophy 30 or Mathematics 13 (symbolic logic) are preferred as this facilitates scheduling after transfer to UCI. A semester of pre-calculus and a semester of calculus are not sufficient to satisfy this requirement.
2. Completion of one year of computer science courses. The course work must contain at least one UC-transferable programming course involving the concepts of object-oriented programming in such languages as C++, Java, Smalltalk, or Eiffel, or functional programming in such languages as Scheme, Lisp, or ML. Programming-only courses in Basic, Fortran, Cobol, Pascal, or C are not acceptable. It is strongly recommended that students select UC-transferable courses that do not focus strictly on learning a programming language but instead focus on topics such as software design, software engineering, human-computer interaction, programming language concepts, data structures, and algorithms, if such courses are available.

Additional courses beyond the one UC-transferable programming course required for admission are strongly recommended. Transfer students must enter UCI with knowledge of Java since it is used in many of the lower-division Informatics requirements and serves as a foundation for upper-division programming-related courses.

Courses equivalent to Informatics 41, 42, 43 are strongly preferred, although courses equivalent to ICS 21, 22, 52 are acceptable as alternatives.

3. Completion of at least one year of college-level courses in English composition, academic writing, research writing, or technical writing. Students should have strong reading and writing skills and facility with quantitative reasoning and critical, logical thinking. Courses in design would also be beneficial, though not required.

Students who transfer to UCI in need of completing any part of this sequence may find that it will take longer than two years to complete their degree.

More information is available at <http://www.ics.uci.edu/informatics/ugrad> or the ICS Student Affairs Office; telephone (949) 824-5156; e-mail: ucounsel@uci.edu.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN INFORMATICS

University Requirements: See pages 59–64.

Major Requirements

Lower-division:

- A. Introductory courses: Informatics 41, 42, 43, 44.
- B. ICS 23.
- C. ICS 6A/Mathematics 6A, Statistics 7/Mathematics 7 or Statistics 67/Mathematics 67, Philosophy 29 or 30 or Mathematics 13.

Upper-division:

- A. Intermediate Informatics courses: Informatics 101, 102, 111, 113, 115, 121, 131, 132.
- B. CS 122A, CS 122B.

C. Advanced Informatics courses: Informatics 122, 123, 141, 143, 151, 153, 161, 162, 163, 191A, 191B, 191C.

Major and minor restrictions: See page 334.

Minor in Informatics

The minor provides a focused study of Informatics to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which information and software design is an integral part but is not the primary focus. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests. The minor particularly centers on understanding the relationships among computers and people, and how these relationships must be addressed in information and software design. Alternatively put, Informatics designs solutions in context, and takes into account the social, cultural, and organizational settings in which computing and information technology will be used.

Requirements for the Minor: Informatics 41, 42, 43, 44, 111, and 131; and at least one of the following pairs of courses: Informatics 101 and Informatics 102, Informatics 113 and 115, Informatics 151 and 153, Informatics 161 and 162, Informatics 132 and 143, CS 122A and CS 122B.

Before enrolling in any course for the Informatics minor, students should ensure that they meet its prerequisites. See the course prerequisites listed in the *Catalogue* or on the Informatics Web site at <http://www.ics.uci.edu/informatics/ugrad>.

NOTE: A maximum of two courses can be taken Pass/Not Pass to satisfy the minor in Informatics. Students majoring in Information and Computer Science, Computer Science, or Computer Science and Engineering cannot minor in Informatics. Students who are considering a major in Informatics must complete the Informatics courses with a letter grade.

Courses in Informatics

LOWER-DIVISION

41 Informatics Core Course I (6). Fundamental concepts of computer software design and construction. Data, algorithms, functions, and abstractions. Overview of computer systems: data representation, architectural components, operating systems, networks. Introduction to information systems: parties involved, architectural alternatives, usability, organizational and social concerns. May not be taken for credit after ICS 22. (V)

42 Informatics Core Course II (6). Alternative data structure implementations; analysis of time and space efficiency. Object-oriented programming concepts and techniques: classes, objects, inheritance, interfaces. Formal languages and automata. Problem modeling and design tradeoffs. Prerequisite: Informatics 41 with a grade of C or better. Only one course from Informatics 42, ICS 22/CSE22, or ICS H22 may be taken for credit. (V)

43 Informatics Core Course III (6). Concepts, methods, and current practice of software engineering. Large-scale software production, software life cycle models, principles and techniques for each stage of development. Laboratory project applying these concepts. Prerequisite: Informatics 42 with a grade of C or better. Informatics 43 and ICS 52 may not both be taken for credit.

44 Seminar in Informatics Research Topics (2). Introduction to current research topics in Informatics. Various faculty members present current research and relate it to the course content of the Informatics degree program.

UPPER-DIVISION

101 Concepts in Programming Languages I (4). In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Prerequisites: Informatics 43 with a grade of C or better; or ICS 23/CSE23/ICS H23 with a grade of C or better and either ICS 51 or CSE31/EECS31 with a grade of C or better. Same as CS 141/CSE141.

102 Concepts of Programming Languages II (4). In-depth study of major programming paradigms: imperative, functional, declarative, object-oriented, and aspect-oriented. Understanding the role of programming languages in software development and the suitability of languages in context. Domain-specific languages. Designing new languages for better software development support. Prerequisite: Informatics 101/CS 141/CSE141 with a grade of C or better.

111 Software Tools and Methods (4). Concepts and techniques of constructing software in a systematic fashion, including detailed design techniques, specifications, programming methods, quality-inducing procedures, development tools, team techniques, testing, estimation, and performance improvement. Laboratory work involves exercises to illustrate important concepts, methods, and tools. Prerequisite: Informatics 43 with a grade of C or better or the following: ICS 52 or CSE90 with a grade of C or better; Mathematics 6A or ICS 6A; Mathematics 6B; Mathematics 6C or 3A; and satisfactory completion of the lower-division writing requirement. Same as CSE121.

113 Requirements Analysis and Engineering (4). Aims to equip students to develop techniques of software-intensive systems through successful requirements analysis techniques and requirements engineering. Students learn systematic process of developing requirements through co-operative problem analysis, representation, and validation. Prerequisites: Informatics 111/CSE121; ICS 6A/Mathematics 6A; Statistics 7/Mathematics 7 or Statistics 67/Mathematics 67.

115 Software Specification and Quality Engineering (4). Aims to prepare students to develop high-quality software through successful specification and quality engineering techniques. Students learn what high-quality means, how to plan for and achieve it, and how to measure it. Prerequisites: ICS 6A/Mathematics 6A; Statistics 7/Mathematics 7 or Statistics 67/Mathematics 67; either Mathematics 6B or 13 or Philosophy 29 or 30; Informatics 111/CSE121.

117 Project in Software System Design (4). Specification, design, construction, testing, and documentation of a complete software system using concepts learned in ICS 52, Informatics 101, and Informatics 111. Special emphasis on the need for and use of teamwork, careful planning, and other techniques for working with large systems. Prerequisites: ICS 51 with a grade of C or better; Informatics 101/CS 141/CSE141 and Informatics 111/CSE121; Mathematics 2A-B and Statistics 67/Mathematics 67. Formerly ICS 125.

118A-B Comprehensive Project in Software System Evolution (4). Provides students with an industrial-like software development experience. Students undergo the vicissitudes of developing a large-scale software system from several points of view and specify, design, construct, test, document, and evolve a complete software system. Students must enroll in both quarters. In-Progress grade assigned for Informatics 118A; final grades assigned after completion of 118B. Prerequisites: ICS 51 with a grade of C or better;

Informatics 101/CS 141/CSE141 and Informatics 111/CSE121; Mathematics 2A-B and Statistics 67/Mathematics 67. Formerly ICS 126A-B.

119 Advanced Project in Software Engineering (4). Students work in teams to specify, design, construct, test, and document a complete software system in a specialized application domain using application/domain-specific techniques. Each offering's topic is announced the preceding spring. Prerequisites: Informatics 117 or 118A with a grade of C or better; Mathematics 2C or 2J or Statistics 67/Mathematics 67. Formerly ICS 127.

121 Software Design I (4). Introduction to software design principles, paradigms, tools, and techniques. Topics include alternative architectural styles, iterative refinement, design patterns, mapping design onto code, design tools, and design notations. Includes extensive practice in creating designs and study of existing designs. Prerequisite: Informatics 102 with a grade of C or better.

122 Software Design II (4). Introduction to advanced software design principles, paradigms, and techniques. Topics include large-scale design, software reuse, product-line architectures, design recovery, refactoring, application frameworks, real-time systems, design-for-context. Case studies of existing designs and extensive practice with real-world designs. Prerequisite: Informatics 121.

123 Software Architectures, Distributed Systems, and Interoperability (4). Prepares students to engineer well-structured software systems. Students learn a wide range of software architectural styles, architectural platforms that provide standard services to applications, and formal architecture description languages. Prerequisites: Informatics 122 or the following: ICS 51 with a grade of C or better; Informatics 101/CS 141/CSE141 and Informatics 111/CSE121; Mathematics 2A-B and Statistics 67/Mathematics 67.

125 Computer Game Development (4). Introduction to the principles of interactive two- and three-dimensional computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work. Prerequisites: CS 112 and Informatics 111/CSE121 or CS 161/CSE161 or CS 171; or Music 151; or Studio Art 106; or consent of instructor. Same as CS 113.

131 Human Computer Interaction (4). Presents basic principles of human-computer interaction (HCI). Introduces students to user interface design techniques, design guidelines, and usability testing. Students gain the ability to design and evaluate user interfaces and become familiar with some of the outstanding research problems in HCI. Prerequisites: one course (with a grade of C or better) selected from Informatics 42, ICS 10A, ICS 21/CSE21/ICS H21, Engineering ENGR10, CEE10, EECS10, MAE10, or equivalent.

132 Project in Human-Computer Interaction and User Interfaces (4). The goal of this project course is to prepare students to develop and evaluate user interfaces to software systems through a one-quarter project. Prerequisites: Informatics 131 and Informatics 101/CS 141/CSE141 and Informatics 111/CSE121.

141 Information Retrieval (4). An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents. Prerequisites: ICS 23/CSE23/ICS H23 or Informatics 43; Statistics 7/Mathematics 7 or Statistics 67/Mathematics 67. Same as CS 121.

143 Information Visualization (4). Introduction to interactive visual interfaces for large datasets, and to principles of human visual perception and human computer interaction that inform their design. Various applications for data analysis and monitoring are discussed. Prerequisite: Informatics 131 or Informatics 43 or ICS 52.

151 Project Management (4). Introduces theoretical and practical aspects of project management. Topics include organizational theory, group behavior, project management skills, case studies, personal and group productivity tools, management of distributed work, stakeholders, consultants, and knowledge management. Students do a project exercise. Prerequisites: Informatics 131 and 161.

153 Computer-Supported Cooperative Work (4). Introduces concepts and principles of collaborative systems. Topics may include shared workspaces, group interaction, workflow, architectures, interaction between social and technical features of group work, and examples of collaborative systems used in real-world settings. Students develop a simple collaborative application. Prerequisites: Informatics 43 or ICS 23/CSE23/ICS H23 with a grade of C or better; or Informatics 161.

161 Social Analysis of Computerization (4). Introduction of computerization as a social process. Examines the social opportunities and problems raised by new information technologies, and the consequences of different ways of organizing. Topics include computerization and work life, privacy, virtual communities, productivity paradox, systems risks. Prerequisites: one course (with a grade of C or better) selected from Informatics 43, ICS 10A, ICS 21/CSE21/ICS H21, Engineering ENGR10, or equivalent; satisfactory completion of the lower-division writing requirement.

162 Organizational Information Systems (4). Introduction to role of information systems in organizations, components and structure of organizational information systems, and techniques used in information systems analysis, design, and implementation. Prerequisite: Informatics 161.

163 Project in the Social and Organizational Impacts of Computing (4). Students undertake projects intended to gather and analyze data from situations in which computers are used, organize and conduct experiments intended to test hypotheses about impacts, and explore the application of concepts learned in previous courses. Prerequisite: Informatics 162.

191A-B-C Senior Design Project (4-4-4). Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis. In-progress grading. Informatics 191A-B-C must be taken in the same academic year. Corequisite: Informatics 151. Prerequisites: Informatics 123, 132, 163; CS 122A/EECS116; senior standing.

H198 Honors Research (4). Directed independent research in Informatics for honors students. Prerequisites: satisfactory completion of the lower-division writing requirement; participation in the Bren School of ICS Honors Program or the Campuswide Honors Program.

199 Individual Study (2 to 5)

DEPARTMENT OF STATISTICS

346 Computer Science; (949) 824-5392; Fax: (949) 824-9863
E-mail: stat@uci.edu; World Wide Web: <http://www.stat.uci.edu/>
Hal S. Stern, **Department Chair**

Faculty

Daniel L. Gillen: Biostatistics, survival analysis and longitudinal methods, group sequential methods, design and analysis of clinical trials, applications to biological and clinical studies
Wesley O. Johnson: Bayesian semi-parametric inference, survival analysis, prediction, specification of priors, applications in epidemiology, diagnostic testing, longitudinal and mixed modeling, asymptotics
Gang Liang: Statistical inference, graphical models, and machine learning
Hal S. Stern: Bayesian methodology, model diagnostics, applications to biological and social sciences, sports and statistics
David van Dyk: Statistical computation, Bayesian methodology, hierarchical modeling, causal inference, and application in astronomy and the physical and social sciences
Yaming Yu: Statistical computation, Bayesian methodology, and missing data problems

Statistics is the science concerned with developing and studying methods for collecting, analyzing, interpreting, and presenting empirical data. Statistical principles and methods are important for addressing questions in public policy, medicine, industry, and virtually every branch of science. Interest in statistical methods has increased dramatically with the abundance of large databases in fields like computer science (Internet and Web traffic), business and marketing (transaction records), and biology (the human genome and related data). It is the substantive questions in such various areas of application that drive the development of new statistical methods and motivate the mathematical study of the properties of these methods.

Courses in Statistics

LOWER-DIVISION

7 Basic Statistics (4). Lecture, three hours; discussion, one to two hours. Introduces basic inferential statistics including confidence intervals and hypothesis testing on means and proportions, t-distribution, Chi Square, regression and correlation. F-distribution and nonparametric statistics included if time permits. Same as Mathematics 7. Statistics 7/Mathematics 7 and Biological Sciences 7 may not both be taken for credit. No credit for Statistics 7/Mathematics 7 if taken after Mathematics 67. (V) *F, W offered for seniors only.*

67 Introduction to Probability and Statistics for Computer Science (4). Lecture, three hours; discussion, two hours. Introduction to the basic concepts of probability and statistics with discussion of applications to computer science. Prerequisites: Mathematics 2B, 6A, and 6C or 3A. No credit for Statistics 7/Mathematics 7 or Biological Sciences 7 if taken after Statistics 67/Mathematics 67. Same as Mathematics 67.

UPPER-DIVISION

100A-B-C Foundations of Applied Statistics I, II, III (4-4-4). Lecture, four hours; laboratory, three hours. **100A-B:** Descriptive statistical concepts and techniques most widely used in social science research. Weekly laboratories employ computer graphics to investigate concepts. 100A: Pass/Not Pass only. **100C:** Classical statistical inference, limited to simple random sampling or simple randomization designs. Characteristics of sampling distributions; bias, standard error, mathematical models, estimation, hypothesis testing. Same as Social Sciences 100A-B-C and Social Ecology 166A-B-C. (V)

101 Introduction to Statistical Computing with SAS (4). Lecture, two hours; laboratory, two hours. Data definition, data acquisition, and data management using SAS procedures and commands. Statistical procedures available from the SAS Statistical Software Package. SAS/GRAPH procedures for producing statistical graphics. Prerequisites: completion of one year of statistics, or concurrent enrollment in Statistics 100C, or consent of instructor. Pass/Not Pass only. Same as Social Ecology 166E and Social Science 101E.

120A-B-C Introduction to Probability and Statistics (4-4-4). Lecture, three hours; discussion, one to two hours. Introductory course covering basic principles of probability and statistical inference. **120A:** Axiomatic definition of probability, random variables, probability distributions, expectation. **120B:** Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference. **120C:** Linear regression, analysis of variance, model checking. Prerequisites: for 120A-B: Mathematics 2A-B; 2D-2J or 4; for 120C: Statistics 120A-B; Mathematics 3A or 6C. Same as Mathematics 131A-B-C. Only one course from Statistics 120A, Mathematics 130A, and Mathematics 132A may be taken for credit.

199 Individual Study (2 to 5). Individual research or investigations under the direction of an individual faculty member. Prerequisite: consent of instructor.

GRADUATE PROGRAM IN ICS

The University of California is the State's primary research institution, and the Donald Bren School of Information and Computer Sciences is the only independent computer science school on any UC campus. Established in December 2002 when the 35-year-old Department of Information and Computer Science was promoted to independent school status, ICS embodies the University's tradition of excellence as a world leader in information and computer sciences. ICS recently received a \$20-million endowment from The Irvine Company Chairman Donald Bren to assist in recruiting and retaining distinguished faculty scholars. ICS began construction on a new, six-story research and administrative facility during the winter of 2004 with completion expected in December 2006. Committed to increasing diversity in computing, ICS created the Ada Byron Research Center in 2003 to address research and outreach topics aimed at increasing the participation of women and other underrepresented populations in computer science and information technology.

Faculty and student-driven research in ICS is supported through a variety of grants, gifts, and contracts from public and private institutions such as the State of California, the U.S. Department of Education, various U.S. defense agencies, the National Science

Foundation, the National Institutes of Health, NASA, and several companies, including Boeing, Conexant, Fujitsu, HP, IBM, Intel, Microsoft, Raytheon, Siemens, Sun, Toshiba, and Unisys. Since 2000, ICS has received more than \$79 million in extramural funding, in addition to the recent \$20-million endowment. Faculty within the School are active participants and leaders of numerous research institutes spanning computer science, including: the Institute for Genomics and Bioinformatics; Institute for Software Research; Center for Embedded Computer Systems; California Institute for Telecommunications and Information Technology; Center for Pervasive Communications and Computing; Arts Computation Engineering; Center for Cyber-Security and Privacy; Center for Research on Information Technology and Organizations; Laboratory for Ubiquitous Computing and Interaction; Large-scale Data Analysis; Network Systems Center; and the Ada Byron Research Center.

ICS offers M.S. and Ph.D. degrees in Information and Computer Science. Enrollments in the M.S. program are being limited to those students with an undergraduate degree in computer science or a closely related field.

Both M.S. and Ph.D. students may complete one of the following concentrations: Computer Science (CS); Informatics (INF); Informatics in Biology and Medicine (IBaM); and Statistics (Stats).

Three additional concentrations are available to M.S. students: Embedded Systems; Knowledge Discovery in Data; and Arts Computation Engineering (ACE). In addition, the School also offers a general M.S. degree that does not identify with any specific concentration.

The M.S. and Ph.D. degree program in Networked Systems is supervised by an interdepartmental faculty group. Information is available in the Interdisciplinary Studies section of the *Catalogue*.

ADMISSION

Applicants will be evaluated on the basis of their prior academic record. Applicants for the M.S. degree are expected to have a bachelor's degree in computer science or a related field. Those who do not have an undergraduate degree in computer science may take the Computer Science Advanced GRE test to demonstrate sufficient background in the field. Scores are reviewed on a case-by-case basis. Ph.D. applicants will be evaluated in their potential for creative research and teaching in Information and Computer Science.

Applicants are expected to have (1) skills in computer programming at least equivalent to those obtained in college-level courses in programming and language development; (2) skills in mathematics equivalent to those obtained in complete college-level courses in logic and set theory, analysis, linear algebra and modern algebra, or probability and statistics; (3) data structures, analysis of algorithms, automata theory, or formal languages; and (4) computer architectures.

All applicants are evaluated on the materials submitted: letters of recommendation, official GRE test scores, official college transcripts, and personal statement. For more information, contact the ICS graduate counselor at (949) 824-5156 or send e-mail to gcounsel@ics.uci.edu.

Financial Assistance

Financial assistance is available to Ph.D. students in the form of fellowships, teaching assistantships, and research assistantships. Although assistance varies, it is the School's goal to support all entering Ph.D. students, subject to availability of funds. International students who are not citizens of countries where English is either the primary or dominant language, as approved by Graduate Council, and who apply for teaching assistantships must take the Test of Spoken English (TSE) or the Speaking Proficiency English Assessment Kit (SPEAK) examination and earn a minimum score of 50 to be considered for an award.

Financial assistance may be available through teaching assistantships and corporate internships for ICS M.S. students.

Students with a Previously Earned Master's Degree

Credit for one or all required courses may be given at the time of admission to those students who have completed a master's degree in computer science or a closely related field. Course equivalency will be determined by the ICS Associate Dean for Graduate Studies following a written recommendation from a sponsoring research advisor. Research advisors can require that a student take additional courses when this is appropriate.

An additional M.S. degree will not be awarded if the student currently holds an M.S. degree in computer science or a related field from another university.

Course Substitutions

A student who has taken relevant graduate courses at UCI or another university may petition to have a specific course certified as equivalent to one which satisfies ICS requirements. The petition should describe the course and can be approved either by a committee composed of the student's faculty advisor, the ICS Associate Dean for Graduate Studies and a faculty member who is in the concentration area in which the course is taught, or by the ICS Graduate Policy Committee. Only two courses can be substituted.

Master of Science Program

The Master of Science program offers concentrations in the same areas as the Ph.D. concentrations described under the Doctor of Philosophy heading below. For each of these concentrations, the course requirements for the M.S. are determined by the concentration track and are identical to those of the Ph.D., although completion plans differ.

In addition, the Master of Science program offers a general M.S. in ICS, a concentration in Embedded Systems, a concentration in Knowledge Discovery in Data, and a concentration in Arts Computation Engineering.

Detailed course requirements for the M.S. and Ph.D. degrees are listed in the following pages under each concentration area. M.S. students may select one of two options: thesis plan or comprehensive examination plan, as described below. The normative time for completion of the M.S. program is two years. All study must be completed within four calendar years from the date of admission.

Plan I: Thesis Plan. The thesis option is available for graduate students who may wish to continue on to a Ph.D. program or those who wish to concentrate on a specific problem. To qualify for this option, students must be in good academic standing with their Department. The student must enroll in at least two quarters of Thesis Supervision (CS 298 or Informatics 298) that will substitute for two required courses as specified under the concentration area or specialization of choice. All required courses must be completed with a grade of B or better, and the student must write a research or thesis project. A committee of three faculty members (voting members of the Academic Senate) will guide the student and give final approval of the thesis. The committee will consist of an advisor (ICS faculty member) who is willing to supervise the thesis project, and two other faculty members (one of which must be from ICS) who are willing to serve on the committee as readers of the thesis. An oral presentation of the thesis to the committee will be required. Seminar courses such as Informatics 209S, CS 239S, CS 259S, CS 269S, and CS 279S cannot be applied to the required "other graduate courses" units.

Plan II: Comprehensive Examination Plan. The student completes the required units as specified under the concentration area. Each course must be completed with a grade of B or better. Seminar courses such as Informatics 209S, CS 239S, CS 259S, CS 269S, and CS 279S cannot be applied to the required "other

graduate courses" units. The student must take a comprehensive examination given by ICS faculty. The examination covers the core requirements and is given twice a year (fall and spring quarters).

ICS GENERAL M.S. DEGREE PROGRAM

The ICS general M.S. degree program is designed for students who do not wish to specialize in any specific area. Students can explore many of the advanced fields in computer science. These areas include: embedded systems, networking, databases, computational geometry, neural networks, data mining, machine learning, graph algorithms, VLSI, parallel architectures, user interfaces, bioinformatics, graphics and visualization, security and cryptography, HCI/CSCW, software engineering, data structures, and ubiquitous computing.

Required Courses

The following courses must be completed with a grade of B or better. Five courses, including at least one from each of the following three categories: *Theory*: Fundamentals of the Design and Analysis of Algorithms (CS 260), Data Structures (CS 261), Analysis of Algorithms (CS 263); *Architecture/CAD/Hardware*: Introduction to Embedded and Ubiquitous Systems (CS 244/Informatics 244), Computer Systems Architectures (CS 250A), Computer Networks (CS 232), Introduction to Computer Design (CS 252); *Software and Systems*: Human-Computer Interaction (Informatics 231), Advanced Compiler Construction (CS 241), Principles of Data Management (CS 222), Software Engineering (Informatics 211), Distributed Computer Systems (CS 230).

Seven additional courses which are either ICS graduate courses or ICS undergraduate project courses. At most two undergraduate project courses can count toward this requirement. (A course taken as an undergraduate student cannot count toward this requirement.) The undergraduate project courses are: Project in Human-Computer Interaction (Informatics 132), Project in System Design (Informatics 117), Comprehensive Project in Software System Evolution (Informatics 118A-B), Advanced Project in Software Engineering (Informatics 119), Project in the Social and Organizational Impacts of Computing (Informatics 163), Language Processor Construction (CS 142B), Project in Operating System Organization (CS 143B), Logic Design Laboratory (CS 153), Computer Design Laboratory (CS 154B), Advanced Computer Networks (CS 133), Project in Algorithms and Data Structures (CS 165), Project in Artificial Intelligence (CS 175), Introduction to Expert Systems (CS 176).

Comprehensive Examination

Each student must pass a general comprehensive examination administered and evaluated by a committee assembled by the Associate Dean for Graduate Studies.

M.S. CONCENTRATION IN EMBEDDED SYSTEMS

The goal of the M.S. concentration in Embedded Systems is to prepare ICS students for the challenges in exploiting technologies that are driving computing-based systems into new and emerging application domains. The ever-increasing integration of communications, multimedia, computing and relentless digitization of data continues to expand the scope and the complexity of embedded systems. To appreciate these advances, and to productively contribute to future advances of these systems, a critical appreciation of the underlying scientific principles is a must. The goal of this program is to develop a comprehensive understanding of the hardware and software technologies used in embedded systems. Students will develop an understanding of the technology capabilities and limitations and the methods to evaluate design trade-offs between different technology choices.

Required Courses

The following courses must be completed with a grade of B or better: all students must complete Introduction to Embedded and Ubiquitous Systems (CS 244/Informatics 244); five courses from the following: List A: Compilation and Compiler Design (CS 241), Software for Embedded Systems (CS 245), Validation and Testing of Embedded Systems (CS 246), Prototyping of Embedded Systems (CS 247), Computer Systems Architecture (CS 250A), Computer Networks (CS 232), Network and Distributed Systems Security (CS 203), Parallel Computing (CS 242), Introduction to Computer Design (CS 252), and Advanced System Software (EECS 211).

Six additional courses chosen in one of the following two ways:

(1) for students pursuing the M.S. thesis option, two four-unit courses in Thesis Supervision (CS 298 or Informatics 298) plus four graduate courses taken from List A or the following List B; or (2) for all other students, six graduate courses taken from List A or the following List B: Introduction to Ubiquitous Computing (CS 248A/Informatics 241), Software Engineering (Informatics 211), User Interfaces and Software Engineering (Informatics 235), Modern Microprocessors (CS 250B), Distributed Computer Systems (CS 230), Wireless and Mobile Networking (CS 236), High-Performance Architectures and Their Compilers (CS 243), Digital System Verification and Testing (CS 251), Design Description and Modeling (CS 253), Design Synthesis (CS 254), System Tools (CS 255), Combinational Algorithm for Design Synthesis (CS 258), Data Compression (CS 267), Graph Algorithms (CS 265), Real-Time Computer Systems (Engineering EECS 223). M.S. students who do not have an undergraduate degree in Computer Science or equivalent must also take CS 260.

Suggested Electives. Students may focus their studies in specific domains within embedded systems by completing groups of electives as shown below.

Embedded System Architectures Focus: CS 250A and CS 250B, CS 242, CS 243, CS 252, CS 253.

Embedded Software Focus: Informatics 211, Informatics 235, CS 243.

Distributed and Networked Embedded Systems Focus: select four of the following five courses: CS 250A, CS 230, CS 232 or CS 236, CS 242.

Micro-Electronic Embedded Systems Focus: CS 251, CS 253, CS 254, CS 255.

System Reliability and Fault Tolerance Focus: CS 250A, CS 251, CS 253.

Theoretical Foundations of Embedded Systems Focus: CS 230, CS 232, CS 258, CS 265.

Comprehensive Examination or Thesis

Each student must either: (1) pass a comprehensive examination administered by the Embedded Systems faculty; or (2) submit a thesis for approval by a three-person committee consisting of an advisor (who is an ICS Embedded Systems full-time faculty member) and two other full-time faculty members (one of which must be from ICS).

M.S. CONCENTRATION IN KNOWLEDGE DISCOVERY IN DATA

The goal of the M.S. concentration in Knowledge Discovery and Data is to educate students in both the fundamental principles of computational methods for modeling data, as well as to provide a broad foundation in emerging methods for knowledge discovery and data mining. Technological advances in digital data collection, memory capacity, and computational power, have revolutionized our view of data analysis in the past 10 years. The volumes of data

being collected in science, business, medicine, and government are truly vast in nature. Across all of these areas, there is a rapidly increasing demand for better theories and tools to provide users with improved understanding of their data and to leverage their data for decision support.

Knowledge discovery in databases (KDD) is an emerging discipline within computer science, focused on the principles of how patterns and structure can be inferred from large data sets. It is an area of significant academic interest and research opportunity. For example, a Special Interest Group in Knowledge Discovery in Databases (SIGKDD) was recently started by the Association for Computing Machinery (ACM) to promote both research and professional activities in this area; a new journal called *Data Mining and Knowledge Discovery* was started in 1997; and the field sponsors an annual international conference with over 500 attendees. In addition, the National Science Foundation has recently begun a large interdisciplinary research program in Knowledge and Distributed Intelligence (KDI), based in part on recent research and interest in KDD. Industry participation is also very active with broad demand for graduates in this area, across a wide variety of companies engaged in leveraging scientific and business data for strategic purposes.

Required Courses

The following courses must be completed with a grade of B or better: Principles of Data Management (CS 222), Machine Learning (CS 273A), Probabilistic Learning (CS 274A), Data Mining (CS 285), Descriptive Multivariate Statistics I (Informatics 207), and any two courses from the Artificial Intelligence Core Course List and any two courses from the Statistics Core Course List.

For students pursuing the M.S. thesis option, two four-unit courses in Thesis Supervision (CS 298 or Informatics 298) plus any one course from the General Computer Science Course List completed with a grade of B or better.

For students not pursuing the thesis option, the following additional courses must be completed with a grade of B or better: any two courses from the General Computer Science List and one elective. For the elective, a non-ICS course can only be taken with the approval of a KDD faculty member.

Artificial Intelligence Core Course List: Project in Artificial Intelligence (CS 175), Information Retrieval, Filtering, and Classification (CS 221), Introduction to Artificial Intelligence (CS 271), Network-Based Reasoning/Constraint Networks (CS 275), Network-Based Reasoning/Belief Networks (CS 276), Neural Networks (CS 281), Representations and Algorithms for Molecular Biology (CS 284A).

Statistics Core Course List: Discrete Mathematics and Probability (Psychology 203A), Introduction to Mathematical Statistics (Psychology 203B), Experimental Design (Psychology 203C), Theory of Mathematical Statistics (Mathematics 201A), Probability (Mathematics 270A-B-C).

General Computer Science Course List: Project in System Design (Informatics 117), Human Computer Interaction (Informatics 231), Software Engineering (Informatics 211), Software Analysis and Testing (Informatics 215), Advanced User Interface Architectures (Informatics 235), Fundamentals of the Design and Analysis of Algorithms (CS 260), Data Structures (CS 261), Analysis of Algorithms (CS 263), Graph Algorithms (CS 265), Computational Geometry (CS 266).

Comprehensive Examination

All students not pursuing the thesis option must pass a comprehensive examination administered and evaluated by the KDD faculty.

M.S. CONCENTRATION IN ARTS COMPUTATION ENGINEERING (ACE)

As digital technologies infiltrate increasingly diverse aspects of cultural practice, and human culture at large is influenced by the presence of digital technologies, there is a profound need for a new type of professional in the entertainment industry, in education, and in the arts, who can help to construct, manage, and monitor these changes. Such a professional must be technically skilled, artistically skilled, and theoretically skilled, all at an equally high and rigorous level. The goal of the M.S. concentration in Arts Computation Engineering is to provide students with a broad-based and interdisciplinary training at the intersection of digital technology and cultural and artistic practices. The ACE program is coordinated across the Donald Bren School of Information and Computer Sciences, The Henry Samueli School of Engineering, and the Claire Trevor School of the Arts, and places equal emphasis on technical, artistic, and critical proficiency. Strongly practical in composition, it provides students with the opportunity to explore in detail topics such as telematic performance, immersive and augmented environments, embodied interaction, and the cultural impact of new technologies.

Graduation is by publicly presented thesis project and written thesis, in addition to completion of course work.

Required Courses

The ACE concentrations in all three fields consist of a two-year curriculum. The following courses are required:

ACE Core: five ACE interdisciplinary theory seminars (Informatics 270), four ACE studio/labs (Informatics 271-277), two ACE project internships (Informatics 279), and one quarter of ACE thesis research (Informatics 278).

(NOTE: A total of 48 units of Core courses must be completed. Any of the ACE core category courses may be reduced by one and replaced with a different ACE core course or an elective, in consultation with the student's advisor.)

Electives: a minimum of four ICS electives including one from each of the following three categories, passed with a grade of B or better:

Theory: Fundamentals of the Design and Analysis of Algorithms (CS 260), Data Structures (CS 261), Analysis of Algorithms (CS 263);

Architecture/CAD/Hardware: Embedded Computing Systems (CS 244/Informatics 244), Computer Systems Architectures (CS 250A), Internet (CS 232/EECS248A/Networked Systems 201), Introduction to Computer Design (CS 252);

Software Systems: Human-Computer Interaction (Informatics 231), Advanced Compiler Construction (CS 241), Data Management (CS 222), Software Engineering (Informatics 211), Distributed Computer Systems (CS 230).

Two additional breadth electives: that may be chosen by students in consultation with an advisor, and/or may be assigned by the ACE program committee in consultation with the student. These courses will compensate for lacunae in the student's background and may include upper-division undergraduate courses when appropriate and approved in advance by the candidate's advisor.

A program faculty member from the School of ICS will advise on elective selection and may be on the thesis committee.

Doctor of Philosophy Program

The Doctor of Philosophy program offers concentrations in four areas: Computer Science (CS); Informatics (INF); Informatics in Biology and Medicine (IBaM); Statistics (STATS).

The program is research oriented and encourages students to work together with faculty to solve advanced problems in computer science. The program is designed for full-time study, and the normal time for completion of the Ph.D. is five years (four years for students who entered with a master's degree), with the exception of the Informatics concentration which has a normal time of six years. The maximum time permitted for any of the concentrations is seven years. Students enrolled in the Ph.D. program must maintain satisfactory academic progress.

Teaching Requirements for the Ph.D. Program

All ICS doctoral students are required to participate in a minimum of two quarters of teaching activities before graduating. Teaching activities in summer or night school or service at other U.S. universities may be accepted in fulfillment of this requirement.

Timeline for the Ph.D. Program

All course requirements must be satisfied prior to the student's application for advancement to candidacy. The normal time for advancement to candidacy is three years (two years for students who entered with a master's degree), with the exception of the Informatics concentration which has a normal time of four years. Information on the selection of committees, advancement to candidacy, development of a doctoral dissertation, and final examination on the dissertation is available from the ICS Associate Dean for Graduate Studies and the ICS Graduate Student Affairs Office.

CONCENTRATION IN COMPUTER SCIENCE (CS)

The field of Computer Science is concerned with the design, analysis, and implementation of computer systems as well as the use of computation as is applied to virtually every field of study and use in the everyday world. Computer systems can range in scope from tiny embedded systems to the Internet as a whole. Research in computer science involves mathematical analysis, empirical experimentation, and the implementation of prototype systems. Core research areas include artificial intelligence and machine learning, bioinformatics, computer architecture, embedded systems, graphics and visual computing, databases and information management, multimedia, networked and distributed systems, programming languages and compilers, security and cryptography, design and analysis of algorithms, scientific computing, and ubiquitous computing.

The Computer Science concentration is a broad and flexible program which offers students opportunities for graduate study in the full spectrum of intellectual activity in computer science.

Required Courses

Each student must complete at least 38 units with an average GPA of 3.5 and at least a B in each course. Four of these are chosen from a common core; the remaining ones are electives chosen by the student and approved by the student's research advisor. Recommended programs for study within the areas of Computer Science are available from the ICS Associate Dean for Graduate Studies and the ICS Graduate Student Affairs Office.

Each student must take ICS 200 (Seminar in Research in ICS) and at least one course from four of the following seven areas listed below:

Design and Analysis of Algorithms: CS 260

Computer Architecture and Design: CS 250A

System Software: CS 241

Artificial Intelligence: CS 271

Networks and Distributed Systems: CS 232 or CS 230

Database Systems: CS 222

Principles of Scientific Computing: CS 206 or CS 211A

The remaining five courses must be approved CS, Informatics, or Statistics lecture courses and cannot include seminars. The selection of courses must be approved by the student's research advisor.

Research Project for the Ph.D. Degree

Each student must find a faculty advisor by the end of the second year who agrees to supervise the research project. The student must take at least one independent studies course (CS 299) with the advisor and carry out a research project as part of this course. By the end of the second year, the student must present the outcome of the research in a technical report, which must be approved by the advisor.

Candidacy Examination

The objective of the candidacy examination is to demonstrate in-depth knowledge of an area of computer science and readiness to carry out independent research at the doctoral level in that area. The student must complete all course requirements and the research project prior to advancing to candidacy. All requirements for candidacy except the candidacy exam must be completed by the end of the second year. In addition, the student must at least attempt the candidacy exam by the end of the second year. If the student does not pass the candidacy exam by the end of the second year, the student will be allowed until the end of the first quarter of the third year to pass the exam. The Candidacy Committee will consist of five faculty members, the majority of whom must be members of the student's program, to administer the exam according to the UCI Senate regulations. The student takes an oral exam, administered by the five-member committee, during which the student is tested on knowledge relevant to the chosen area of specialization. Each area is defined by a set of topics and reading list, which are maintained by the Computer Science Department office.

Dissertation Topic Defense

The student must produce a substantial written document representing the student's dissertation plan. This must include the proposed dissertation abstract, a dissertation outline, and a detailed plan for completing the work. A dissertation defense committee is formed in accordance with UCI Senate regulations. The dissertation committee must approve the student's proposal. At the discretion of the student's advisor, the student may be required to give an oral presentation of the proposed plan to the committee. This must be completed by the end of the fourth year.

Doctoral Dissertation and Final Examination

Ph.D. students are required to complete a Ph.D. dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral dissertation defense which consists of a public seminar presenting results followed by a private examination by the doctoral committee and other interested members of the faculty of the Computer Science Department.

Graduate Program in Mathematical and Computational Biology

The graduate program in Mathematical and Computational Biology (MCB) is a one-year "gateway" program designed to function in concert with selected department programs, including the Ph.D. concentration in Computer Science. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences section of the *Catalogue*, page 156.

CONCENTRATION IN INFORMATICS (INF)

Informatics is the interdisciplinary study of the design, application, use, and impact of information technology. It goes beyond technical design to focus on the relationship between information system design and use in real-world settings. These investigations lead to new forms of system architecture, new approaches to system design and development, new means of information system implementation and deployment, and new models of interaction between technology and social, cultural, and organizational settings.

In the Donald Bren School of Information and Computer Sciences, Informatics is concerned with software architecture, software development, design and analysis, programming languages, ubiquitous computing, information retrieval and management, human-computer interaction, computer-supported cooperative work, and other topics that lie at the relationship between information technology design and use in social and organizational settings. Effective design requires an ability to analyze things from many different perspectives, including computer science, information science, organizational science, social science, and cognitive science. Relevant courses in those disciplines are therefore an integral part of the program and give this concentration a unique interdisciplinary flavor—which is imperative as the computing and information technology fields play such a pervasive role in our daily lives.

Students who choose the Informatics concentration must complete a Seminar in Research in ICS (ICS 200), the Informatics Core, and a focus track in either General Informatics, Software, or Interactive and Collaborative Technology. All courses must be passed with a grade of B or better. Ph.D. students must additionally write a survey paper with an extensive bibliography, and a research paper of publishable quality.

Informatics Core: Seminar in Research in ICS (ICS 200), Human-Computer Interaction (Informatics 231), Software Engineering (Informatics 211), Social Analysis of Computing (Informatics 261), three quarters of Seminar in Informatics (Informatics 209S), and two four-unit graduate lecture courses in ICS, outside the field of Informatics.

General Informatics Track (INF:GEN)

Additional Informatics Core: Introduction to Ubiquitous Computing (CS 248A/Informatics 241), Information Retrieval, Filtering, and Classification (CS 221).

Software Electives: two courses chosen from: Formal Specification and Modeling (Informatics 213), Software Architecture (Informatics 221), Software Analysis and Testing (Informatics 215), Software Processes (Informatics 217), Applied Software Design Techniques (Informatics 223), Advanced User Interface Architecture (Informatics 235), Software Environments (Informatics 219).

ICT Electives: two courses chosen from: Ubiquitous Computing and Interaction (CS 248B/Informatics 242), Knowledge-Based User Interfaces (Informatics 233), Computer-Supported Cooperative Work (Informatics 251), Computerization, Work, and Organizations (Informatics 263), Theories of Computerization and Information Systems (Informatics 265), Computing and Cyberspace (Informatics 267), Qualitative Research Methods in Information Systems (Informatics 203) or Social Ecology 217 or Management 290, Quantitative Research Methods in Information Systems (Informatics 205) or Descriptive Multivariate Statistics I (Informatics 207) or Social Science 201A-B.

Special Topics: two courses of Informatics 295 taught by Informatics faculty.

M.S. students pursuing the thesis option must substitute two four-unit courses in Thesis Supervision (CS 298 or Informatics 298) for two courses from the Electives or Special Topics.

Software Track (INF:SW)

Software has transformed society in dramatic and powerful ways. From the World Wide Web to pilotless vehicles to spreadsheets, software systems inform, control, and enhance daily activities. Software research at UCI is aimed at creating new software technology and solutions, furthering the information revolution. Perspectives of engineering, science, mathematics, and human-computer interaction guide the work. The central goal of all the research is improvement in software development, evolution, deployment, quality, and cost-effectiveness.

Specific research emphases of the faculty members in the concentration include: analysis and testing, software understanding, empirically guided analysis, environments, software architectures, hypermedia, workflow, user interface software, process, formal methods, specification languages, extensible component-based software systems, distributed event-based systems, and programming languages. A valuable and unusual feature of the concentration is the opportunity to work with the Software group's industrial partners. These companies provide opportunities for internships, support research projects, and provide a test-bed for evaluation of new ideas. Graduates of the program have taken careers in research universities, industrial research laboratories, colleges, and industry.

Background: Students must have basic competency in the following computer science topics: programming language concepts, data structures, analysis of algorithms, automata theory or formal languages, artificial intelligence, computer architecture, and operating systems. The software faculty will evaluate, upon entry to the Ph.D. program, whether a student has satisfied these requirements through courses taken previously (e.g., at the undergraduate level) or through equivalent experience. Satisfaction of any unfulfilled requirements may be achieved through either graduate or undergraduate classes in an individualized program worked out with a Software area graduate advisor.

Required Courses

Software Electives: five courses from Knowledge-Based User Interfaces (Informatics 233), Formal Specification and Modeling (Informatics 213), Software Architecture (Informatics 221), Software Analysis and Testing (Informatics 215), Software Processes (Informatics 217), Applied Software Design Techniques (Informatics 223), Advanced User Interface Architectures (Informatics 235), Software Environments (Informatics 219), Special Topics taught by Software area faculty (Informatics 295; no more than two).

ICS Breadth: three graduate courses outside of Software, drawn from a list maintained by the Software faculty.

M.S. students pursuing the thesis option must substitute two four-unit courses in Thesis Supervision (CS 298 or Informatics 298) for two of the Software Electives.

Interactive and Collaborative Technology Track (INF:ICT)

UCI enjoys an international reputation for its research on the human and social dimensions of computer system design and use. There are two principal strands to this work. The first concerns the interaction between people and computers, including novel forms of interactive experience beyond traditional desktop computing. The second concerns the role that computer systems can play in collaborative work between individuals, groups, and organizations. Examples of topics that ICT researchers investigate include: adoption and diffusion of collaborative technologies; software architectures for user-adaptive systems; universal access to interactive systems; design principles for information visualization; and new patterns of computer-mediated work such as virtual teams.

The approach used places equal emphasis on three areas of investigation—empirical, theoretical, and technical. The empirical work involves studying technology in use, using both laboratory techniques and fieldwork investigations of real-world settings. The

theoretical research employs and develops analytic understanding of the relationships among technology, people, organizations, and social settings. Finally, in the technical work, ICT researchers develop new models and technologies for interaction with and collaboration through technology. Students in the ICT track gain a thorough grounding in all three areas.

The cornerstone of this approach is to study real use of technology, as it occurs in real-world settings. ICT researchers believe that the success or failure of technology depends on how people can fit that technology into real practice, balancing technical, cognitive, social, and cultural dimensions. Using an interdisciplinary approach, ICT research aims at a deeper understanding of interaction with and collaboration through technology, and at exploiting these insights for the design of better systems.

Required Courses

ICT Electives (group 1): two courses chosen from: Computerization, Work, and Organizations (Informatics 263), Theories of Computerization and Information Systems (Informatics 265), Qualitative Research Methods in Information Systems (Informatics 203) or Social Ecology 217 or Management 290, Quantitative Research Methods in Information Systems (Informatics 205) or Descriptive Multivariate Statistics I (Informatics 207) or Social Science 201A-B.

ICT Electives (group 2): two courses chosen from: Introduction to Ubiquitous Computing (CS 248A/Informatics 241), Knowledge-Based User Interfaces (Informatics 233), Advanced User Interface Architectures (Informatics 235), Computer-Supported Cooperative Work (Informatics 251).

ICT Breadth: Students must choose four courses outside of Informatics that form a coherent area of study. Students are encouraged, but not required, to take them outside of ICS.

A maximum of two ICT Electives may be substituted by Informatics 295 courses taught by ICT faculty. M.S. students pursuing the thesis option must substitute two four-unit courses in Thesis Supervision (CS 298 or Informatics 298) for two of the ICS Breadth courses.

CONCENTRATION IN INFORMATICS IN BIOLOGY AND MEDICINE (IBAM)

Biology and medicine have become data-intensive information sciences. Massive data acquisition technologies, such as genome sequencing, high-throughput drug screening, and DNA arrays, generate biological information in quantities that overwhelm conventional approaches. Cost-effective health care and quality medical decision-making require integrating large amounts of up-to-date information and knowledge. Biological systems have also inspired computer science advances with new concepts, including genetic algorithms, artificial neural networks, computer viruses and synthetic immune systems, DNA computing, artificial life, and hybrid VLSI-DNA gene chips. New computational opportunities such as these create a critical need for theoretical and algorithmic advances in storing, retrieving, networking, processing, analyzing, and visualizing biomedical information.

Informatics in Biology and Medicine is an interdisciplinary concentration at the interface between computer sciences, biological sciences, and medicine. It addresses problems that are specific to the information technologies in biology, medicine, and health care. Research topics include gene finding, protein structure and function prediction, structural and functional genomics, proteomics, electronic patient record systems, medical decision support systems, guideline-based health care, medical information access, and human-computer interfaces for medical applications. To make advances in these areas, society needs people with knowledge and skills that bridge those taught in conventional biological, medical,

and computer science curricula. This area provides for such an interdisciplinary computer science education.

Background: Students should have already taken at least one undergraduate course in basic biology, or must make up that deficit during their first year with one of these courses: From Organisms to Ecosystems (Biological Sciences 94), Biochemistry (Biological Sciences 98), Molecular Biology (Biological Sciences 99), Developmental Biology (Biological Sciences D104), Human Physiology (Biological Sciences E109).

Required Courses

The following courses must be completed with a grade of B or better: Seminar in Research in ICS (ICS 200); one course in Theory selected from: Fundamentals of the Design and Analysis of Algorithms (CS 260), Data Structures (CS 261), or Analysis of Algorithms (CS 263); one course in Architecture/CAD/Hardware selected from: Introduction to Embedded and Ubiquitous Systems (CS 244/Informatics 244), Computer Systems Architectures and Languages (CS 250A), Computer Networks (CS 232), or Introduction to Computer Design (CS 252); one course in Software and Systems selected from: Human-Computer Interaction (Informatics 231), Compiler Construction (CS 241), Principles of Data Management (CS 222), Software Engineering (Informatics 211), or Distributed Computer Systems (CS230); Introduction to Medical Informatics (CS 208); Representations and Algorithms for Molecular Biology (CS 284A); at least three quarters of Seminar in Informatics in Biology and Medicine (CS 289S); four courses from: Human-Computer Interaction (Informatics 231), Knowledge-Based User Interfaces (Informatics 233), Information Retrieval, Filtering, and Classification (CS 221), Advanced Topics in Data Management (CS 224), Advanced User Interface Architectures (Informatics 235), Computerization, Work, and Organizations (Informatics 263), Computational Geometry (CS 266), Machine Learning (CS 273A), Probabilistic Learning: Theory and Algorithms (CS 274A), Network-Based Reasoning/ Belief Networks (CS 276), Neural Networks (CS 281), Cognitive and Computational Neuroscience (CS 283), Probabilistic Modeling of Biological Data (CS 284B), Data Mining (CS 285), special topics taught by one of the faculty in this area (CS 280; only one 280 course counts toward the advanced topics requirement) (for M.S. students pursuing the thesis option, two of the four courses must be substituted with two four-unit courses in Thesis Supervision, CS 298 or Informatics 298); two courses from: Systems, Anatomy, and Physiology I (Engineering 210A), Environmental Health Sciences III: Biostatistics and Epidemiology (Environmental Analysis and Design E226), Decision Analysis (Management 283), Molecular Evolutionary Methods (Ecology and Evolutionary Biology 251), Problems in Genomic Analysis (Biological Chemistry 204), Structure and Biosynthesis of Nucleic Acids (Molecular Biology and Biochemistry 203), Structure and Biosynthesis of Proteins (Molecular Biology and Biochemistry 204), Macromolecular Structure, Function, and Interaction (Molecular Biology and Biochemistry 240), Cellular and Molecular Neuroscience (Physiology and Biophysics 202); upon petition, an undergraduate course may be substituted for one of the above interdisciplinary graduate-level courses.

Additional Requirements for the Ph.D. Degree

Each student must write a survey paper and a research paper of publishable quality and pass a comprehensive examination prior to advancing to candidacy.

CONCENTRATION IN STATISTICS (STATS)

Statistics is the science concerned with developing and studying methods for collecting, analyzing, interpreting, and presenting empirical data. Statistical principles and methods are important for addressing questions in public policy, medicine, industry, and virtually every branch of science. Interest in statistical methods has increased dramatically with the abundance of large databases in

fields like computer science (Internet and Web traffic), business and marketing (transaction records), and biology (the human genome and related data). It is the substantive questions in the various areas of application that drive the development of new statistical methods and motivate the mathematical study of the properties of these methods.

Research in Statistics can range from mathematical studies of the theoretical underpinnings of a statistical model or method to the development of novel statistical models and methods and a thorough study of their properties. Frequently, statistics research is motivated and informed by collaborations with experts in a particular substantive field. Their scientific studies and data collection efforts may yield complex data that cannot be adequately handled using standard statistical methodology. Statisticians aim to develop methods that address the scientific or policy questions of the researcher. In doing so, statisticians must consider how efficiently and effectively the proposed methodology can be implemented and what guarantees can be provided as to the performance of the proposed methods. Such questions can often be answered using a combination of mathematical, analytical, and computational techniques.

Background: Individuals from a variety of backgrounds can make significant contributions to the field of statistics as long as they have sufficient background in statistics, mathematics, and computing. Undergraduate preparation in statistics, mathematics, and computing should include multivariate calculus (the equivalent of UCI courses Mathematics 2A-B, 2D-E), linear algebra (121A), elementary analysis (140A-B), introductory probability and statistics (Statistics 120A-B-C), and basic computing (ICS 21). For students with undergraduate majors outside of mathematics and statistics, it is possible to make up one or two missing courses during the first year in the program.

Required Courses

Statistics Course Requirements: Intermediate Probability and Statistics (Statistics 200A-B-C); Statistical Methodology (Statistics 210, 211, 212); five other graduate courses in or related to statistics, at least three of which are offered by the Statistics Department. (For M.S. students pursuing the thesis option, two of the five courses must be substituted with two four-unit courses in Thesis Supervision, Statistics 298, CS 298, or Informatics 298.)

ICS Breadth Requirement: Two courses in ICS outside of Statistics: one in Informatics and one in Computer Sciences.

The entire program of courses must be approved by the Statistics Department Graduate Committee. Students with previous graduate training in statistics may petition the Committee to substitute other courses for a subset of the required courses.

Other Requirements for the Ph.D. Degree

Additional courses required of Ph.D. students: Advanced Probability and Statistics Topics (Statistics 220A-B); Statistical Computing (Statistics 230).

Each Ph.D. student is required to take a comprehensive examination, ordinarily at the end of the first year, covering the material from Statistics 200A-B-C, 210, 211, and 212.

Ph.D. students are required to demonstrate substantive knowledge of an application area outside of statistics (e.g., computer science, economics, cognitive sciences, biology, or medicine). Such knowledge can be demonstrated by course work in the application area (three quarter courses), co-authorship of publishable research in the application area, or other evidence of supervised collaborative work that is substantiated by an expert in the field. In the case of a theoretically oriented student, the outside application area may be mathematics.

Graduate Courses in Information and Computer Science

200 Seminar in Research in ICS (2). Graduate orientation program and colloquium series. Includes talks by ICS faculty in all areas about their current research. Satisfactory/Unsatisfactory only. Formerly ICS 202.

398A Teaching Assistant Training Seminar (2) F. Theories, methods, and resources for teaching computer science at the university level, particularly by teaching assistants. Classroom presentations, working with individuals, grading, motivating students. Participants will give and critique presentations and may be videotaped while teaching. Satisfactory/Unsatisfactory only. Formerly ICS 398.

398B Advanced Teaching Assistant Seminar (2) F. Teaching computer science at the university level, emphasizing issues in teaching an entire course. Course organization, designing examinations and projects, grading, motivating students. Participants will begin to assemble teaching portfolios. Satisfactory/Unsatisfactory only. Prerequisite: ICS 398A or consent of instructor.

399 University Teaching (4). Involves on-the-job experience for Teaching Assistants. Limited to and required of Teaching Assistants.

Graduate Courses in Computer Science

201 Foundation of Cryptographic (4). Introduction to cryptographic protocols, including encryption, signature schemes, message authentication, and identification. Topics are presented using a provable security paradigm, when one identifies security goals and designs cryptographic schemes along with proofs they achieve these goals under clearly states assumptions. Prerequisites: CS 260 or 263, or consent of instructor. Formerly ICS 268.

202 Applied Cryptography (4). Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control. Prerequisites: CS 260 and 263, or consent of instructor. Formerly ICS 247.

203 Network and Distributed Systems Security (4). Overview of modern computer and networks security: attacks and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials. Prerequisite: CS 132 or EECS148. Same as Networked Systems 240. Formerly ICS 243G.

206 Principles of Scientific Computing (4). Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in linear algebra, optimization, and probability. Prerequisites: basic courses in multivariate calculus, linear algebra, and probability. CS 206 and Statistics 230 may not both be taken for credit. Formerly ICS 282.

211A Computer Graphics (4). Euler characteristics, genus, manifolds; graphics, pipeline; lighting; texture-, bump-, and mip-mapping; spatial hierarchies; back-face/view-frustum culling; color theory; anti-aliasing, dithering; introduction to certain advanced topics like Monte Carlo methods, radiosity, ray tracing. Formerly ICS 285.

211B Advanced Topics in 3D Computer Graphics (4) F, W, S. Advanced topics in 3D graphics on rendering, geometric modeling, and visualization. Subjects range from illumination and shading, and multiresolution representations, to other advanced algorithms and data structures in graphics. Also looks at trends that go beyond traditional computer graphics. Prerequisites: CS 161, 164, or 211A, and 266. Formerly ICS 286.

212 Multimedia Systems and Applications (4). Organization and structure of modern multimedia systems; audio and video encoding/compression; quality of service concepts; scheduling algorithms for multimedia; resource management in distributed and multimedia systems; multimedia protocols over high-speed networks; synchronization schemes; multimedia applications and teleservices. Prerequisites: undergraduate degree in computer science or CS 143 and 161; ICS 148, 153, and 156 recommended. Formerly ICS 218.

213 Introduction to Visual Perception (4). Introduction to the process of human visual perception. Offers the physiological and psychophysical approach to understand vision, introducing concepts of perception of color, depth, movement. Examples of the quantification and application of these models in computer vision, computer graphics, multimedia, HCI. Prerequisite: Mathematics 121A. Formerly ICS 288.

215 Data Mining (4). Introduction to the general principles of inferring useful knowledge from large data sets (commonly known as data mining or knowledge discovery). Relevant concepts from statistics, databases and data structures, optimization, artificial intelligence, and visualization are discussed in an integrated manner. Prerequisite: CS 273 or 274 or consent of instructor. Formerly ICS 278.

221 Information Retrieval, Filtering, and Classification (4). Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods. Prerequisites: B.S. degree in computer science, or CS 161, 171; Mathematics 3A or 6C; and a course in basic probability. Formerly ICS 207.

222 Principles of Data Management (4). Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing. Prerequisites: CS 122A 131, 143A, and 152. Formerly ICS 214A.

223 Transaction Processing and Distributed Data Management (4). Covers fundamental principles underlying transaction processing including database consistency, concurrency control, database recovery, and fault-tolerance. Includes transaction processing in centralized, distributed, parallel, and client-server environments. Prerequisite: CS 222. Formerly ICS 214B.

224 Advanced Topics in Data Management (4). Selected advanced topics in data management. Content differs in each offering and with instructor's interests. Intended for students interested in data management with focus on reading and critiquing recent research papers, presentations, and substantial research projects. Prerequisites: CS 143A, 152, 161, 222, 223, or consent of instructor. Formerly ICS 215.

230 Distributed Computer Systems (4). Principles of distributed computing systems. Topics covered include message-passing, remote procedure calls, distributed shared memory synchronization, resource and process/thread management, distributed file systems, naming and security. Prerequisite: consent of instructor. Formerly ICS 242.

231 Queueing Networks (4). Probability, random processes, and queueing theory applied to computer networks. Poisson processes, Markov chains, queues, queueing networks, simulation. Prerequisites: ICS 243A and an introductory course in probability. Same as Networked Systems 251.

232 Internet (4). A broad overview of basic Internet concepts. Internet architecture and protocols, including addressing, routing, TCP/IP, quality of service, and streaming. Prerequisite: EECS148, CS 132, or consent of instructor. Same as EECS248A and Networked Systems 201. Formerly ICS 243A.

233 Networking Laboratory (4). A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments. Prerequisite: CS 132 or EECS148. Same as Networked Systems 202. Formerly ICS 234B.

234 Advanced Networks (4). Fundamental concepts of switching, advanced medium access control methods, virtual circuits, integrated services, quality of service, performance models, simulation, measurement. Prerequisite: CS 232. Same as Networked Systems 210. Formerly ICS 243C.

235 Internet Technology (4). Application layer Internet protocols, potentially including client/server, WWW, file sharing, group communications, Internet programming. Prerequisite: CS 232. Same as Networked Systems 220. Formerly ICS 243D.

236 Wireless and Mobile Networking (4). Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP. Prerequisites: CS 132 or EECS148, and an introductory course in probability or consent of instructor. Same as Networked Systems 230. Formerly ICS 243E.

237 Middleware for Networked and Distributed Systems (4). Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings. Prerequisite: undergraduate-level course in operating systems and networks or consent of instructor. Same as Networked Systems 260. Formerly ICS 243F.

239S Seminar in Parallel Distributed and Network Systems (2). Current research and research trends in parallel distributed and network systems. Forum for presentation and criticism by students of research work in progress. May be repeated for credit. Formerly ICS 249.

240 Language-Based Security (4). Teaches state-of-the art language-based techniques for increasing the security and reliability of software systems. Covers static (e.g., bytecode verification, proof-carrying code) and dynamic (e.g., reference monitors, stack inspection) techniques. Also discusses information flow and securing legacy code. Prerequisite: either CS 230, 242, or 262, or consent of instructor.

241 Advanced Compiler Construction (4). Advanced study of programming language implementation techniques: optimizations such as common sub-expression elimination, register allocation, and instruction scheduling. Implementation of language features such as type-directed dispatch, garbage collection, dynamic linking, and just-in-time code generation. Prerequisite: CS 142 or equivalent. Formerly ICS 211.

242 Parallel Computing (4). Definition of parallel processing systems. Theory and application of arrays, trees, and hypercubes. Computational models, applications: sorting, integer arithmetic, matrix operations, Fast Fourier Transform, and others. Interconnection networks: a framework for the description, analysis, and construction of hypercube-derived networks. Formerly ICS 244.

243 High-Performance Architectures and Their Compilers (4). Emphasis on the development of automatic tools (i.e., compilers/environments) for the efficient exploitation of parallel machines, and the trade-offs between hardware and software in the design of supercomputing and high-performance machines. Formerly ICS 245.

244 Introduction to Embedded and Ubiquitous Systems (4). Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains. Prerequisites: B.S. degree in computer science; or ICS 51, CS 152; Mathematics 3A or 6C or ICS 6A; CS 161. Same as Informatics 244. Formerly ICS 212.

245 Software for Embedded Systems (4). Embedded computing elements, device interfaces, time-critical IO handling. Embedded software design under size, performance, and reliability constraints. Software timing and functional validation. Programming methods and compilation for embeddable software. Embedded runtime systems. Case studies of real-time software systems. Prerequisites: B.S. degree in computer science; or ICS 51, CS 152; Mathematics 3A or 6C or ICS 6A; CS 161. Formerly ICS 213.

246 Validation and Testing of Embedded Systems (4). Embedded system building blocks including IP cores. Co-simulation. Formal verification using model checking. Verification environments. Test challenges in core integration: compliance, feature, random, and collision testing. Core access and test integration. Interface-based verification and standards. Prerequisite: B.S. degree in computer science or basic courses in algorithms and data structures, calculus, discrete mathematics, linear algebra, symbolic logic. Formerly ICS 216.

247 Design Automation and Prototyping of Embedded Systems (4). System representation and modeling. Abstract and language models. Simulation as a modeling activity. Computation and hw/sw systems prototypes. System analysis using models. Constraint and interface modeling. Behavioral compilation and synthesis. Prerequisites: B.S. degree in computer science or ICS 6A, 51; CS 152, 161, 244; and Mathematics 3A or 6C. Formerly ICS 217.

248A Introduction to Ubiquitous Computing (4). The "disappearing computer" paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation. Same as Informatics 241.

248B Ubiquitous Computing and Interaction (4). Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work. Prerequisites: Informatics 231 and 241. Same as Informatics 242.

249S Seminar in Compilers and Operating Systems (2). Current research and research trends in system-level software such as compilers and operating systems. Forum for presentation and criticism by students of new published research and work in progress. Prerequisites: undergraduate degree in computer science or CS 142 and 143. May be taken for credit four times. Formerly ICS 219.

250A Computer Systems Architecture (4). Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies. Prerequisites: CS 132 and 143A, or equivalent. Formerly ICS 241A.

250B Modern Microprocessors (4). Fundamental concepts and recent advances in computer architecture necessary to understand and use modern microprocessors. Topics span out-of-order execution, multiple instruction issue, control/data speculation, predication, advanced cache and DRAM organizations, embedded systems, DSP and multi-media instructions. Prerequisite: CS 250A or equivalent. Formerly ICS 241B.

251 Digital System Verification and Testing (4). Techniques for simulation, verification, and testing of hardware and mixed-mode systems. Fault models, test generation, algorithms, and functional testing. Design for testability. Prerequisite: consent of instructor. Formerly ICS 251.

252 Introduction to Computer Design (4). The methodology and use of CAD tools for computer design, accomplished by a lab in which students practice design using commercially available silicon compilers and other tools. Prerequisite: CS 151 and 152 or equivalent. Formerly ICS 252.

253 Design Description and Modeling (4). Introduction to design modeling. Overview of design description languages and demonstration of design modeling at different abstraction levels. Techniques and methodologies for simulating and testing of design. Prerequisites: CS 151, 152, and 250A; or consent of instructor. Formerly ICS 253.

254 Design Synthesis (4). Methods, algorithms, and tools for design synthesis on different levels of design: logic, register-transfer, behavioral, and system. CAD laboratory assignments using design tools for exploration of different synthesis algorithms. Prerequisites: CS 152, 250A, or 252, or consent of instructor. Formerly ICS 256.

255 System Tools (4). Specification and requirement analysis of integrated systems. Support for early system-design decisions. Estimation and prediction of design metrics. System partitioning, modeling of hardware/software codesign. Synthesis from executable specifications. Prerequisites: CS 252 and 253; or consent of instructor. Formerly ICS 257.

258 Combinatorial Algorithms for Design Synthesis (4). Combinatorial optimization techniques and graph algorithms with application in design synthesis and development of CAD tools for design synthesis such as network flow theory, integer programming, SAT solvers, and more. Prerequisite: CS 161, 252, or familiarity with general area of design synthesis and algorithms.

259S Seminar in Design Science (2). Current research and research trends in design science. Forum for presentation and criticism by students of research work in progress. May be repeated for credit. Formerly ICS 259.

260 Fundamentals of the Design and Analysis of Algorithms (4). Covers fundamental concepts in the design and analysis of algorithms and is geared toward non-specialists in theoretical computer science. Topics include: deterministic and randomized graph algorithms, fundamental algorithmic techniques like divide-and-conquer strategies and dynamic programming, and NP-completeness. Prerequisite: CS 161 or equivalent undergraduate algorithms course. Formerly ICS 260.

261 Data Structures (4). An in-depth treatment of data structures and their associated management algorithms including resource complexity analysis. Prerequisite: ICS 23 and CS 161. Formerly ICS 261.

262 Computational Complexity (4). Advanced course in computational models and complexity classes. Covers the fundamentals of Turing Machines, Decidability, and NP-completeness. Includes discussion of more advanced topics including polynomial hierarchy, randomized complexity classes, #P-completeness and hardness of approximation. Prerequisite: CS 162. Formerly ICS 262.

263 Analysis of Algorithms (4). Analysis of correctness and complexity of various efficient algorithms; discussion of problems for which no efficient solutions are known. Prerequisites: CS 161 and 261. Formerly ICS 263.

264 Topics in Online Algorithms (4). Design and analysis of algorithms which make decisions with partial information. Focuses primarily on the use of competitive analysis, a means of evaluating online algorithms, although some probabilistic analyses are covered. Application areas covered vary. Prerequisite: CS 161 or equivalent. Formerly ICS 264.

265 Graph Algorithms (4). Graph definitions, representation methods, graph problems, algorithms, approximation methods, and applications. Prerequisites: CS 161 and 261. Formerly ICS 265.

266 Computational Geometry (4). An overview of some of the basic problems in computational geometry and of some algorithmic and data-structuring techniques appropriate to their solution. Prerequisites: CS 161 and 261. Formerly ICS 266.

267 Data Compression (4). An introduction to the theory and practice of modern data compression techniques. Topics include codes, coding, modeling, text compression, lossless and lossy image compression standards and systems, audio compression. Prerequisite: CS 161, 260, or 261. Formerly ICS 267.

269S Seminar in the Theory of Algorithms and Data Structures (2). Current research and research trends in the theory of algorithms and data structures. May be repeated for credit. Formerly ICS 269.

271 Introduction to Artificial Intelligence (4). The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental subdisciplines of artificial intelligence including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning. Formerly ICS 270A.

273A Machine Learning (4). Computational approaches to learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes. Prerequisites: CS 206 and 271. Formerly ICS 273A.

273B Kernel-Based Learning (4). Principles of kernel methods, support vector machines, and related machine learning methods. Applications to regression, classification, prediction, and other data analysis problems. Typical areas of application range from bioinformatics, to image analysis, to pattern recognition. Prerequisites: CS 273A or consent of instructor. Formerly ICS 273B.

274A Probabilistic Learning: Theory and Algorithms (4). An introduction to probabilistic and statistical techniques for learning from data, including parameter estimation, density estimation, regression, classification, and mixture modeling. Prerequisite: CS 206 or consent of instructor. Formerly ICS 274A.

274B Learning in Graphical Models (4). Models for data analysis are presented in the unifying framework of graphical models. The emphasis is on learning from data but inference is also covered. Real world examples are used to illustrate the material. Prerequisite: CS 274A or consent of instructor. Formerly ICS 274B.

275 Network-Based Reasoning/Constraint Networks (4). Study of the theory and techniques of constraint network model. Covers techniques for solving constraint satisfaction problems: backtracking techniques, consistency algorithms, and structure-based techniques. Tractable subclasses. Extensions into applications such as temporal reasoning, diagnosis, and scheduling. Prerequisite: a basic course in algorithm design and analysis, or consent of instructor. Formerly ICS 275A.

276 Network-Based Reasoning/Belief Networks (4). Focuses on reasoning with uncertainty using "Bayes Networks" that encode knowledge as probabilistic relations between variables, and the main task is, given some observations, to update the degree of belief in each proposition. Prerequisite: a basic course in probability or consent of instructor. Formerly ICS 275B.

279S Seminar in Artificial Intelligence (2). Current research and research trends in artificial intelligence. May be repeated for credit. Formerly ICS 279.

281 Neural Networks (4). Introduction to concepts of artificial neural networks (ANNs). Architectures of supervised and unsupervised networks. Basic math of learning and performance rules. Formerly ICS 276A.

282 Models of the Brain (4). Basic neural anatomy and physiology. Fundamental cell types and their channel properties. Organization of telencephalic circuitry. Cortico-Hippocampal pathways. Synaptic plasticity: long-term potentiation. Behavioral implications of plasticity, interpretation of lesion experiments, computational network models based on physiology of plasticity. Formerly ICS 276B.

283 Cognitive and Computational Neuroscience (4). Computational analysis and simulation of physiological rules as sited in anatomical circuitries. Synaptic plasticity in the brain and its behavioral and psychological consequences in learning and memory. Theories of hippocampal function; thalamo-cortical function and interactions among neocortical layers. Formerly ICS 276C.

284A Representations and Algorithms for Molecular Biology (4). Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes. Prerequisite: a basic course in algorithms, or a basic course in molecular biology, or consent of instructor. Formerly ICS 277A.

284B Probabilistic Modeling of Biological Data (4). A unified Bayesian probabilistic framework for modeling and mining biological data. Applications range from sequence (DNA, RNA, proteins) to gene expression data. Graphical models, Markov models, stochastic grammars, structure prediction, gene finding, evolution, DNA arrays, single- and multiple-gene analysis. Prerequisite: a basic course in algorithms and molecular biology, or CS 284A or equivalent, or consent of instructor. Formerly ICS 277B.

284C Computational Systems Biology (4). Computational inference and modeling of gene regulation networks, signal transduction pathways, and the effects of regulatory networks in cellular processes, development, and disease. Introduction of required mathematical, computational, and data handling tools. Prerequisites: CS 284A or 284B or Biological Sciences 99 and Mathematics 2D and 2J, or consent of instructor. Formerly ICS 277C.

289S Seminar for Informatics in Biology and Medicine (2). Current research and research trends in bioinformatics and medical informatics. Forum for presentation and criticism by students of recently published research and work in progress. Prerequisite: CS 284A or 284B, or a basic understanding of bioinformatics or medical informatics. May be repeated for credit. Formerly ICS 209.

290 Research Seminar (2). Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research. Satisfactory/Unsatisfactory only. Formerly ICS 290.

291 Directed Research (2 to 12). Formerly ICS 291.

295 Special Topics in Information and Computer Science (4) F, W, S. Formerly was ICS 280.

298 Thesis Supervision (2 to 12). Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program. Formerly ICS 298.

299 Individual Study (2 to 12). Individual research or investigation under the direction of an individual faculty member. Formerly ICS 299.

Graduate Courses in Informatics

201 Research Methodology for Informatics (4). Introduction to strategies and idioms of research in informatics. Includes examination of issues in scientific inquiry, qualitative and quantitative methods, and research design. Both classic texts and contemporary research literature are read and analyzed.

203 Qualitative Research Methods in Information Systems (4). Introduction to qualitative research methods used to study computerization and information systems, such as open-ended interviewing, participant observation, and ethnography. Studies of the methods in practice through examination of research literature. Prerequisite: Informatics 251 or 261. Formerly ICS 235A.

205 Quantitative Research Methods in Information Systems (4). Quantitative research methods used to study computerization and information systems: Design of instruments, sampling, sample sizes, and data analysis. Validity and reliability. Longitudinal versus cross-sectional designs. Analysis of secondary data. Studies of the methods through examination of research literature. Prerequisites: basic knowledge of elementary statistics; Informatics 251 or 261. Formerly ICS 235B.

207 Descriptive Multivariate Statistics I (4). Mathematical tools to organize and illuminate the multivariate methods. Multiple regression analysis. Multi-dimensional scaling and cluster analysis. Statistical computing via MDS(x), DMDP, and SPSS. Students must enroll in the laboratory section which meets on Wednesdays. Satisfactory/Unsatisfactory grading only. Prerequisite: Social Science 100A-B-C or equivalent. Same as Social Ecology 290A and Social Science 201A. Formerly ICS 238A.

209S Seminar in Informatics (2). Current research and research trends in Informatics. Forum for presentation and criticism by students of research work in progress. May be repeated for credit. Formerly ICS 229.

211 Software Engineering (4). Study of the concepts, methods, and tools for the analysis, design, construction, and measurement of complex software-intensive systems. Underlying principles emphasized. State-of-the-art software engineering and promising research areas covered, including project management. Formerly ICS 221.

213 Formal Specification and Modeling (4). Examination of formal specification and modeling techniques, including algebraic, scenario-based, model-based, state-based, temporal and other logics, along with their related uses in software development. Formerly ICS 222.

215 Software Analysis and Testing (4). Studies techniques for developing confidence in software from traditional testing schemes to integrated, multi-technique analytic approaches. Considers strengths and weaknesses and explores opportunities for synergistic technique application. Emphasis is on approaches integrated into the software process. Formerly ICS 224.

217 Software Processes (4). Explores vehicles for modeling, coding, and analyzing software processes. Considers integration of software process programming approaches with traditional management issues. Explores the use of software process execution as a vehicle for effective integration of tools into environments. Formerly ICS 225.

219 Software Environments (4). Study of the requirements, concepts, and architectures of comprehensive, integrated, software development and maintenance environments. Major topics include process support, object management, communication, interoperability, measurement, analysis, and user interfaces in the environment context. Formerly ICS 228.

221 Software Architecture (4). Study of the concepts, representation techniques, development methods, and tools for architecture-centric software engineering. Topics include domain-specific software architectures, architectural styles, architecture description languages, software connectors, and dynamism in architectures. Formerly ICS 223.

223 Applied Software Design Techniques (4). Study of concepts, representations, techniques, and case studies in structuring software systems, with an emphasis on design considerations. Topics include static and dynamic system structure, data models, abstractions, naming, protocols and application programmer interfaces. Formerly ICS 226.

231 Human-Computer Interaction (4). The design and evaluation of interfaces to computer systems and applications with special attention to their fit to human cognitive capabilities and organizational practices. Includes coverage of hypermedia, groupware, and other rapidly emerging developments. Formerly ICS 205.

233 Knowledge-Based User Interfaces (4). Concepts related to the development of interactive software systems with a focus on knowledge-based tools and human-centered design. Topics span the fields of human-computer interaction, software engineering, and knowledge representation. Prerequisite: CS 171 or equivalent. Formerly ICS 206.

235 Advanced User Interface Architecture (4). Architectural concerns in advanced interactive systems. The design of current and emerging platforms for novel interactive systems. Paradigms such as constraint-based programming, multimodal interaction, and perceptual user interfaces for individual, distributed, and ubiquitous applications. Formerly ICS 227.

241 Introduction to Ubiquitous Computing (4). The "disappearing computer" paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation. Same as CS 248A. Formerly ICS 203A.

242 Ubiquitous Computing and Interaction (4). Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work. Prerequisites: Informatics 231 and 241. Same as CS 248B. Formerly ICS 203B.

244 Introduction to Embedded and Ubiquitous Systems (4). Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains. Prerequisites: B.S. degree in computer science; or ICS 51, CS 152; Mathematics 3A or 6C or ICS 6A; CS 161. Same as CS 244.

251 Computer-Supported Cooperative Work (4). The role of information systems in supporting work in groups and organizations. Examines various technologies designed to support communication, information sharing, and coordination. Focuses on behavioral and social aspects of designing and using group support technologies. Formerly ICS 233.

261 Social Analysis of Computing (4). The social and economic impacts of computing and information technologies on groups, organizations, and society. Topics include computerization and changes in the character of work, social control and privacy, electronic communities, and risks of safety-critical systems to people. Formerly ICS 230.

263 Computerization, Work, and Organizations (4). Selected topics in the influence of computerization and information systems in transforming work and organizations. Theories of organization and organizational change. Processes by which diverse information technologies influence changes in work and organizations over short and long time periods. Prerequisite: Informatics 251 or 261. Formerly ICS 234A.

265 Theories of Computerization and Information Systems (4). Social and economic conceptions of information technology. Macrosocial and economic conditions that foster changes in information technologies. Social construction of information and computer technology in professional worlds. Theories of information technology and large-scale social change. Prerequisite: Informatics 251 or 261. Formerly ICS 234B.

267 Computing and Cyberspace (4). Selected topics in Internet-level computerization and systems, including electronic communities, distributed information services, electronic commerce, and digital libraries. Surveys systems and architectures. Theories of social interaction, computer-mediated communication, and social-technical system design. Examines social studies of cyberspace use and impacts. Prerequisite: Informatics 251 or 261. Formerly ICS 234C.

269 Computer Law (4). The American legal system and its provisions affecting computer systems, computer networks, and information processing. Intellectual property, contracts, privacy, liability for malfunction, computer crime, constitutional issues, transborder data flow, computer-based evidence, and litigation. Prerequisite: graduate standing or consent of instructor. Formerly Informatics 264.

270 Arts Computation Engineering Interdisciplinary Theory Seminar: Special Topics (4). Counterposes technological discourses with fine arts discourses and practices, with a focus on historical contextualization, utilizing critical theory and science and technology studies perspectives. Topics vary and are not repeated in any three-year period. May be repeated for credit as topics vary. Same as Engineering 270 and Arts Interdisciplinary 270.

271 Arts Computation Engineering Studio/Laboratory: Interactive Installation and Performance Design Workshop (4). Designing persuasive spatialized interactive experiences: spatially and temporally distributed narratives. User-system relationships. "Freedom" in interaction: authoriality and control. Audience and the spect-actor. Sensors, behavior logics, and multimodal output. Machine learning and autopedagogic systems. Training in relevant technologies. May be taken twice for credit. Same as Engineering 271 and Arts Interdisciplinary 271.

272 Arts Computation Engineering Studio/Laboratory: Games and Algorithmic Systems in Literature and the Arts (4). Explores the cultural tradition of the game and game play with particular reference to the automation of games in computational systems and the close relation between gaming, improvisation, hypertext, and interactive art. Game programming techniques and projects. May be taken twice for credit. Same as Engineering 272 and Arts Interdisciplinary 272.

273 Arts Computation Engineering Studio/Laboratory: Spatial Interaction: Sensors and Input/Output (4). Designing and building sensor and effector systems for cultural applications. Sensors, sensor combinations, sensor data collection and interpretation, input/output techniques and devices. Same as Engineering 273 and Arts Interdisciplinary 273.

274 Arts Computation Engineering Studio/Laboratory: Real Space Interaction (4). Designing and building machine artworks, motion control, mechatronic, animatronic, and mobile robotic projects. Mechanics, electro-mechanics, electronics, microcontrollers, motor control. Aesthetico-critical as well as technical aspects subject to assessment. Same as Engineering 274 and Arts Interdisciplinary 274.

275 Arts Computation Engineering Studio/Laboratory: Cultural Practice in Immersive Media (4). Examines and moves beyond existing paradigms of virtuality. Sensor and input devices, their logics and limitations. Embodied and symbolic interaction. Panoramic and stereoscopic image technologies. Stereoscopic graphics and spatialized sound. Technical components and their integration. Collaborative projects. Same as Engineering 275 and Arts Interdisciplinary 275.

276 Arts Computation Engineering Studio/Laboratory: Telematic Performance and Teleoperative Art (4). Art and performance projects utilizing real time and quasi-real time distance interaction. Synchronous performance and distributed choreography. Network technologies and protocols. Speed, bandwidth, latency. Web-based technologies. Video and sound. Teleoperation/remote machine control. Same as Dance 276, Engineering 276, and Arts Interdisciplinary 276.

277 Arts Computation Engineering Studio/Laboratory: Special Topics (4). Focuses on currently emerging technologies, techniques, and cultural and critical issues. May be repeated for credit as topics vary. Same as Engineering 277 and Arts Interdisciplinary 277.

278 Arts Computation Engineering Thesis Research (4 to 12). Independent research for thesis and thesis project. May be taken for a total of 36 units. Same as Engineering 278 and Arts Interdisciplinary 278.

279 Special Topics in the Arts Computation Engineering (4). Prerequisites vary. May be repeated for credit as topics vary. Same as Engineering 279 and Arts Interdisciplinary 279.

290 Research Seminar (2). Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

295 Special Topics in Informatics (4). May be repeated for credit as topics vary.

298 Thesis Supervision (2 to 12). Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

299 Individual Study (2 to 12). Individual research or investigation under the direction of an individual faculty member.

Graduate Courses in Statistics

200A-B-C Intermediate Probability and Statistical Theory (4-4-4). 200A: Basics of probability theory, random variables and basic transformations, univariate distributions—discrete and continuous, multivariate distributions.

200B: Random samples, transformations, limit laws, normal distribution theory, introduction to stochastic processes, data reduction, point estimation (maximum likelihood). 200C: Interval estimation, hypothesis testing, decision theory and Bayesian inference, basic linear model theory. Prerequisites: Statistics 120A-B-C or equivalent or consent of instructor.

210 Statistical Methods I: Linear Models (4). Statistical methods for analyzing data from surveys and experiments. Topics include randomization and model-based inference, two-sample methods, analysis of variance, linear regression and model diagnostics. Prerequisite: knowledge of basic statistics (at the level of Statistics 7), calculus, linear algebra.

211 Statistical Methods II: Advanced Statistical Modeling (4). Analysis of data using extensions of the traditional linear model. Topics include generalized linear models (logistic and poisson regression), linear mixed models. Different approaches to inference are considered including likelihood-based methods and estimating equations. Prerequisite: Statistics 210 or equivalent.

212 Statistical Methods III: Longitudinal Data Analysis (4). Statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations. Prerequisite: Statistics 211 or equivalent.

220A-B Advanced Probability and Statistics Topics (4-4). Advanced topics in probability and statistical inference including measure theoretic probability, large sample theory, decision theory, resampling and Monte Carlo methods, nonparametric methods. Prerequisites: Statistics 200A-B-C.

225 Bayesian Statistical Analysis (4). Introduction to the Bayesian approach to statistical inference. Topics include univariate and multivariate models, choice of prior distributions, hierarchical models, computation including Markov chain Monte Carlo, model checking, and model selection. Prerequisites: either Economics 220A-B, Mathematics 201A-B, Mathematics 131A-B-C/Statistics 120A-B-C, Psychology 203A-B, or consent of instructor.

230 Statistical Computing Methods (4). Numerical computations and algorithms with applications in statistics. Topics include optimization methods including the EM algorithm, random number generation and simulation, Markov chain simulation tools, and numerical integration. Prerequisites: two quarters of upper-division or graduate training in probability and statistics; possible courses include Economics 220A-B, Mathematics 131A-B-C/Statistics 120A-B-C, Mathematics 201A-B, Psychology 203A-B, and Statistics 225. Statistics 230 and CS 206 may not both be taken for credit.

240 Multivariate Statistical Methods (4). Theory and application of multivariate statistical methods. Topics include: likelihood and Bayesian inference for the multivariate normal model, visualization of multivariate data, data reduction techniques, cluster analysis, and multivariate statistical models. Prerequisites: Statistics 200A-B-C and Mathematics 121A.

245 Time Series Analysis (4). Statistical models for analysis of time series from time and frequency domain perspectives. Emphasizes theory and application of time series data analysis methods. Topics include ARMA/ARIMA models, model identification and estimation, linear operators, Fourier analysis, spectral estimation, state space models, Kalman filter. Prerequisites: Statistics 200A-B-C.

250 Biostatistics (4). Statistical methods commonly used to analyze data arising from clinical studies. Topics include analysis of observational studies and randomized clinical trials, techniques in the analysis of survival and longitudinal data, approaches to handling missing data, meta-analysis, nonparametric methods. Prerequisite: Statistics 210.

255 Statistical Methods for Survival Data (4). Statistical methods for analyzing survival data from cohort studies. Topics include parametric and non-parametric methods, the Kaplan-Meier estimator, log-rank tests, regression models, the Cox proportional hazards model and accelerated failure time models, efficient sampling designs, discrete survival models. Prerequisite: Statistics 211.

260 Inference with Missing Data (4). Statistical methods and theory useful for analysis of multivariate data with partially observed variables. Bayesian and likelihood-based methods developed. Topics include EM-type algorithms, MCMC samplers, multiple imputation, and general location model. Applications from economics, education, and medicine are discussed. Prerequisites: Statistics 200A-B-C and 210.

265 Causal Inference (4). Various approaches to causal inference focusing on the Rubin causal model and propensity-score methods. Topics include randomized experiments, observational studies, non-compliance, ignorable and non-ignorable treatment assignment, instrumental variables, and sensitivity analysis. Applications from economics, politics, education, and medicine. Prerequisites: Statistics 200A-B-C and 210.

298 Thesis Supervision (2 to 12). Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

299 Individual Study (2 to 12). Individual research or investigation under the direction of an individual faculty member.

INTERDISCIPLINARY STUDIES

UCI offers a variety of interdisciplinary programs of study which span the boundaries of traditional academic scholarship and provide students with opportunities to pursue subject areas deriving from the interaction of different disciplines. Faculty participation is determined by research and teaching interests and, as such, faculty may be drawn from various departments and schools across the campus.

This section presents information about:

Chicano/Latino Studies (major, minor)	p. 357
Computer Science and Engineering (major)	p. 362
Global Sustainability (minor)	p. 364
History and Philosophy of Science (minor)	p. 365
Native American Studies (minor)	p. 365
Networked Systems (graduate program)	p. 366
Transportation Science (graduate program)	p. 367

The School of Humanities section presents information about:

African American Studies (major, minor)	p. 254
Archaeology (minor)	p. 257
Asian American Studies (major, minor, graduate emphasis)	p. 259
Asian Studies (minor)	p. 306
Latin American Studies (minor)	p. 307
Religious Studies (major, minor)	p. 317
Women's Studies (major, minor, graduate emphasis)	p. 327

The School of Social Sciences section presents information about:

Conflict Resolution (minor)	p. 470

UNDERGRADUATE STUDY

Chicano/Latino Studies

383 Social Science Tower; (949) 824-7180
World Wide Web: <http://www.socsci.uci.edu/clstudies>
Leo Chávez, **Director**

Core Faculty

Louis DeSipio, Ph.D. University of Texas at Austin, *Associate Professor of Chicano/Latino Studies and Political Science*
Cynthia Feliciano, Ph.D. University of California, Los Angeles, *Assistant Professor of Chicano/Latino Studies, Sociology, and Education*
Raúl Fernández, Ph.D. Claremont Graduate School, *Professor of Chicano/Latino Studies and Social Sciences*
Lisa García Bedolla, Ph.D. Yale University, *Assistant Professor of Chicano/Latino Studies and Political Science*
Gilbert González, Ph.D. University of California, Los Angeles, *Professor of Chicano/Latino Studies and Social Sciences*
Michael J. Montoya, Ph.D. Stanford University, *Assistant Professor of Chicano/Latino Studies and Anthropology*
Alejandro Morales, Ph.D. Rutgers University, *Professor of Chicano/Latino Studies and Spanish*
Vicki L. Ruiz, Ph.D. Stanford University, *Professor of Chicano/Latino Studies and History*
Rodolfo D. Torres, Ph.D. Claremont Graduate School, *Professor of Chicano/Latino Studies, Social Ecology, and Political Science*
Deborah R. Vargas, Ph.D. University of California, Santa Cruz, *Assistant Professor of Chicano/Latino Studies*

Affiliated Faculty

Frank Bean, Ph.D. Duke University, *Professor of Sociology*
Leo Chávez, Ph.D. Stanford University, *Director of Chicano/Latino Studies and Professor of Anthropology*
Gilberto Q. Conchas, Ph.D. University of Michigan, *Associate Professor of Education*

Susan Bibler Coutin, Ph.D. Stanford University, *Associate Professor of Social Ecology*
Robert Garfias, Ph.D. University of California, Los Angeles, *Professor of Anthropology*
José Rodrigo Lazo, Ph.D. University of Michigan, *Assistant Professor of English*
Leticia Oseguera, Ph.D. University of California, Los Angeles, *Assistant Professor of Education and Chicano/Latino Studies*
Caesar D. Sereseres, Ph.D. University of California, Riverside, *Associate Dean for Undergraduate Studies, School of Social Sciences, and Associate Professor of Political Science*
James Diego Vigil, Ph.D. University of California, Los Angeles, *Professor of Social Ecology*

Chicano/Latino Studies is an interdisciplinary program designed to provide undergraduate students with an opportunity to examine the historical and contemporary experiences of Americans of Latin American origin. This diverse population includes people who trace their heritage to Mexico, Puerto Rico, Cuba, El Salvador, Guatemala, Nicaragua, and many other Latin American and Caribbean nations. The curriculum seeks to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, drama, film, music) accomplishments in Chicano/Latino communities. The Program offers a B.A. degree in Chicano/Latino Studies and a minor.

Change of Major. Students who wish to change their major to Chicano/Latino Studies should contact the program office for information about change of major requirements, procedures, and policies. Information is also available at http://www.due.uci.edu/Change_of_Major.html.

Center for Research on Latinos in a Global Society

Interdisciplinary research in Chicano/Latino Studies is conducted under the auspices of the Center for Research on Latinos in a Global Society (CRLGS). Its multifold goals are: (1) to examine the emerging role of Latinos as actors in global economic, political, and cultural events; (2) to promote Latino scholarship; (3) to enhance the quality of research in Latino studies; (4) to provide a forum for intellectual exchange and the dissemination of research finding; and (5) to promote the participation of undergraduate and graduate students in research on Latino issues. The use of the term "global society" underscores the faculty's perception that, as a society, the United States is becoming "globalized," meaning that it is increasingly affected by worldwide economic, political, demographic, and cultural forces and that Latinos are at the center of this. Latinos in the United States, individually and as a sociopolitical group, play important roles in the multiple processes—immigration, trade, international capital flow, and international political movements—which are changing the traditional demarcation between domestic and foreign, and national and international politics, economics, and society.

Scholarship Opportunities

The Jeff Garcilazo Fellowship/Scholarship Fund, in honor and memory of the late Chicano/Latino Studies and History professor, was established to provide opportunities for students to examine the historical and contemporary experiences of Americans of Latin American origin. Funds are awarded to current UCI students.

The Hispanic Scholarship Fund (HSF), formerly the National Hispanic Scholarship Fund, awards scholarships annually to students enrolled in and attending an accredited college full-time from the fall through the spring (or summer) terms.

CAREER OPPORTUNITIES

Many career opportunities exist for students who graduate with a B.A. degree in Chicano/Latino Studies, such as service with national and international organizations which seek knowledge of American multicultural society in general, and of Chicano/Latino peoples and cultures in particular; positions as area specialists with state and federal government agencies; careers in the private sector with corporations or private organizations which have a significant portion of their activities in the U.S. and Mexico, Puerto Rico, Cuba, El Salvador, Guatemala, and other Latin American countries; and positions of service and leadership within Chicano/Latino communities such as education, human services, law, health fields, journalism, and public policy. Students may also continue their education and pursue professional or graduate degrees. Employers and admission officers understand that many of their employees and graduates will one day work in communities with significant Chicano/Latino populations, and for this reason they give due consideration to applicants who have in-depth knowledge of Chicano/Latino culture.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

Requirements for the Major

- A. Familiarity with basic mathematical, computational, and statistical tools underlying modern social sciences. This requirement is met by passing a three-course sequence in mathematics selected from Anthropology 10A-B-C, Mathematics 2A-B, 7, Psychology 10A-B-C, Social Science 10A-B-C, Social Science 100A-B-C, or Sociology 10A-B-C. Computer education is essential for a complete social science education. This requirement can be satisfied by passing Information and Computer Science 10A, 10B, or 21, or Social Science 3A. This course requirement should be taken during the student's first year. (NOTE: ICS 10A, 10B, 21, and Social Science 100A may be taken Pass/Not Pass.)
- B. An understanding of the fundamental concepts, analytical tools, and methods of social science. This requirement is met by taking two four-unit introductory courses in the School of Social Sciences bearing a one-digit course number. These courses normally should be taken during the student's first year.
- C. Five core courses: Chicano/Latino Studies 61, 62, 63, 101, 102.
- D. Spanish 2A or its equivalent; students are encouraged to continue their Spanish language education through Spanish 2C.
- E. One comparative ethnic studies course selected from either African American Studies, Asian American Studies, or Education 124. Course must focus on the study of African American or Asian American communities in the U.S.
- F. Four upper-division electives are required; each course must be completed in a separate category selected from the following six: Literature, Arts, Media, Culture (Chicano/Latino Studies 110–129); History (Chicano/Latino Studies 130–139); Society, Labor, Politics, Law, Gender, Race, Ethnicity (Chicano/Latino Studies 140–159); Globalization, Transnationalism, Immigration, U.S.-Mexico Border (Chicano/Latino Studies 160–169); Health, Medicine, Psychosocial Dynamics (Chicano/Latino Studies 170–179); Educational Policy and Issues (Chicano/Latino Studies 180–189).
- G. Three additional elective courses, two of which must be upper-division, selected from Chicano/Latino Studies courses. Electives may include Field Research/Independent Studies courses (Chicano/Latino Studies 190–199). Students may obtain credit for one of these three courses through participation in a study abroad program in Mexico. Students must consult with the Program office for additional information regarding this option.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI. Courses taken through the UC Education Abroad Program will be counted toward satisfaction of the residence requirement by student petition and upon prior approval of course content by the Chicano/Latino Studies Program Committee.

Optional Independent Research Project

Students are encouraged to pursue field research and write a substantial research paper on topics of their choice under the guidance of Chicano/Latino faculty members. Often, this project will grow out of issues examined in Chicano/Latino Studies 102 (Research Seminar). Research projects typically involve a combination of library research and fieldwork in a local "Chicano/Latino community." Methods and analytical frameworks vary depending on the student and faculty advisors. Interested students should enroll in Chicano/Latino Studies 199 (Independent Study).

Honors Program in Chicano/Latino Studies

The Honors Program in Chicano/Latino Studies is designed to allow undergraduates to pursue field research and write an honors thesis on topics of their choice under the guidance of Chicano/Latino Studies faculty members. Research projects typically involve a combination of library research and field research. The program is open to all senior Chicano/Latino Studies majors with a grade point average of 3.3 or better overall, with 3.5 in Chicano/Latino Studies courses (at least five courses). Prior completion of or concurrent enrollment in Chicano/Latino Studies 101 (Research in the Latino Community) is strongly recommended. Successful completion of the Honors Program and the honors thesis satisfies the upper-division writing requirement.

Although course work for the Honors Program does not start until the senior year, it is highly recommended that during the spring quarter of the junior year, students find a professor willing to serve as their research project advisor on the basis of a mutually acceptable abstract that indicates the goal and significance of their project. If extensive research is to be undertaken at this time, students should enroll in Chicano/Latino Studies 199.

During the fall quarter of the senior year, students enroll in Chicano/Latino Studies H190A and write a proposal describing their research question, the relevant background literature, and the method of data collection and analysis. Field work for the project may begin during this quarter.

In the winter quarter of the senior year, students begin or continue their research by enrolling in Chicano/Latino Studies H190B. In the spring quarter of the senior year, students enroll in Chicano/Latino Studies H190C and complete a senior honors thesis. Honors theses are read and evaluated by the advisor and a second faculty member chosen by the Director of the Chicano/Latino Studies Program in consultation with the advisor.

Requirements for the Minor

Completion of three core courses: Chicano/Latino Studies 61, 62, 63; three upper-division courses selected from Chicano/Latino Studies 100–179; and Spanish 2A or its equivalent.

Residence Requirements for the Minor: Other than the language requirement, no more than two courses taken at other academic institutions may be used toward satisfaction of minor.

In addition to satisfying the requirements for the major or minor, students are encouraged to take advantage of the variety of unique educational opportunities available at UCI. Through the Education Abroad Program (EAP), students receive academic credit while studying at universities in Mexico, Chile, Costa Rica, Brazil, or

Spain. Internship opportunities with private and public institutions concerned with the Chicano/Latino communities are available in Orange County, Sacramento, and Washington, D.C. Independent research with faculty on Chicano/Latino issues is also encouraged. Student research is conducted and given academic credit through independent study or group research courses offered in each academic unit. The Undergraduate Research Opportunities Program (UROP) and the Summer Academic Enrichment Program (SAEP) are examples of programs at UCI which allow students to work as research assistants with professors.

Courses in Chicano/Latino Studies

LOWER-DIVISION

61 Introduction to Chicano/Latino Studies I (4). Introduces links between culture, history, and sociology of Chicano/Latino communities. Examines the formation, evolution, and adaptation of Chicano/Latino communities within a national and international perspective. Reviews literature on Chicano/Latino Studies as a field of intellectual inquiry. (III, VII-A)

62 Introduction to Chicano/Latino Studies II (4). Foundations of Latinos from pre-history to present with emphasis on race, class, gender, and culture. Examines institutions/processes of: indigenous culture; conquests, colonialism/neocolonialism; racialization; capitalist industrialization; immigration; Americanization. History, literary, and artistic materials/texts of Latino subgroups. (III, VII-A)

63 Introduction to Chicano/Latino Studies III (4). An introduction to Chicano/Latino Studies through inter- and intra-group comparisons of various Latino groups in the United States. Issues examined include immigration, political participation and protest, socioeconomic status, gender relations and sexuality, and ethnic and racial discrimination. (III, VII-A)

64 Introduction to Minority Politics (4). Examines major theories that attempt to explain the roles of race and ethnicity in U.S. politics, while also looking at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Same as Political Science 61A. (III, VII-A)

65 Ethnic and Immigrant America (4). Focusing on Asian, Latino, and Black immigrant groups, examines the second generation's experience of straddling two cultures and growing up American. Covers topics such as assimilation, bilingualism, race relations, education, bicultural conflicts, interracial marriage, and multiracial identities. Same as Sociology 68A. (VII-A)

UPPER-DIVISION

101 Research in the Latino Community (4). Students engage in firsthand research in the local Orange County environment. Students identify a research problem, conduct a literature review, develop questions and/or hypotheses, appropriate methods, and write a proposal. Formerly Chicano/Latino Studies 195A.

102 Chicano/Latino Research Seminar (4). Taught as a writing and research seminar in Chicano/Latino Studies. Student develops own project; engages in peer editing; drafts, writes, and presents paper at spring research conference. Prior course work in Chicano/Latino Studies helpful, i.e., Chicano/Latino Studies 61, 62, 63. Prerequisites: Chicano/Latino Studies 101, satisfactory completion of the lower-division writing requirement, and upper-division standing. Formerly Chicano/Latino Studies 100C. (VII-A)

103 Comparative Latino Populations (4). Provides foundation for understanding of Chicano/Latino Studies as an interdisciplinary field of inquiry. Focus on the history, arts, cultures of distinct (Mexican, Cuban, Puerto Rican, Central American) Latino communities. Topics include: precolonial history and culture, conquest, mestizaje, colonialism/neocolonialism, resistance. Same as Social Science 173K. Formerly Chicano/Latino Studies 100A. (VII-A)

104 Latinos in a Global Society (4). Examines interconnections between diverse Latino groups in the U.S. and the effects of globalization on their social, cultural, political realities. Topics include: immigration, demographics, socioeconomic differentiation, familial relations, political protest/resistance, law and policy, and links to "homeland" issues. Prerequisite: Chicano/Latino Studies 103. Same as Social Science 173L. Formerly Chicano/Latino Studies 100B. (VII-A)

110-129: LITERATURE, ARTS, MEDIA, CULTURE

110A, B Chicano Literature (4, 4). Focus on contemporary Chicano literature, in relation to Chicana literature, women's literature, American literature, and Latino literature. Prerequisite: Spanish 10B or consent of instructor. Same as Spanish 140A, B. (VII-A)

111A Critical Issues in Chicano Studies (4). A critical survey of social science literature on the Chicano experience and a general discussion of the various models and theories applied by social scientists to the study of oppressed national minorities. Discussion of race and class within the context of the Chicano experience. (VII-A)

111B Chicano Culture (4). Current research and perspectives on different aspects of Chicano culture: political, economic, sociological, artistic, and folkloric. Prerequisite: Spanish 10B or equivalent. May be taken for credit twice as topics vary. Same as Spanish 142. (VII-A)

113 Literature and Ethnicity (4). Examines the works of several American minority authors in order to discuss the relationship of ethnicity as a social phenomenon to literature. Same as Social Science 175A. (VII-A)

114 Film Media and the Latino Community (4). Uses film as a resource for understanding contemporary issues and problems facing the Chicano/Latino community. (Does not study cinema as a genre.) Same as Social Science 173G. (VII-A)

115A Latino Music: A View of Its Diversity and Strength (4). A survey of the music of the many Latin cultures of the Americas including Mexico, Central and South America, as well as the Caribbean, and of those many Latin cultures which thrive and survive in the United States. Same as Anthropology 138Q. (VII-B)

115B Music of Greater Mexico (4). A wide range of musics exists in Mexico, and in the Mexican traditions within the United States. From the indigenous traditions of Mexico and the ancient Aztec and Mayan civilizations through the Colonial and Revolutionary periods, the variety of Mexican music is explored. Same as Anthropology 138S.

115C Afro-Latin American Music (4). Musical culture of Afro-Latin American peoples, emphasizing Spanish-speaking Caribbean. Topics include: background in West Africa, the persistence of traditions in the Caribbean, the commercial music of the twentieth century, the connections between musical culture, religion, and the economy. Same as Social Science 176A. (VII-B)

116 Reading Images Culturally (4). Students are provided with the analytical tools necessary to undertake research on visual representations. Images, as cultural productions, are steeped in the values, ideologies, and taken-for-granted beliefs of the culture which produced them. Of concern are representations of race, identity, gender, and the "Other." Same as Anthropology 137A.

117 Chicano/Latino Experience: History, Society, and Culture in Autobiography (4). Examines how history, society, and culture are manifested in autobiography and studies how Chicano/Latino subjects have recorded their life experience before and during the twentieth century. Same as Social Science 173J. (VII-A)

119 Chicana, Chicano/Latina, Latino Cultural Studies (4). Explores sites of cultural production within the scholarship area of Chicano/Latino Cultural Studies. Considers questions pertaining to social structural processes as they relate to cultural productions and considers potential political strategies for challenging inequality within cultural sites. (VII-A)

121 Latina/Latino Pop: Latina/Latino Popular Culture (4). With a focus on the politics of language and space/place, prepares students to critically analyze sites of Latina/Latino popular culture including: music, film, performance, sports, media, and varied subcultures.

129 Special Topics in Literature, Arts, Media, Culture (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

130-139: HISTORY

132A Chicana/Chicano History: Pre-Colonial to 1900 (4). Examines social history of the Southwest region from antiquity to 1900. Discusses major questions, theory and research methods pertinent to Chicanas/Chicanos. Themes include: indigenous empires, conquest, colonialism, social stratification, ideology, marriage, sexuality, industrial capitalism, accommodation and resistance. Same as History 151A. (VII-A)

132B Chicana/Chicano History: Twentieth Century (4). Examines social history of the Southwest with emphasis on Mexican-origin people. Discusses major questions, theory, and research methods pertinent to Chicana/Chicano history. Themes explored include: immigration, xenophobia, class struggle, leadership, generational cohorts, unionization, education, barrioization, ethnicity, patriarchy, sexuality. Same as History 151B. (VII-A)

133A Nineteenth-Century Mexico (4). Examines the history of Mexico in the nineteenth century. Focuses on the social, economic, political, and cultural transformation of Mexico in the 1800s. Same as History 161B. (VII-B)

133B Twentieth-Century Mexico (4). Examines the history of contemporary Mexico beginning with the Mexican Revolution and concluding with the present administration. Social, economic, and political effects of the Revolution; formation of a "one-party democracy"; economic transformation of the nation; the present crisis. Same as History 161C. (VII-B)

134 U.S. Latino Cultures (4). Focuses on some aspect—literature, art, cultural production, history—of the multifaceted Latino cultures that have developed within the United States. Can focus on one group, such as Caribbean Americans, Chicanos, Central Americans, or take a comparative perspective of several groups. Prerequisite: Spanish 10B or equivalent. Same as Spanish 110C. (VII-A)

135 Latinas in the Twentieth-Century U.S. (4). Latinas in the U.S. from 1900 to present, offering a diversity of their cultures, regional histories, sexualities, generations, and classes. Same as History 151C. (VII-A)

139 Special Topics in Chicano/Latino History (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

140-159: SOCIETY, LABOR, POLITICS, LAW, GENDER, RACE, ETHNICITY

140A Latina/Latino Queer Sexualities (4). Introduces students to the notion of "queer" in relation to Chicanas/Chicanos and Latinas/Latinos and provides students with theoretical frameworks to explore the shifting categories of sexuality, gender, Chicano, Latino within the scholarship areas of Chicana/Chicano and Latina/Latino Studies.

141 Chicano/Chicana Labor History (4). Examines origins of Latino/Latina labor from colonial period to present. Emphasis on the issues of race, culture, class, and gender. Focus on processes and institutions including: *encomienda*, migration, unions, informal economies, *Bracero* program, domestic work. Same as Social Science 167. (VII-A)

142 Latinos and the Law (4). Examines a range of theoretical, empirical, and policy approaches to legal issues affecting the Latino population, with emphasis on California. Discusses topics concerning the purpose of law, the creation of law, and the enforcement of law. Same as Criminology, Law and Society C171.

143 Mexican-Americans and Politics (4). Examines political development of Mexican-Americans. Topics include their "territorial" roots in the Southwest, demographics, political leadership and organization; policy issues of immigration, bilingualism, education, and economics; relations with other minority groups; the role of Mexican-Americans in U.S.-Mexico relations. Same as Political Science 126A. (VII-A)

147 Comparative Minority Politics (4). Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements. Same as African American Studies 151, Asian American Studies 132, and Political Science 124C. (VII-A)

148 Racial and Ethnic Relations in the United States (4). Examines central questions and issues in the field of race and ethnicity; the emergence, maintenance, and consequences of the ethnic and racial stratification system in the United States; the future of racial and ethnic relations; and relevant public policy issues. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Sociology 167A.

151 Latinos in U.S. Politics (4). Comparing the political issues facing Latino groups by examining their migration histories, voting behavior, nonelectoral participation, and policy issues. Latino issues are examined on the national, state, and local levels; including formal representation, immigration, affirmative action, and language policy. Same as Political Science 124B. (VII-A)

152 Race and Citizenship in America (4). The role U.S. citizenship policy has played in the social construction of race. Looks comparatively at citizenship experiences of different racial/ethnic groups to understand how the meaning of being a U.S. "citizen" has varied over time and across groups. Same as Political Science 124D. (VII-A)

153 Cross-Cultural Research on Urban Gangs (4). Taking an urban policy approach, examines the background and contemporary traditions of gangs in several ethnic groups including African-, Asian-, and Mexican-Americans. Cross-cultural exploration of the varied facets of gang life. The major social-control institutions affecting them. Same as Criminology, Law and Society C156.

154 Latino Metropolis (4). Explores the processes of Latino urbanization in the United States and the spatialization of Latino identities, particularly in the context of Southern California with selected comparisons drawing from other cities. Same as Environmental Analysis and Design E190U. (VII-A)

155 Culture Change and the Mexican People (4). Reviews culture contact and colonization, innovation diffusion, acculturation, assimilation, culture conflict and marginality, modernization, urbanization, legal transformations. Mexico and the Southwestern U.S. are reviewed through several centuries to better appreciate the indigenous base of the Mexican people. Same as Criminology, Law and Society C172. (VII-A)

158 Chicana Feminisms (4). Surveys the development of Chicana feminist thought and practice. Focuses on historical contemporary writings by and about Chicana feminists. Draws from interdisciplinary scholarship in order to survey the diversity of Chicana feminisms. Prerequisite: satisfactory completion of the lower-division writing requirement. Formerly Chicano/Latino Studies 120. (VII-A)

159 Special Topics in Society, Labor, Politics, Law, Gender, Race, Ethnicity (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

160-169: GLOBALIZATION, TRANSNATIONALISM, IMMIGRATION, U.S.-MEXICO BORDER

160 Perspectives on the U.S.-Mexican Border (4). Economic aspects of the historical development of the U.S.-Mexican border. The current economic situation in the Southwest and border areas as it affects both Mexico and the Latino/Chicano population is also examined. Same as Social Science 173I. (VII-A)

161 Immigration in Comparative Perspective (4). Examines issues related to the migration and settlement of immigrants. Although the focus is on the Mexican migration to the United States, comparisons are also made to immigrant groups from Korea, Japan, Southeast Asia, Central America, the Caribbean, and Europe. Same as Anthropology 125X. (VII-A)

162 Social Ecology of the Borderlands (4). An introduction to the most important socioeconomic issues affecting the urban-regional context of the U.S.-Mexico border area. Borderlands regional development, urbanization, migration, industrialization, labor market, and environmental issues are considered. Prerequisite: Environmental Analysis and Design E8. Same as Environmental Analysis and Design E143U. (VII-B)

163 U.S. Immigration Policy (4). Examines selected immigration policy debates since the nineteenth century, rationale and consequences of immigration law since 1965, problems of administration, implementation and enforcement, impact of immigration policy on foreign relations, and contemporary debate regarding the future of U.S. policy. Same as Political Science 126C. (VII-A)

164 U.S.-Mexican Relations (4). Realism and interdependence theories are applied to this asymmetric relationship. Analysis of NAFTA, relations with Canada, current issues in trade, capital flows, migration, narcotics control, and energy. Emphasis on interplay of domestic politics (California, Mexican-Americans) and foreign policy. Same as Political Science 145B. (VII-B)

165 Latin American and Latino Cultures I (4). Surveys the history, social and economic conditions, gender issues, problems of economic and social development in Latin America and their relation to U.S. Latinos. Topics include the colonial experience, economic relations with the U.S., Latin American migration to the U.S. Same as Social Science 172F. (VII-B)

169 Special Topics in Globalization, Transnationalism, Immigration, U.S.-Mexico Border (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

170-179: HEALTH, MEDICINE, AND PSYCHOSOCIAL DYNAMICS

170 Chicano/Latino Families (4). Introduction to the research, literature, and issues surrounding the topic of Chicano/Latino families in the United States. Topics include: cultural history of Chicano/Latino families, demographic changes, social organization, traditions, lifestyles, values, beliefs, generational differences, ethnic identity, immigration, regional variation. Formerly Chicano/Latino Studies 144. (VII-A)

171 Chicano/Latino Psychology (4). Examines research and literature investigating Chicano/Latino ethnicity as a variable influencing behavior. Explores mental health needs and issues of Chicano/Latinos and discusses competent, sensitive methods of mental health service delivery. Prerequisite: Psychology 7A or 9A-B-C. Same as Psychology 174F. Formerly Chicano/Latino Studies 145. (VII-A)

172 Culture and Health (4). Explores America's cultural diversity by examining differing systems of belief and behavior in relation to illness, curing, disease, practitioner behavior, and use of conventional medical services. Groups focused on include Native Americans, African Americans, Latinos, and Asians. Same as Anthropology 134D. Formerly Chicano/Latino Studies 146.

173 The Chicana/Latina: A Psychosocial Perspective (4). Provides an in-depth psychosocial perspective of the Chicana/Latina experience in the U.S. Topics include the historical contributions of Latina women in Latino communities; Chicana feminist theories, gender roles and sexuality, ethnic identity, education, health, and models of multicultural counseling. Prerequisite: satisfactory completion of the lower-division writing requirement. Formerly Chicano/Latino Studies 149. (VII-A)

174 Multicultural Counseling (4). Covers both theories and application of multicultural counseling that are of greatest relevance to psychology. Topics include the historical foundations of multicultural counseling; theories and models of multicultural counseling; multicultural assessment and prediction; counseling and effective interventions for minorities. Prerequisite: satisfactory completion of the lower-division writing requirement. Formerly Chicano/Latino Studies 150. (VII-A)

175 Latinos/Latinas and Medicine (4). Introduction to medical social science perspectives of Latinos/Latinas in a variety of settings. Emphasis placed on understanding the intersection of immigration, mental health, gender, reproduction, and spirituality in analyzing how the experience of health and illness is shaped by these factors. Same as Anthropology 133A. Formerly Chicano/Latino Studies 156. (VII-A)

176 Race, Science, and Disease (4). Contemporary issues of race, ethnicity, and the science of disease. "Race" as a biological, social, legal, and cultural construct is examined from three interlinked axes: genetic ideologies, disease explanations, and social inequalities. Historical and current analyses of health and inequality. Same as Anthropology 128B. (VII-A)

179 Special Topics in Health, Medicine, and Psychosocial Dynamics (1 to 4). Prerequisites: vary. May be repeated for credit as topics vary.

180-189: EDUCATIONAL POLICY AND ISSUES

180 History of Chicano Education (4). Examines the relationship between the development of the public education system and the Chicano community in the U.S. Same as Social Science 173H. Formerly Chicano/Latino Studies 131. (VII-A)

182 Latina/Latino Access and Persistence in Higher Education (4). Introduction to how social, political, and economic forces impact on Latina/Latino racial/ethnic minorities with regard to their access and persistence in the U.S. higher education system. Investigates historical perspectives and theoretical underpinnings of college access and retention research. (VII-A)

190-199: SPECIAL COURSES

H190A Honors Research Preparation (4). Students write a proposal describing their research question, the relevant background literature, and the method of data collection and analysis. Field work for the project may begin during this quarter. Prerequisites: open only to students in the Honors Program in Chicano/Latino Studies; consent of instructor.

H190B Honors Field Research (4). Students begin or continue their research for their senior honors thesis. Prerequisites: Chicano/Latino Studies H190A; consent of instructor.

H190C Honors Thesis (4). Students draft a senior honor thesis (typically) with the following sections: problem statement, literature review, description of the methods, results, and conclusions. Prerequisites: Chicano/Latino Studies H190A-B; satisfactory completion of the lower-division writing requirement; consent of instructor.

191A-B-C HABLE: Language Intervention for Disadvantaged Children (4-4-4). Trains students (fall quarter) to deliver home visits (winter and spring) that promote school readiness among two-four year-olds from low SES and educational backgrounds. Covers fundamentals of child language, literacy, cognitive development; procedures, ethics of home visitation. Work with parents and children to create better home literacy and language environment. Prerequisites: must pass an interview by instructor, be fluent in English and one other language (Spanish most typically), must have experience with preschool children and be culturally sensitive. Same as Psychology 144A-B-C and Social Science 186A-B-C.

198 Group Directed Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topics vary.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE

212 U.S. Latinos, Culture, Medical Beliefs (4). Examines culture, social history, and medical beliefs of U.S. Latinos. Examines the development of issues related to identity, alternative medical practices and beliefs, sexuality, family, gender, and religious beliefs as they relate to contemporary Latinos. Same as Anthropology 233A.

213 Health and Medicine Among Latinos and Latinas (4). Examines contemporary issues of health beliefs, health practices, reproduction, political economy, immigration, access to medical care, culture competency, medicalization, biomedicine, and disease as they relate to U.S. Latinas and Latinos. Same as Anthropology 233B.

217 Street Ethnography (4). Focuses on urban populations, especially gangs, and outlines some of the major conceptual and theoretical issues related to this topic and the processes of street socialization. Methods of inquiry include mapping, ethnohistory, survey questionnaires, and other quantitative techniques. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C222.

220E-F U.S. Latino Cultures I, II (4-4). The history and cultural background of contemporary Americans of Latin American descent. Introduction to major works in history, social sciences, and the arts that are essential for understanding this aspect of the U.S. socio-historical development. Prerequisite: graduate standing or consent of instructor. Same as Social Science 274E-F.

230 Spaces of Inequalities and Alternative Futures (4). Interface between social theory and social policy explored with analytical attention to the widening class divide with its gendered and racialized spaces of inequalities. Contemporary U.S. social policy debates assessed within wider social and economic processes and structures of inequalities.

289 Special Topics in Chicano/Latino Studies (1 to 4). Current research in Chicano/Latino Studies. May be repeated for credit.

Undergraduate Major in Computer Science and Engineering

The undergraduate program in Computer Science and Engineering is administered by faculty from two academic units: the Department of Computer Science (CS) in the Donald Bren School of Information and Computer Sciences, and the Department of Electrical Engineering and Computer Sciences (EECS) in The Henry Samueli School of Engineering. For faculty listings from respective departments, see pages 338 and 230. Successful completion of the program leads to a B.S. degree in Computer Science and Engineering.

Program Educational Objectives: Graduates of the program will (1) demonstrate broad knowledge of computer science and engineering; (2) design, describe, and use state-of-the-art hardware/software systems; (3) maintain awareness of contemporary issues in computer science and engineering in a global and societal context and an understanding of the professional and ethical responsibilities of their profession; (4) demonstrate effective oral and written communication. (Program educational objectives are those aspects of computer science and engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

This program is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The program gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include systems view, manufacturing and economic issues, and multidisciplinary engineering applications.

Career Paths. Most likely careers will involve building the hardware infrastructure—computers, networks, embedded devices, as well as operating systems, compilers, and networking software. The focus is on cooperation between hardware and software to yield the highest performance. Examples of such problem areas would be in traffic management, flight control, earthquake monitoring, automotive control, and smart homes.

ADMISSIONS

High School Students: Students must have completed four years of mathematics through pre-calculus or math analysis and are advised to have completed one year each of chemistry and physics. One semester of programming course work is also advised. That preparation, along with honors courses and advanced placement courses, is fundamental to success in the program.

UCI requires applicants to take two SAT Subject Tests, selected from two different subject areas, for example, science and history/social studies, or literature and language. If one of the selected subject areas is mathematics, applicants must take Math Level 2. Also, The Henry Samueli School of Engineering recommends that freshmen applicants in Engineering majors take the SAT Subject Test, Math Level 2, as one of the two required SAT Subject areas.

Transfer Students. Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer, including one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of programming with at least one course in object-oriented programming (Java recommended), and one additional

approved transferable course for the major (an approved math, science, or CSE course). Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact the Donald Bren School of Information and Computer Sciences at (949) 824-5156 or The Henry Samueli School of Engineering at (949) 824-4334.

Change of Major

Students interested in changing their major to Computer Science and Engineering should contact the Student Affairs Office in the Bren School of ICS or The Henry Samueli School of Engineering for information about change-of-major requirements. Information is also available at http://www.due.uci.edu/Change_of_Major.html.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN COMPUTER SCIENCE AND ENGINEERING

University Requirements: See pages 59–64.

Major Requirements:

Mathematics and Basic Science Courses:

Mathematics Courses: Students must complete a minimum of 32 units of mathematics including Mathematics 2A-B, 2D, 2J, 6A-B, 6C or 3A, and 67.

Basic Science Courses: Students must complete a minimum of 18 units of basic science courses including Physics 7A-B-D and 7LA-LB-LD.

Students select, with the approval of a faculty advisor, one additional basic science course needed to satisfy school and department requirements.

Engineering and Computer Topics Courses:

Students must complete a minimum of 72 units of *engineering topics*, which includes 24 units of engineering design, and a minimum of 60 units of *computer topics*, which includes 36 units of upper-division computer topics. The following courses must be completed:

CSE21, CSE22, CSE23, CSE25, CSE31, CSE31L, CSE70A, CSE90, CSE104, CSE112, CSE120A, CSE121, CSE132, CSE135A, CSE135B, CSE141, CSE142, CSE151, CSE161, CSE181A-B-C, Computer Science 112 or EECS104, EECS148 or Computer Science 132.

Students select, with the approval of a faculty advisor, any additional engineering and computer topics courses needed to satisfy school and department requirements.

Tracks: Students must complete one of the tracks listed below.

Algorithms: Students complete Computer Science 163 and 164.

Artificial Intelligence: Students complete Computer Science 171 and one course from Computer Science 172, 173, 175 or 176.

Embedded Systems: Students complete Computer Science 145A and 145B.

Parallel Computing: Students complete EECS117, Computer Science 155.

(The nominal Computer Science and Engineering program will require 190 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary).

NOTE: Students majoring in Computer Science and Engineering may not complete the major in Computer Engineering, the major in Computer Science, the major or minor in Information and Computer Science, or the minor in Informatics.

Courses in Computer Science and Engineering

LOWER-DIVISION

CSE21 Introduction to Computer Science I (6). First of a three-quarter introductory course. Introduces fundamental concepts related to computer software design and construction. Develops initial design and programming skills using a high-level programming language (primarily C++/Java). Introduces useful computer-based tools for analysis, expression, discovery. Same as ICS 21. Only one course from CSE21/ICS 21 and ICS H21 may be taken for credit. (V)

CSE22 Introduction to Computer Science II (6). Second of a three-quarter introductory sequence. Abstract behavior of classic data structures (stacks, queues, priority queues, tables, trees), alternative implementations, analysis of time and space efficiency. Recursion. Object-oriented and functional programming. Models of computation. Prerequisite: CSE21/ICS 21 with a grade of C or better. Same as ICS 22. Only one course from CSE22/ICS 22, ICS H22, or Informatics 42 may be taken for credit. (V)

CSE23 Fundamental Data Structures (4). Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques. Prerequisites: CSE22/ICS 22 with a grade of C or better, or Informatics 42 with a grade of C or better, or EECS40; Mathematics 6A or ICS 6A. Same as ICS 23. Only one course from CSE23/ICS 23 and ICS H23 may be taken for credit. (V)

CSE25 Computing Tools for Computer Science and Engineering (2). Introduces computer-based mathematical and engineering tool usage and the C programming language. Prerequisites: CSE21/ICS 21 and Mathematics 2A.

CSE31 Introduction to Digital Systems (4) F, Summer. Digital representation of information. Specifications of combinational and sequential systems. Analysis and design of networks of gates and flip flops. Standard modules and their use. Introduction to algorithmic systems: datapath and control. Prerequisite: CSE21/ICS 21, EECS10, or MAE10. Same as EECS31. (Design units: 2)

CSE31L Introduction to Digital Logic Laboratory (3) W. Introduction to common digital building blocks: gates, memory circuits, MSI components. Operating characteristics, specifications, and applications. Design of simple combinational and sequential digital systems (processors state machines). Construction and debugging techniques, using hardware description languages and CAD tools. Prerequisites: CSE31/EECS31; EECS10 or EECS 12 or CSE22/ICS 22. Same as EECS31L. Formerly CSE31LB. (Design units: 3)

CSE70A Network Analysis I (4) W, Summer. Modeling and analysis of electronic networks. Basic network theorems. Sinusoidal steady state and transient analysis of RLC networks and the impedance concept. Corequisite: Mathematics 2J or 3D. Prerequisites: Physics 7D; CSE21/ICS 21, EECS10, or MAE10. Same as EECS70A. (Design units: 1)

CSE90 Systems Engineering and Technical Communications (2). Introduces systems engineering concepts, including specifications and requirements, hardware and software design, integration, testing, and documentation. Emphasizes organization and writing of reports and effective presentations.

UPPER-DIVISION

CSE104 Principles of Operating Systems (4). Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems. Prerequisites: CSE23/ICS 23, and ICS 51 or CSE31/EECS31 with grades of C or better. Same as Computer Science 143A. Only one course from CSE104/Computer Science 143A and EECS111 may be taken for credit.

CSE112 Electronic Devices and Circuits (4). Semiconductor properties, carrier transport, P-N junctions, metal-semiconductor junctions, diodes, MOS transistors, transistor equivalent circuits, amplifiers, invertors, digital circuits, CMOS circuits, and logic gates. Prerequisites: Physics 7D, CSE70A/EECS70A. (Design units: 1)

CSE120A Discrete-Time Signals and Systems (4) W. Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications. Prerequisite: CSE70A/EECS70A. Same as EECS150B. CSE120A/EECS150B and EECSH150B may not both be taken for credit. (Design units: 0)

CSE121 Software Tools and Methods (4). Concepts and techniques of constructing software in a systematic fashion, including detailed design techniques, specifications, programming methods, quality-inducing procedures, development tools, team techniques, testing, estimation, and performance improvement. Laboratory work involves exercises to illustrate important concepts, methods, and tools. Prerequisites: CSE90 or ICS 52 with a grade of C or better; Mathematics 6A or ICS 6A; Mathematics 6B; Mathematics 6C or 3A; or Informatics 43 with a grade of C or better; and satisfactory completion of the lower-division writing requirement. Same as Informatics 111.

CSE132 Organization of Digital Computers (4) W. Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces. Microprogramming and microprocessors. Prerequisite: CSE31L/EECS31L. Same as EECS112. Only one course from CSE132/EECS112, CSEH132/EECSH112, and Computer Science 152 may be taken for credit. (Design units: 4)

CSEH132 Honors Organization of Digital Computers (4) W. Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces, including advanced microarchitecture topics such as: pipelining, superscalar, multithreading, reconfigurable and microprocessor design. Prerequisite: CSE31L/EECS31L. Same as EECSH112. Only one course from CSEH132/EECSH112, CSE132/EECS112, and Computer Science 152 may be taken for credit. (Design units: 4)

CSE135A Digital Signal Processing (3) F. Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters, Butterworth and Chebyshev filters, quantization effects. Prerequisite: CSE120A/EECS150B. Same as EECS152A. (Design units: 2)

CSE135B Digital Signal Processing Design and Laboratory (3) W. Students plan and perform 10 core laboratory exercises covering signal synthesis and analysis with various filter and frequency transform processes. Models of radio and radar/sonar signal processing are included. Prerequisite: CSE135A/EECS152A. Same as EECS152B. (Design units: 3)

CSE141 Concepts in Programming Languages I (4). In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Prerequisites: Informatics 43 with a grade of C or better; or ICS 23/CSE23/ICS H23 with a grade of C or better and either ICS 51 or CSE31/EECS31 with a grade of C or better. Same as Computer Science 141/Informatics 101.

CSE142 Compilers and Interpreters (4). Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support. Prerequisite: CSE141/Computer Science 141/Informatics 101. Prerequisite for Computer Engineering majors only: EECS40. Same as Computer Science 142A.

CSE151 Introduction to VLSI (4) F. A first course in the design of Very Large Scale Integrated (VLSI) systems and chips. Review of CMOS VLSI technology. Analysis and synthesis of basic and complex CMOS gates. Introduction to CAD methodology and usage of CAD Tools. Prerequisite: CSE132/EECS112. Same as EECS115. (Design units: 4)

CSE161 Design and Analysis of Algorithms (4). Time and space complexity of algorithms. Models of computation, techniques for efficient algorithm design, effect of data structure choice on efficiency of an algorithm. Fast algorithms for problems such as sorting, set manipulation, graph problems, matrix multiplication, Fourier transforms, and pattern matching. NP-complete problems. Prerequisites: CSE23/ICS 23, and CSE31/EECS31 or ICS 51 with grades of C or better; ICS 6A/Mathematics 6A; Mathematics 6B; Mathematics 6C or 3A; Mathematics 2B; satisfactory completion of the lower division writing requirement. Same as Computer Science 161.

CSE181A-B Senior Design Project (3-3). Teaches problem definition, detailed design, integration and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions. Corequisite: CSE135A/EECS152A. Prerequisite: CSE104/Computer Science 143A. (Design units: 3-3)

CSE181C Senior Design Project (3). Completion, documentation, and presentation of projects started in CSE181A-B. Teaches engineering documentation writing and presentation skills. Students write comprehensive project reports individually and participate in a public presentation of the project's results. Prerequisites: CSE181A-B and satisfactory completion of the lower-division writing requirement.

Minor in Global Sustainability

321 Steinhaus Hall; (949) 824-6006; Fax (949) 824-2181

Peter J. Bryant and Peter A. Bowler, **Co-Directors**

Core Faculty

Peter A. Bowler, Ph.D. University of California, Irvine, *Director of the UCI Arboretum, UC Natural Reserve System Academic Coordinator, and Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology, and Social Ecology*

Peter J. Bryant, Ph.D. University of Sussex, *Director of the Graduate Program in Molecular Biology, Genetics, and Biochemistry and Professor of Developmental and Cell Biology*

Michael L. Burton, Ph.D. Stanford University, *Professor of Anthropology and Social Ecology*

William S. Reeber, Ph.D. The Johns Hopkins University, *Professor of Earth System Science*

Susan E. Trumbore, Ph.D. Columbia University, *Professor of Earth System Science*

The interdisciplinary minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

As a result of population growth and the pursuit of higher standards of living, humanity has initiated many global trends that cannot be sustained indefinitely. Some of these trends are physico-chemical in nature, such as the rapid depletion of fossil fuels and

the increasing pollution of our environment, including the accumulation of ozone-depleting chemicals with consequent increase of ultraviolet radiation at the earth's surface, and the buildup of carbon dioxide that is almost certainly causing global warming. Other trends are biological ones including the degradation of agricultural land, the destruction of many kinds of wildlife habitat with associated high rates of species extinction, and the depletion of wildlife populations by over-exploitation. Global changes are also taking place in the human situation including loss of cultural diversity, a growing income gap between rich and poor nations leading to deepening poverty and additional pressure for biological resource exploitation, accelerating urbanization with associated social problems, and regional population and economic imbalances leading to escalating political tensions and potential for conflict. This program examines the causes of, and interrelationships between, these problems and considers new approaches to solving them. Its goal is to provide broad, interdisciplinary training that will allow students to better understand and effectively deal with the serious environmental problems that we will face in the twenty-first century.

The minor is open to all UCI students. Course descriptions are available in the academic department sections of the *Catalogue*.

Requirements for the Minor

Completion of an introductory sequence of three core courses:

Earth System Science 1 (The Physical Environment), Biological Sciences 65 (Biodiversity and Conservation), and Environmental Analysis and Design E20/Anthropology 20A (People, Cultures, and Environmental Sustainability).

Three relevant elective courses (12 units): One elective course must be taken in each of the following three disciplines, and at least two of these must be upper division. Students may select from the following list and must have their choices approved by a panel of participating faculty:

Biological Sciences: 55 (Introduction to Ecology), 94 (From Organisms to Ecosystems), E106 (Processes in Ecology and Evolution), E150 (Conservation Biology), E175 (Restoration Ecology), E178 (Ocean Ecology), E179 (Limnology and Freshwater Biology), E181 (Conservation in the American West), E186 (Population and Community Ecology).

Physical Sciences/Engineering: Earth System Science 3 (Oceanography), 5 (The Atmosphere); Engineering 20 (Energy and Society); Civil and Environmental Engineering CEE121 (Transportation Systems I: Analysis and Design), CEE122 (Transportation Systems II: Operations and Control), CEE123 (Transportation Systems III: Planning and Forecasting); Physics 16 (Physics and Global Issues), 20C (Observational Astronomy).

Social Sciences/Social Ecology: Anthropology 125A (Economic Anthropology), 125B (Ecological Anthropology); Environmental Analysis and Design E3 (Human Environments), E5 (Introduction to Environmental Quality and Health), E15 (Native American Religions and the Environmental Ethic), E105U (Environmental Law), E106 (Human Ecology), E111 (Dynamics of Human Populations), E160 (Microbial Ecology of Natural and Polluted Waters); Economics 145E (Economics of the Environment); Political Science 149 (when topic is Global Environmental Politics); Social Science 172E (Native American Culture); Sociology 44 (Populations).

Senior Seminar on Global Sustainability I, II, III: During their final year in this program, students complete Biological Sciences 191A-B-C (same as Earth System Science 190A-B-C and Social Ecology 186A-B-C) which includes a seminar, directed study, and independent research in a relevant area. This work forms the basis for a senior research paper which is completed and presented near the end of spring quarter in a colloquium.

Minor in the History and Philosophy of Science

(949) 824-6495

Brian Skyrms, *Director*

Participating Faculty

Francisco J. Ayala, Ph.D. Columbia University, *University Professor and Donald Bren Professor of Biological Sciences*
 Jeffrey A. Barrett, Ph.D. Columbia University, *Department Chair and Professor of Logic and Philosophy of Science*
 William H. Batchelder, Ph.D. Stanford University, *Professor of Cognitive Sciences*
 Paul C. Eklof, Ph.D. Cornell University, *Department Vice Chair for Undergraduate Studies and Professor of Mathematics*
 Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and Philosophy*
 Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Professor of History*
 Donald Hoffman, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
 Karl G. Hufbauer, Ph.D. University of California, Berkeley, *Professor Emeritus of History*
 Mary-Louise Kean, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
 Stuart M. Krassner, Sc.D. The Johns Hopkins University, *Professor Emeritus of Developmental and Cell Biology*
 J. Karel Lambert, Ph.D. Michigan State University, *Professor Emeritus of Philosophy*
 R. Duncan Luce, Ph.D. Massachusetts Institute of Technology, *UCI Distinguished Professor Emeritus of Cognitive Sciences and Economics*
 Penelope Maddy, Ph.D. Princeton University, *UCI Chancellor's Professor of Logic and Philosophy of Science and of Mathematics*
 Robert May, Ph.D. Massachusetts Institute of Technology, *Professor of Logic and Philosophy of Science*
 Louis Narens, Ph.D. University of California, Los Angeles, *Professor of Cognitive Sciences*
 Alan Nelson, Ph.D. University of Illinois at Chicago, *Professor of Philosophy*
 Riley Newman, Ph.D. University of California, Berkeley, *Professor of Physics*
 Robert Newsom, Ph.D. Columbia University, *Professor Emeritus of English*
 Terence D. Parsons, Ph.D. Stanford University, *Professor of Philosophy, UCLA*
 A. Kimball Romney, Ph.D. Harvard University, *Professor Emeritus of Anthropology*
 Michael R. Rose, Ph.D. University of Sussex, *Professor of Ecology and Evolutionary Biology*
 Jonas Schultz, Ph.D. Columbia University, *Professor Emeritus of Physics*
 Brian Skyrms, Ph.D. University of Pittsburgh, *Director of the Minor in the History and Philosophy of Science and UCI Distinguished Professor of Logic and Philosophy of Science and of Economics*
 Norman M. Weinberger, Ph.D. Case Western Reserve University, *Professor of Neurobiology and Behavior*
 Peter Woodruff, Ph.D. University of Pittsburgh, *Professor Emeritus of Philosophy*

The minor in the History and Philosophy of Science is intended for students who wish to study the history of science, the philosophical foundations of scientific inquiry, and the relationship between science and other fields. The history of science explores how science is actually done and how it has influenced history. This may involve tracking down an idea's source or its influences, evaluating the cultural forces at work in the generation of a scientific theory or the reaction of culture to science, or taking a detailed look at the work of a particular scientist or movement within science.

The philosophy of science is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences. Philosophy of science courses cover such topics as the role of logic and language in science and in mathematics, scientific explanation, evidence, and probability. These courses may also

cover work that has been done on the philosophical problems in specific sciences—for example, the direction of time in physics, the model of mind in psychology, the structure of evolution theory in biology, and the implications of Gödel's incompleteness theorems for mathematics.

The minor is available to all UCI students. Course descriptions may be found in the academic department sections of the *Catalogue*.

Requirements for the Minor

Completion of seven courses as follows:

1. Two courses selected from: Logic and Philosophy of Science 31, 40; History 60.
2. Two courses selected from: History 135A, 135B, 135C, 135D, 135E; Philosophy 110–115 (when topic is science); Political Science 136B; Psychology 120H.
3. Three courses selected from: Linguistics 141, 143; Logic and Philosophy of Science 106, 107, 108, 140, 141A, 141B, 141C, 141D, 142, 143, 145, 146, 147A, 147B.

Minor in Native American Studies

Participating Faculty

Jaime E. Rodríguez, Ph.D. University of Texas, *Director of Latin American Studies and Professor of History*
 Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature*
 Tanis Thorne, Ph.D. University of California, Los Angeles, *Lecturer in History*
 Steven C. Topik, Ph.D. University of Texas, *Professor of History*

Affiliated Faculty

John Carlos Rowe, Ph.D. State University of New York, Buffalo, *Professor Emeritus of Comparative Literature*

The minor in Native American Studies is an interdisciplinary, interschool program which focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis. Study in the minor is enriched by the research and teaching interests of faculty from different departments.

The minor is open to all UCI students. Advising information is available from the undergraduate counseling offices in the Schools of Humanities, Social Ecology, and Social Sciences.

Course descriptions are available in the academic department sections and on the World Wide Web at <http://eee.uci.edu/clients/tcthorne/idp/>.

Requirements for the Minor

Core courses: Environmental Analysis and Design E15 (Native American Religions and the Environmental Ethic); History 15A (Native American History); and Sociology 65 (Cultures in Collision: Indian-White Relations Since Columbus; same as Anthropology 85A).

Four upper-division courses selected from: Anthropology 121D (Cross-Cultural Studies of Gender), 135A (Religion and Social Order), 162A (Peoples and Cultures of Latin America); Art History 175 (Studies in Native and Tribal Art); Education 124 (Multicultural Education in K–12 Schools); History 161A (Indian and Colonial Societies in Mexico); Philosophy 131E (Race and Gender); Social Science 172E (Native American Culture), 175B (Ethnic and Racial Communities); Spanish 100C (Introduction to Latin

American Literature: Pre-Hispanic to Nineteenth Century); Women's Studies 162 (Race and Gender), 163 (Women of Color).

Students may also select from the following courses when the topics presented relate to Native American Studies: Anthropology 149 (Special Topics in Archaeology), 169 (Special Topics in Area Studies); Comparative Literature CL 105 (Multicultural Topics in Comparative Literature); English E 105 (Multicultural Topics in English-Language Literature); Sociology 149 (Special Topics: Structures), 169 (Special Topics: Age, Gender, Race, and Ethnicity).

GRADUATE STUDY

Graduate Program in Networked Systems

(949) 824-8584

<http://www.networkedsystems.uci.edu>

Magda El Zarki, **Director**

Faculty

Lichun Bao, Ph.D. University of California, Santa Cruz, *Assistant Professor of Computer Science* (mobile ad-hoc networks, medium access control, channel access scheduling, topology management, sensor networks, quality of service)

Magda El Zarki, Ph.D. Columbia University, *Director of Networked Systems and Professor of Computer Science, Informatics, and Electrical Engineering and Computer Science* (telecommunications, networks, wireless communication, video transmission)

Scott Jordan, Ph.D. University of California, Berkeley, *Associate Professor of Electrical Engineering and Computer Science, and of Computer Science* (modeling and analysis of behavior, control, and pricing in computer/telecommunication networks)

Raymond O. Klefstad, Ph.D. University of California, Irvine, *Assistant Adjunct Professor of Electrical Engineering and Computer Science* (distributed object computing and high-performance, real-time ORBs, design patterns for object-oriented communication systems, object-oriented communication software frameworks, flexible and adaptive distributed, parallel, and concurrent systems, generative programming and aspect-oriented programming)

K. H. (Kane) Kim, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science and of Informatics* (ultra-reliable distributed and parallel computing, real-time object-based system engineering)

Tatsuya Suda, Ph.D. Kyoto University, *Professor of Computer Science and of Electrical Engineering and Computer Science* (computer networks, distributed systems, performance evaluation)

Wei Kang (Kevin) Tsai, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Electrical Engineering and Computer Science* (flow control and routing in integrated networks, digital signal processing, neural networks, and multi-objective optimization)

Gene Tsudik, Ph.D. University of Southern California, *Professor of Computer Science* (security and applied cryptography, mobile/ad-hoc networks and distributed systems)

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Associate Professor of Computer Science* (parallel and distributed systems, multimedia servers and applications, internetworking, high-performance architectures, resource management)

The graduate program in Networked Systems is administered by faculty from two academic units: the Department of Computer Science (CS) in the Donald Bren School of Information and Computer Sciences, and the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering. The program offers M.S. and Ph.D. degrees in Networked Systems.

The Networked Systems program provides education and research opportunities to graduate students in the areas of computer networks and telecommunication networks. Networked Systems include telephone networks, cable TV networks, cellular phone networks, and the Internet, as well as other emerging networks. Networked Systems are inherently interdisciplinary. By their

design, they connect devices such as computers and phones using communications methods. Networked Systems therefore must address the combination of software, hardware, and communications. As a result, the Networked Systems area spans traditional departmental boundaries. At a minimum, the area draws heavily from Computer Science, Computer Engineering, and Electrical Engineering. At UCI, these areas are housed in two departments, CS and EECS. The Networked Systems program unites the strengths of these two departments and provides integrated M.S. and Ph.D. degrees in this area.

Program requirements include core, breadth, and concentration courses. The **core courses** are taken by all Networked Systems students and form a foundation for networking topics. The **breadth courses** may be selected from technical courses (including distributed systems, algorithms, data structures, operating systems, databases, random processes, and linear systems) and management and applications of technology (including educational technology, management of information technology, and social impact). The **concentration courses** may be selected from a long list including courses on networks, performance, middleware, communications, and operations research. Core, breadth, and concentration course lists are available on the Networked Systems Web site at <http://www.networkedsystems.uci.edu> or from the Networked Systems Program Office.

As an alternative to the Networked Systems program, students interested in networks may wish to consider: the Systems concentration, offered by the CS Department, which includes courses in networks, compilers, computer architecture, distributed systems, algorithms, and data structures; the Computer Networks and Distributed Computing concentration, offered by the EECS Department, which includes courses in networks, algorithms, operating systems, databases, and computer architecture; or the Electrical Engineering concentration, offered by the EECS Department, which includes courses in networks, random processes, communications, linear systems, and signal processing.

Admission

Prospective graduate students apply directly to the Networked Systems program, specifying whether they wish to pursue the M.S. degree only, the M.S. and Ph.D. degrees, or the Ph.D. degree only. Applicants who do not hold a bachelor's degree in Computer Science, Computer Engineering, or Electrical Engineering may be required to take supplementary course work to demonstrate sufficient background in the field.

Applicants are evaluated on the basis of their prior academic record and their potential for creative research and teaching, as demonstrated in their application materials including official university transcripts, letters of recommendation, GRE test scores, and statement of purpose.

Master of Science Program

Students pursuing the M.S. degree may choose either Plan I (Thesis Plan) or Plan II (Comprehensive Examination Plan.) Both plans require the completion of three core courses; three courses chosen from the breadth course list, with at most two chosen from the Management and Applications of Technology list; and five courses chosen from the concentration course lists, with at least one course chosen from at least three different concentrations.

Students following Plan I complete the 11 courses above and a thesis. Students following Plan II must complete two additional courses chosen with the approval of the advisor, for a total of 13 courses.

Doctor of Philosophy Program

The Ph.D. degree requires the following 15 courses: three core courses; four courses chosen from the breadth course list, with at most two chosen from the Management and Applications of Technology list; six courses chosen from the concentration course lists, with at least one course chosen from at least three different concentrations; and two additional courses, chosen with the approval of the research advisor. Students must also complete three teaching practicum courses (ICS 399) and a dissertation.

Courses applied to the M.S. degree can also be applied to the Ph.D. degree. Students who have taken similar graduate-level courses at another university may petition to apply these courses to the Ph.D. requirements. Ph.D. students who have served as teaching assistants, readers, or tutors at another university may petition to apply this experience toward the teaching practicum requirement. The normal time for advancement to candidacy is three years (two for students who entered with a master's degree). The normal time for completion of the Ph.D. is six years (five for students who entered with a master's degree), and the maximum time permitted is seven years.

Courses in Networked Systems

201 Internet (4) F. A broad overview of basic Internet concepts. Internet architecture and protocols, including addressing, routing, TCP/IP, quality of service, and streaming. Prerequisite: EECS148, Computer Science 132, or consent of instructor. Same as EECS248A and Computer Science 232.

202 Networking Laboratory (4) F. A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments. Prerequisite: EECS148 or Computer Science 132. Same as Computer Science 233.

210 Advanced Networks (4) W. Fundamental concepts of switching, advanced medium access control methods, virtual circuits, integrated services, quality of service, performance models, simulation, measurement. Prerequisite: Networked Systems 201. Same as Computer Science 234.

220 Internet Technology (4) F. Application layer Internet protocols, potentially including client/server, WWW, file sharing, group communications, Internet programming. Prerequisite: Networked Systems 201. Same as Computer Science 235.

230 Wireless and Mobile Networking (4) S. Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP. Prerequisites: EECS148 or Computer Science 132, and an introductory course in probability or consent of instructor. Same as Computer Science 236.

240 Network and Distributed Systems Security (4) S. Overview of modern computer and networks security: attacks and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials. Prerequisite: EECS148 or Computer Science 132. Same as Computer Science 203.

250 Performance Analysis of Computer Communication Networks (3) W. Mathematical modeling and optimization of network performance and design. Data link layer and media access protocols. Queuing models for communication networks. Routing and congestion control. Prerequisite: Networked Systems 201. Same as EECS248B.

251 Queueing Networks (4) W. Probability, random processes and queueing theory applied to computer networks. Poisson processes, Markov chains, queues, queueing networks, simulation. Prerequisites: Networked Systems 201 and an introductory course in probability. Same as Computer Science 231.

252 Computer Network Characterization (4) F. Stochastic models of computer and telecommunication network traffic and capacity. Loss networks, traffic characterization, large deviations results, models of wireless networks. Prerequisites: Networked Systems 201, and EECS240 or consent of instructor.

253 Linear Optimization Methods (3) W. Formulation, solution, and analysis of linear programming and linear network flow problems. Simplex methods, dual ascent methods, interior point algorithms and auction algorithms. Duality theory and sensitivity analysis. Shortest path, max-flow, assignment, and minimum cost flow problems. Prerequisite: Mathematics 2J or consent of instructor. Same as EECS261A.

254 Nonlinear Optimization Methods (3) S. Formulation, solution, and analysis of nonlinear programming problems. Unconstrained optimization, optimization over a convex set, Lagrange multiplier theory, Lagrange multiplier algorithms, duality theory, convex programming, dual methods, and multi-objective optimization theory. Emphasizes mathematical analysis. Prerequisite: Mathematics 2J or consent of instructor. Same as EECS261B.

255 Network Congestion and Flow Control Theory (3). Congestion and flow control theory for network traffic engineering. Path control, flow assignment, and network management. Fundamental laws of network congestion, controllability, observability, manageability, and maximin theories, and time-optimal queue control theory. Same as EECS262.

260 Middleware for Networked and Distributed Systems (4) W. Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings. Prerequisite: undergraduate-level course in operating systems and networks or consent of instructor. Same as Computer Science 237.

261 Distributed Computer Systems (3) S. Design and analysis techniques for decentralized computer architectures, communication protocols, and hardware-software interface. Performance and reliability considerations. Design tools. Prerequisites: EECS211 and EECS213. Same as EECS218.

270 Topics in Networked Systems (4). Study of Networked Systems concepts. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

295 Networked Systems Seminar (2). Current research in networked systems. Includes talks by UCI faculty, visiting researchers, and Networked Systems graduate students. Satisfactory/Unsatisfactory only. May be repeated for credit.

Graduate Program in Transportation Science

(949) 824-5989, -5906; Fax (949) 824-8385

World Wide Web: <http://www.transci.uci.edu/>

Michael McNally, Director

Faculty

Volodymyr Bilotkach, Ph.D. University of Arizona, Assistant Professor of Economics

Marlon G. Boarnet, Ph.D. Princeton University, Chair of the Department of Planning, Policy, and Design and Professor of Social Ecology and Economics

David Brownstone, Ph.D. University of California, Berkeley, Department Chair and Professor of Economics

Jan K. Brueckner, Ph.D. Stanford University, Professor of Economics

Joseph F. DiMento, Ph.D., J.D. University of Michigan, Professor of Social Ecology and Management

Gordon J. Fielding, Ph.D. University of California, Los Angeles, Professor Emeritus of Social Sciences

R. (Jay) Jayakrishnan, Ph.D. University of Texas at Austin, Associate Professor of Civil and Environmental Engineering

Charles Lave, Ph.D. Stanford University, Professor Emeritus of Economics

Michael McNally, Ph.D. University of California, Irvine, Director of Transportation Science and Associate Professor of Civil and Environmental Engineering and of Planning, Policy, and Design

Wilfred W. Recker, Ph.D. Carnegie-Mellon University, Director of the Institute of Transportation Studies and Professor of Civil and Environmental Engineering

Amelia C. Regan, Ph.D. University of Texas, Austin, Associate Professor of Computer Science and Civil Engineering

Stephen G. Ritchie, Ph.D. Cornell University, Professor of Civil and Environmental Engineering

Jean-Daniel Saphores, Ph.D. Cornell University, Assistant Professor of Social Ecology, Civil and Environmental Engineering, and Economics

Kenneth A. Small, Ph.D. University of California, Berkeley, *Professor Emeritus of Economics*
 Kurt Van Dender, Ph.D. Katholieke Universiteit Leuven (Belgium), *Assistant Professor of Economics*

Affiliated Faculty

Arthur S. DeVany, Ph.D. University of California, Los Angeles, *Professor Emeritus of Economics*
 Amihai Glazer, Ph.D. Yale University, *Professor of Economics*
 Sandra S. Irani, Ph.D. University of California, Berkeley, *Professor of Computer Science and of Civil and Environmental Engineering*
 Raymond W. Novaco, Ph.D. Indiana University, *Professor of Social Ecology*
 Luis Suarez-Villa, Ph.D. Cornell University, *Professor of Social Ecology*
 Carole J. Uhlaner, Ph.D. Harvard University, *Associate Professor of Political Science*
 Christian Werner, Ph.D. The Free University of Berlin, *Professor Emeritus of Economics*

The graduate program in Transportation Science is administered by faculty from three academic units: the Department of Civil and Environmental Engineering in The Henry Samueli School of Engineering, the Department of Economics in the School of Social Sciences, and the Department of Planning, Policy, and Design in the School of Social Ecology. The program is designed to educate students in a broad set of competencies and perspectives that mirror the actual practice of current transportation research. The M.S. and Ph.D. degrees in Transportation Science are offered.

Admission

Admission is limited to a small number of exceptionally talented, independent, and self-disciplined students. The deadline for application for admission is January 15 for fall quarter. Students are admitted for winter or spring quarters only under exceptional circumstances. Late applications are considered on a space-available basis. All applicants must take the Graduate Record Exam (GRE) prior to the application deadline. Applicants whose first language is not English must also submit Test of English as a Foreign Language (TOEFL) scores.

Requirements

All students must complete a core curriculum consisting of eight courses from Civil Engineering, Economics, and Social Ecology plus the graduate colloquium. Students may apply to the Director of Graduate Studies for exemption from specific courses based upon the evidence of prior course work. Students also must successfully complete at least six courses from among the four specialization areas: (1) Methods and Analysis, (2) Transportation Economics, (3) Traffic Analysis, and (4) Planning and Policy Analysis. At least four of these six courses must be from one specialization.

Other requirements include: a replication project, in which students replicate the empirical work of a published paper from a major transportation journal; the qualifying examination, which consists of the oral defense of the student's dissertation proposal; and completion of the dissertation.

The normal time for advancement to candidacy is three years. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Research Facilities

UCI is a major research university and has an excellent library collection, as well as special interlibrary loan arrangements with other University of California libraries including the Transportation Library at Berkeley. Research is coordinated with the Irvine branch of the Institute of Transportation Studies (ITS). About 30 to 40 graduate students are employed as research assistants each year in ITS.

Research covers a broad spectrum of transportation issues. Current funded research projects focus upon: intelligent transportation systems (ITS), particularly advanced transportation management systems; planning and analysis of transportation systems; transportation systems operation and control; artificial intelligence applications; transportation engineering; transportation safety; road and congestion pricing; environmental and energy issues and demand for alternative fuel vehicles; public transit operations, transportation-land use interactions, demand for autos, and travel demand.

ITS is part of the University of California Transportation Center, one of ten federally designated centers of excellence for transportation research. The transportation research program at UCI is also supported by the Advanced Transportation Management Systems (ATMS) Laboratories.

The Institute maintains a regular publications series documenting research conducted within its programs and is the editorial headquarters of three international journals: *Transportation Research, Part C; Journal of Regional Science; and Journal of Urban Economics*.

SCHOOL OF PHYSICAL SCIENCES

Ronald J. Stern, **Dean**

180 Rowland Hall

Academic Counseling: (949) 824-6507

World Wide Web: <http://www.physsci.uci.edu/>

The School of Physical Sciences offers both professional training and general education in the Departments of Chemistry, Earth System Science, Mathematics, and Physics and Astronomy. The faculty, active in research and graduate education, are at the same time vitally concerned with undergraduate teaching. Curricula of the School are designed to meet the needs of a wide variety of students ranging from those with little technical background who seek insight into the activities and accomplishments of physical scientists to those seeking a comprehensive understanding that will prepare them for creative research in physical science.

Over the course of the past century and a half, physics, chemistry, and mathematics have evolved into interdependent but separate intellectual disciplines. This development is reflected in the departmental structure of the School of Physical Sciences. In the same period, these fundamental disciplines have moved into domains of abstraction unimagined by early scientists. This trend to abstraction with its concomitant increase in understanding of the physical universe provides the major challenge to the student of the physical sciences. Mathematics, physics, and chemistry, while providing the foundation of the technology that dominates contemporary civilization, underlie to an ever-increasing extent the new developments in the biological and social sciences. Earth system science is grounded in the traditional physical sciences while breaking new paths in the quantitative study of changes in the global environment.

DEGREES

Chemistry	B.S., M.S., Ph.D.
Earth and Environmental Sciences	B.S.
Earth System Science	M.S., Ph.D.
Mathematics	B.S., M.S., Ph.D.
Physics	B.S., M.S., Ph.D.

Honors

Criteria used by the School of Physical Sciences in selecting candidates for honors at graduation are as follows: Approximately 1 percent will be awarded *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. Honors are awarded on the basis of a student's performance in research, cumulative grade point average, and performance in upper-division courses in the major. Students considered for honors at graduation must have completed 72 units in residence at a University of California campus by the end of the winter quarter of the academic year in which they graduate. Other important factors are considered (see page 55). The School of Physical Sciences also grants special honors to students who have distinguished themselves by their work in their major subject.

Undergraduate Programs

Each department offers courses that are of value to nonmajors and majors in the sciences. The programs for majors are designed to meet the needs of students planning careers in business or industry, of students planning advanced professional study, and of students planning graduate work that continues their major interest. Students who wish to complete a coordinated set of courses beyond the introductory level in Mathematics and in Earth and Atmospheric Sciences may pursue minors in these areas. Introductory courses in chemistry, mathematics, and physics meet the needs of

students majoring in the sciences, mathematics, and engineering and are also appropriate for students in other disciplines who seek a rigorous introduction to the physical sciences. In addition, a number of courses within the School have few or no prerequisites and are directed particularly toward students majoring in areas remote from the sciences.

PLANNING A PROGRAM OF STUDY

Students who choose a major in the School of Physical Sciences have a variety of academic advising and counseling resources available to them. In addition to faculty advisors, there is a Chief Academic Advisor in each department who is responsible for interpreting degree requirements, reviewing student petitions, and assisting with special advising problems. An academic advising and counseling staff, employed in the Associate Dean's Office, is available to serve a broad range of student advising needs. In consultation with their faculty advisor or an academic counselor, students should plan a course of study leading to a major in one of the departments of the School. In carrying out this major, students may often concentrate very heavily in a second department within the School or in some other school. Occasionally students choose to pursue a double major. Permission to do so may be sought by a petition submitted to the Office of the Associate Dean of Physical Sciences.

All initial courses of study for majors include mathematics through calculus, and calculus is a prerequisite for much of the upper-division work in each major. A student interested in any of the physical sciences should continue mathematical training beyond these prerequisite courses. Furthermore, students interested in either physics or chemistry usually will include work in both of these subjects in their undergraduate careers.

Students in the physical sciences are urged to acquire a working knowledge of computer programming at an early stage of their University studies. This can be accomplished by taking Information and Computer Science 21, Chemistry 5, Engineering CEE10, MAE10, or Physics 53.

CAREER OPPORTUNITIES

The majority of graduates continue their education beyond the Bachelor's degree level. Many pursue advanced academic degrees in preparation for careers in scientific or medical research, engineering, or postsecondary education. Other students will complete a secondary education credential in order to prepare for careers teaching high school mathematics and science. Some students enter professional school in areas such as medicine, dentistry, law, or business administration. Students who choose not to continue their studies beyond the baccalaureate level most frequently find employment in private business or industry. In addition to technical areas directly related to their major fields of study, students often enter careers in less obviously related fields such as computing, systems analysis, engineering, journalism, marketing, or sales.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

SPECIAL PROGRAMS

Preparation for Teaching Science and Mathematics

Students interested in teaching science and mathematics should consider the programs in science and mathematics education offered by the Departments of Chemistry, Mathematics, and

Physics and Astronomy. The concentration in Chemistry Education, the specialization in Mathematics for Education, and the concentration in Physics Education each provide strong grounding in the fundamentals of one discipline. At the same time, these programs emphasize the breadth in natural sciences needed to satisfy the requirements for the secondary teaching credential during the mandatory year of study following award of the B.S. degree. Each department's curriculum includes specialized instruction in effective methods of science teaching and provides opportunities for practical fieldwork experiences in a secondary school classroom. Detailed requirements for each program are provided in the departmental sections.

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; telephone (949) 824-5461; e-mail: honors@uci.edu; World Wide Web: <http://www.honors.uci.edu/>.

Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. See the Center for International Education section for additional information.

Minor in Biomedical Engineering

The minor in Biomedical Engineering is an interdisciplinary curriculum that includes courses from the Schools of Engineering, Physical Sciences, and Biological Sciences. The minor is designed to provide a student in the physical sciences with the introductory skills needed in the quantitative biomedical arena. See The Henry Samueli School of Engineering section of the *Catalogue* for more information.

Minor in Conflict Resolution

The interdisciplinary minor in Conflict Resolution provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. See the School of Social Sciences section of the *Catalogue* for more information.

Minor in Global Sustainability

The interdisciplinary minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See the Interdisciplinary Studies section of the *Catalogue* for more information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: None.

Departmental Requirements: Refer to individual departments.

Graduate Programs

The School offers M.S. and Ph.D. degree programs in the Departments of Chemistry, Earth System Science, Mathematics, and Physics and Astronomy.

DEPARTMENT OF CHEMISTRY

1120 Natural Sciences II; (949) 824-6018

V. Ara Apkarian, **Department Chair**

Faculty

- Nancy Allbritton, Ph.D. Massachusetts Institute of Technology, M.D. The Johns Hopkins University School of Medicine, *Professor of Physiology and Biophysics, Biological Sciences, Biomedical Engineering, and Chemistry* (analytical chemistry)
- V. Ara Apkarian, Ph.D. Northwestern University, *Department Chair and Professor of Chemistry* (chemical physics)
- Ramesh D. Arasasingham, Ph.D. University of California, Davis, *Lecturer with Security of Employment, Chemistry* (chemical education and inorganic chemistry)
- Donald R. Blake, Ph.D. University of California, Irvine, *Department Vice Chair and Professor of Chemistry and Earth System Science* (atmospheric and analytical chemistry, and radiochemistry)
- Vladimir E. Bondybey, Ph.D. University of California, Berkeley, *Adjunct Professor of Chemistry* (chemical physics)
- David A. Brant, Ph.D. University of Wisconsin, *Professor Emeritus of Chemistry* (physical chemistry of biological macromolecules)
- A. Richard Chamberlin, Ph.D. University of California, San Diego, *Professor of Chemistry* (organic synthesis and bioorganic chemistry)
- Robert M. Corn, Ph.D. University of California, Berkeley, *Professor of Chemistry* (physical and analytical chemistry)
- Robert J. Doedens, Ph.D. University of Wisconsin, *Associate Dean of the School of Physical Sciences and Professor of Chemistry* (structural inorganic chemistry)
- William J. Evans, Ph.D. University of California, Los Angeles, *Professor of Chemistry* (synthetic inorganic and organometallic chemistry)
- Patrick Farmer, Ph.D. Texas A & M University, *Professor of Chemistry* (inorganic and analytical chemistry)
- Barbara J. Finlayson-Pitts, Ph.D. University of California, Riverside, *Professor of Chemistry* (atmospheric, physical, and analytical chemistry)
- Fillmore Freeman, Ph.D. Michigan State University, *Professor of Chemistry* (organic chemistry)
- Nien-Hui Ge, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry* (physical/analytical chemistry)
- R. Benny Gerber, Ph.D. Oxford University, *Professor of Chemistry* (theoretical chemistry and chemical physics)
- Zhibin Guan, Ph.D. University of North Carolina at Chapel Hill, *Associate Professor of Chemistry* (organic chemistry)
- Stephen Hanessian, Ph.D. Ohio State University, *Adjunct Professor of Chemistry* (organic chemistry)
- Warren J. Hehre, Ph.D. Carnegie-Mellon University, *Professor Emeritus of Chemistry* (theoretical chemistry)
- John C. Hemminger, Ph.D. Harvard University, *Professor of Chemistry* (surface chemistry and physics, atmospheric and analytical chemistry)
- Alan F. Heyduk, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Chemistry* (inorganic chemistry)
- Wilson Ho, Ph.D. University of Pennsylvania, *Donald Bren Professor of Physics and Chemistry* (experimental condensed matter physics and chemistry)
- Kenneth C. Janda, Ph.D. Harvard University, *Professor of Chemistry* (chemical physics, spectroscopy, and analytical chemistry)
- Elizabeth R. Jarvo, Ph.D. Boston College, *Assistant Professor of Chemistry* (inorganic, organic, and organometallic)
- Jhong K. Kim, Ph.D. University of California, Santa Cruz, *Senior Lecturer in Chemistry* (organic chemistry)
- Susan M. King, Ph.D. Massachusetts Institute of Technology, *Senior Lecturer in Chemistry* (organic chemistry)
- Vladimir A. Mandelshtam, Ph.D. Institute of Spectroscopy, Academy of Sciences of the U.S.S.R., *Associate Professor of Chemistry* (theoretical and computational chemistry)
- Craig C. Martens, Ph.D. Cornell University, *Professor of Chemistry* (theoretical chemistry)
- Rachel W. Martin, Ph.D. Yale University, *Assistant Professor of Chemistry* (physical chemistry, chemical physics, bioorganic, bioinorganic, chemical biology)
- Robert T. McIver, Jr., Ph.D. Stanford University, *Professor Emeritus of Chemistry* (physical and analytical chemistry)
- George E. Miller, D. Phil. Oxford University, *Senior Lecturer with Security of Employment Emeritus and Reactor Supervisor* (radioanalytical and analytical chemistry, and chemical education)

Harold W. Moore, Ph.D. University of Illinois, *Edward A. Dickson Professor Emeritus of Chemistry* (organic chemistry and rational drug design)

Shaul Mukamel, Ph.D. Tel-Aviv University, *UCI Chancellor's Professor of Chemistry* (analytical/physical chemistry)

Serguei A. Nizkorodov, Ph.D. University of Basel, Switzerland, *Assistant Professor of Chemistry* (atmospheric/physical chemistry)

James S. Nowick, Ph.D. Massachusetts Institute of Technology, *Professor of Chemistry* (organic and bioorganic chemistry)

Larry E. Overman, Ph.D. University of Wisconsin, *UCI Distinguished Professor of Chemistry* (organic chemistry)

Reginald M. Penner, Ph.D. Texas A & M University, *Department Vice Chair and Professor of Chemistry* (analytical chemistry)

Eric O. Potma, Ph.D. University of Groningen (The Netherlands), *Assistant Professor of Chemistry* (physical chemistry, chemical physics, bioorganic, bioinorganic, chemical biology)

Thomas L. Poulos, Ph.D. University of California, San Diego, *Director of the Irvine Research Unit in Macromolecular Structure and UCI Chancellor's Professor of Molecular Biology and Biochemistry, Physiology and Biophysics, and Chemistry* (inorganic/organic chemistry)

Peter M. Rentzepis, Ph.D. Cambridge University, *Professor of Chemistry and of Electrical Engineering and Computer Science, and UC Presidential Chair* (physical chemistry and picosecond spectroscopy)

F. Sherwood Rowland, Ph.D. University of Chicago, *Donald Bren Research Professor Emeritus of Chemistry and Earth System Science* (atmospheric and analytical chemistry, and radiochemistry)

Scott D. Rychnovsky, Ph.D. Columbia University, *Professor of Chemistry* (organic chemistry)

A. J. Shaka, Ph.D. Oxford University, *Professor of Chemistry* (physical and analytical chemistry)

Kenneth J. Shea, Ph.D. Pennsylvania State University, *Professor of Chemistry* (organic, polymer, and analytical chemistry)

Mare Taagepera, Ph.D. University of Pennsylvania, *Senior Lecturer with Security of Employment Emerita* (physical organic chemistry and chemical education)

Douglas J. Tobias, Ph.D. Carnegie Mellon University, *Professor of Chemistry* (computational biophysical chemistry)

Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, *Assistant Professor of Molecular Biology and Biochemistry and of Chemistry* (organic chemistry)

Christopher D. Vanderwal, Ph.D. Scripps Research Institute, *Assistant Professor of Chemistry* (organic)

David L. Van Vranken, Ph.D. Stanford University, *Department Vice Chair and Professor of Chemistry* (organic chemistry)

Gregory A. Weiss, Ph.D. Harvard University, *Assistant Professor of Chemistry and of Molecular Biology and Biochemistry* (organic chemistry)

Keith A. Woerpel, Ph.D. Harvard University, *Professor of Chemistry* (organic and organometallic chemistry)

Max Wolfsberg, Ph.D. Washington University, *Professor Emeritus of Chemistry* (theoretical chemistry)

Albert Yee, Ph.D. University of California, Berkeley, *Director and Chair of the UCI Division of the California Institute for Telecommunications and Information Technology (Calit2) and Professor of Chemical Engineering and Materials Science, Biomedical Engineering, and Chemistry*

Undergraduate Program

The major in Chemistry is elected by students planning careers in the chemical sciences and frequently also by those whose interests lie in biology, medicine, earth sciences, secondary education, business, and law. The curriculum of the Department is designed to satisfy the diverse needs of these students and others who may have occasion to study chemistry. The year course Chemistry 1A-B-C (or the Honors sequence Chemistry H2A-B-C) is prerequisite to all study in the Department at more advanced levels. The subject matter of this course serves also as a thorough introduction to the varied aspects of modern chemistry for students who do not wish to pursue their studies beyond the introductory level.

In order to enroll in Chemistry 1A, students must pass the Chemistry Placement Examination, which is given in late spring, summer, and during Orientation Week prior to the beginning of fall quarter. A preparatory course, Chemistry 1P, is offered in summer

and fall for those who do not pass the Chemistry Placement Examination or who need additional preparation prior to entering Chemistry 1A. A grade of C or better in Chemistry 1P automatically qualifies the student for Chemistry 1A.

Completion of a one-year sequence in organic chemistry, either Chemistry 51A-B-C or H52A-B-C, is required for Chemistry majors and for students of the life sciences. Certain advanced courses required of Chemistry majors may also be of interest to others.

The undergraduate program of the Chemistry Department emphasizes close contact with research. Chemistry majors are urged to engage in research or independent study under the direction of a faculty member. A handout describing the procedures for arranging an undergraduate research opportunity is available from the Chemistry Undergraduate Program Office, 1202 Natural Sciences II.

Much of the important chemical literature is being and has been printed in foreign languages, principally German, Russian, Japanese, Chinese, and French. Reading competence in one or more of these languages is desirable, and Chemistry majors are encouraged to acquire this competence.

Chemistry majors who are interested in teaching chemistry at the secondary level are urged to consider completing the optional concentration in Chemistry Education. A two-year post-baccalaureate program for the M.S. in Chemistry and a California Secondary Teaching Credential is described in the Chemistry Graduate Program section. Chemistry majors who plan subsequent study in medical, dental, or other professional schools should request information concerning admission requirements directly from the schools which they seek to enter. Counseling about preparation for a career in the health sciences is provided by the health science advisors in the School of Biological Sciences. Those intending to pursue graduate studies in chemistry should discuss their plans with a faculty member no later than the fall quarter of their senior year.

Admission to the Major

Students may be admitted to the Chemistry major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at http://www.due.uci.edu/Change_of_Major.html. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of general chemistry with laboratory and one year of approved calculus.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: None.

Departmental Requirements

Basic Requirements: Mathematics 2A-B-D, Physics 7B-D-E and 7LB-LD, Chemistry 1A-B-C and 1LA-1LB-1LC (or H2A-B-C and H2LA-LB-LC), Chemistry 5, Chemistry 51A-B-C and 51LA-LB-LC (or H52A-B-C and H52LA-LB-LC), Chemistry 107 and 107L, Chemistry 131A-B-C (or 130A-B-C), Chemistry 151 and 151L.

Elective Requirements: At least five electives from the following lists, including at least two courses selected from the lecture list and two courses selected from the laboratory list. *Lectures:* Chemistry 125, 127, 128, 135, 136, 137, 138; and Chemistry courses numbered 201–205, 213–249, 262, 271, and 272; Biological Sciences 98 (Biochemistry), 99 (Molecular Biology); Earth System Science 122 (Atmospheric Dynamics), 130 (Physical Oceanography); Physics 111A-B (Classical Mechanics), 112A-B (Electromagnetic Theory); Engineering CBEMS110 (Reaction Kinetics and

Reactor Design), CBEMS112 (Introduction to Biochemical Engineering), CBEMS120A (Momentum Transfer), CBEMS120B (Heat and Mass Transfer), CBEMS130 (Separation Processes), CBEMS135 (Chemical Process Control), CBEMS145 (Chemical Engineering Design), CEE162 (Introduction to Environmental Chemistry), CEE165 (Physical-Chemical Treatment Processes).

Laboratories: Biological Sciences M114L (Biochemistry Laboratory), M116L (Molecular Biology Laboratory), Chemistry 128L (Introduction to Chemical Biology Laboratory Techniques), 152 (Advanced Analytical Chemistry), 153 (Physical Chemistry Laboratory), 156 (Advanced Laboratory in Chemistry and Synthesis of Materials), 160 (Organic Synthesis Laboratory), 170 (Radioisotope Techniques), 180 (Undergraduate Research), Engineering CBEMS140A-B (Chemical Engineering Laboratory), Physics 120 (Electronics for Scientists), and 121 (Advanced Laboratory). (Chemistry 180 can be counted toward this requirement no more than once.)

At least three of the courses used to satisfy the Elective Requirement must be courses offered by the Chemistry Department, including at least one lecture course and one laboratory course.

Optional American Chemical Society Certification: For ACS Certification the program must include Biological Sciences 98 or Chemistry 128; Mathematics 2J and 3D.

Optional Concentration in Biochemistry: The program must include Biological Sciences 97, 98, 99; Chemistry 128, 128L; and three advanced biology electives chosen from: Biological Sciences D103, D104, D111L, D137, D147, D151, D152, E109, E112L, M114, M114L, M116, M116L, M121, M121L, M122, M122L, M124, M124L, M128, M130, M133, M137, M138, M140, M144, N110, and N132.

Optional Concentration in Chemistry Education: The program must include Education 173 (or 176), Physical Sciences 114 (two quarters), and three science breadth electives offered by one department from the following list: Earth System Science 51, 53, 55, 122, 130, 164; Mathematics 2E, 2J, 3A, 3D, 7; Physics 20A, 51A, 51B. One quarter of Physical Sciences 114 can be replaced by one quarter of Chemistry 191 or 192. The Chemistry elective requirement is reduced for students in this concentration to two lecture courses and two laboratory courses. Of these, three must be courses offered by the Chemistry Department.

HONORS PROGRAM IN CHEMISTRY

The Honors Program in Chemistry is a research-based program offered to selected Chemistry majors during their final year. Applicants to the program must have completed their junior year with a grade point average of at least 3.3 overall and in their Chemistry courses. They must also have demonstrated the potential of carrying out research of honors quality, as judged by the Chemistry faculty member who will supervise their research. Students in this program enroll in Honors Research in Chemistry (Chemistry H180A-B-C) throughout their senior year and submit a formal thesis late in the spring quarter. They also enroll in the Honors Seminar in Chemistry (Chemistry H181), in which they receive instruction in scientific writing and present a formal research seminar. Successful completion of Chemistry H181 satisfies the UCI upper-division writing requirement.

Students who complete these requirements, whose grade point average remains above the 3.3 standard, and whose research is judged to be of honors quality will graduate with Departmental Honors in Chemistry.

The Department also offers an Honors General Chemistry sequence, H2A-B-C. This course in general chemistry is designed for members of the Campuswide Honors Program (CHP) and other highly qualified students. It covers the same material as Chemistry 1A-B-C, but in greater depth.

Additional information is available from the Chemistry Undergraduate Program Office.

PLANNING A PROGRAM OF STUDY

The departmental requirements leave the student a great deal of latitude in choice of courses; the student can choose to pursue interests ranging from biochemistry on the one hand to chemical physics on the other. Many of the basic requirements above coincide with those of the School of Biological Sciences. For this reason a double major in Chemistry and Biological Sciences is popular. The Department is approved by the American Chemical Society to offer an undergraduate degree certified by the Society as suitable background for a career in chemistry or for graduate study in chemistry. While it is not mandatory, it is desirable for students to pursue a course of study that the Department judges to merit a certified degree. Specifically, the following courses must be included in the program of study: Biological Sciences 98 or Chemistry 128; and Mathematics 2J and 3D. These courses must be taken for a letter grade.

Students should consult with their academic advisors on courses of study. A Chemistry major normally takes Chemistry 1A-B-C and 1LA-LB-LC (or H2A-B-C and H2LA-LB-LC), Mathematics 2A-B-D, and required writing courses during the freshman year. Students are encouraged to enroll in at least one freshman seminar during the freshman year; freshman seminars probe timely scientific topics and allow students to interact with faculty in an intimate environment. The sophomore year should include Chemistry 5, 51A-B-C, and 51LA-LB-LC (or H52A-B-C and H52LA-LB-LC); the Physics 7 sequence should be completed no later than the fall quarter of the junior year. The balance of the freshman and sophomore program can be chosen at the student's discretion with consideration given to progress toward completion of the UCI breadth requirement.

In the junior year all Chemistry majors should enroll in a year sequence of physical chemistry and in Chemistry 151/151L (fall), 107 (winter), and 107L (spring). Chemistry 130A-B-C and 131A-B-C are equivalent courses in physical chemistry. They have the same prerequisites and expect the same level of chemical and mathematical rigor. Both are acceptable to satisfy the physical chemistry requirement for the major. Chemistry 131A-B-C develops the topic beginning from a molecular or microscopic point of view and proceeds to the macroscopic description of matter; applications may address primarily gas phase systems. Chemistry 130A-B-C, on the other hand, commences with the macroscopic description; this approach may be of particular interest for applications of physical chemistry in biology, materials science, and engineering. Students should choose between the two courses on the basis of their interests. Because of significant differences in the sequence of topics, students starting in one series may not switch to the other in subsequent quarters.

During the junior and senior years the Chemistry Department electives requirement should be fulfilled, as should other University and departmental requirements.

Sample programs for Chemistry majors, American Chemical Society-certified Chemistry majors, the Biochemistry concentration, the Chemistry Education concentration, and Chemistry-Biological Sciences double majors are shown in the accompanying charts. Sample programs for Chemistry majors wishing to emphasize chemical physics, computational or theoretical chemistry, chemical synthesis and reactivity, or materials or polymer science in their undergraduate programs are available from the Chemistry Undergraduate Program Office, 1202 Natural Sciences II.

The faculty encourages Chemistry majors to enhance their education by studying abroad for one or more quarters, or during the summer. In most cases, the Chemistry EAP advisor can help students plan a program of study that will not extend the time it takes to graduate. Also, study abroad can enhance students' applications for admission to graduate and professional schools. For more information about opportunities to study abroad, see the Center for International Education section of this *Catalogue* or visit the Physical Sciences Student Affairs Office.

Graduate Program

The Department offers the M.S. and Ph.D. degrees in Chemistry. The Ph.D. degree is granted in recognition of breadth and depth of knowledge of the facts and theories of modern chemistry and an ability to carry out independent chemical research demonstrated through submission of an acceptable doctoral dissertation. The M.S. degree may be earned either through submission of an acceptable Master's thesis (Plan I) or through an approved program of graduate course work and a comprehensive oral examination (Plan II). A Master's degree is not a prerequisite for admission to the Ph.D. program.

Students in the Ph.D. and M.S. Plan I (Thesis) programs are required to complete a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units), in chemistry. The M.S. Plan II (Non-Thesis) program requires that the student complete 10 graduate-level chemistry courses (or 40 units) and a comprehensive oral examination. Graduate students are expected to attain grades of B or better to remain in good academic standing. The comprehensive oral examination assesses the competence of the candidate in the areas of chemistry covered by the chosen course work, with unanimous agreement among the three examination committee members required for satisfactory completion.

Progress toward the Ph.D. degree during the first year is assessed by a written examination administered after completion of the first year of study. This examination covers either research accomplishments during the first year or comprehensive knowledge acquired in course work. The time and content of the examination depends upon the student's specific area of interest.

Training in teaching is an integral part of each graduate program, and all graduate degree candidates are expected to participate in the teaching program for at least four quarters during their graduate career.

Participants in the Ph.D. program take an oral examination for formal Advancement to Candidacy. This examination normally comes in a student's second or third graduate year and consists of an oral defense before a faculty committee of the student's dissertation research project, and an original research proposition conceived, developed, and documented by the student. The committee may examine the student at this time on any subject it deems relevant to the independent pursuit of chemical research.

The most important component of the Ph.D. program is the doctoral dissertation, which must describe the results of original research performed by the student under the supervision of a faculty member of the Department. The criterion for acceptability of the dissertation is that its contents be of a quality suitable for publication in a scientific journal of high editorial standards. Each Ph.D. candidate is expected to present the work described in the completed dissertation in a seminar before the Department, following which the candidate will be examined on the contents of the dissertation by a committee of the faculty. A Master's thesis presented in partial fulfillment of the requirements for the M.S. under Plan I must also describe the results of a student's original research performed under the direction of a faculty member. However, no public oral defense of the Master's thesis is required.

Residency requirements specify a minimum of six quarters in residence at UCI for Ph.D. candidates and three quarters for M.S. candidates.

The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

CONCENTRATION IN PROTEIN ENGINEERING SCIENCE

Several faculty in the Department of Chemistry, in conjunction with faculty in the School of Biological Sciences and The Henry Samueli School of Engineering, participate in the joint graduate program in Protein Engineering. This interdisciplinary graduate program offers students the opportunity to work with faculty in any of the participating academic units; take course work in the areas of protein structure, function, and molecular biology; and earn the Ph.D. in Chemistry, Biological Sciences, or Engineering with a concentration in Protein Engineering Science. Additional information is available in the School of Biological Sciences section of the *Catalogue* and through the graduate program in Protein Engineering office in the Biological Sciences Administration Building.

MASTER OF SCIENCE IN CHEMISTRY WITH A TEACHING CREDENTIAL

In cooperation with the UCI Department of Education, the Chemistry Department sponsors a coordinated two-year program for the M.S. degree in Chemistry and the California Single Subject Teaching Credential. The M.S. degree may be obtained under either Plan I or Plan II described below. Prospective graduate students interested in this program should so indicate on their graduate application and should request a detailed description of the program from the Chemistry Department Graduate Affairs Office or the Department of Education.

The following lists specify requirements for each of the graduate programs offered by the Department of Chemistry.

MASTER OF SCIENCE IN CHEMISTRY PLAN I (Thesis Plan)

Completion of a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units) in chemistry (as specified by the Department and excluding Chemistry 280, 290, 291, and 399) with maintenance of an average grade of B or better in all course work undertaken.

Completion of the teaching requirement.

Completion of three quarters in residence at UCI.

Submission of an acceptable Master's thesis.

MASTER OF SCIENCE IN CHEMISTRY PLAN II (Non-Thesis Plan)

Completion of 10 graduate-level courses (or 40 units) in chemistry (excluding Chemistry 290, 291, and 399 and counting Chemistry 280 no more than once) with an average grade of B or better.

Maintenance of an average grade of B or better in all course work undertaken.

Completion of the teaching requirement.

Completion of three quarters in residence at UCI.

Satisfactory completion of a comprehensive oral examination.

DOCTOR OF PHILOSOPHY IN CHEMISTRY

Completion of a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units) in chemistry (as specified by the Department and excluding Chemistry 280, 290, 291, and 399) with maintenance of an average grade of B or better in all course work undertaken.

Completion of the second-year Examination requirement.

Completion of the Oral Examination requirement for Advancement to Candidacy.

Completion of the teaching requirement.

Completion of six quarters in residence at UCI.

Submission of an acceptable doctoral dissertation.

Area Requirements

Ph.D. students generally choose from one of seven areas of specialization in the Department which determines course work requirements. Generally, each area requires three or four core courses and a menu of additional courses from which to choose to reach the required total of seven courses.

Analytical Chemistry: Three core courses: Chemistry 243, 246, and 249; plus four additional courses from: Chemistry 213, 230, 231A, 232A, 233, 234, 247, 248, 271, and 272.

Atmospheric Chemistry: Four core courses: Earth System Science 208, Chemistry 213, either Chemistry 231A or 232A, and Chemistry 245; plus three additional courses from: Chemistry 230, 231A, 231B, 232A, 234, 241, 243.

Inorganic Chemistry: Three core courses: Chemistry 215, 216, and 217; plus four additional courses from: Chemistry 201, 202, 203, 204, 205, 220, 225, and 249; Molecular Biology and Biochemistry 203, 204, and 207; Biological Chemistry 210A and 212.

Organic Chemistry: Three core courses: Chemistry 201, 203, and 204 or 220; plus four additional courses from: Chemistry 202, 205, 215, 216, 217, 218, 220, and 225; Molecular Biology and Biochemistry 203, 204, and 207; Biological Chemistry 210A and 212; Physiology and Biophysics 204 and 242.

Physical Chemistry: Three core courses: Chemistry 213, 231A, and 232A; plus four additional courses from Chemistry 207, 227, 230, 231B, 231C, 232B, 232C, 234, 235, 236, 248, 249, and 266.

CONCENTRATION IN CHEMICAL AND MATERIALS PHYSICS

This is an interdisciplinary program between condensed matter physics and physical chemistry, which is designed to eliminate the barrier between these two disciplines. Students with B.S. degrees in Physics, Chemistry, or Materials Science and Engineering, are encouraged to apply to the program. The goal of the concentration in Chemical and Materials Physics (ChAMP) is to provide students with a broad interdisciplinary education in the applied physical sciences that emphasizes modern laboratory and computational skills. The program accepts students for both the M.S. and the Ph.D. degrees. Upon admission to the program, students are assigned two faculty advisors, one from the Department of Physics and Astronomy, and one from the Department of Chemistry, to provide guidance on curriculum and career planning.

The curriculum for the M.S. program includes a summer session to assimilate students with different undergraduate backgrounds; formal shop, laboratory, and computational courses; a sequence on current topics to bridge the gap between fundamental principles and applied technology; and a course to develop communication skills. The required courses include thirteen core courses and three electives (subject to advisor approval) as follows: **Core:** Chemistry 206, 208, 229A, 231A-B-C, 232A-B, 266; two courses from the following group: Chemistry 228, 230, Physics 211, 222; one course from each of the following two groups: Physics 133 or 238A or Chemistry 236; Physics 129 or 273 or Chemistry 139. **Electives:** Chemistry 213, 225, 226, 229B, 232C, 233, 243, 248, 249, Engineering EECS278, EECS285B, MSE201, MSE259A, Physics 134, 213C, 223, 224, 226, 229B, 233A-B, 238A. In addition to the required courses, M.S. students complete a master's thesis. Students are required to advance to candidacy for the master's degree at least one quarter prior to filing the master's thesis. There is no examination associated with this advancement, but the thesis committee needs to be selected and appropriate forms need to be filed. The M.S. program prepares students to compete for high-tech jobs or to begin research toward a Ph.D. degree.

Successful completion of the M.S. degree requirements qualifies students for the Ph.D. program. Progress toward the Ph.D. degree is assessed by a written comprehensive examination administered in the summer after completion of the first year of study. This examination covers comprehensive knowledge acquired in course work, and the content of the examination depends upon the student's specific area of interest.

Participants in the Ph.D. program take an examination for formal advancement to candidacy. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normal progress toward the degree, it must be taken by the end of the student's third year. The examination is comprised of two parts: (a) a written report on a topic to be determined in consultation with the research advisor and (b) an oral report on research accomplished and plans for completion of the Ph.D. dissertation.

Courses in Chemistry

LOWER-DIVISION

NOTE: Enrollment in lower-division Chemistry courses may be subject to pre-testing or other limitations. See the *Catalogue's* Placement Testing section and the quarterly *WebSOC, Searchable Schedule of Classes* for information.

1A-B-C General Chemistry (4-4-4); 1A (F, W, Summer), 1B (W, S, Summer), 1C (S, Summer, F). Lecture, three hours; discussion, one hour. Stoichiometry, properties of gases, liquids, solids, and solutions; chemical equilibrium, chemical thermodynamics; atomic and molecular structure; chemical kinetics, periodic properties and descriptive chemistry of the elements.

Corequisite: concurrent enrollment in the corresponding laboratory courses. Prerequisite for Chemistry 1A: high school chemistry and one of the following: a passing score on the UCI Chemistry Placement Examination or a grade of C or better in Chemistry 1P; for Chemistry 1B and 1C, a grade of C- or better in all previous courses in the sequence. Chemistry 1A-B-C and Chemistry H2A-B-C may not both be taken for credit. (II) NOTE: The Chemistry Placement Examination, which is to be taken prior to enrollment in Chemistry 1A, assesses the student's preparation for General Chemistry. Students enrolled in the W-S-Summer/F sequence of Chemistry 1A-B-C must complete Chemistry 1C in the Summer Session to be eligible to enroll in Chemistry 51A or H52A in the subsequent fall quarter.

1LA General Chemistry Laboratory for Chemistry and Engineering Majors (I) F, W. Laboratory, three hours. Training and experience in basic laboratory techniques through experiments related to lecture topics in Chemistry 1A. Open to Chemistry and Engineering majors only. Prerequisite: concurrent enrollment or successful completion of Chemistry 1A. NOTE: Chemistry 1LA is open to Chemistry and Engineering majors only. Chemistry 1LA and Chemistry H2LA may not both be taken for credit. (II).

1LB-LC General Chemistry Laboratory (2-2); 1LB (W, S), 1LC (S, Summer, F). Discussion, one hour; laboratory, four hours. Training and experience in basic laboratory techniques. Chemical practice and principles illustrated through experiments related to lecture topics in Chemistry 1A-B-C. Corequisite for Chemistry 1LB and 1LC: concurrent enrollment in the corresponding segment of Chemistry 1. Prerequisite for Chemistry 1LB: a grade of C- or better in Chemistry 1A or Chemistry 1A and 1LA. Prerequisite for Chemistry 1LC: a grade of C- or better in Chemistry 1B and 1LB. Chemistry 1LB-LC and H2LB-LC may not both be taken for credit. (II)

1P Preparation for General Chemistry (4) F, Summer. Lecture, three hours; quiz, two hours. Units of measurement, dimensional analysis, significant figures; elementary concepts of volume, mass, force, pressure, energy, density, temperature, heat, work; fundamentals of atomic and molecular structure; the mole concept; stoichiometry; properties of the states of matter; gas laws; solutions, concentrations.

NOTE: Chemistry 1P satisfies no requirements other than contribution to the 180 units required for graduation. Designed for students who need additional help prior to enrollment in General Chemistry.

H2A-B-C Honors General Chemistry (4-4-4) F, W, S. Lecture, three hours; discussion, one hour. Covers the same material as Chemistry 1A-B-C but in greater depth. Additional topics included as time permits. Corequisite: concurrent enrollment in the corresponding quarter of Chemistry H2LA-LB-LC. Prerequisite for H2A: membership in the Campuswide Honors Program, or a score of 4 or 5 on the Chemistry Advanced Placement Examination, or a score of 700 or better on the SAT II in Chemistry, or a qualifying score on the UCI Chemistry Placement Examination, or consent of instructor. Prerequisite for H2B-H2C: grade of B or better in preceding course in series. Chemistry H2A-B-C satisfies the same requirements and prerequisites as Chemistry 1A-B-C; corresponding segments may not both be taken for credit. (II)

H2LA-LB-LC Honors General Chemistry Laboratory (2-2-2) F, W, S. Laboratory, three hours (H2LA), four hours (H2LB-LC). Training and experience in basic laboratory techniques through experiments related to lecture topics in Chemistry H2A-B-C. Corequisite: concurrent enrollment in the corresponding segment of Chemistry H2A-B-C. Prerequisites: membership in the Campuswide Honors Program, or a score of 4 or 5 on the Chemistry Advanced Placement Examination, or a score of 700 or better on the SAT II in Chemistry, or a qualifying score on the UCI Chemistry Placement Examination, or consent of instructor. Chemistry H2LA-LB-LC and Chemistry 1LA-LB-LC may not both be taken for credit.

5 Scientific Computing Skills (4) F, S, Summer. Lecture, three hours; discussion, one hour; laboratory, two hours. Introduces students to the personal computing software used by chemists for managing and processing of data sets, plotting of graphs, symbolic and numerical manipulation of mathematical equations, and representing chemical reactions and chemical formulas. Corequisites: Chemistry 1C and Mathematics 2D. Prerequisites: Chemistry 1A-B and Mathematics 2A-B.

51A-B-C Organic Chemistry (4-4-4); 51A (F, W, Summer), 51B (W, S, Summer), 51C (S, Summer, F). Lecture, three hours; discussion, one hour. Fundamental concepts relating to carbon compounds with emphasis on structural theory and the nature of chemical bonding, stereochemistry, reaction mechanisms, and spectroscopic, physical, and chemical properties of the principal classes of carbon compounds. Corequisite for 51A-B: concurrent enrollment in the corresponding segment of Chemistry 51L. Prerequisites for 51A: Chemistry 1A-B-C and 1LB-1LC. Prerequisites for 51B and 51C: a grade of C- or better in previous quarter of sequence. Chemistry 51A-B-C and Chemistry H52A-B-C may not both be taken for credit. NOTE: Priority for enrollment in the Chemistry 51A-B-C sequence offered in W-S-Summer/F is given to students who successfully complete Chemistry 1C in the preceding fall quarter.

51LA-LB-LC Organic Chemistry Laboratory (2-2-2); 51LA (F, W, Summer), 51LB (W, S, Summer), 51LC (S, Summer, F). Discussion, one hour; laboratory, four hours. Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in Chemistry 51A-B-C. Corequisite for 51LA-LB-LC: concurrent enrollment in the corresponding segment of Chemistry 51L. Prerequisites for 51LB: a grade of C- or better in Chemistry 51A and 51LA. Prerequisites for 51LC: a grade of C- or better in Chemistry 51B and 51LB.

NOTE: Chemistry H52A-B-C, H52LA-LB-LC satisfy the same requirements and prerequisites as Chemistry 51A-B-C, 51LA-LB-LC; corresponding segments may not both be taken for credit.

H52A-B-C Honors Organic Chemistry (4-4-4) F, W, S. Lecture, three hours; discussion, one hour. Fundamental concepts of the chemistry of carbon compounds. Structural, physical, and chemical properties of the principal classes of carbon compounds. Corequisite: concurrent enrollment in the corresponding segment of Chemistry H52L. Prerequisites for H52A: a B average in Chemistry 1A-B-C or H2A-B-C or consent of instructor. Prerequisites for H52B and H52C: a grade of C or better in previous quarter of sequence. Chemistry H52A-B-C and Chemistry 51A-B-C may not both be taken for credit.

H52LA-LB-LC Honors Organic Chemistry Laboratory (2-2-2) F, W, S. Laboratory, five hours. Fundamental techniques of modern experimental organic chemistry. Corequisite: concurrent enrollment in the corresponding segment of Chemistry H52. Prerequisite for H52LB and H52LC: a grade of C or better in previous quarter of sequence.

H90 The Idiom and Practice of Science (4). Lecture, three hours; discussion, two hours. A series of fundamental and applied scientific problems are addressed, illustrating the pervasive role of mathematical analysis. Topics may include thermodynamics, chemical equilibria, acid-base chemistry, kinetics, states of matter, electronic structure of atoms and the periodic table, chemical bonding, spectroscopy, and topics from organic, atmospheric, and biochemistry. Open only to members of the Campuswide Honors Program or consent of instructor. (II)

UPPER-DIVISION

107 Inorganic Chemistry I (4) W. Lecture, three hours; discussion, one hour. Introduction to modern inorganic chemistry. Principles of structure, bonding, and chemical reactivity with application to compounds of the main group and transition elements, including organometallic chemistry. Prerequisites: Chemistry 1A-B-C; 51A-B-C or H52A-B-C.

107L Inorganic Chemistry Laboratory (3) S. Laboratory, seven hours; discussion, one hour. Modern techniques of inorganic and organometallic chemistry including experience with glove box, Schlenk line, and vacuum line methods. Prerequisite: Chemistry 107.

125 Advanced Organic Chemistry (4) F. Lecture, three hours; discussion, one hour. Rapid-paced comprehensive treatment of organic chemistry, reinforcing the fundamental concepts introduced in Chemistry 51A-B-C and H52A-B-C. Focuses on molecular structure, reactivity, stability, scope and mechanisms of organic reactions. Topics include: structure and bonding; theoretical organic chemistry; acidity and basicity; reactive intermediates; pericyclic reactions; stereochemistry; organic synthesis; natural products; organic photochemistry. Prerequisites: Chemistry 51A-B-C or H52A-B-C.

127 Inorganic Chemistry II (4) S. Lecture, three hours; discussion, one hour. Advanced treatment of selected fundamental topics in inorganic chemistry, building on material presented in Chemistry 107. Molecular symmetry with applications to electronic structure and spectroscopy. Reaction kinetics and mechanisms; inorganic synthesis and catalysis; bioinorganic chemistry. Prerequisite: Chemistry 107.

128 Introduction to Chemical Biology (4) W. Lecture, three hours; discussion, one hour. Introduction to the basic principles of chemical biology: structures and reactivity; chemical mechanisms of enzyme catalysis; chemistry of signaling, biosynthesis, and metabolic pathways. Prerequisites: Chemistry 1A-B-C; Chemistry 51A-B-C or H52A-B-C.

128L Introduction to Chemical Biology Laboratory Techniques (4) S. Discussion, one hour; laboratory, six hours. Introduction to the basic laboratory techniques of chemical biology: electrophoresis, plasmid preparation, PCR, protein expression, isolation, and kinetics. Prerequisite: Chemistry 128.

NOTE: Chemistry 130A-B-C and 131A-B-C are parallel courses in physical chemistry; both are acceptable to satisfy the physical chemistry requirements for the major. Because of significant differences in course content, students starting in one series may not switch to the other in subsequent quarters.

130A-B-C Physical Chemistry: Biological and Materials Applications. Lecture, three hours; discussion, one hour.

130A Chemical Thermodynamics (4) F. Principles of chemical and heterogeneous equilibrium. Multiple chemical equilibrium, electrochemical equilibria, and equilibria at phase boundaries. Corequisite: Physics 7E or Engineering CBEMS40A. Prerequisites: Chemistry 1C and 5; Mathematics 2D; Physics 7D.

130B Quantum Chemistry, Spectroscopy, and Bonding (4) W. Fundamentals of molecular quantum mechanics. Development of the principles of rotational, vibrational, electronic, and magnetic resonance spectroscopy. Chemical bonding. Applications to biological and condensed phase systems. Prerequisite: Chemistry 130A; Physics 7E or Engineering CBEMS40A.

130C Structure, Statistical Mechanics, and Chemical Dynamics (4) S. Kinetic theory and statistical mechanics with applications to gases, macromolecules, and condensed phases. Transport phenomena. Chemical kinetics. Prerequisite: Chemistry 130B.

131A-B-C Physical Chemistry: A Molecular Approach. Lecture, three hours; discussion, one hour.

131A Quantum Principles (4) F. Principles of quantum chemistry with applications to nuclear motions and the electronic structure of the hydrogen atom. Corequisite: Physics 7E or Engineering CBEMS40A. Prerequisites: Chemistry 1C and 5; Mathematics 2D; Physics 7D.

131B Molecular Structure and Elementary Statistical Mechanics (4) W. Principles of quantum mechanics with application to the elements of atomic structure and energy levels, diatomic molecular spectroscopy and structure determination, and chemical bonding in simple molecules. Prerequisites: Chemistry 131A; Physics 7E or Engineering CBEMS40A.

131C Thermodynamics and Chemical Dynamics (4) S. Energy, entropy, and the thermodynamic potentials. Chemical equilibrium. Chemical kinetics. Prerequisite: Chemistry 131B.

135 Methods of Molecular Structure Determination (4) F. Lecture, three hours; discussion, one hour. Prerequisites: Chemistry 130A-B-C or 131A-B-C. Determination of molecular structure using spectroscopic, diffraction, and scattering techniques.

136 The Molecular Structure and Properties of Materials (4) F. Lecture, three hours; discussion, one hour. Development of the molecular basis for the properties of solid materials. Discussion of the interrelationship between molecular structure and properties such as optical behavior, conductivity, superconductivity, and magnetism. The properties of surfaces of materials are contrasted to bulk properties. Prerequisites: Chemistry 130A-B-C or 131A-B-C.

137 Computational Chemistry (4) S. Lecture, three hours; discussion, one hour; laboratory, three hours. Short introduction to programming languages and to representative algorithms employed in chemical research. Students have the opportunity to devise and employ their own codes and also to employ codes which are widely used in various fields of chemistry. Corequisite: Chemistry 130B or 131B. Prerequisites: Chemistry 51A-B-C or H52A-B-C and 130A or 131A.

138 Introduction to Computational Organic Chemistry (4). Lecture, three hours; discussion, one hour; laboratory, three hours. An introduction to the use of computational chemistry to investigate reaction mechanisms, to calculate structures, and to predict properties of molecules. Students have the opportunity to perform calculations employing computational methods which are widely used in various fields of chemistry. Prerequisites: Chemistry 51A-B-C or H52A-B-C.

151 Quantitative Analytical Chemistry (4) F, Summer. Lecture, three hours; discussion, one hour. Theoretical aspects of methods in analytical chemistry. Topics include statistical treatment of data and the fundamental chemistry which underlies methods of chemical analysis. Corequisite: Chemistry 151L. Prerequisites: Chemistry 1A-B-C, 1LB-LC; 5; 51A-B-C and 51LA-LB-LC or H52A-B-C and H52LA-LB-LC.

151L Quantitative Analytical Chemistry Laboratory (2) F, Summer. Discussion, one hour; laboratory, six hours. Practical aspects of important methods in analytical chemistry. Laboratory analysis of standard samples. Laboratory experiments include methods of gravimetry, titrimetry, chromatography and other separation methods, spectrochemical and electrochemical measurements. The use of computer programs for the reduction of data from laboratory experiments is encouraged. Corequisite: Chemistry 151. Prerequisites: Chemistry 1A-B-C, 1LB-LC; 5; 51A-B-C and 51LA-LB-LC or H52A-B-C and H52LA-LB-LC.

152 Advanced Analytical Chemistry (5) W. Lecture, three hours; discussion, one hour; laboratory, seven hours. In-depth treatment of most modern instrumental methods for quantitative analysis of real samples and basic principles of instrument design. Laboratory experiments in the use of electronic test equipment, microprocessor programming; interfacing and use of techniques such as absorption, emission, and luminescence spectrophotometry, polarography, gas and liquid chromatography, magnetic resonance, neutron activation analysis, and mass spectrometry. Prerequisite: Chemistry 151 and 151L.

153 Physical Chemistry Laboratory (4) S. Prelaboratory lecture, three hours; laboratory, nine hours. Laboratory exercises emphasize quantitative characterization of chemical substances and chemical processes. Experiments in chemical thermodynamics, atomic and molecular spectroscopy, chemical kinetics, and various methods of molecular structure determination. Corequisite: Chemistry 130C or 131C. Prerequisites: Chemistry 151, 151L, and Chemistry 130A-B or 131A-B.

156 Advanced Laboratory in Chemistry and Synthesis of Materials (4) S. Lecture, two hours; laboratory, eight hours. Synthesis and characterization of organic and inorganic materials including polymers, oxides, metal alloys, electronic materials. Techniques include electron microscopy, solid-state NMR, gel permeation chromatography, photolithography, x-ray diffraction, porosity, and thermal analysis. Prerequisite: Chemistry 130A-B or 131A-B or Engineering ENGR54. Same as Engineering CBEMS160.

160 Organic Synthesis Laboratory (4) W. Lecture, two hours; discussion, one hour; laboratory, eight hours. Modern experimental techniques in organic synthesis including experience with thin-layer chromatography, liquid chromatography, and gas chromatography. Modern methods of structure elucidation including FT NMR are employed in the characterization of products. Prerequisite: Chemistry 125.

170 Radioisotope Techniques (4) W. Lecture, three hours; laboratory, four to six hours. Basic theory and practice of production, separation, safe handling, counting, applications of radioactive isotopes with emphasis on applications in chemistry, biology, and medicine. Prerequisite: Chemistry 151, 151L.

177 Medicinal Chemistry (4) F. Lecture, three hours; discussion, one hour. An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity. Corequisite: Chemistry 177L. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128.

177L Medicinal Chemistry Laboratory (2) F. Laboratory, four hours. Laboratory accompanying Chemistry 177. Corequisite: Chemistry 177. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128.

180 Undergraduate Research (4-4-4) F, W, S. The student wishing to engage in research for credit should arrange with a member of the faculty to sponsor and supervise such work. A student time commitment of 10 to 15 hours per week is expected, and a written research report is required at the end of each quarter of enrollment. Prerequisite: consent of a faculty sponsor.

H180A-B-C Honors Research in Chemistry (4-4-4) F, W, S. Undergraduate honors research in Chemistry. A student time commitment of 10-15 hours per week is required. Corequisite for H180C: Chemistry H181. Prerequisites: consent of instructor; open to participants in the Chemistry Honors program and to Chemistry majors participating in the Campuswide Honors Program.

H181 Honors Seminar in Chemistry (2) S. Students receive guidance in the preparation of oral and written research presentations. A written thesis is prepared and a formal research seminar is presented. Corequisite: Chemistry H180C. Prerequisites: successful completion of Chemistry H180A-B; satisfactory completion of the lower-division writing requirement. Open only to students in the Chemistry Honors Program and Chemistry majors who are participating in the Campuswide Honors Program.

191 Chemistry Outreach Program (2) F, W, S. Field work, six to eight hours; discussion, one hour. Involves intensive participation in the UCI Chemistry Outreach Program, which performs Chemistry demonstrations at local high schools. Pass/Not Pass only. May be taken for credit six times.

192 Tutoring in Chemistry (2) F, W, S. Enrollment limited to participants in the Chemistry Peer Tutoring Program. Prerequisite: consent of instructor. May be taken for a total of 18 units of which the first eight may be taken for a letter grade. The remaining 10 units must be taken Pass/Not Pass only. NOTE: No more than eight units may be counted toward the 180 units required for graduation. Satisfies no degree requirement other than contribution to the 180-unit total.

199 Independent Study in Chemistry (1 to 4 per quarter). The student wishing to engage in independent study for credit should arrange with a member of the faculty to sponsor and supervise such work. A student time commitment of three to four hours per week per unit is expected, and a written report on the independent study is required at the end of each quarter of enrollment. Prerequisite: consent of instructor.

GRADUATE

201 Organic Reaction Mechanisms I (4). Lecture, three hours; discussion, one hour. Advanced treatment of basic mechanistic principles of modern organic chemistry. Topics include molecular orbital theory, orbital symmetry control of organic reactions, aromaticity, carbonium ion chemistry, free radical chemistry, the chemistry of carbenes and carbanions, photochemistry, electrophilic substitutions, aromatic chemistry. Prerequisite: Chemistry 130A-B-C or 131A-B-C or equivalent.

202 Organic Reaction Mechanisms II (4). Lecture, three hours; discussion, one hour. Topics include more in-depth treatment of mechanistic concepts, kinetics, conformational analysis, computational methods, stereoelectronics, and both solution and enzymatic catalysis. Prerequisite: Chemistry 201.

203 Organic Spectroscopy (4). Lecture, three hours; discussion, one hour. Modern methods used in structure determination of organic molecules. Topics include mass spectrometry; ultraviolet, chiroptical, infrared, and nuclear magnetic resonance spectroscopy. Prerequisite: Chemistry 51A-B-C or H52A-B-C.

204 Organic Synthesis I (4). Lecture, three hours; discussion, one hour. Fundamentals of modern synthetic organic chemistry will be developed. Major emphasis is on carbon-carbon bond forming methodology. Topics include carbonyl annulations, cycloadditions, sigmatropic rearrangements, and organometallic methods. Corequisite: concurrent enrollment in Chemistry 202.

205 Organic Synthesis II (4). Lecture, three hours; discussion, one hour. Fundamentals of modern synthetic organic chemistry will be developed. Major emphasis this quarter is on natural product total synthesis and retrosynthetic (antithetic) analysis. Prerequisite: Chemistry 204.

206 Laboratory Skills (4 to 6). Lecture, three hours; laboratory, six to ten hours. Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills. Prerequisite: consent of instructor. Same as Physics 206. Concurrent with Physics 106.

207 Chemistry for Physicists (4). Lecture, three hours; discussion, one hour. Introduction to fundamental concepts in molecular structure and reactivity: theory of bonding, valence and molecular orbitals; structure and reactivity in inorganic chemistry; elements in molecular group theory; nomenclature in organic chemistry; and survey of macromolecules. Same as Physics 207.

208 Mathematics for Chemists (4). Lecture, three hours; discussion, one hour. Applications of mathematics to physical and chemical problems. Calculus of special functions, complex variables and vectors; linear vector spaces and eigenvalue problems. Differential equations. Same as Physics 208.

213 Chemical Kinetics (4) S. Lecture, three hours; discussion, one hour. Surveys gas phase and organic reaction mechanisms and their relationship to kinetic rate laws; treats the basic theory of elementary reaction rates. A brief presentation of modern cross-sectional kinetics is included. Prerequisites: Chemistry 130A-B-C or 131A-B-C or equivalent.

215 Inorganic Chemistry I (4). Lecture, three hours; discussion, one hour. Principles of modern inorganic chemistry with applications to chemical systems of current interest. Inorganic phenomena are organized into general patterns which rationalize observed structures, stabilities, and physical properties. Prerequisites: Chemistry 107 and 130A-B-C or 131A-B-C or equivalent.

216 Organometallic Chemistry (4). Lecture, three hours; discussion, one hour. Synthesis and reactivity of organometallic complexes with an emphasis on mechanisms. Topics include bonding and fluxional properties; metal-carbon single and multiple bonds; metal π -complexes. Applications to homogeneous catalysis and organic synthesis are incorporated throughout the course. Prerequisite: Chemistry 107 or 215.

217 Physical Inorganic Chemistry (4). Lecture, three hours; discussion, one hour. General principles of the spectroscopy and magnetism of inorganic compounds. Characterization of inorganic complexes by infrared, near-infrared, visible, ultraviolet, NMR, EPR, EXAFS, and Mossbauer spectroscopies. Some necessary group theory developed. Prerequisite: Chemistry 215 or consent of instructor.

218 Metallobiochemistry (4). Lecture, three hours; discussion, one hour. A review of the biochemistry of metallic elements emphasizing: methods for studying metals in biological systems; the chemical basis for nature's exploitation of specific elements; structures of active sites; mechanisms; solid-state structures and devices; metals in medicine. Prerequisite: Chemistry 130A-B-C or equivalent.

219 Chemical Biology (4). Lecture, three hours; discussion, one hour. A survey of the organic chemistry underlying biological function. Introduction to chemical genetics, receptor-ligand interactions, small molecule agonists and antagonists, combinatorial synthesis, high throughput assays, molecular evolution, protein and small molecule design. Prerequisite: graduate standing or consent of instructor.

220 Bioorganic Chemistry (4). Lecture, three hours; discussion, one hour. Structure and function of biologically important macromolecules. Introduction to nucleic acids, protein structure, principles of molecular recognition, enzyme function, modeling, and engineering. Prerequisite: Chemistry 51A-B-C or H52A-B-C or equivalent.

221A Fundamentals of Molecular Biophysics (4) S. An overview of the principles and concepts in molecular biophysics. Topics covered include energy and entropy in biology, non-equilibrium reaction kinetics, random walks and molecular diffusion, molecular forces in biology. Prerequisites: undergraduate courses in physical chemistry and biochemistry, or consent of instructor.

221B Molecular Biophysics (4) F. A study of the biophysics of macromolecules and cells from a molecular perspective. Topics covered include protein folding, single molecule reaction kinetics, nucleic acid translation and transcription, molecular motors, cellular signal transduction. Prerequisites: Chemistry 221A and undergraduate courses in physical chemistry and biochemistry, or consent of instructor.

222 Natural Products (4) F. Lecture, three hours; discussion, one hour. Fundamentals of natural products chemistry are surveyed. Topics include classification schemes, biosynthesis, isolation and characterization, drug development from natural products, and chemical synthesis.

225 Polymer Chemistry: Synthesis and Characterization of Polymers (4). Lecture, three hours; discussion, one hour. Structure of synthetic and natural polymers. Survey of modern polymer synthetic methods. Molecular weight and molecular weight distribution. Chain conformation and stereochemistry. Introduction to polymer characterization, chain models, and solution behavior. Prerequisite: undergraduate courses in organic and physical chemistry; or consent of instructor.

226 Polymer Materials: Polymer Structure-Property Relationships (4). Lecture, three hours; discussion, one hour. Chain length and copolymer sequence distributions. Polymer chain models and configurational statistics. Melting and glass transitions in crystalline and amorphous polymers. Network theory. Elasticity and viscoelasticity. Solution theory and phase equilibria. Mechanical and materials properties. Prerequisite: undergraduate courses in organic and physical chemistry; or consent of instructor.

227 Molecular Modeling (4). Laboratory, four hours. Concepts of molecular mechanics and electronic structure theory, and applications to practical chemical questions. Topics include prediction of conformational preference, reactivity, and selectivity. A hands-on course with numerous worked problems and examples using graphics workstations. Prerequisite: consent of instructor.

228 Electromagnetism (4). Lecture, three hours; discussion, one hour. Maxwell's equations, electrodynamics, electromagnetic waves and radiation, wave propagation in media, interference and quantum optics, coherent and incoherent radiation, with practical applications in interferometry, lasers, waveguides, and optical instrumentation. Prerequisite: consent of instructor. Same as Physics 228.

229A-B Computational Methods (4-4). Lecture, three hours; laboratory, six hours. Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science. Prerequisite: consent of instructor. Same as Physics 229A-B.

230 Classical Mechanics and Electromagnetic Theory (4). Lecture, three hours; discussion, one hour. The fundamentals of classical mechanics and electromagnetic theory are developed with specific application to molecular systems. Newtonian, Lagrangian, and Hamiltonian mechanics are developed. Boundary value problems in electrostatics are investigated. Multipole expansion and macroscopic media are discussed from a molecular viewpoint. Prerequisite: Chemistry 131A-B-C or equivalent.

231A-B-C Quantum Mechanics and Spectroscopy. Lecture, three hours; discussion, one hour.

231A Fundamentals of Quantum Mechanics (4) F. The postulates of quantum mechanics are discussed and applied to a variety of model problems. Prerequisites: Chemistry 131A-B-C or equivalent.

231B Applications of Quantum Mechanics (4) W. Approximate methods for solving atomic and molecular structure problems are developed, and the application of quantum mechanics to spectroscopy is introduced. Prerequisite: Chemistry 231A or consent of instructor.

231C Molecular Spectroscopy (4) S. Theory and techniques of spectroscopy as used for the study of molecular and condensed phase properties. Coherent time domain spectroscopies are covered. Prerequisite: Chemistry 231B or consent of instructor.

232A Thermodynamics and Introduction to Statistical Mechanics (4) W. Lecture, three hours; discussion, one hour. A detailed discussion from an advanced point of view of the principles of classical thermodynamics. The fundamentals of statistical mechanics. Topics include an introduction to ensemble theory, Boltzmann statistics, classical statistical mechanics, and the statistical mechanics of ideal gas systems. Prerequisite: Chemistry 130A-B-C or 131A-B-C or equivalent.

232B Advanced Topics in Statistical Mechanics (4) S. Continued discussion of the principles of statistical mechanics. Applications to topics of chemical interest including imperfect gases, liquids, solutions, and crystals. Modern techniques such as the use of autocorrelation function methods. Prerequisite: Chemistry 232A or equivalent.

232C Non-Equilibrium Statistical Mechanics (4) F. Lecture, three hours; discussion, one hour. Phenomenology of material processes, including: kinetic theories of transport and continuum, linear response theory, critical phenomena of phase transition, self-assembly, and nucleation. Prerequisite: consent of instructor.

233 Nuclear and Radiochemistry (4). Lecture, three hours. Advanced treatment (beyond that in Chemistry 170) of nuclear structure, nuclear reactions, and radioactive-decay processes. Introduction to nuclear activation analysis, isotope effects, radiation chemistry, hot-atom chemistry, nuclear age-dating methods, nuclear reactors, and nuclear power. Prerequisite: Chemistry 170 or equivalent or consent of the instructor.

234 Advanced Chemical Kinetics (4). Topics and format vary. Prerequisite: Chemistry 213 or consent of the instructor.

235 Molecular Quantum Mechanics (4) W. Lecture, three hours; discussion, one hour. Application of quantum mechanics to calculation of molecular properties. Electronic structure of molecules. Prerequisite: Chemistry 231A or equivalent.

241 Current Issues Related to Tropospheric and Stratospheric Processes (4) S. Lecture, three hours. Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forest, plants, and ecosystems; particulate matter (PM₁₀); combustion; modeling and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies. Prerequisite: One course selected from Chemistry 245, Earth System Science 202, Engineering MAE164, Engineering MAE261, or consent of instructor. Same as Engineering MAE 260.

242 Applied Optics (4) W. Lecture, four hours; discussion, one hour. Focuses on how to design and construct optical instruments. Topics include geometrical optics, polarizing optics, opt-electronic devices; laser theory, non-linear optics and laser design; ray-tracing and other optical design software; fiber optics; spectroscopic instruments and techniques. Prerequisite: consent of instructor.

243 Advanced Instrumental Analysis (4) W. Lecture, three hours. Theory and applications of modern advanced instrumental methods of analysis. Includes data acquisition, storage, retrieval and analysis; Fourier transform methods; vacuum technologies, magnetic sector, quadrupole, and ion trap mass spectrometry; surface science spectroscopic methods; lasers and optics. Prerequisites: Chemistry 152 and Chemistry 130A-B-C or 131A-B-C.

245 Atmospheric Chemistry of the Natural and Polluted Troposphere (4) F. Lecture, three hours; discussion, one hour. Kinetics, mechanisms, and photochemistry of tropospheric reactions in the gas, liquid, and solid phases, and methods of analysis. Chemistry of photochemical oxidant formation and acid deposition, and applications to control strategies. Chemistry of toxic chemicals and indoor air pollution. Prerequisites: Chemistry 130A-B-C or 131A-B-C and Chemistry 151 and 151L or equivalent.

246 Separations and Chromatography (4). Lecture, three hours; discussion, one hour. Introduction to modern separation techniques such as gas chromatography, high-performance liquid chromatography, supercritical fluid chromatography, capillary electrophoresis, and field flow fractionation. Applications of these separation strategies are discussed.

247 Current Problems in Analytical Chemistry (4). Lecture, three hours; discussion, one hour. Surveys current research challenges in analytical chemistry. Topics include electrochemistry, chromatography, spectroscopy, and mass spectrometry.

248 Electrochemistry (4). Lecture, three hours; discussion, one hour. Fundamentals of electrochemistry including thermodynamics and the electrochemical potential, charge transfer kinetics, and mass transfer. Methods based on controlled potential and controlled current are described; the effects of slow heterogeneous kinetics and the perturbation caused by homogeneous chemistry are discussed.

249 Analytical Spectroscopy (4). Lecture, three hours; discussion, one hour. Advanced treatment of spectroscopic techniques and instrumentation. Atomic and molecular absorption, emission, and scattering processes and their application to quantitative chemical analysis are outlined. Puts different spectroscopic techniques in perspective and demonstrates most appropriate applications to analytical problems.

251 Special Topics in Organic Chemistry (1 to 4). Advanced topics in organic chemistry. Prerequisite: consent of the instructor.

252 Special Topics in Physical Chemistry (1 to 4). Advanced topics in physical chemistry. Prerequisite: consent of the instructor.

253 Special Topics in Inorganic Chemistry (1 to 4). Advanced topics in inorganic chemistry. Prerequisite: Chemistry 215 or consent of the instructor.

266 Current Topics in Chemical and Materials Physics (4). Lecture, three hours; discussion, one hour. The subjects covered vary from year to year. Connection between fundamental principles and implementations in practice in science, industry, and technology. Prerequisite: consent of instructor. Same as Physics 266.

271 Structural X-ray Crystallography (4). Lecture, three hours; discussion, one hour. The principles and practice of the determination of structures by single crystal x-ray diffraction techniques. Crystal symmetry, diffraction, structure solution and refinement. Opportunities for hands-on experience in structure determination. Prerequisite: Chemistry 130A-B-C or Chemistry 131A-B-C or equivalent.

272 Industrial Chemistry (4). Lecture, three hours; discussion, one hour. Scientific, economic, and environmental aspects of the top 50 industrially produced chemicals, including how they are obtained and used, present and future sources of energy and raw materials, and the effects of chemical manufacturing on the price structure of our economy. Prerequisite: consent of instructor.

280 Research (2 to 12) F, W, S. Supervised original research toward the preparation of a Ph.D. dissertation or M.S. thesis. Prerequisite: consent of the instructor.

290 Seminar (1) F, W, S. Weekly seminars and discussions on general and varied topics of current interest in chemistry. Prerequisite: graduate standing. May be repeated for credit.

291 Research Seminar (4). Detailed discussion of research problems of current interest in the Department. Format, content, and frequency of the course are variable. Prerequisite: consent of instructor.

292 Graduate Symposium (2) F. Students present public seminars on literature-based research topics in contemporary chemistry. Topics to be chosen by student and approved by instructor. May be repeated for credit as topics vary.

299 Independent Study (1 to 4) F, W, S. Prerequisite: consent of instructor.

399 University Teaching (1 to 4) F, W, S. Required of and limited to Teaching Assistants.

DEPARTMENT OF EARTH SYSTEM SCIENCE

3200 Croul Hall; (949) 824-8794

Eric S. Saltzman, *Chair*

Faculty

- Ralph J. Cicerone, Ph.D. University of Illinois, *Chancellor Emeritus and Professor Emeritus of Earth System Science* (atmospheric and analytical chemistry)
- Ellen R. M. Druffel, Ph.D. University of California, San Diego, *Professor of Earth System Science and National Science Foundation "ADVANCE" Chair* (biogeochemistry and oceanography)
- James S. Famiglietti, Ph.D. Princeton University, *Associate Professor of Earth System Science and of Civil and Environmental Engineering* (hydrology and climate)
- Michael L. Goulden, Ph.D. Stanford University, *Associate Professor of Earth System Science and of Ecology and Evolutionary Biology* (biosphere-atmosphere exchange, physiological ecology)
- Gudrun Magnusdottir, Ph.D. Colorado State University, *Associate Professor of Earth System Science* (atmospheric dynamics)
- J. Keith Moore, Ph.D. Oregon State University, *Assistant Professor of Earth System Science* (ocean ecosystem dynamics and biogeochemistry)
- Diane E. Pataki, Ph.D. Duke University, *Assistant Professor of Earth System Science and of Ecology and Evolutionary Biology* (global change biology)
- Michael Prather, Ph.D. Yale University, *Professor of Earth System Science and Fred Kavli Chair in Earth System Science* (mathematical modeling of atmospheric chemistry, and climate)
- Francois W. Primeau, Ph.D. Massachusetts Institute of Technology/Woods Hole Oceanographic Institution, *Assistant Professor of Earth System Science* (physical oceanography and climate dynamics)
- James T. Randerson, Ph.D. Stanford University, *Associate Professor of Earth System Science* (global biogeochemical cycles, biosphere-atmosphere trace gas exchange)
- William S. Reece, Ph.D. The Johns Hopkins University, *Professor of Earth System Science* (geochemistry and biogeochemistry)
- Eric S. Saltzman, Ph.D. University of Miami, *Department Chair and Professor of Earth System Science* (marine and atmospheric chemistry)
- Kathleen K. Treseder, Ph.D. Stanford University, *Assistant Professor of Earth System Science and of Ecology and Evolutionary Biology* (microbial biogeochemistry)
- Susan E. Trumbore, Ph.D. Columbia University, *Professor of Earth System Science* (geochemistry and biogeochemistry)
- Laurel L. Wilkening, Ph.D. University of California, San Diego, *Chancellor Emerita and Professor Emerita of Earth System Science* (planetary science)
- Jin-Yi Yu, Ph.D. University of Washington, *Associate Professor of Earth System Science* (atmospheric sciences and climate dynamics)
- Charles S. Zender, Ph.D. University of Colorado, *Associate Professor of Earth System Science* (atmospheric physics, aerosols, and climate)

Affiliated Faculty

- Donald R. Blake, Ph.D. University of California, Irvine, *Professor of Chemistry and Earth System Science* (atmospheric and analytical chemistry, and radiochemistry)
- Carl A. Friehe, Ph.D. Stanford University, *Professor of Mechanical and Aerospace Engineering and of Earth System Science* (fluid mechanics, turbulence, micrometeorology, instrumentation)
- F. Sherwood Rowland, Ph.D. University of Chicago, *Donald Bren Research Professor Emeritus of Chemistry and Earth System Science* (atmospheric and analytical chemistry, and radiochemistry)
- Soroosh Sorooshian, Ph.D. University of California, Los Angeles, *Director of the Center for Hydrometeorology and Remote Sensing (CHRS) and UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science* (hydrometeorology, remote sensing, water resources)

The goal of the Department of Earth System Science is to increase the scientific understanding of the Earth as a coupled system of atmosphere, ocean, and land. Earth System Science is inherently interdisciplinary in scope, linking the fields of oceanography, atmospheric and terrestrial sciences, climatology, hydrology, biology, physics, and chemistry to understand the climate system and global biogeochemical cycles. These fields have traditionally been taught in different departments, which has hindered students who want to learn about all of the disciplines that interact to control the

global environment. At the undergraduate level, courses are designed to educate both science and non-science majors in the basic processes driving the Earth system, including elemental cycling, Earth's climate, and global environmental problems. Undergraduates can pursue a major in Earth and Environmental Sciences or a minor in Earth and Atmospheric Sciences. The Department also offers a group of lower-division breadth courses appropriate for non-science majors. At the graduate level, the Department offers the M.S. and Ph.D. degrees in Earth System Science. Graduate study emphasizes laboratory, field, and modeling studies of global change in the environment through study of physical, chemical, and biological processes within and between the atmosphere, oceans, and terrestrial systems.

Undergraduate Program

The objective of the major is to prepare students to understand the rapidly evolving field of Earth System Science. Students work with faculty and graduate students to obtain a quantitative understanding of the Earth system. Both the major and the minor consist of a set of required core courses and a group of elective courses drawn from offerings in Physical Sciences, Biological Sciences, Engineering, and Social Ecology. The core courses provide a broad scientific foundation of the physical, chemical, and biological principles needed to understand the complex interactions of the atmosphere, ocean, and land that drive the Earth's climate and biogeochemical cycles. Majors develop the analytical and quantitative skills needed to understand sensitive environmental issues.

In their junior and senior years, ESS students are encouraged to focus on a particular area within Earth System Science and to choose electives within ESS and campuswide that build a coherent core of knowledge. Focus areas include but are not limited to climatology, biogeochemical cycles, oceanography, hydrology, terrestrial sciences, atmospheric sciences, environmental policy and planning, and resource management. Alternatively, the focus could be on chemical, physical, or biological processes across these disciplines. This flexible program is designed to accommodate the particular interests of each student. Majors are encouraged to become directly involved in scientific research working with a faculty member by taking Earth System Science 199 for several quarters, typically in the senior year. The UCI upper-division writing requirement may be fulfilled by taking Earth System Science 199 and 198 in the senior year.

Many ESS students go on to graduate school programs and careers as research scientists in academic, public, or private institutions. Students are prepared to enter the workforce directly as scientists in a diverse array of fields including environmental policy and planning, environmental consulting, air quality monitoring and assessment, laboratory analysis, scientific research, science education, natural resource management, wildlife management, conservation and environmental protection, and water resource management.

The minor is open to all students (except Earth and Environmental Sciences majors), but it is primarily designed for students in the natural sciences and engineering who wish to explore interdisciplinary problems and broaden their studies to include the application of their fields to understanding the Earth system.

Admission to the Earth and Environmental Sciences Major

Students may be admitted to the Earth and Environmental Sciences major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at http://www.due.uci.edu/Change_of_Major.html. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of calculus and one year of *either*

general chemistry (with laboratory) or calculus-based physics (with laboratory).

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: None.

Departmental Requirements

A. Earth System Science 25*, 51, 53, 55, 114, 116, 191;
Mathematics 2A-B-J; Chemistry 1LB-LC, and either 1A-B-C or
H2A-B-C; Physics 3A-B-C, 3LB-LC, or 7A-B-E, 7LA-LB;

* Other approved courses may be substituted for Earth System Science 25 by petition.

B. Seven electives from the following (at least four must be Earth System Science courses): all four-unit Earth System Science courses except 114 and 116 (199 may count only once toward the elective requirement); Chemistry 51A and 51LA, 51B and 51LB, 51C, H52A and H52LA, H52B and H52LB, H52C, 130A, 130B, 130C, 131A, 131B, 131C; Physics 51A, 51B, 115A, 120, 134A, 134B, 137, 144, 145; Mathematics 3A or 6C, 2D, 3D, 105A, 112A, 115, 131A, 131B, 131C; Mechanical and Aerospace Engineering (MAE) 91, 130A, 164, 180, 185; Civil and Environmental Engineering (CEE) 132, 156, 162, 166, 171, 172, 174, 176, 178; Biological Sciences 93, 94, 98, D105, D134, E106, E167, E178, E179, E179L, E181, E186, E189, M133; Environmental Analysis and Design E105U, E110, E132U, E145U, E155U, E160, E160L, E161, E165L, E168, E173; Criminology, Law and Society C148; Computing Skills (one of the following may be counted toward degree): Information and Computer Science 21, Engineering EECS10, Engineering MAE 10, Physics 53, or other approved programming course.

MINOR IN EARTH AND ATMOSPHERIC SCIENCES

NOTE: All of these courses have prerequisites. Students pursuing the minor should plan to fulfill all prerequisites prior to enrolling in these courses.

Requirements for the Minor

Earth System Science 51, 53, 55, plus four electives chosen from the above approved elective list for majors, at least two of which must be Earth System Science courses.

Some students (particularly transfer students) take Earth System Science 51, 53, and 55 in the junior year.

Graduate Program

Applicants to the Earth System Science Ph.D. program should have a broad quantitative scientific background, with an undergraduate degree in natural science or related fields such as applied mathematics and engineering. Undergraduate preparation should involve mathematics including differential equations, a year-long sequence of physics and of chemistry, and courses in general biology, ecology, or geology. Entering graduate students plan their courses and research with the help of the Earth System Science Advisory Committee of academic and research faculty. Students are admitted to the Ph.D. program only; the Master's degree is awarded upon progress to the Ph.D.

To complete the course requirements for the Ph.D. program, a minimum of 10 approved graduate-level courses, including the core curriculum, must be completed with an average grade of B or better. All courses must be approved by the student's Advisory Committee. The core curriculum consists of Earth System Science 200, 202, 204, 206, 208, 210, 212, 218, and 298. These courses are described below. Students are also expected to participate in the Earth System Science seminar. Additionally, Ph.D. students are required to complete a teaching assistant training program and to have a minimum of two quarters of experience as a teaching assistant, provided opportunities are available.

Academic Senate regulations specify a minimum period of residence of six quarters for Ph.D. candidates. Enrollment in a minimum of 12 units of graduate/upper-division course work per quarter is required. Registration in every regular academic session is necessary until all requirements for the degree have been completed, unless a formal Leave of Absence is granted by the Office of Graduate Studies. All Ph.D. requirements must be completed within 15 quarters in residence (five years), excluding summer quarters. Exceptions must be put to a vote of the Earth System Science faculty. The maximum time permitted is seven years.

A single departmental Qualifying Examination for all eligible Earth System Science students is administered during the fall quarter. This examination determines the student's readiness to begin research for the dissertation and should be taken following completion of the core course work and summer research, during the fall quarter of the second year. The Qualifying Examination consists of both written and oral parts. The written portion of the examination emphasizes breadth, general knowledge, and the ability to integrate and use information covered in the core curriculum and other course work. The oral examination provides an opportunity to clarify questions arising from the student's performance on the written examination.

Following completion of the Qualifying Examination, those students who receive a recommendation to continue Ph.D. work will pursue research on a potential dissertation topic and then take the Advancement to Candidacy Examination. This oral examination is given by a faculty committee, including extra-departmental faculty. Concurrent with this examination, the Ph.D. candidates present a research seminar to the entire Earth System Science Department outlining their proposed dissertation work. The normal time for advancement to candidacy is three years.

A dissertation based on original research and demonstrating critical judgment, intellectual synthesis, creativity, and clarity in written communication is required for the Ph.D. degree. The dissertation must summarize the results of original research performed by the student under the supervision of a faculty member of the Department. The criterion of acceptability of a dissertation is that its contents be judged by the committee as suitable for publication in a peer-reviewed scientific journal of high editorial standards. The dissertation may be a compilation of published papers or manuscripts accepted for publication, so long as a major proportion of the material has been produced independently by the candidate. The format

and content are approved by the Dissertation Committee, and University requirements for style, format, and appearance are met.

The Master's degree is awarded only to students admitted to the Ph.D. program who have completed a total of 10 courses, met the three-quarter residency requirement, and completed the Qualifying Examination.

A summary of the requirements follows.

DOCTOR OF PHILOSOPHY IN EARTH SYSTEM SCIENCE

1. Completion of course work (10 courses, including core courses)
2. Six quarters in residence at UCI
3. Completion of the teaching and seminar requirements
4. Completion of the Qualifying Examination, with recommendation to continue for the Ph.D.
5. Pass the Advancement to Candidacy Examination
6. Presentation of an open research seminar
7. Submission of an acceptable doctoral dissertation and formal defense

MASTER OF SCIENCE IN EARTH SYSTEM SCIENCE

1. Completion of course work (10 courses, including core courses)
2. Three quarters in residence at UCI
3. Completion of the teaching and seminar requirements
4. Completion of the Qualifying Examination

Courses in Earth System Science

Lower-division undergraduate course offerings emphasize an understanding of the basic science involved in global change of the Earth's atmosphere, oceans, and biosphere and soils. Any three courses selected from Earth System Science 1, 3, 5, 7, 11, 15, Physics 15, 16, 17, 18, 19, 20A, 20B, 20C, 20D, 21, and Engineering E5 will satisfy the natural sciences breadth requirement.

Lower-division Earth System Science courses also are core or elective courses in the interdisciplinary minor in Global Sustainability; see the Interdisciplinary Studies section of this *Catalogue* for information.

Upper-division courses are particularly appropriate as electives for students majoring in the physical or biological sciences, or engineering, with an interest in applying physics, chemistry, and biology to study the Earth's atmosphere, oceans, biosphere, and climate.

LOWER-DIVISION

1 The Physical Environment (4) F. Covers the origin and evolution of the Earth, its atmosphere, and oceans, from the perspective of biogeochemical cycles, energy use, and human impacts on the Earth system. (II)

3 Oceanography (4) S. Examines circulation of the world oceans and ocean chemistry as it relates to river, hydrothermal vent, and atmospheric inputs. Geological features, the wide variety of biological organisms, and global climate changes, such as greenhouse warming, are also studied. (II)

5 The Atmosphere (4) W. The composition and circulation of the atmosphere with a focus on explaining the fundamentals of weather and climate. Topics include solar and terrestrial radiation, clouds, and weather patterns. (II)

7 Geology (4) W. Basic geologic principles; teaches students how to interpret earth history from landforms and the rock record, understand volcano and earthquake risks, and recognize the distribution of resources. The geologic time scale, fossil record, and major events in earth history are explored. (II)

9 The Biosphere (4) W. An introduction to the role of biological processes in the Earth system. Topics span the functioning of cells, organisms, ecosystems, and the global biosphere, including an introduction to evolution, terrestrial and marine organismal biology, and principles of ecology and biogeochemistry. Same as Biological Sciences 9M. (II)

11 Climate Change and Policy (4). Develops an understanding of the physical basis behind global climate change; examines how human activities cause it, looks to future rates and impacts of global warming, and reviews the international conventions, protocols, and scientific assessments of climate change. (II)

13 Global-Change Biology (4) W. Addresses ways in which humans are altering the global environment, with consequences for the ecology of animals, plants, and microbes. Discussion on how these biologically oriented questions relate to human society, politics, and the economy. Same as Biological Sciences 9K. (II)

15 Atmospheric Pollution, Ozone, and Climate (4) S. Air pollution occurs on global, continental, and urban scales. We pollute the atmosphere in different ways. Its consequences on the quality of the air we breathe, health of our ecosystems, ozone layer depletion, and changes in our climate are studied. (II)

25 Introduction to Earth and Environmental Sciences (4) F. Covers the origin and evolution of the Earth, its atmosphere, and oceans, from the perspective of biogeochemical cycles, and human impacts. Corequisite: Mathematics 2A or consent of instructor. Open only to Physical Sciences, Biological Sciences, and Engineering majors.

51 Land Interactions (4) F. The role of terrestrial processes in the Earth system. Provides an introduction to ecosystem processes that regulate the cycling of energy, water, carbon, and nutrients. Analysis of the impact of human activities. Corequisites: Mathematics 2B and Physics 3A or 7A. Prerequisite: Chemistry 1C.

53 Ocean Biogeochemistry (4) W. Overview of oceanography for those interested in Earth system science. Focus is on physical, chemical, and biological processes that drive biogeochemical cycling in the oceans. Coastal systems also reviewed, with emphasis on California waters. Corequisite: Mathematics 2B, Physics 3B or 7B. Prerequisite: Chemistry 1C.

55 Earth's Atmosphere (4) S. Composition, physics, and circulation of Earth's atmosphere with an emphasis on explaining the role of atmospheric processes in shaping the climate system. Topics include: atmospheric composition, the global energy balance, radiative transfer and climate, atmospheric circulation and climate sensitivity. Corequisite: Mathematics 2B; Physics 3B or 7B.

H90 The Idiom and Practice of Science (4). A series of fundamental and applied scientific problems are addressed, illustrating the pervasive role of mathematical analysis. Topics may include energy utilization, the climate system, the "greenhouse effect," ozone depletion and air pollution, ecological consequences of water pollution, nutrient cycles. Open only to members of the Campuswide Honors Program or consent of instructor. (II)

UPPER-DIVISION

112 Global Climate Change and Impacts (4) F. Observations over the twentieth century show extensive changes in atmospheric composition, climate and weather, and biological systems that have paralleled industrial growth. Evidence of globally driven changes in these biogeochemical systems is studied, including projected impacts over the twenty-first century. Prerequisites: Earth System Science 51, 53, and 55.

114 Earth System Science Laboratory and Field Methods (4) S. Introduction to methods used to measure exchange of gases and energy between the atmosphere and terrestrial ecosystems. Laboratories include data acquisition and isotopic and chromatographic analysis. Field measurements at UCI's Marsh Reserve include microclimate, hydrology, trace-gas exchange, and plant growth.

116 Data Analysis for Earth Sciences (4) F. Analysis and interpretation of geophysical data, including functional fitting, probability density functions, and multidimensional time-series methods, with applications in atmospheric, oceanic, and biogeochemical sciences.

122 Atmospheric Dynamics (4) W. Fluid dynamical processes that determine the large-scale flow of the atmosphere and ocean. Most important are interactions between the density stratification and the Coriolis force associated with Earth's rotation. Topics include circulation, vorticity, planetary waves and their role in climate. Prerequisites: Mathematics 2D, Physics 7A-B-E, or consent of instructor.

124 Weather and Meteorology (4) W. Provides an overview of weather systems in midlatitudes and tropics. The fundamental dynamics possible for these weather systems are described. Elementary weather analysis and forecasting techniques are introduced. Prerequisite: Earth System Science 55.

126 Engineering Meteorology (4) W. Fundamentals and aspects of atmospheric sciences important to engineering and environmental problems. Basic physics and thermodynamics of the atmosphere; dispersion of pollutants. A design problem is included. Prerequisites: Engineering MAE91 or CBEMS40B; MAE130A or CEE170 or CBEMS120A or consent of instructor. Same as Engineering MAE162.

130 Physical Oceanography (4) W. Physical processes that determine the distribution of water properties such as salt and temperature. Fluid-dynamical underpinnings of physical oceanography. Wave motions. The wind-driven and thermohaline circulation. Similarities and differences between ocean and atmosphere dynamics. Prerequisites: Mathematics 2D and Physics 7A-B-E, or consent of instructor.

132 Terrestrial Hydrology (4) S. Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Major components of the hydrological cycle and their linkages within the coupled Earth system. Prerequisites: Mathematics 2D and Physics 7A-D-E or equivalent or consent of instructor. Concurrent with Earth System Science 232.

134 Fundamentals of GIS for Environmental Sciences (4). Introduction to Geographic Information Systems (GIS). Topics include fundamentals of cartography, creating/editing GIS data, linking spatial and tabular data, georeferencing, map projections, geospatial analysis, spatial statistics and the development of GIS models. Examples from hydrology, ecology, and geology. Prerequisite: Earth System Science 51, 53, or 55, or consent of instructor.

138 Satellite Remote Sensing for Earth System Science (4) S. Satellite remote sensing data are increasingly used to study the Earth system. Provides an overview of the principles behind remote sensing, and the types of satellite data available for study of the oceans, land, and atmosphere. Prerequisite: Earth System Science 51, 53, or 55; or consent of instructor.

142 Atmospheric Chemistry (4) S. Chemistry of the troposphere and stratosphere. Topics include: processes controlling the lifetime and reaction pathways of chemicals in the atmosphere, the role of the atmosphere in biogeochemical cycles, and interactions between atmospheric chemistry and the physical climate system. Prerequisites: Chemistry 1A-B-C.

144 Marine Geochemistry and Biogeochemistry (4) S. Processes controlling the major and minor element composition of seawater and element distributions in the ocean. Gas exchange, carbon dioxide system, stable isotopes, radionuclides as tracers and chronometers, particle fluxes, organic geochemistry, sediment geochemistry, global cycles of biogeochemically important elements.

164 Terrestrial Ecosystems (4) F, W, S. A mechanistic perspective of the structure and functioning of terrestrial ecosystems. Includes the mechanisms that control plant growth, hydrology and nutrient cycling, and the roles terrestrial ecosystems play in local and global biogeochemistry. Prerequisite: Biological Sciences E106 or consent of instructor. Same as Biological Sciences E118 and Environmental Analysis and Design E167.

166 The Earth Surface Processes (4) S. Physical character of land surfaces. Land surface processes and global change. Tectonic deformation, gravity, fluid flow, climate, and insolation. Landforms, deformation, watershed evolution, weathering, sediment production, transport, deposition, and coastal zone evolution. Includes field expeditions. Prerequisite: Mathematics 2B or consent of instructor.

168 Physiological Plant Ecology (4) F. An examination of the interactions between plants and their environment. Emphasis on the underlying physiological mechanisms of plant function, adaptations and responses to stress, and the basis of the distribution of plants and plant assemblages across the landscape. Prerequisite: Biological Sciences E106 or consent of instructor. Same as Biological Sciences E127.

190A-B Senior Seminar on Global Sustainability I, II (2-2) F, W. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. **A:** Prepare bibliography. **B:** Prepare research proposal. In-progress grading for 190A-B, grade for sequence given upon completion of 190C. Prerequisites: senior standing, Biological Sciences 65, Environmental Analysis and Design E20, and Earth System Science 10. Same as Biological Sciences 191A-B and Social Ecology 186A-B.

190C Writing/Senior Seminar on Global Sustainability III (4) S. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations and to prepare senior research paper. Prepare/

write research paper under the direction of a faculty member. Prerequisites: Earth System Science 190A-B and satisfaction of the lower-division writing requirement. Same as Biological Sciences 191C and Social Ecology 186C.

191 Introduction to Research in Earth System Science (1) F. A series of weekly presentations by Earth System Science faculty describing ongoing research in their laboratories. The goals are to introduce students to the range of research topics and methods in Earth System Science and to the research opportunities available within the Department. Prerequisite: upper-division standing or consent of instructor; limited to majors in Earth and Environmental Sciences or minors in Earth and Atmospheric Sciences.

198 Senior Thesis in Earth System Science (2) S. Students receive guidance on the effective oral and written communication of research results. Students prepare and present a seminar, a poster, and a written thesis describing their research in Earth System Science. Prerequisites: successful completion of two quarters of Earth System Science 199 or comparable research experience with consent of instructor; successful completion of the lower-division writing requirement. Intended for seniors majoring in Earth and Environmental Sciences.

199 Undergraduate Research (2 to 4) F, W, S. For junior and senior undergraduates, preferably with majors in science or engineering. Interested students should arrange with a member of the Earth System Science faculty to supervise and support a research project. A written summary is required at the end of each quarter. Prerequisite: consent of instructor.

GRADUATE

200A Earth System Climatology (2) F. Includes evolution of Earth, atmosphere/ocean circulation, and land and ocean geography. Prerequisites: Mathematics 2D; Physics 3C or 7E or equivalent, or consent of instructor. Formerly Earth System Science 200.

200B Earth System Physics (2) F. Physical processes which mediate the transformation of energy and momentum in the climate system. Topics include hydrostatics, radiation, and climate forcing and feedbacks. Prerequisites: Mathematics 2D; Physics 3C or 7E or equivalent, or consent of instructor. Formerly Earth System Science 200.

202 Terrestrial and Ocean Biogeochemistry (4) F. Biogeochemical processes which mediate the transformation of carbon, nitrogen, and other biogeochemically important elements on land and in the ocean. Topics include chemistry of soils and seawater, nutrient limitation, cycling of dissolved and particulate organic matter, and isotopes.

204 Global Hydrology and the Planetary Boundary Layer (4) F. Global hydrologic cycle and its interactions within the Earth's climate system. Precipitation, clouds and radiation, water vapor, sea surface fluxes, terrestrial hydrology. Planetary boundary layer. Surface energy and radiation budgets; temperature, humidity, and wind profiles; turbulence, neutral boundary layers, similarity theory.

206 Atmospheric and Oceanic Dynamics (4) W. Introduces the student to atmospheric and oceanic fluid dynamics. Equations of motion for a rotating stratified fluid. Scaling analysis, potential vorticity dynamics, linear waves, energetics and instability theory with applications to the mean circulation and variability.

208A Atmospheric Chemistry (2) W. Chemistry of the atmosphere. Topics include: tropospheric photochemistry; the tropospheric ozone budget; stratospheric chemistry and the ozone hole. Formerly Earth System Science 208. Earth System Science 208A and 242 may not both be taken for credit.

208B Global Biogeochemical Cycles (2) W. Global biogeochemical cycling of the elements. Topics include: global cycling of carbon, nitrogen, oxygen, and sulfur; impact of human activities on biogeochemical processes. Formerly Earth System Science 208. Earth System Science 208B and 242 may not both be taken for credit.

210 Geoscience Data Analysis and Modeling (4) F. Teaches basic numerical and statistical techniques needed to solve or analyze Earth system models/data, computational approaches and accuracy, plus hands-on experience with computers. Focuses on probabilistic time-series models and deterministic models based on linear and non-linear differential equations.

212 Earth System Change (4) S. Explores past, present, and projected changes in the Earth system: atmospheric composition, ocean circulation, climate and weather, and the biosphere. Begins with paleo-record, lessons from past climate change. Ends with currently observed global warming, related changes, projections of our future.

218 Terrestrial and Marine Ecology (4) S. A mechanistic perspective of the structure and functioning of terrestrial and marine ecosystems. Includes the processes that control plant growth and community structure, nutrient cycling, and role of ecosystem dynamics in local and global biogeochemical cycling.

222 Atmospheric Dynamics (4) W. Fluid dynamical processes that determine the large-scale flow of the atmosphere and ocean. Most important are interactions between the density stratification and the Coriolis force associated with Earth's rotation. Topics include circulation, vorticity, planetary waves and their role in climate. Formerly Earth System Science 212.

230 Physical Oceanography (4) S. Physical processes that determine the distribution of water properties such as salt and temperature. Fluid-dynamical underpinnings of physical oceanography. Wave motions. The wind-driven and thermohaline circulation. Similarities and differences between ocean and atmosphere dynamics. Prerequisites: Mathematics 2D and Physics 7A-B-E, or consent of instructor.

232 Terrestrial Hydrology (4) S. Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Major components of the hydrological cycle and their linkages within the coupled Earth system. Prerequisites: Mathematics 2D and Physics 7A-D-E or equivalent or consent of instructor. Concurrent with Earth System Science 132.

236 Radiative Processes and Remote Sensing (4) F. Solar and terrestrial radiation and Earth system interaction. Radiative transfer theory. Principles, applications of remote sensing of environment. Planck's law, radiative transfer equation, radiative properties of trace gases and aerosols, remote sensing techniques, global trends in radiative forcing. Prerequisites: Mathematics 2D and Physics 7A-B-D, or equivalent.

238 Analysis of Hydrologic Systems (3) F. Application of systems theory in hydrologic, land surface, and biogeochemical modeling. Design, identification, and calibration of conceptual models. Principles of dynamic systems and modeling approaches, theory of linear systems and mathematical concepts of differential calculus, theoretical concepts of parameter estimation and optimization theory. Same as Civil and Environmental Engineering CEE289.

242 Atmospheric Chemistry (4) S. Chemistry of the troposphere and stratosphere. Topics include: processes controlling the lifetime and reaction pathways of chemicals in the atmosphere, the role of the atmosphere in biogeochemical cycles, and interactions between atmospheric chemistry and the physical climate system. Prerequisites: Chemistry 1A-B-C. Formerly Earth System Science 202. Earth System Science 242 and 208A and/or 208B may not both be taken for credit.

246 Isotope Geochemistry (4) S. Principles of isotope geochemistry with an emphasis on applications in biogeochemistry. Covers basic theory and experimental investigations of natural variations in stable and radioactive isotopes and isotope fractionation by kinetic processes, isotope exchange reactions, and diffusional processes.

260 Global Biological Change (4) F. Lecture, two hours; field work, one hour. An investigation of the mechanisms that underlie responses of organisms to human-caused environmental changes. Activities include field trips, literature discussions, and lectures. Focuses on issues of interest in Southern California, including nitrogen deposition, invasions, and habitat fragmentation. Same as Ecology and Evolutionary Biology 225.

280 Special Topics in Earth System Science (4). Each quarter is devoted to current topics in the field of Earth System Science. May be repeated for credit as topics vary. Prerequisite: Earth System Science 200 or equivalent, or consent of instructor.

282A-B-C Topics in Climate (4-4-4). Each quarter is devoted to in-depth analysis of an important and rapidly developing area in the field of climate dynamics. May be repeated for credit as topics vary. Formerly Earth System Science 233A-B-C.

286A-B-C Topics in Biogeochemistry (4-4-4). Each quarter is devoted to in-depth analysis of a subarea in biogeochemistry which is undergoing rapid development. May be repeated for credit as topics vary. Formerly Earth System Science 231A-B-C.

288 Special Topics in Ecosystems (4) F, W, S. Each quarter is devoted to current topics relating to Ecosystems. May be repeated for credit as topics vary. Prerequisites: Earth System Science 200 or equivalent, or consent of instructor.

290 Seminar (1) F, W, S. Weekly seminars and discussions on topics of general and current interest in Earth System Science. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing. May be repeated for credit as topics vary.

291 Research Seminar (1 to 4) F, W, S. Detailed discussions of ongoing research in Earth System Science. Format, content, and frequency of the course are variable. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

298 Practicum in Earth System Science (4) W. For first-year graduates. Students explore research opportunities and develop a proposal for a summer research project under the direction of a faculty member. Prerequisite: consent of instructor.

299 Research (2 to 12) F, W, S. Supervised original research in areas of Earth System Science. Prerequisite: consent of instructor. May be repeated for credit. Formerly Earth System Science 280.

399 University Teaching (1 to 4) F, W, S. Required of and limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

DEPARTMENT OF MATHEMATICS

103 Multipurpose Science and Technology Building; (949) 824-5503

John S. Lowengrub, **Department Chair**

Faculty

Takeo Akasaki, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (ring theory)

Vladimir Baranovsky, Ph.D. University of Chicago, *Assistant Professor of Mathematics* (algebraic geometry)

Frank B. Cannonito, Ph.D. Adelphi University, *Professor Emeritus of Mathematics* (group theory)

Larry Chrystal, M.A. University of California, Santa Barbara, *Lecturer in Mathematics*

Michael C. Cranston, Ph.D. University of Minnesota, *Department Vice Chair for Graduate Studies and Professor of Mathematics* (probability)

Vittorio Cristini, Ph.D. Yale University, *Assistant Professor of Biomedical Engineering and Mathematics*

Donald Darling, Ph.D. California Institute of Technology, *Professor Emeritus of Mathematics*

Lawrence Man Hou Ein, Ph.D. University of California, Berkeley, *Professor of Mathematics* (algebraic geometry)

Paul C. Eklof, Ph.D. Cornell University, *Department Vice Chair for Undergraduate Studies and Professor of Mathematics* (logic and algebra)

Aleksandr Figotin, Ph.D. Tashkent University, *Professor of Mathematics* (applied mathematics, electromagnetic waves in inhomogeneous media, photonic crystals)

Mark Finkelstein, Ph.D. Stanford University, *Associate Professor of Mathematics* (analysis)

Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and Philosophy* (logic)

Michael D. Fried, Ph.D. University of Michigan, *Professor Emeritus of Mathematics* (arithmetic geometry, complex variables)

Patrick Guidotti, Ph.D. University of Zürich, *Assistant Professor of Mathematics* (applied mathematics)

Svetlana Jitomirskaya, Ph.D. Moscow State University, *Professor of Mathematics* (mathematical physics)

Richard K. Juberg, Ph.D. University of Minnesota, *Professor Emeritus of Mathematics* (analysis, differential equations)

Ludmil Katzarkov, Ph.D. University of Pennsylvania, *Professor of Mathematics* (algebraic geometry, representation theory)

Abel Klein, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics* (mathematical physics)

Natalia L. Komarova, Ph.D. University of Arizona, *Assistant Professor of Mathematics and of Ecology and Evolutionary Biology* (applied mathematics)

Rachel Lehman, Ph.D. University of California, Irvine, *Lecturer in Mathematics*

Peter Li, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor of Mathematics* (differential geometry)

Song-Ying Li, Ph.D. University of Pittsburgh, *Professor of Mathematics* (harmonic analysis, several complex variables)

John S. Lowengrub, Ph.D. New York University, *Department Chair and Professor of Mathematics* (computational mathematics)

Zhiqin Lu, Ph.D. New York University, *Associate Professor of Mathematics* (differential geometry)

Penelope Maddy, Ph.D. Princeton University, *UCI Chancellor's Professor of Logic and Philosophy of Science and of Mathematics* (logic, philosophy, and foundations of mathematics)

Caryl Margulies, Ph.D. University of California, Irvine, *Lecturer in Mathematics*

- Eric D. Mjolsness, Ph.D. California Institute of Technology, *Associate Professor of Computer Science and Mathematics*
- Qing Nie, Ph.D. Ohio State University, *UCI Chancellor's Fellow and Professor of Mathematics and Biomedical Engineering* (computational applied mathematics)
- Timur Oikhberg, Ph.D. Texas A&M University, *Associate Professor of Mathematics* (analysis)
- Richard S. Palais, Ph.D. Harvard University, *Adjunct Professor of Mathematics* (differential geometry)
- David L. Rector, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus of Mathematics* (algebraic topology, computer algebra)
- Robert C. Reilly, Ph.D. University of California, Berkeley, *Associate Professor of Mathematics* (differential geometry)
- Karl C. Rubin, Ph.D. Harvard University, *Professor of Mathematics, and Edward and Vivian Thorp Chair in Mathematics* (number theory)
- Bernard Russo, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (functional analysis)
- Donald G. Saari, Ph.D. Purdue University, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics* (dynamical systems and mathematical economics)
- Martin Schechter, Ph.D. New York University, *Professor of Mathematics* (partial differential equations, functional analysis)
- Stephen Scheinberg, Ph.D. Princeton University; M.D. University of California, Irvine, *Professor Emeritus of Mathematics* (analysis)
- Alice Silverberg, Ph.D. Princeton University, *Professor of Mathematics and Computer Science* (number theory and arithmetic algebraic geometry)
- William H. Smoke, Ph.D. University of California, Berkeley, *Professor Emeritus of Mathematics* (homological algebra)
- Knut Solna, Ph.D. Stanford University, *Associate Professor of Mathematics* (applied mathematics)
- Ronald J. Stern, Ph.D. University of California, Los Angeles, *Dean of the School of Physical Sciences and Professor of Mathematics* (geometry and topology)
- Chuu-Lian Terng, Ph.D. Brandeis University, *Professor of Mathematics and National Science Foundation "ADVANCE" Chair* (differential geometry)
- Edriss S. Titi, Ph.D. Indiana University, *Professor of Mathematics and of Mechanical and Aerospace Engineering* (partial differential equations, nonlinear analysis)
- Howard G. Tucker, Ph.D. University of California, Berkeley, *Professor of Mathematics* (probability and statistics)
- Daqing Wan, Ph.D. University of Washington, *Professor of Mathematics* (number theory, algebraic geometry)
- Frederic Yui-Ming Wan, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics and of Mechanical and Aerospace Engineering* (applied mathematics)
- Robert W. West, Ph.D. University of Michigan, *Professor Emeritus of Mathematics* (algebraic topology)
- Joel J. Westman, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (analysis)
- Robert J. Whitley, Ph.D. New Mexico State University, *Professor Emeritus of Mathematics* (analysis)
- Janet L. Williams, Ph.D. Brandeis University, *Professor Emerita of Mathematics* (probability and statistics)
- Jack Xin, Ph.D. New York University, *Professor of Mathematics* (applied mathematics)
- James J. Yeh, Ph.D. University of Minnesota, *Professor of Mathematics* (real and stochastic analysis)
- Martin Zeman, Ph.D. Humboldt University (Berlin), *Associate Professor of Mathematics* (logic and combinatorics)
- Hong-Kai Zhao, Ph.D. University of California, Los Angeles, *Associate Professor of Mathematics and Computer Science* (computational applied mathematics)
- Weian Zheng, Ph.D. Université de Strasbourg, *Professor of Mathematics* (probability)

The Department of Mathematics is engaged in teaching and fundamental research in a wide variety of basic mathematical disciplines, and offers undergraduate and graduate students the opportunity to fashion a thorough program of study leading to professional competence in mathematical research, or in an area of application.

The curriculum in mathematics includes opportunities for supervised individual study and research, and is augmented by seminars and colloquia. It is designed to be compatible with curricular structures at other collegiate institutions in California in order to enable students transferring to UCI to continue their programs of mathematics study.

Undergraduate Program

The Department offers a B.S. degree in Mathematics. Within this program there are five tracks; besides the standard track, there are four specializations or concentrations (in Mathematics for Economics, Applied and Computational Mathematics, Statistics, and Mathematics for Education). In addition, the Department offers a minor in Mathematics.

Undergraduate mathematics courses are of several kinds: courses preparatory to advanced work in mathematics, the exact sciences, and engineering; courses for students of the social and biological sciences; and courses for liberal arts students and those planning to enter the teaching field.

Admission to the Major

Students may be admitted to the Mathematics major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at http://www.due.uci.edu/Change_of_Major.html. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the required course work of one year of approved calculus.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: None.

Departmental Requirements

Lower-Division Requirements (for all Mathematics majors except those in the Education specialization):

- A. Mathematics 2A-B, 2D (or H2D), 2E (or H2E), 2J, 3A, 3D.
- B. Computing skills attained through either Information and Computer Science 21, Engineering E10, Engineering CEE10, Engineering EECS10, Engineering EECS12, Engineering MAE10, or Physics 53.
- C. One three-quarter lecture course sequence selected from Chemistry 1A-B-C; Physics 7A-B-D, 7A-B-E, or 7B-D-E. (This also satisfies UCI breadth requirement category II if taken with the accompanying laboratories.)

Upper-Division Requirements (for Mathematics majors except those in the Economics concentration, Applied and Computational specialization, or Education specialization): Most of the upper-division Mathematics courses are organized into a series of Core Areas. The Core Areas are: Numerical Analysis (courses numbered 100–109); Applied Mathematics (110–119); Algebra (120–129); Probability and Statistics (130–139); Analysis (140–149); Logic (150–159); and Geometry/Topology (160–169). There are also non-Core-Area courses (170–189). Students are required to complete 15 upper-division one-quarter lecture courses in Mathematics (with associated laboratories when applicable) as follows. (Mathematics Honors Program students follow modified requirements, as explained in a later section.)

- A. Mathematics 120A, 121A
- B. Mathematics 140A-B
- C. A third lecture course from the Algebra Core Area (120–129)
- D. A third lecture course from the Analysis Core Area (140–149)
- E. One additional lecture course from either the Algebra or the Analysis Core Area
- F. Two lecture courses from a third Core Area
- G. One lecture course from a fourth Core Area
- H. Five additional lecture courses in Mathematics chosen from the Core Areas or from courses numbered 170–189

The Department offers one concentration and three specializations. Note that all require the completion of an application and an interview with an advisor. Mathematics 13 is strongly recommended for all Mathematics majors, as preparation for upper-division courses.

Concentration in Mathematics for Economics

Admission to this concentration requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the concentration. This approval should be applied for after the student has completed Economics 20A-B, but no later than the end of the junior year.

Upper-division requirements:

- A. Twelve upper-division Mathematics lecture courses (plus any associated laboratories) including:
 1. Nine courses: Mathematics 120A, 121A-B, 140A-B-C, 131A-B-C (same as Statistics 120A-B-C).
 2. Three elective lecture courses chosen from Mathematics 105A-B (plus 105LA-LB), 107 (plus 107L), 112A-B-C, 118A-B-C, 130B-C, 171A-B, 176.
- B. Eight Economics courses: Economics 20A-B, 105A-B-C, 123A-B-C.

Specialization in Applied and Computational Mathematics

Admission to this specialization requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the specialization. This approval should be applied for no later than the end of the junior year.

Upper-division requirements:

- A. Thirteen upper-division Mathematics lecture courses (plus any associated laboratories) including:
 1. Ten required lecture courses: Mathematics 105A-B, 107 (plus 105LA-LB, 107L), 112A-B-C, 115, 121A, 140A-B.
 2. A two-quarter sequence chosen from: Mathematics 114A-B, 114A and 147, 118A-B, 120A-B, 130A-B, 131A-B, 140C-D, 162A-B, 171A-B.
 3. One additional Mathematics course numbered 100-189.
- B. Two approved courses in an area of application outside of Mathematics. Approval must be obtained in advance from the advisor for this specialization. The student is responsible for satisfying any prerequisites for these courses.

Specialization in Statistics

Admission to this specialization requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the specialization.

All the requirements for the Mathematics major must be satisfied; in fulfilling requirements F and H, students must include the following courses: Mathematics 131A-B-C (or Statistics 120A-B-C), either 130B-C or 132B-C, and two additional courses approved in advance by the advisor for this specialization.

Specialization in Mathematics for Education

Admission to this specialization requires approval in advance by the Mathematics Department. The admission process begins with completing a form at the Department office, and includes an interview with the Department's Undergraduate Advisor and its Tutor Supervisor. This approval should be applied for no later than the end of the junior year.

This specialization helps to prepare students for teaching mathematics. Students wishing to go on and teach at the intermediate and

high school levels should also consult with an academic advisor in the Department of Education. A California Commission on Teaching Credentialing (CCTC)-approved subject-matter program (SMP) in Mathematics can be easily satisfied in tandem with this specialization, and enables students to waive a subject matter exam for teachers. Specific SMP requirements and enrollment procedures are available from the Department of Education.

Lower-Division Requirements: The same as for other tracks except that Mathematics 13 may replace Mathematics 2E (or H2E).

Upper-Division Requirements:

- A. Mathematics 120A-B, 121A, 124, 140A-B, 131A-B (or Statistics 120A-B), 150, 161, 180, 184; plus one additional Mathematics course numbered 100-189.
- B. One quarter of Education 172B and two quarters of Mathematics 192.

HONORS PROGRAM IN MATHEMATICS

The Honors Program in Mathematics is open to all junior and senior Mathematics majors who meet the minimum academic qualifications of a 3.5 GPA in Mathematics courses and a 3.2 GPA overall. In addition to satisfying the requirements for the major in Mathematics (in any one of its tracks), participants must complete at least one of the two series Mathematics 205A-B-C (Introduction to Graduate Analysis) or 206A-B-C (Introduction to Graduate Algebra) with a grade of C or better. If Mathematics 205A-B-C is not taken, then 140A-B-C-D must all be completed. If Mathematics 206A-B-C is not taken, then 120A-B and 121A-B must all be completed.

In terms of satisfaction of the Mathematics major requirements, Mathematics 205A-B-C counts as the equivalent of four upper-division courses, specifically 140A-B-C-D; and 206A-B-C counts as the equivalent of four upper-division courses, specifically, 120A-B and 121A-B. The graduate sequences may be taken in place of or in addition to the undergraduate courses named.

Students must apply for the Honors Program no later than the fall quarter of their senior year. Those who are accepted enroll in the Honors Seminar (Mathematics H195A-B) during the winter and spring quarter of their senior year. At the end of the spring quarter students submit an Honors thesis, which is designed and completed under the supervision of the Honors Seminar faculty. (Mathematics H195B may be counted toward the major requirements as one of the five additional courses in area H.) Upon approval of the thesis by the Department's Honors Committee and completion of all other requirements, students graduate with Honors in Mathematics, and this distinction is noted on their transcript.

Requirements for the Minor

One course selected from Mathematics 13, 120A, or 140A, plus six additional upper-division lecture courses in Mathematics (plus the associated laboratories, where applicable) numbered 100-188.

NOTE: Nearly all upper-division courses in Mathematics have Mathematics 2A-B-J as prerequisites, and many courses have additional prerequisites such as Mathematics 2D, 2E, 3A, and/or 3D.

PLANNING A PROGRAM OF STUDY

The application process for the specializations and concentrations is designed to make sure the student gets suitable advising in planning a program of study. For all Mathematics majors, or prospective majors, assistance in planning a program of study is available from the Mathematics Department Undergraduate Advisor and the advisors for the various tracks, as well as from the academic counselors for the School of Physical Sciences. The following sample programs are only examples.

Majors should consider taking Mathematics H2D in place of 2D and H2E in place of 2E. Those in the specialization for Education should note that Mathematics 124, 161, 180, and 184 may not be offered more than once every other year and thus should be taken when offered.

Graduate Program

Graduate courses are designed to meet the needs of students doing graduate work in mathematics and in those disciplines that require graduate-level mathematics for their study. Among the fields covered are analysis, algebra, applied and computational mathematics, mathematical biology, functional analysis, geometry and topology, probability, ordinary and partial differential equations, and mathematical logic.

In addition to formal courses, there are seminars for advanced study toward the Ph.D. in various fields of mathematics. Topics will vary from year to year. Each seminar is conducted by a faculty member specializing in the subject studied. Enrollment will be subject to the approval of the instructor in charge.

MASTER OF SCIENCE IN MATHEMATICS

The Master's program serves a dual purpose. For some students it will be a terminal program of mathematics education; for others it will lead to study and research at the doctoral level. To earn the Master of Science degree, the student must satisfy course and residency requirements, and pass Comprehensive Examinations administered by the Graduate Studies Committee of the Department.

The total number of required courses for the M.S. degree is 12 courses, completed with satisfactory performance. Students are required to complete at least one series of the following courses: Mathematics 210A-B-C, 220A-B-C, or 230A-B-C. At most one undergraduate course may count as an elective course, provided it is sponsored by rank faculty and approved by the Graduate Advisor. At most one elective course (of at least three units) is allowed outside the Department.

Students will take Advisory Examinations in Algebra and Analysis upon entrance to the graduate program. The Advisory Examination in Algebra is based on the courses Mathematics 120A and 121A-B plus some advanced topics in group theory and linear algebra; students who do not pass this examination will be asked to take the Mathematics 206A-B-C sequence. The Advisory Examination in Analysis is based on the courses Mathematics 140A-B-C-D; students who do not pass this examination will be asked to take the Mathematics 205A-B-C sequence.

Students must pass two Comprehensive Examinations, one in Algebra and one in Analysis, before the beginning of their second

year in the graduate program and will be given, at most, two chances to pass each examination. Students who have passed the Advisory Examination will be exempted from taking the corresponding Comprehensive Examination.

Mathematics 199, 297, 298, 299, and 399 may not be used to fulfill course requirements.

The residency requirement ordinarily is satisfied by full-time enrollment for three quarters immediately preceding the award of the M.S. degree. When appropriate, a leave of absence may be granted between matriculation and the final quarters of study.

MASTER OF SCIENCE IN MATHEMATICS WITH A TEACHING CREDENTIAL

In cooperation with the UCI Department of Education, the Department of Mathematics sponsors a coordinated program for the M.S. degree in Mathematics and the California Single Subject Teaching Credential. This option requires 12 courses, at least eight of which must be graduate courses. Three thesis courses (Mathematics 299) may be used as part of the course work for this option. The Advisory and Comprehensive Examination requirements are the same as for the regular Master's degree. Prospective graduate students interested in this program should so indicate on their applications and can request a detailed description of the program from the Department of Mathematics or the Department of Education.

DOCTOR OF PHILOSOPHY IN MATHEMATICS

When accepted into the doctoral program, the student embarks on a program of formal courses, seminars, and individual study courses to prepare for the Ph.D. Qualifying Examinations, Advancement to Candidacy Examination, and dissertation.

All students will take Advisory Examinations in Algebra and Analysis upon entrance to the graduate program. The Advisory Examination in Algebra is based on the courses Mathematics 120A and 121A-B, plus some advanced topics in group theory and linear algebra; students who do not pass this examination will be asked to take the Mathematics 206A-B-C sequence. The Advisory Examination in Analysis is based on material covered in Mathematics 140A-B-C-D; students who do not pass this examination will be asked to take the Mathematics 205A-B-C sequence. All students who take Mathematics 205A-B-C (Analysis) and 206A-B-C (Algebra) must pass, at the beginning of their second year in the graduate program, the corresponding Comprehensive Examination, which covers the material of the Advisory Examination plus Mathematics 205 or 206, respectively.

Each student must choose at least two series of the following three series of courses—Mathematics 210A-B-C (Real Analysis), 220A-B-C (Complex Analysis), or 230A-B-C (Algebra)—and pass two written Qualifying Examinations from these courses before the end of their third year. Each examination may be taken twice. A student who passes the examination prior to taking the corresponding course will be exempted from taking the course. The Department will offer the Qualifying Examinations twice each year, during orientation week before the fall quarter and at the end of spring quarter.

By the end of their second year, students must declare a major specialization from the following areas: Algebra, Analysis, Applied and Computational Mathematics, Geometry and Topology, Logic, or Probability. Students are required to take two series of courses from their chosen area. (Students who later decide to change their area must also take two series of courses from the new area.) Additionally, all students must take two series of course outside their declared major area of specialization. Special topics courses within certain areas of specialization and courses counted toward the M.S. degree, other than Mathematics 205A-B-C and 206A-B-C,

will count toward the fulfillment of the major specialization requirement.

By the beginning of their third year, students must have an advisor specialist in their major area. With the advisor's aid, the student forms a committee for the Advancement to Candidacy oral examination. This committee will be approved by the Department on behalf of the Dean of Graduate Studies and the Graduate Council and will have five faculty members. At least one, and at most two, of the members must be faculty from outside the Department. Before the end of the third year, students must have a written proposal, approved by their committee, for the Advancement to Candidacy examination. The proposal should explain the role of at least two series of courses from the student's major area of specialization and of additional research reading material, and should have a plan for investigating specific topics under the direction of the student's adviser(s). The courses Mathematics 210A-B-C, 220A-B-C, and 230A-B-C cannot count for both Qualifying and Advancement to Candidacy Examinations. After the student meets the requirements, the Graduate Studies Committee recommends to the Dean of Graduate Studies the advancement to candidacy for the Ph.D. degree. Students should advance to candidacy by the beginning of their fourth year.

Teaching experience and training is an integral part of the Ph.D. program. All doctoral students are expected to participate in the Department's teaching program.

The candidate must demonstrate independent, creative research in Mathematics by writing and defending a dissertation that makes a new and valuable contribution to mathematics in the candidate's area of concentration. Upon advancement to candidacy a student must form a Thesis Committee, ideally a subcommittee of the Advancement Examination Committee, consisting of at least three faculty members and chaired by the student's advisor. The committee guides and supervises the candidate's research, study, and writing of the dissertation; conducts an oral defense of the dissertation; and recommends that the Ph.D. be conferred upon approval of the doctoral dissertation. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

GRADUATE PROGRAM IN MATHEMATICAL AND COMPUTATION BIOLOGY

The graduate program in Mathematical and Computational Biology (MCB) is a one-year "gateway" program designed to function in concert with selected department programs, including the Ph.D. in Mathematics. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences section of the *Catalogue*, page 156.

Courses in Mathematics

LOWER-DIVISION

1A-B Pre-Calculus. Lecture, three hours; discussion, two hours.

1A (0) F. Basic equations and inequalities, linear and quadratic functions, and systems of simultaneous equations. Four units of workload credit only.

1B (4) F, W, Summer. Preparation for calculus and other mathematics courses. Exponentials, logarithms, trigonometry, polynomials, and rational functions. Satisfies no requirements other than contribution to the 180 units required for graduation. Prerequisite: Mathematics 1A, satisfactory performance on the algebra or pre-calculus placement examinations offered periodically by the Mathematics Department, or consent of instructor.

2A-B Single-Variable Calculus (4-4) F, W, S, Summer. Lecture, three hours; discussion, two hours. **2A:** Introduction to derivatives, calculation of derivatives of algebraic and trigonometric functions; applications including curve sketching, related rates, and optimization. Antiderivatives. Prerequisite: pass the UCI Precalculus test no more than one year before the start of the quarter in which Mathematics 2A will be taken, or get a grade of C (2.0) or better in Mathematics 1B at UCI. **2B:** Definite integrals; the Fundamental theorem of calculus. Applications of integration including finding areas and volumes. Techniques of integration. Logarithmic and exponential functions. Polar coordinates. Prerequisite for Mathematics 2B: 2A. (V)

2D-E Multivariable Calculus. Lecture, three hours; discussion, two hours.

2D (4) F, W, S, Summer. Differential and integral calculus of real-valued functions of several real variables, including applications. Prerequisites: Mathematics 2A-B. Mathematics 2D and H2D may not both be taken for credit. (V)

2E (4) F, W, S, Summer. The differential and integral calculus of vector-valued functions. Implicit and inverse function theorems. Line and surface integrals, divergence and curl, theorems of Green, Gauss, and Stokes. Prerequisite: 2D. Mathematics 2E and H2E may not both be taken for credit.

H2D-E Honors Multivariable Calculus (4-4) W, S. Lecture, three hours; discussion, two hours. Covers the same material as Mathematics 2D-E, but with a greater emphasis on the theoretical structure of the subject matter. Especially recommended for prospective Mathematics majors and others with a particular interest in mathematics. Satisfies the same requirements and prerequisites as 2D-E. Prerequisites for H2D: a grade of B (3.0) or better in Mathematics 2B or a score of 4 or 5 on the Advanced Placement Calculus BC examination; for H2E: a grade of C (2.0) or better in Mathematics H2D. Mathematics 2D-E and H2D-E may not both be taken for credit. (H2D: V)

2J Infinite Series and Basic Linear Algebra (4) F, W, S, Summer. Lecture, three hours; discussion, two hours. Systems of linear equations: matrix operations; determinants; eigenvalues, and eigenvectors. Infinite sequences and series. Complex numbers. Prerequisites: Mathematics 2A-B. (V)

3A Introduction to Linear Algebra (4) F, W, S. Lecture, three hours; discussion, two hours. Vectors, matrices, linear transformations, dot products, determinants, systems of linear equations, vector spaces, subspaces, dimension. Prerequisite: Mathematics 2J. Mathematics 3A and Mathematics 6C may not both be taken for credit.

3D Elementary Differential Equations (4) F, W, S, Summer. Lecture, three hours; discussion, two hours. Linear differential equations, variation of parameters, constant coefficient cookbook, systems of equations, Laplace transforms, series solutions. Further topics as time permits. Prerequisites: Mathematics 2D and 2J.

4 Mathematics for Economists (4) F, S. Lecture, three hours; discussion, two hours. Topics in linear algebra and multivariable differential calculus suitable for economic applications. Prerequisites: Mathematics 2A-B. No credit for Mathematics 4 if taken after both Mathematics 2J and 2D. (V)

6A Discrete Mathematics for Computer Science (4) F, S, Summer. Lecture, three hours; discussion, two hours. Covers essential tools from discrete mathematics used in computer science with an emphasis on the process of abstracting computational problems and analyzing them mathematically. Topics include: combinatorics, mathematical induction, elementary probability, and asymptotic analysis. Prerequisite: high school mathematics through trigonometry. Same as Information and Computer Science 6A. (V)

6B Discrete Mathematics: Boolean Algebra and Logic (4) W, S, Summer. Lecture, three hours; discussion, two hours. Relations and their properties; Boolean algebras, formal languages; finite automata. Prerequisite: Mathematics 6A or Information and Computer Science 6A. (V)

6C Linear Algebra (4) F, W, S, Summer. Lecture, three hours; discussion, two hours. Linear equations, vector spaces and subspaces, linear functions and matrices, linear codes, determinants, scalar products. Prerequisite: high school mathematics through trigonometry. Mathematics 6C and Mathematics 3A may not both be taken for credit. NOTE: Mathematics majors must take 3A. (V)

7 Basic Statistics (4) F, W, S, Summer. Lecture, three hours; discussion, one to two hours. Introduces basic inferential statistics including confidence intervals and hypothesis testing on means and proportions, t-distribution, Chi Square, regression and correlation. F-distribution and nonparametric statistics included if time permits. Same as Statistics 7. Mathematics 7/Statistics 7 and Biological Sciences 7 may not both be taken for credit. No credit for Mathematics 7/Statistics 7 if taken after Mathematics 67/Statistics 67. (V) F, W offered for seniors only.

13 Introduction to Abstract Mathematics (4) F, W, S. Lecture, three hours; discussion, two hours. The style of precise definition and rigorous proof which is characteristic of modern mathematics. Topics include set theory, equivalence relations, proof by mathematical induction, and number theory. Students construct original proofs to statements. Strongly recommended for freshman and sophomore Mathematics majors as preparation for upper-division courses such as Mathematics 120 and 140. Prerequisite: Mathematics 2A or Mathematics 6A/ICS 6A.

67 Introduction to Probability and Statistics for Computer Science (4) S. Lecture, three hours; discussion, two hours. Introduction to the basic concepts of probability and statistics with discussion of applications to computer science. Prerequisites: Mathematics 2B, 6A, and 6C or 3A. No credit for Mathematics 7/Statistics 7 or Biological Sciences 7 if taken after Mathematics 67/Statistics 67. Same as Statistics 67.

UPPER-DIVISION

NOTE: Some of the upper-division courses listed below have one or two hours of discussion weekly in addition to the lectures. Not all courses are offered every year.

105A-B Numerical Analysis (4-4) F, W. Lecture, three hours. Introduction to the theory and practice of numerical computation. **105A:** Floating point arithmetic, roundoff; solving transcendental equations; quadrature; linear systems, eigenvalues, power method. Corequisite: Mathematics 105LA if offered. Prerequisites: Mathematics 2A-B-J; some acquaintance with computer programming. Mathematics 105A and Engineering MAE185 may not both be taken for credit. **105B:** Lagrange interpolation, finite differences, splines, Padé approximations; Gaussian quadrature; Fourier series and transforms. Corequisite: Mathematics 105LB if offered. Prerequisite: Mathematics 105A.

105LA-LB Numerical Analysis Laboratory (1-1) F, W. Laboratory, two hours. Provides practical experience to complement the theory developed in Mathematics 105A-B. Corequisite: concurrent enrollment in Mathematics 105A-B.

107 Numerical Differential Equations (4) S. Lecture, three hours. Theory and applications of numerical methods to initial and boundary-value problems for ordinary and partial differential equations. Corequisite: concurrent enrollment in Mathematics 107L if offered. Prerequisites: Mathematics 3D and 105A-B.

107L Numerical Differential Equations Laboratory (1) S. Laboratory, two hours. Provides practical experience to complement the theory developed in Mathematics 107. Corequisite: concurrent enrollment in Mathematics 107.

112A-B-C Introduction to Partial Differential Equations and Applications (4-4-4). Lecture, three hours. Introduction to ordinary and partial differential equations and their applications in engineering and science. Basic methods for classical PDEs (potential, heat, and wave equations). **112A:** Classification of PDEs, separation of variables and series expansions, special functions, eigenvalue problems. **112B:** Green functions and integral representations, method of characteristics. **112C:** Galerkin method and other discretization techniques. Prerequisites for 112A: Mathematics 2D, 3D; for 112B: 2E and 112A.

114A-B Applied Complex Analysis (4-4) F, W. Lecture, three hours. Introduction to complex functions and their applications to engineering and science. **114A:** Complex numbers, elementary functions; analytic functions; complex integration; power series; residue theory; conformal maps; applications. **114B:** Applications to potential theory, flows; heat; Laplace transforms; asymptotic expansions. Prerequisites: for 114A: Mathematics 2D, 2J. Mathematics 2E and 3D recommended. For 114B: Mathematics 114A. Mathematics 114A and Engineering EECS145 may not both be taken for credit. Mathematics 114A may not be taken for credit after Mathematics 147. Mathematics 147 and 114B may not both be taken for credit. *Mathematics 114B not offered every year.*

115 Mathematical Modeling (4). Lecture, three hours. Mathematical modeling and analysis of phenomena that arise in engineering physical sciences, biology, economics, or social sciences. Corequisite or prerequisite: Mathematics 112A or Engineering MAE140. Prerequisites: Mathematics 2D; 3A or 6C; 3D.

118A-B-C The Theory of Differential Equations (4-4-4). Lecture, three hours; discussion, one hour. Introductory theoretical course in ordinary and/or partial differential equations. Existence and uniqueness of solutions, methods of solution, the geometry of solutions. Students are expected to follow and understand proofs. Prerequisites: Mathematics 3A, 3D; 140A-B or consent of instructor.

120A Introduction to Abstract Algebra: Groups (4) F, W. Lecture, three hours; discussion, two hours. Axioms for group theory; permutation groups, matrix groups. Isomorphisms, homomorphisms, quotient groups. Advanced topics as time permits. Special emphasis on doing proofs. Prerequisite: Mathematics 3A or 6C; Mathematics 13 is strongly recommended.

120B Introduction to Abstract Algebra: Rings and Fields (4) W, S. Lecture, three hours; discussion, two hours. Basic properties of rings; ideals, quotient rings; polynomial and matrix rings. Elements of field theory. Prerequisite: Mathematics 120A.

121A-B Linear Algebra (4-4). Lecture, three hours; discussion, two hours. Introduction to modern abstract linear algebra. Special emphasis on students doing proofs. **121A:** Vector spaces, linear independence, bases, dimension. Linear transformations and their matrix representations. Theory of determinants. **121B:** Canonical forms; inner products; similarity of matrices. Prerequisite for 121A: Mathematics 3A or 6C.

124 Algebra and Some Famous Impossibilities (4). Lecture, three hours. Proof of the impossibility of certain ruler-and-compass constructions (squaring the circle; trisecting angles); nonexistence of analogs to the "quadratic formula" for polynomial equations of degree 5 or higher. The necessary algebra introduced as needed. Prerequisites: Mathematics 3A or 6C; Mathematics 120A. Previous or concurrent enrollment in Mathematics 120B and 121A recommended.

NOTE: Only one course from Mathematics 130A, 131A, and 132A may be taken for credit. Any one of these courses, or Mathematics 67, will satisfy the prerequisite for Mathematics 130B, 131B, and 132B.

130B-C Probability and Stochastic Processes (4-4). Lecture, three hours. Introductory course emphasizing applications. **130B:** Conditional probability and conditional expectations; Markov chains. **130C:** Exponential distribution and Poisson process; Brownian motion; additional topics, such as option pricing, as time permits. Prerequisites: for 130B: Mathematics 2A-B; either 67, 130A, 131A (same as Statistics 120A), or 132A; for 130C: Mathematics 130B.

131A-B-C Introduction to Probability and Statistics (4-4-4). Lecture, three hours; discussion, one to two hours. Introductory course covering basic principles of probability and statistical inference. **131A:** Axiomatic definition of probability, random variables, probability distributions, expectation. **131B:** Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference. **131C:** Linear regression, analysis of variance, model checking. Prerequisites: for 131A-B: Mathematics 2A-B; 2D-2J or 4; for 131C: Mathematics 131A-B; 3A or 6C. Same as Statistics 120A-B-C.

132B-C Discrete Probability and Mathematical Theory of Sample Surveys (4-4). Lecture, three hours. Sample selection, stratification, cluster sampling, double-sampling procedures, optimal allocation, probability-proportional-to-size sampling. Applications to problems in economics, business, public health, agriculture, and the social sciences. Prerequisites: for 132B: Mathematics 67 or 131A; for 132C: Mathematics 132B.

140A-B Elementary Analysis (4-4). Lecture, three hours; discussion, two hours. Introduction to real analysis including: the real number system, convergence of sequences, infinite series, differentiation and integration, and sequences of functions. Students are expected to do proofs. Prerequisites: Mathematics 2D, 2J; Mathematics 13 is strongly recommended.

140C-D Analysis in Several Variables (4-4). Lecture, three hours; discussion, two hours. **140C:** Rigorous treatment of multivariable differential calculus. Jacobians, Inverse and Implicit Function theorems. Prerequisites: some background in linear algebra (Mathematics 3A, 6C, or 2J), and 140B. **140D:** Rigorous treatment of multivariable integral calculus. Multiple integrals in \mathbb{R}^n ; iterated integrals and Fubini's theorem; change-of-variables theorem; differential forms and Stokes' theorem. Prerequisite: Mathematics 2E and 140C.

140T Topics in Analysis (4). Lecture, three hours; discussion, two hours. Additional topics in analysis. Varies from year to year. Prerequisites: Mathematics 140A-B and consent of instructor. May be repeated for credit as topics vary. *Not offered every year.*

141 Introduction to Topology (4) S. Lecture, three hours. The elements of naive set theory and the basic properties of metric spaces. Introduction to topological properties. Prerequisite: Mathematics 140A. Formerly Mathematics 141A.

146 Fourier Analysis (4) S. Lecture, three hours. Rigorous introduction to the theory of Fourier series and orthogonal expansions. Fourier transform. Prerequisites: Mathematics 3D and 140A-B. Mathematics 112A recommended.

147 Complex Analysis (4) W. Rigorous treatment of basic complex analysis: complex numbers, analytic functions, Cauchy integral theory and its consequences (Morera's Theorem, Argument Principle, Fundamental Theorem of Algebra, Maximum Modulus Principle, Liouville's Theorem), power series, residue calculus harmonic functions, conformal mapping. Students are expected to do proofs. Corequisite: Mathematics 140B. Prerequisite: Mathematics 140A. Mathematics 114A may not be taken for credit after 147. Mathematics 147 and 114B may not both be taken for credit.

150 Introduction to Mathematical Logic (4) F. Lecture, three hours. First-order logic through the Completeness Theorem for predicate logic. Prerequisite: consent of instructor. Only one course from Mathematics 150, Philosophy 105B, and Logic and Philosophy of Science 105B may be taken for credit.

151 Set Theory (4) W. Lecture, three hours. Axiomatic development; infinite sets; cardinal and ordinal numbers. Prerequisite: Mathematics 150. Only one course from Mathematics 151, Philosophy 105A, and Logic and Philosophy of Science 105A may be taken for credit.

152 Computability (4) S. Lecture, three hours. Computable functions; undecidability; Gödel's Incompleteness Theorem. Prerequisite: Mathematics 150. Only one course from Mathematics 152, Philosophy 105C, and Logic and Philosophy of Science 105C may be taken for credit.

161 Modern Geometry (4) Lecture, three hours. Euclidean geometry; Hilbert's axioms; absolute geometry; hyperbolic geometry; the Poincaré models; geometric transformations. Prerequisites: Mathematics 2D, 3A, 120A. Formerly Mathematics 182.

162A-B Introduction to Differential Geometry (4-4) W, S. Lecture, three hours. Applications of advanced calculus and linear algebra to the geometry of curves and surfaces in space. Prerequisites: Mathematics 2D-E, 2J. *Not offered every year.*

171A-B Mathematical Methods in Operations Research. Lecture, three hours. *Offered summer only.*

171A Linear Programming (4). Simplex algorithm, duality, optimization in networks. Prerequisite: Mathematics 3A or 6C.

171B Nonlinear Programming (4). Conditions for optimality, quadratic and convex programming, search methods, geometric programming. Prerequisites: Mathematics 2D and either 3A or 6C.

173A-B Introduction to Cryptology (4-4). Lecture, three hours. Introduction to some of the mathematics used in the making and breaking of codes, with applications to classical ciphers and public key systems. The mathematics which is covered includes topics from number theory, probability, and abstract algebra. Prerequisites: Mathematics 2A-B; 3A or 6C.

176 Mathematics of Finance (4). Lecture, three hours. Introduces the mathematics of finance with an emphasis on financial derivatives. After a review of certain tools from probability, statistics, and elementary differential and partial differential equations, concepts such as hedging, arbitrage, Puts, Calls, and the design of portfolios are discussed. Prerequisites: Mathematics 2A-B-J. Same as Economics 135.

180 Introduction to Number Theory (4). Lecture, three hours. The ring of integers. Divisibility. Prime numbers and factorization. Number-theoretic functions such as the Moebius function and the Euler function. Congruences, Moebius inversion, perfect numbers, diophantine equations, quadratic residues. Other topics as time permits. Prerequisite: Mathematics 2J.

184 History of Mathematics (4). Lecture, three hours. Topics vary from year to year. Some possible topics: mathematics in ancient times; the development of modern analysis; the evolution of geometric ideas. Students are assigned individual topics for term papers. Prerequisite: Mathematics 2D, 2J, 3A or 6C, 3D, 120A, 140A. *Not offered every year.*

189 Special Topics in Mathematics (4). Lecture, three hours. Offered from time to time, but not on a regular basis. Content and prerequisites vary with the instructor. May be repeated for credit as topics vary.

192 Tutoring in Mathematics (2). Enrollment limited to upper-division Mathematics majors participating in the Department's Tutoring Program. Admission requires approval of Department Tutor Supervisor. For students *not* in the Department's specialization in Mathematics for High School Teaching, this course satisfies no requirements other than contribution to the 180 units required for graduation. Pass/Not Pass only. Prerequisites: Mathematics 2D; 2J; 3D; 13 or 120A or 140A. May be taken twice for credit.

194 Problem-Solving Seminar (2). Develops ability in analytical thinking and problem solving, using problems of the type found in the Mathematics Olympiad and the Putnam Mathematical Competition. Students taking the course in fall will prepare for and take the Putnam examination in December. Pass/Not Pass only. NOTE: satisfies no requirement other than contribution to the 180 units required for graduation. Recommended for prospective teachers. May be taken twice for credit.

H195A-B Honors Seminar (4-4) W, S. A focused study of a topic which will vary from year to year, culminating in the writing of an Honors thesis. Prerequisite: enrollment in the Mathematics Honors Program or consent of instructor.

199A-B-C Special Studies in Mathematics (4-4-4) F, W, S. Supervised reading. For outstanding undergraduate mathematics majors in supervised but independent reading or research of mathematical topics. Prerequisite: consent of Department. NOTE: Cannot normally be used to satisfy departmental requirements.

GRADUATE

NOTE: Undergraduates who are not in the Honors Program and wish to take 205A or 206A should first get the consent of the instructor.

205A-B-C Introduction to Graduate Analysis (5-5-5) F, W, S. Lecture, four hours. Construction of the real number system, topology of the real line, concepts of continuity, differential and integral calculus, sequences and series of functions, equicontinuity, metric spaces, multivariable differential and integral calculus, implicit functions, curves and surfaces. Prerequisites: Mathematics 2A-B, 2J, 2D, 2E, 3A; or equivalent or consent of instructor.

206A-B-C Introduction to Graduate Algebra (5-5-5). Lecture, four hours. Introduction to abstract linear algebra, including bases, linear transformation, eigenvectors, canonical forms, inner products, symmetric operators. Introduction to groups, rings, and fields including examples of groups, group actions, Sylow theorems, modules over principal ideal domains, polynomials and Galois groups. Prerequisite: Mathematics 3A or equivalent or consent of instructor.

210A-B-C Real Analysis (4-4-4) F, W, S. Lecture, three hours. Measure theory, Lebesgue integral, signed measures, Radon-Nikodym theorem, functions of bounded variation and absolutely continuous functions, classical Banach spaces, L_p spaces, integration on locally compact spaces and the Riesz-Markov theorem, measure and outer measure, product measure spaces. Prerequisites: Mathematics 140A-B-C or consent of instructor.

211A-B Topics in Real Analysis (4-4). Lecture, three hours. A continuation of Mathematics 210A-B-C; topics selected by instructor.

218A-B-C Introduction to Manifolds and Geometry (4-4-4) F, W, S. Lecture, three hours. General topology and fundamental groups, covering space; Stokes theorem on manifolds, selected topics on abstract manifold theory. Prerequisites: Mathematics 205A-B-C or consent of instructor.

220A-B-C Analytic Function Theory (4-4-4) F, W, S. Lecture, three hours. Standard theorems about analytic functions. Harmonic functions. Normal families. Conformal mapping. Prerequisites: Mathematics 140A-B-C or equivalent or consent of instructor.

221A-B Several Complex Variables (4-4). Lecture, three hours. Introduction to the study of holomorphic functions in several complex variables. Topics include: Automorphism group of a domain, Bergman kernel function, boundary behavior of Poisson integrals, pluriharmonic functions, Hardy and Bergman spaces, Mobius invariant function spaces, subharmonicity, convexity. Prerequisites: Mathematics 210, 220, and 260.

225A-B-C Introduction to Numerical Analysis and Scientific Computing (4-4-4). Lecture, three hours. Introduction to fundamentals of numerical analysis from an advanced viewpoint. **225A:** Error analysis, approximation of functions, nonlinear equations. **225B-C:** Numerical linear algebra, numerical solutions of differential equations; stability. Corequisite: Mathematics 225LA-LB-LC (if offered). Prerequisites: Mathematics 3D; 105A-B or 140A-B; 121A; and Mathematics 112A or Engineering MAE140.

225LA-LB-LC Laboratory for Numerical Analysis and Scientific Computing (2-1-1). Laboratory, two hours for 225LA; one hour for 225LB and 225LC. Provides practical experience to complement the theory in Mathematics 225A-B-C. Corequisite: Mathematics 225A-B-C.

226A-B-C Computational Differential Equations (4-4-4). Lecture, three hours. Finite difference and finite element methods. Quick treatment of functional and nonlinear analysis background: weak solution, L_p spaces, Sobolev spaces. Approximation theory. Fourier and Petrov-Galerkin methods; mesh generation. Elliptic, parabolic, hyperbolic cases in 226A-B-C, respectively. Corequisite: Mathematics 226LA-LB-LC (if offered). Prerequisites: basic differential equations, such as in Mathematics 3D and either Mathematics 112A or Engineering MAE140; plus either abstract analysis (e.g., Mathematics 140A-B) or numerical analysis (Mathematics 105A-B or equivalent).

226LA-LB-LC Laboratory for Computational Differential Equations (2-1-1). Laboratory, two hours for 226LA; one hour for 226LB and 226LC. Provides practical experience to complement the theory in Mathematics 226A-B-C. Corequisite: Mathematics 226A-B-C.

230A-B-C Algebra (4-4-4) F, W, S. Lecture, three hours. Elements of the theories of groups, rings, fields, modules. Galois theory. Modules over principal ideal domains. Artinian, Noetherian, and semisimple rings and modules. Prerequisites: Mathematics 120A and 121A-B or equivalent, or consent of instructor.

232A-B-C Algebraic Number Theory (4-4-4) F, W, S. Lecture, three hours. Prime number theorem, quadratic reciprocity, Gauss sums, diophantine equations, zeta functions over finite fields. Algebraic integers, prime ideals, class groups, Dirichlet unit theorem, localization, completion, Galois extensions, Chebotarev density theorem. Representations of finite groups, L -functions, Hecke L -functions. Introduction to class field theory. Prerequisites: Mathematics 206A-B-C or consent of instructor.

233A-B-C Algebraic Geometry (4-4-4). Lecture, three hours. Basic commutative algebra and classical algebraic geometry. Algebraic varieties, morphisms, rational maps, blow ups. Theory of schemes, sheaves, divisors, cohomology. Algebraic curves and surfaces, Riemann-Roch theorem, Jacobian classification of curves and surfaces.

234A-B-C Topics in Algebra (4-4-4). Lecture, three hours. Group theory, homological algebra, and other selected topics. Prerequisites: Mathematics 230A-B-C or consent of instructor.

235A Mathematics of Cryptography (4). Lecture, three hours. Mathematics of public key cryptography: encryption and signature schemes; RSA; factoring; primality testing; discrete log based cryptosystems, elliptic and hyperelliptic curve cryptography. Prerequisite: consent of instructor.

236A-B Topics in the Mathematics of Cryptography (4-4). Lecture, three hours. Continuation of Mathematics 235A. Topics to be determined by the instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

237A-B Homological Algebra (4-4). Lecture, three hours. Categories and functors, including the category of modules over a (possibly noncommutative) ring; direct sums and products, direct and projective limits, tensor products and Hom; image, kernel, complexes, homology and exact sequences. Applications. Prerequisites: Mathematics 230A-B-C or consent of instructor.

240A-B-C Differential Geometry (4-4-4). Lecture, three hours. Riemannian manifolds, connections, curvature and torsion. Submanifolds, mean curvature, Gauss curvature equation. Geodesics, minimal submanifolds, first and second fundamental forms, variational formulas. Comparison theorems and their geometric applications. Hodge theory applications to geometry and topology. Prerequisites: Mathematics 141A-B or consent of instructor.

245A-B-C Topics in Differential Geometry (4-4-4). Lecture, three hours. Continuation of Mathematics 240A-B-C. Topics to be determined by the instructor. Prerequisites: Mathematics 240A-B-C or consent of instructor. May be repeated for credit as topics vary.

250A-B-C Algebraic Topology (4-4-4). Lecture, three hours. Provides fundamental materials in algebraic topology: fundamental group and covering space, homology and cohomology theory, and homotopy group. Prerequisites: Mathematics 230A and 141A-B, or equivalent, or consent of instructor.

260A-B-C Functional Analysis (4-4-4). Lecture, three hours. Normed linear spaces, Hilbert spaces, Banach spaces, Stone-Weierstrass Theorem, locally convex spaces, bounded operators on Banach and Hilbert spaces, the Gelfand-Neumark Theorem for commutative C^* -algebras, the spectral theorem for bounded self-adjoint operators, unbounded operators on Hilbert spaces. Prerequisites: Mathematics 210A-B-C and 220A-B-C or consent of instructor.

270A-B-C Probability (4-4-4). Lecture, three hours. Probability spaces, distribution and characteristic functions. Strong limit theorems. Limit distributions for sums of independent random variables. Conditional expectation and martingale theory. Stochastic processes. Prerequisites: Mathematics 130A-B-C and 210A-B-C or consent of instructor.

271A-B-C Stochastic Processes (4-4-4). Lecture, three hours. Processes with independent increments, Wiener and Gaussian processes, function space integrals, stationary processes, Markov processes. Prerequisites: Mathematics 210A-B-C or consent of instructor.

274 Topics in Probability (4-4-4). Lecture, three hours. Selected topics, such as theory of stochastic processes, martingale theory, stochastic integrals, stochastic differential equations. Prerequisites: Mathematics 270A-B-C or consent of instructor. May be repeated for credit as topics vary.

277A-B-C Topics in Mathematical Physics (4-4-4). Lecture, three hours. Topics to be determined by the instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

280A-B-C Mathematical Logic (4-4-4). Lecture, three hours. Basic set theory; models, compactness, and completeness; basic model theory; Incompleteness and Gödel's Theorems; basic recursion theory; constructible sets. Prerequisite: consent of instructor.

281A-B-C Set Theory (4-4-4). Lecture, three hours. Ordinals, cardinals, cardinal arithmetic, combinatorial set theory, models of set theory, Gödel's constructible universe, forcing, large cardinals, iterate forcing, inner model theory, fine structure. Prerequisites: Mathematics 280A-B-C or consent of instructor.

282A-B-C Model Theory (4-4-4). Lecture, three hours. Languages, structures, compactness and completeness. Model-theoretic constructions. Omitting types theorems. Morley's theorem. Ranks, forking. Model completeness. O-minimality. Applications to algebra. Prerequisites: Mathematics 280A-B-C.

285A-B-C Topics in Mathematical Logic (4-4-4). Lecture, three hours. Continuation of Mathematics 280A-B-C. Topics to be conducted by the instructor. Prerequisite: Mathematics 280A-B-C or consent of instructor. May be repeated for credit as topics vary.

290A-B-C Methods in Applied Mathematics (4-4-4). Lecture, three hours. Introduction to ODEs and dynamical systems: existence and uniqueness. Equilibria and periodic solutions. Bifurcation theory. Perturbation methods: approximate solution of differential equations. Multiple scales and WKB. Matched asymptotic. Calculus of variations: direct methods, Euler-Lagrange equation. Second variation and Legendre condition.

291A-B-C Topics in Applied and Computational Mathematics (4-4-4) F, W, S. Lecture, three hours. Topics to be determined by instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

295A-B-C Partial Differential Equations (4-4-4). Lecture, three hours. Theory and techniques for linear and nonlinear partial differential equations. Local and global theory of partial differential equations: analytic, geometric, and functional analytic methods. Prerequisites: Mathematics 112A-B-C, 210A-B-C or equivalent, or consent of instructor.

296 Topics in Partial Differential Equations (4). Lecture, three hours. Continuation of Mathematics 295A-B-C. Topics to be determined by the instructor. Prerequisites: Mathematics 295A-B-C or consent of instructor. May be repeated for credit as topics vary.

297 Mathematics Colloquium (1). Weekly colloquia on topics of current interest in mathematics. Satisfactory/Unsatisfactory Only. May be repeated for credit.

298A-B-C Seminar (1 to 3) F, W, S. Seminars organized for detailed discussion of research problems of current interest in the Department. The format, content, frequency, and course value are variable. Prerequisite: consent of the Department. May be repeated for credit.

299A-B-C Supervised Reading and Research (2 to 12) F, W, S. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Limited to Teaching Assistants. Does not satisfy any requirements for the Master's degree. Satisfactory/Unsatisfactory Only. May be repeated for credit.

COURSES IN PHYSICAL SCIENCES

5 California Teach 1: Introduction to Science and Mathematics Teaching (2) W, S. Seminar, 1.5 hours; field work, 1.5 hours. For students interested in becoming middle or high school teachers of mathematics or science. Meets five times for students to gain an understanding of effective, research-based teaching strategies. Includes an opportunity to experience math and science teaching in a grade K–5 classroom. Prerequisite: freshman, sophomore, or junior standing or consent of instructor. Same as Biological Sciences 14.

105 California Teach 2: Middle School Science and Mathematics Teaching (2) F, W, S. Seminar, 1.5 hours; field work, 1.5 hours. For students interested in becoming middle or high school teachers of mathematics or science. Meets five times for students to gain an understanding of effective, research-based teaching strategies. Includes an opportunity to experience teaching in a grade 6–8 classroom. Prerequisite: sophomore, junior, or senior standing or consent of instructor. Same as Biological Sciences 101.

114 Math/Science Education Teacher Apprentice Field Experience (4) F, W, S. Students assist public school classroom teachers in laboratory demonstrations and experiments, tutoring individuals or small groups. Prerequisite: consent of instructor. May be taken for credit twice. Same as Education 114.

139 Technical Writing and Communication Skills (4) F, W, S. Lecture, three hours. Workshop in writing technical reports, journal articles, proposals. Oral presentations. Communicating with the public. May not be used in satisfaction of any School or departmental requirement. Prerequisites: upper-division standing; satisfaction of the lower-division writing requirement. Open only to Physical Sciences majors.

DEPARTMENT OF PHYSICS AND ASTRONOMY

4129 Frederick Reines Hall; (949) 824-6911

Andrew J. Lankford; **Department Chair**

Faculty

Myron Bander, Ph.D. Columbia University, *Professor Emeritus of Physics* (elementary particle theory)

Aaron Barth, Ph.D. University of California, Berkeley, *Assistant Professor of Physics* (observational astrophysics)

Elizabeth Barton, Ph.D. Harvard University, *Assistant Professor of Physics* (observational cosmology and astrophysics)

Steven Barwick, Ph.D. University of California, Berkeley, *Professor of Physics* (experimental high-energy particle astrophysics)

Gregory A. Benford, Ph.D. University of California, San Diego, *Professor of Physics* (plasma physics and astrophysics)

James Bullock, Ph.D. University of California, Santa Cruz, *Assistant Professor of Physics* (theoretical astrophysics and cosmology)

David A. Buote, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Physics* (observational astrophysics and cosmology)

David Casper, Ph.D. University of Michigan, *Associate Professor of Physics* (experimental particle physics)

Gary A. Chanan, Ph.D. University of California, Berkeley, *Professor of Physics* (observational astrophysics)

Liu Chen, Ph.D. University of California, Berkeley, *Professor of Physics* (plasma theory)

Alexander (Sasha) Chernyshev, Ph.D. Russian Academy of Sciences (Russia), *Assistant Professor of Physics* (condensed matter theory)

Philip G. Collins, Ph.D. University of California, Berkeley, *Assistant Professor of Physics* (experimental condensed matter physics)

Asantha Cooray, Ph.D. University of Chicago, *Assistant Professor of Physics* (theoretical astrophysics and cosmology)

Michael B. Dennin, Ph.D. University of California, Santa Barbara, *Associate Professor of Physics* (experimental condensed matter physics)

Igor Dzyaloshinskii, Ph.D. Institute for Physical Problems (U.S.S.R.), *Professor Emeritus of Physics* (condensed matter theory)

Jonathan Lee Feng, Ph.D. Stanford University, *Associate Professor of Physics* (elementary particle theory)

Zachary Fisk, Ph.D. University of California, San Diego, *UCI Distinguished Professor of Physics* (experimental condensed matter physics)

Steven Gross, Ph.D. University of Texas, Austin, *Associate Professor of Developmental and Cell Biology, Biomedical Engineering, and Physics* (experimental biophysics)

Herbert W. Hamber, Ph.D. University of California, Santa Barbara, *Professor of Physics* (elementary particle theory)

William W. Heidbrink, Ph.D. Princeton University, *Professor of Physics* (experimental plasma physics)

Wilson Ho, Ph.D. University of Pennsylvania, *Donald Bren Professor of Physics and Chemistry* (experimental condensed matter, physics and chemistry)

Herbert Hopster, Ph.D. University of Aachen (Federal Republic of Germany), *Professor of Physics* (experimental condensed matter physics)

Manoj Kaplinghat, Ph.D. Ohio State University, *Assistant Professor of Physics* (theoretical cosmology)

David P. Kirkby, Ph.D. California Institute of Technology, *Associate Professor of Physics* (experimental particle physics)

Ilya Krivorotov, Ph.D. University of Minnesota, *Assistant Professor of Physics* (experimental condensed matter physics)

Andrew J. Lankford, Ph.D. Yale University, *Department Chair and Professor of Physics* (experimental particle physics)

Jon M. Lawrence, Ph.D. University of Rochester, *Professor of Physics* (experimental condensed matter physics)

Zhihong Lin, Ph.D. Princeton University, *Associate Professor of Physics* (plasma theory)

Mark A. Mandelkern, Ph.D. University of California, Berkeley; M.D. University of Miami, *Professor of Physics* (experimental particle physics and medical physics)

Alexei A. Maradudin, Ph.D. University of Bristol (England), *Professor Emeritus of Physics* (condensed matter theory)

Meinhard E. Mayer, Ph.D. Parhon University (Romania), *Professor Emeritus of Physics* (mathematical physics)

Roger D. McWilliams, Ph.D. Princeton University, *Professor of Physics* (experimental plasma physics)

Douglas L. Mills, Ph.D. University of California, Berkeley, *Professor Emeritus of Physics* (condensed matter theory)

William R. Molzon, Ph.D. University of Chicago, *Professor of Physics* (experimental particle physics)

Orhan Nalcioğlu, Ph.D. University of Oregon, *Professor of Radiological Sciences, Electrical and Computer Engineering, and Physics* (medical physics)

Riley Newman, Ph.D. University of California, Berkeley, *Professor of Physics* (experimental particle physics and gravitational physics)

William H. Parker, Ph.D. University of Pennsylvania, *Vice Chancellor for Research, Dean of Graduate Studies, and Professor of Physics* (experimental condensed matter physics)

Arvind Rajaraman, Ph.D. Stanford University, *Assistant Professor of Physics* (elementary particle theory)

Thorsten Ritz, Ph.D. University of Ulm (Germany), *Assistant Professor of Physics* (theoretical biophysics)

John Rosendahl, M.S. University of California, Irvine, *Lecturer in Physics*

Norman Rostoker, D.Sc. Carnegie Institute of Technology, *Professor Emeritus of Physics* (plasma physics)

James E. Rutledge, Ph.D. University of Illinois, *Professor of Physics* (experimental condensed matter physics)

Nathan Rynn, Ph.D. Stanford University, *Professor Emeritus of Physics* (experimental plasma physics)

Jonas Schultz, Ph.D. Columbia University, *Professor Emeritus of Physics* (experimental particle physics)

Dennis J. Silverman, Ph.D. Stanford University, *Professor Emeritus of Physics* (elementary particle theory)

Zuzanna Siwy, Ph.D. Silesian University of Technology, *Assistant Professor of Physics* (experimental biophysics)

Tammy Smecker-Hane, Ph.D. The Johns Hopkins University, *Associate Professor of Physics* (observational astrophysics)

Henry W. Sobel, Ph.D. Case Institute of Technology, *Professor of Physics* (experimental particle physics)

Min-Ying (Lydia) Su, Ph.D. University of California, Irvine, *Assistant Professor of Radiological Sciences and Physics in Residence* (medical physics)

Peter Taborek, Ph.D. California Institute of Technology, *Professor of Physics* (experimental condensed matter physics)

Virginia L. Trimble, Ph.D. California Institute of Technology, *Professor of Physics* (theoretical astronomy)

Gerard Van Hoven, Ph.D. Stanford University, *Professor Emeritus of Physics* (plasma physics and astrophysics)

Richard F. Wallis, Ph.D. Catholic University of America, *Professor Emeritus of Physics* (condensed matter theory)

Steven White, Ph.D. Cornell University, *Professor of Physics* (condensed matter theory)

Ruqian Wu, Ph.D. Institute of Physics (China), *Professor of Physics* (condensed matter theory)

Gaurang B. Yodh, Ph.D. University of Chicago, *Professor of Physics* (experimental particle astrophysics)

Clare Yu, Ph.D. Princeton University, *Professor of Physics* (condensed matter theory and theoretical biophysics)

Physics is that branch of science concerned with the study of natural phenomena at the fundamental level. Physicists study the smallest particles of matter (quarks and leptons), nuclei, and atoms; the fundamental forces; the properties of solids, liquids, gases, and plasmas; the behavior of matter on the grand scale in stars and galaxies; and even the origin and fate of the universe. Other disciplines such as chemistry, biology, medicine, and engineering often build upon the foundations laid by physics.

The Department of Physics and Astronomy offers courses for students of various interests, from those in the humanities and social sciences, to those in biological sciences, and to those in physics, engineering, and other sciences. Faculty members are conducting active research in several forefront areas of physical research, and there is student access to specialized research areas such as astrophysics, cosmology, elementary particle, plasma, condensed matter, biological, and medical physics at both advanced and undergraduate course levels. The Department offers several interdisciplinary concentrations and tracks which include courses taught by faculty in Biological Sciences, Chemistry, Engineering, and Medicine. The faculty is vigorous, innovative, and engaged in everything from the traditional activities of research, education, and university service to community action, literature, and national policy making, to mention a few examples. The Department encourages student-faculty interaction.

Undergraduate Program

The goal of the undergraduate major in Physics is to develop expert problem solvers with a broad understanding of physical principles. The program is flexible and prepares students for careers in industrial research, applications programming, education, law, or business, as well as for graduate study in astronomy, biomedical physics, engineering, or physics. Annual mandatory meetings with faculty advisors assist students in selecting a program that matches their aptitudes and interests. In addition to the core Physics courses, students complete either a standard track (such as the track for future Ph.D. physicists), or one of the formal concentrations or specializations (in Applied Physics, Biomedical Physics, Computational Physics, Philosophy of Physics, Physics Education, or Astrophysics). In addition, Physics majors may find the minor in Earth and Atmospheric Sciences, offered by the Department of Earth System Science, to be of interest.

The three lower-division sequences in physics are distinguished by their intended audience, their mathematical prerequisites, and the extent to which they offer preparation for more advanced courses. These aspects of the beginning courses are summarized as follows:

Physics 3: *Intended audience:* Premedical students, Biological Sciences majors. *Prerequisites:* algebra and trigonometry; concurrent enrollment in Mathematics 2A. *Preparation for advanced courses:* Physics 7D with permission.

Physics 7: *Intended audience:* Physical Sciences and Engineering majors. *Prerequisite:* concurrent enrollment in Mathematics 2. *Preparation for advanced courses:* Physics 51A.

Physics 14-21: *Intended audience:* Nonscience majors. *Prerequisites:* none. *Preparation for Advanced courses:* none.

Admission to the Major

Students may be admitted to the Physics major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at http://www.due.uci.edu/Change_of_Major.html. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of approved calculus and one year of calculus-based physics with laboratory for engineering and physics majors.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59-64.

School Requirements: None.

Departmental Requirements

Physics 7A-B-D-E with laboratory courses 7LA-LB-LD; Mathematics 2A-B, 2D-E, 2J, 3D; Physics 50; Physics 61A-B*; Physics 52A-B-C; Physics 53 (or another programming course); Physics 111A-B, 112A-B, 113A, 115A, 121, and 125A; Physics 196C or H196C or 197; and five additional coherently related four-unit courses. (The five coherently related courses are normally satisfied by concentrations, specializations, and tracks.)

* For students transferring into the major after taking Physics 51A-B, Physics 51A-B will be accepted in place of Physics 61A-B.

Concentration in Applied Physics

Requirements: The six additional coherently related courses required for the major must be in engineering and be approved by the Department of Physics and Astronomy.

Concentration in Biomedical Physics

Requirements: Biological Sciences 97, 98, and 99; Chemistry 1A-B-C, 1LB-LC, 51A-B, (or 52A-B).

Concentration in Computational Physics

Requirements: Three courses in computer science (Information and Computer Science 21, 22, 23), two courses in numerical analysis plus the accompanying laboratories (Mathematics 105A-B, 105LA-LB), and one advanced computational course (Mathematics 107, 107L or Physics 131). Mathematics 6A is also recommended as a prerequisite.

Concentration in Philosophy of Physics

Requirements: One course selected from Philosophy or Logic and Philosophy of Science 30, 104, 105A-B-C, or Mathematics 150, 151, 152; Philosophy or LPS 31; Philosophy or LPS 140; one course from History 60, 135A, 135B, 135C, or an approved alternative elective; Physics 113B; three courses selected from Philosophy or LPS 102, 121, 141A, 141B, 141C, 141D.

Concentration in Physics Education

Requirements: Education 173; two quarters of Physical Sciences 114 and/or Physics 191; five courses selected from Biological Sciences 1A-B, Chemistry 1A-B-C, Earth System Science 3, 7, 51, Physics 20A-B.

Specialization in Astrophysics

Requirements: Physics 139; three astrophysics courses selected from Physics 137, 138, 144, or 145; and any two upper-division Physics electives.

Honors Program in Physics

The Honors Program in Physics provides an opportunity for selected students majoring in Physics to pursue advanced work in one of the research areas of the Department. Admission to the program is based on an application normally submitted by the sixth week of the spring quarter of the junior year. Applicants must have an overall grade point average of at least 3.4 and a grade point average in physics courses of 3.5 or better. (Exceptions to these procedures and standards may be granted in unusual circumstances.) In selecting students for the program, the Department considers evidence of ability and interest in research.

Students admitted to the program participate in a year-long course, Physics H196A-B-C, which includes two quarters of research and a final quarter in which a written thesis is submitted. If this work and the student's final GPA are deemed of honors quality by the program advisor, the student then graduates with Departmental Honors in Physics.

PLANNING A PROGRAM OF STUDY

Physics 3 is a one-year course suitable for premedical students, students majoring in Biological Sciences, and nonscience majors. It surveys most of the important branches of physics. Laboratory work accompanies the course. Nonscience majors with some mathematical skill may wish to consider Physics 3 as an alternative to Physics 14 through 21.

A student who decides to major in Physics after completing Physics 3 should meet with the Department Undergraduate Advisor for placement information.

Physics 7 is an intensive four-quarter course for students in Physical Sciences and Engineering who are interested in a careful quantitative approach to macroscopic physics. Laboratory work accompanies the course. Students with an advanced background in physics may begin the sequence with 7B upon satisfactory completion of the Physics Placement Examination.

Physics courses numbered between 14 and 21 are general education courses intended for nonscience majors. The content and format of Physics 21 may vary from year to year.

The introduction to mathematical methods (Mathematics 2E, 2J, 3D, and Physics 50), microscopic physics (Physics 61A-B), and experimental physics (Physics 52A-B-C) are normally taken in the sophomore year.

Courses numbered 111 and above are for Physics majors and other qualified students. Courses numbered between 111 and 115 emphasize the mathematical and theoretical structures that have unified our understanding of nature. It should be noted that multi-quarter courses such as 111A-B must be taken and passed in sequential order. Any student who is so inclined may take more than the minimum one quarter of advanced laboratory work. Courses numbered between 132 and 149 introduce active subdisciplines in current research. Independent research (195, 196) is strongly encouraged. Physics 196C, H196C, and 197 stress the written and verbal communication of research findings.

Transfer students are specifically advised to seek individual consultation with the Department Undergraduate Advisor before deciding on a program of courses.

All Physics majors must complete the core courses listed below. By the end of the junior year, each student must also select a concentration or track.

Note that alternatives to Physics major requirements can be approved upon petition to the Department and the Office of the Associate Dean. Furthermore, exceptionally prepared students are allowed to enroll in graduate-level courses; to do so requires the approval of the Department Undergraduate Advisor.

Sample Program — Physics Core Curriculum

FALL	WINTER	SPRING
Freshman		
Mathematics 2A Physics 7A, 7LA	Mathematics 2B Physics 7B, 7LB	Mathematics 2D Physics 7D, 7LD
Sophomore		
Mathematics 2E Mathematics 2J Physics 7E Physics 52A	Mathematics 3D Physics 61A Physics 52B	Physics 50 Physics 61B Physics 52C
Junior		
Physics 111A Physics 112A	Physics 111B Physics 112B	Physics 53 Physics 113A Physics 115A
Senior		
Physics 125A	Physics 121	Physics 197

For a student planning graduate study in physics, additional courses in advanced physics are strongly recommended.

Sample Program — Physics Graduate School Track

FALL	WINTER	SPRING
Senior		
Physics 113B Physics Elective	Physics 113C Physics 125B	Physics 115B Physics Elective

Students preparing for graduate school in atmospheric science or physical oceanography should complete the minor in Earth and Atmospheric Sciences.

The **Applied Physics concentration** is designed to provide appropriate education to students who anticipate a career in industrial or technological research. It combines the fundamental knowledge of physical processes obtained from physics courses with the technical knowledge obtained from engineering courses. A student is required to complete six courses in the School of Engineering approved by the Physics and Astronomy Department. Examples of appropriate courses include Engineering EECS70, EECS170 and 170LA, EECS170B and 170LB, EECS170C and 170LC, EECS174, EECS188, MAE120, MAE135, and MAE147. Upon completion of the Applied Physics concentration, the student will receive a B.S. degree in Physics.

Sample Program — Applied Physics Concentration

FALL	WINTER	SPRING
Junior		
	Engr. EECS70A	Engr. EECS70B, 70LB
Senior		
Engr. ECE113A, LA	Engr. EECS113B, LB Engr. EECS178	Physics 206

The **Biomedical Physics concentration** is designed for the student who anticipates a career in physics applied to biology and medicine, such as health physics or radiological physics, or who intends to work in a scholarly field which deals with the physical aspects of biology or medicine, such as molecular biology or physiology. Completion of requirements for the Physics major is required as are nine quarters of basic courses in biology and chemistry. Students who wish to follow the Biomedical Physics concentration are advised to seek guidance early in their college careers. The requirements are such that coordination of a program in the second year is essential.

Sample Program — Biomedical Physics Concentration

FALL	WINTER	SPRING
Freshman		
Chemistry 1A	Chemistry 1B, 1LB	Chemistry 1C, 1LC
Sophomore		
Chemistry 51A	Chemistry 51B	
Junior		
Bio. Sci. 97	Bio. Sci. 98	Bio. Sci. 99

The **Computational Physics concentration** provides training for positions in software development in a wide variety of high-technology fields. For example, consider medical imaging software for magnetic resonance imaging. To write a first-rate program, one must understand the apparatus and analysis techniques (physics), use appropriate numerical techniques (numerical analysis), and employ a convenient object-oriented interface (computer science). The concentration develops this unique set of skills: physical and mathematical insight through the Physics curriculum, knowledge of modern computer programming techniques, and knowledge of numerical analysis.

Sample Program — Computational Physics Concentration

FALL	WINTER	SPRING
Junior		
ICS 21	ICS 22	ICS 23
Senior		
Math. 105A, 105LA	Math. 105B, 105LB	Math. 107, 107L

The **Philosophy of Physics concentration** is concerned with the study of the conceptual history of physics, the method of inquiry that has led to our best physical theories, and the structure and interpretation of the theories themselves. Students take courses in deductive and inductive logic, the philosophy and history of physics, and quantum mechanics. The emphasis on careful argument makes this concentration useful for anyone who wishes to pursue a graduate degree in philosophy or law, or for other careers that employ both verbal and quantitative analysis.

The **Physics Education concentration** is for students who plan a career in secondary education. An Education course, five general science courses, and two quarters of classroom experience complete the requirements for the concentration.

The **Astrophysics specialization** is primarily taken by two types of students, those planning on going on to graduate school in astronomy or astrophysics and those planning to work in aeronautics or astrophysics-related industries or government research laboratories after receiving their bachelor's degree. It also is an excellent focus for students who anticipate careers in science journalism, teaching, science administration, or public relations. The course work includes one upper-division astrophysics laboratory (139), three of four courses in astrophysics (137, 138, 144, 145), and two or more upper-division Physics courses. Of the Physics electives, students bound for graduate school are strongly advised to include Physics 113B, 115B, and 125B. Other recommended electives include Physics 131, 132, 134A-B, 135, and 136.

Sample Program — Astrophysics Specialization

Physics 139	Physics 138	Physics 144 or 145

Graduate Program

The Department offers the M.S. and Ph.D. degrees in Physics. These degrees are awarded in recognition of demonstrated knowledge of the basic facts and theories of physics and of a demonstrated capacity for independent research. Active programs of research are underway in particle physics, nanophysics, biophysics, medical physics, condensed matter physics, low-temperature physics, plasma physics, gravitational physics, astrophysics, and cosmology.

In general, graduate study in the physics Ph.D. program is expected to be a full-time activity. Other proposed arrangements should be approved by the Graduate Committee. The normal time for completion of the Ph.D. is six years of full-time study, and the maximum time permitted is seven years. Students may pursue the M.S. degree on either a full-time or part-time basis.

Complementing the formal courses, the Department offers regular colloquia and informal seminars. Graduate students are members of an intellectual community and are expected to participate fully in departmental activities. Attendance at colloquia is considered an essential part of graduate study. In addition, there are regular weekly research seminars in condensed matter, particle, and plasma physics, and astrophysics.

Sources of support available to graduate students include teaching assistantships, research assistantships, and fellowships. Students planning to pursue graduate work in Physics should obtain a copy of the Department's graduate brochure.

Students admitted into the graduate program in Physics and Astronomy may elect to pursue the M.S. or Ph.D. degree with a concentration in Chemical and Materials Physics, as described in a later section.

MASTER OF SCIENCE IN PHYSICS

The requirements for the M.S. degree are (1) at least three quarters of residence; (2) mastery of graduate course material, which must be demonstrated by passing, with a grade of B or better, a minimum of eight quarter courses including: Physics 211, 213A-B, 215A, 223, at least one other course numbered between 200 and 259, and two other courses approved by the graduate advisor, which can include undergraduate upper-division courses in related areas, and (3) either Option A, a research project and written thesis, or, Option B, a comprehensive written examination. Students following Option B should take Physics 214A.

(The requirements for the M.S. degree with a concentration in Chemical and Materials Physics differ from these.)

DOCTOR OF PHILOSOPHY IN PHYSICS

The principal requirements for the Ph.D. degree are a minimum of six quarters of residence, passage of a written and an oral examination, and successful completion and defense of a dissertation reporting results of original research. In addition, the Ph.D. candidate must complete certain graduate course requirements. There is no foreign language requirement.

Course Requirements. Students are required to exhibit mastery of the basic sequences—Classical Mechanics, Electromagnetic Theory, Quantum Mechanics, Mathematical Physics, and Statistical Physics. A minimum of 12 quarter courses including 211, 212A, 213A-B, 214A, 215A-B, 223, at least two other courses numbered between 200 and 259, and two other courses approved by the graduate advisor, must be passed with a grade of B or better. Students are strongly encouraged to take Physics 211, 212A, 213A-B, 214A, 215A-B, and 223 in their first year of study. It is expected that students, having selected a research specialty, will ordinarily take the core courses in that subject in their second year of study. Students

pursuing research in elementary particle physics ordinarily complete Physics 215C during their first year and Physics 234A-B-C and 235A-B during their second year. Students pursuing research in plasma physics ordinarily complete Physics 239A during their first year and Physics 239B-C-D their second year; Physics 249 is also recommended. Students pursuing research in condensed-matter physics ordinarily take Physics 238A-B-C during their second year. Students pursuing research in astrophysics/cosmology ordinarily complete Physics 240A during spring of their first year; 240B, C in their second year; and one or more of Physics 241A, B, C, D in their second or subsequent years.

(The requirements for the Ph.D. degree with a concentration in Chemical and Materials Physics differ from these, as outlined below.)

Comprehensive Examination. Progress toward the degree is assessed by a written comprehensive examination covering a broad range of fundamentals of physics at the graduate and advanced undergraduate levels. It is offered twice a year, and a student is allowed a maximum of three attempts. The first attempt must occur before the end of the fall quarter of the student's second year, and the examination must be passed by the end of spring quarter of the student's second year.

Advancement to Ph.D. Candidacy. For advancement to Ph.D. candidacy, a student must pass an oral advancement examination. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normal progress toward the degree, it must be taken by the end of the student's third year. The candidacy committee that administers this examination will contain one or two faculty members from outside the Department. This oral examination will cover material principally related to the broad and general features of the student's dissertation area.

Teaching Program. Experience in teaching is an integral part of the graduate program, and all Ph.D. students are required to participate in the teaching program for at least three quarters during their graduate careers. All new teaching assistants are required to enroll in Physics 269. Students who are not citizens from countries where English is either the primary or dominant language as approved by the UCI Graduate Council must pass either the Test of Spoken English (TSE) or the UCI SPEAK (Speaking Proficiency English Assessment Kit) examination. One of these tests must be passed before such a student can qualify for a teaching assistantship in order to fulfill the Department's teaching requirement. The Department expects one of these tests to be passed by the end of the student's second year at UCI.

Dissertation. A dissertation summarizing the results of original research performed by the student under the supervision of a doctoral committee, appointed by the Department Chair on behalf of the Dean of Graduate Studies and the Graduate Council, will be required for the Ph.D. degree. A criterion for the acceptability of a dissertation by the Department is that it be suitable for publication in a scientific journal. The dissertation must not have been submitted to any other institution prior to its submission to the UCI Physics and Astronomy Department.

Defense of Dissertation. Upon completion of the dissertation, the student will take an oral examination, open to the public, before the doctoral committee.

CONCENTRATION IN CHEMICAL AND MATERIALS PHYSICS

This is an interdisciplinary program between condensed matter physics and physical chemistry, which is designed to eliminate the barrier between these two disciplines. Students with B.S. degrees in Physics, Chemistry, or Materials Science and Engineering, are encouraged to apply to the program. The goal of the concentration in Chemical and Materials Physics (ChMP) is to provide students

with a broad interdisciplinary education in the applied physical sciences that emphasizes modern laboratory and computational skills. The program accepts students for both the M.S. and the Ph.D. degrees. Upon admission to the program, students are assigned two faculty advisors, one from the Department of Physics and Astronomy, and one from the Department of Chemistry, to provide guidance on curriculum and career planning.

The curriculum for the M.S. program includes a summer session to assimilate students with different undergraduate backgrounds; formal shop, laboratory, and computational courses; a sequence on current topics to bridge the gap between fundamental principles and applied technology; and a course to develop communication skills. The required courses include thirteen core courses and three electives (subject to advisor approval) as follows: **Core:** Physics 206, 207, 228, 229A, 266; Chemistry 231A-B or Physics 215A-B, Chemistry 231C, 232A-B; one course from each of the following three groups: Physics 211 or 222; Physics 133 or 238A or Chemistry 236; Physics 129 or 273 or Chemistry 139. **Electives:** Physics 134, 213C, 223, 224, 229B, 233A, 233B, 238A, Chemistry 213, 225, 226, 232C, 233, 243, 248, 249, Engineering EECS278, EECS285B, MSE201, MSE259A. In addition to the required courses, M.S. students complete a master's thesis. Students are required to advance to candidacy for the master's degree at least one quarter prior to filing the master's thesis. There is no examination associated with this advancement, but the thesis committee needs to be selected and appropriate forms need to be filed. The M.S. program prepares students to compete for high-tech jobs or to begin research toward a Ph.D. degree.

Successful completion of the M.S. degree requirements qualifies students for the Ph.D. program. Progress toward the Ph.D. degree is assessed by a written comprehensive examination administered in the summer after completion of the first year of study. This examination covers comprehensive knowledge acquired in course work, and the content of the examination depends upon the student's specific area of interest.

Participants in the Ph.D. program take an examination for formal advancement to candidacy. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normal progress toward the degree, it must be taken by the end of the student's third year. The examination is comprised of two parts: (a) a written report on a topic to be determined in consultation with the research advisor and (b) an oral report on research accomplished and plans for completion of the Ph.D. dissertation.

Courses in Physics

LOWER-DIVISION

NOTE: The Department of Physics and Astronomy strictly enforces all course prerequisites. Courses with sequential designations (for example, 1A-B-C) indicate multiple-quarter courses; each course in a sequence is prerequisite to the one following.

3A-B-C Basic Physics (4-4-4) F, W, S, Summer. Lecture, three hours; discussion, one hour. **3A:** Vectors; motion, force, and energy. **3B:** Fluids; heat; electricity and magnetism. **3C:** Waves and sound; optics; quantum ideas; atomic and nuclear physics; relativity. Prerequisite or corequisite: Mathematics 2A-B. (II)

3LB Basic Physics Laboratory (1.5) W, S, Summer. Laboratory, three hours. Practical applications of electronics and classical physics to biology. Goals include skill to use oscilloscope and other basic instrumentation. (II)

3LC Basic Physics Laboratory (1.5) S, Summer, F. Laboratory, three hours. Practical applications of physics to medical imaging. Topics include optics, radioactivity, and acoustics. Prerequisite: Physics 3LB. (II)

7A-B-D Classical Physics (4-4-4) F, W, S; W, S, Summer. Lecture, three hours; discussion, one hour. **7A:** Units; vectors; motion; momentum; force. **7B:** Energy; rotation and gravity. **7D:** Electricity and magnetism. Corequisites for 7A-B-D: corresponding quarters of Physics 7LA-LB-LD; Mathematics 2A-B and 2C or 2D. Physics 7A and Physics 1 may not both be taken for credit. (II)

7LA-LB-LD Classical Physics Laboratory (1-1-1) F, W, S; W, S, Summer. Laboratory, two hours. Experiments related to lecture topics in Physics 7A-B-D. Corequisite: corresponding quarter of Physics 7A-B-D. (II)

7E Classical Physics (4) F, Summer. Lecture, three hours; discussion one hour. Fluids; oscillations; waves; and optics. Prerequisites: Physics 7B, Mathematics 2B. (II)

COURSES FOR NON-MAJORS

Course numbers between 14 and 21 are assigned to courses especially designed for students majoring in programs other than the physical sciences.

14 Physics of Energy and the Environment (4). Lecture, three hours. The physics of society's energy production and consumption, and of their influences on the environment. Topics include fossil and renewable energy resources; nuclear power; prospects for a hydrogen economy; efficient and environmentally benign transportation; efficient home and commercial energy usage. (II)

15 Physics of Music (4). Lecture, three hours. Introduces basic physical principles underlying generation and properties of music, including basic properties of sound waves, musical scales and temperament, musical instruments, and acoustics of music halls. No mathematics background required, but high school algebra is recommended. (II)

16 Physics of Weapons and Their Control (4). Lecture, three hours. Introduction to physics related to issues of peace and conflict. Topics include: nuclear and non-nuclear weapons, delivery systems, missile defense systems, satellite surveillance systems, technology for homeland security, and arms control. Same as International Studies 16. (II)

17 Physics of Athletics (4). Lecture, three hours. Introduces basic physical principles behind motion. Examples are drawn from a range of athletic endeavors (such as ice skating, baseball, diving, and dance). No mathematics background required, but high school algebra is recommended. (II)

18 How Things Work (4) S. Lecture, three hours. Survey of the physical basis of modern technology, with an emphasis on electronics and materials. Topics include power generation and distribution, communication (radio, TV, telephone, computers, tape recorders, CD players), imaging (optics, x-rays, MRI), and modern materials (alloys, semiconductors, superconductors, polymers, ceramics, liquid crystals). (II)

19 Great Ideas of Physics (4). Lecture, three hours. Introduces nonscience majors to physics, examining important breakthroughs and controversies. Potential topics: Einstein's Relativity; Heisenberg's Uncertainty Principle; black holes; extra-dimensions; antimatter. Case studies illustrate the essential nature of scientific review and independent confirmation of results. No mathematics background required. (II)

20 Physical Science of the Earth and Cosmos. Introduction to the physical environment. The formation, structure, and evolution of the Earth, planets, stars, galaxies, and the universe as a whole.

20A Introduction to Astronomy (4) F, S. History of astronomy. Underlying physics. Objects in the solar system and how they are studied. Properties of stars: their formation, structure, and evolution. Pulsars and black holes. Galaxies and quasars. (II)

20B Cosmology: Man's Place in the Universe (4) W. "Cook's Tour" of the universe. Ancient world models. Evidence for universal expansion; the size and age of the universe and how it all began. The long-range future and how to decide the right model. Anthropic principle. (II)

20C Observational Astronomy (4). Lecture, three hours; discussion, one hour. Fundamental observational techniques used in astronomy, including the analysis and interpretation of images and spectra that allow students to determine orbits of planets and moon, time evolution of supernovae, ages of star clusters, Hubble's Law. Naked-eye observations of the night sky. Observations of stars and galaxies with the UCI 24-inch telescope. Current events in observational astronomy. Prerequisites: Physics 20A, 20B. (II)

20D Space Science (4) S. Motions of planets, satellites, and rockets. Propulsion mechanisms and space flight. The solar radiation field and its influence on planets. The interplanetary medium, solar wind, and solar-terrestrial relations. (II)

21 Special Topics in Physics (4). Lecture, three hours. Topics vary. Past topics have included physics and music, Newton, planetary science. Lectures on areas of special interest in physics are used to introduce students to scientific method, fundamental laws of science, qualitative and quantitative analysis of data. May be repeated for credit as topics vary. (II)

ADVANCED LOWER-DIVISION

50 Mathematical Methods for Physical Science (4) S. Lecture, three hours; discussion, one hour. Mathematica and its applications to linear algebra, differential equations, and complex functions. Fourier series and Fourier transforms. Other topics in integral transforms. Corequisite: Mathematics 2E. Prerequisites: Mathematics 2J and 3D.

51A-B Modern Physics (4-4) W, S. Lecture, three hours; discussion, one hour. **51A:** Wave-particle duality; quantum mechanics; special relativity; statistical mechanics. Prerequisites: Physics 7E and Mathematics 2D. **51B:** Atoms; molecules; solids, nuclei; elementary particles. Physics 51A-B is for nonmajors only. Corresponding segments of Physics 51A-B and 61A-B may not both be taken for credit.

52A-B-C Fundamentals of Experimental Physics (2-2-2) F, W, S. Laboratory, four hours. **52A:** Optics: lenses, mirrors, polarization, lasers, optical fibers, interference, spectra. Corequisite: Physics 7E. **52B:** Circuits: oscilloscope, meters, DC and AC circuits. Corequisite: Mathematics 2J. Prerequisite: Physics 7D. **52C:** Data analysis: random and systematic errors, curve fitting; nuclear counting; quantum experiments. Prerequisite: Physics 51A or 61A.

53 Introduction to C and Numerical Analysis (4) S. Introduction to structured programming; in-depth training in C. Elementary numerical methods applied to physics problems. Prerequisites: Mathematics 2J and 3D.

61A-B Modern Physics for Majors (4-4) W, S. Lecture, three hours; discussion, one hour. **61A:** Special Relativity; wave-particle duality; Schrödinger equation; angular momentum. Prerequisites: Physics 7E and Mathematics 2D. **61B:** Atomic transitions; molecules; statistical physics; solids; nuclei; elementary particles; cosmological models. Corresponding segments of Physics 61A-B and 51A-B may not both be taken for credit.

H90 The Idiom and Practice of Science (4) W. Lecture, three hours; discussion, two hours. A series of fundamental and applied scientific problems of social relevance. Possible topics include Newton's Laws, calculus, earthquake physics, and radiation. Open only to members of the Campuswide Honors Program. (II)

99 General Physics Seminar (1) F, W, S. Designed to introduce undergraduate students to current topics in physics. Focus is discussion of selected readings on current research issues. May be repeated for credit.

UPPER-DIVISION

100 Computational Methods (4) F, W, S. Lecture, three hours; laboratory, six hours. Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science. Prerequisite: consent of instructor. Concurrent with Physics 229A.

106 Laboratory Skills (4 to 6) F, W, S. Lecture, three hours; laboratory, six to ten hours. Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills. Prerequisite: consent of instructor. Concurrent with Physics 206 and Chemistry 206.

111A-B Classical Mechanics (4-4) F, W. Lecture, three hours; discussion, one hour. One dimensional motion and oscillations; three-dimensional motion, non-inertial coordinates, conservation laws, and Lagrangian and Hamiltonian dynamics; rigid body motion and relativity. Prerequisites: Physics 7E and 50; Mathematics 2J and 3D.

112A-B Electromagnetic Theory (4-4) F, W. Lecture, three hours; discussion, one hour. Electric, magnetic, and gravitational fields and potentials; electrodynamics; mechanical and electromagnetic waves and radiation. Prerequisites: Physics 7D and 50; Mathematics 2E.

113A-B-C Quantum Physics (4-4-4) S, F, W. Lecture, three hours; discussion, one hour. Inadequacy of classical physics; time independent and time dependent Schrodinger equation; systems in one, two, and three dimensions; matrices; Hermitian operators; symmetries; angular momentum; perturbation theory; scattering theory; applications to atomic structure; emphasis on phenomenology. Prerequisites: Physics 111B and 112B.

115A Statistical Physics (4) S. Lecture, three hours. Microscopic theory of temperature, heat, and entropy; kinetic theory; multicomponent systems; quantum statistics. Prerequisite: Physics 111A.

115B Thermodynamics (4) S. Lecture, three hours. Macroscopic theory of temperature, heat, and entropy; mathematical relationships of thermodynamics; heat engines; phase transitions. Prerequisite: Physics 115A.

120 Electronics for Scientists (4) F. Lecture, two hours; laboratory, four hours. Applications of modern semiconductor devices to physical instrumentation. Characteristics of semiconductor devices, integrated circuits, analog and digital circuits. Prerequisite: Physics 52B or consent of instructor.

121 Advanced Laboratory (4) W, S. Lecture, one hour; laboratory, eight hours. Experiments in atomic, condensed matter, nuclear, particle, and plasma physics. Introduction to instrumentation and a first experience in the research laboratory. Prerequisites: Physics 51B or 61B, and 52C. May be taken for credit three times.

125A-B Mathematical Physics (4-4) F. Lecture, three hours; discussion, one hour. Complex variables; Legendre and Bessel functions; complete sets of orthogonal functions; partial differential equations; integral equations; calculus of variations; coordinate transformations; special functions and series. Prerequisite: Physics 113A.

131 Special Topics in Computational Physics (4). Lecture, three hours. Modern symbolic and numerical techniques on state-of-the-art computers for solving problems in classical and quantum mechanics, fluids, electromagnetism, and mathematical physics. Prerequisites: Physics 53, 113A, and 115A. May be repeated for credit as topic varies. Concurrent with Physics 231.

CAPSTONE SEMINARS

NOTE: Some of the upper-division courses listed below have one or two hours of discussion weekly in addition to the lectures. Students should refer to the quarterly *WebSOC*, *Searchable Schedule of Classes* for specific information.

132 Introduction to Nuclear Physics (4). Lecture, three hours. Nucleons and nuclear structure, radioactivity, neutron-proton scattering, the deuteron, nuclear reactions. Prerequisite: Physics 113A.

133 Introduction to Condensed Matter Physics (4) S. Lecture, three hours. Phenomena of solids and their interpretation in terms of quantum theory. Prerequisites: Physics 113B and 115A.

134A Optics (4) F of even years. Lecture, three hours; discussion, one hour. Fundamentals of geometrical and physical optics. Lenses and mirrors, interference and diffraction, the eye and vision, instrumentation for astronomy and medicine. Corequisite: Physics 112B. Prerequisite: Physics 112A.

134B Modern Optics (4) W of odd years. Lecture, three hours. Interaction of radiation with matter; lasers; nonlinear optics; optical properties of solids; absorption and scattering of light; modern spectroscopic techniques. Corequisite: Physics 112B. Prerequisite: Physics 112A. Formerly Physics 134.

135 Introduction to Plasma Physics (4) F. Lecture, three hours. Ionization and discharge mechanisms; microscopic motions and kinetic equations; macroscopic fluid theories; electrodynamics of plasma; waves and instabilities; examples of laboratory and cosmic phenomena. Prerequisite: Physics 112B.

136 Introduction to Particle Physics (4) S. Lecture, three hours. Experimental techniques and theoretical concepts of high-energy phenomena: accelerators and detectors; classification of particles and interactions; particle properties; symmetries and mass multiplets; production and decay mechanisms. Prerequisite: Physics 113B.

137 Introduction to Cosmology (4) W. Lecture, three hours; discussion, one hour. Solution of the differential equations governing the expansion of the Universe. Observational determinations of the parameters governing the expansion. Big Bang inflation, primordial nucleosynthesis, and cosmic microwave background. Dark matter, dark energy, and large-scale structure of the Universe. Prerequisites: Physics 111A, Mathematics 3D.

138 Extragalactic Astrophysics (4) W. Lecture, three hours; discussion, one hour. Introduction to the solar neighborhood, Milky Way, and other galaxies. Interstellar medium. Star formation. Stellar populations. Evolution of spiral, elliptical, and irregular galaxies. Supermassive black holes, quasars, and active galaxies. Galaxies as probes of the expansion rate of the Universe. Prerequisites: Physics 111A-B.

139 Observational Astrophysics (4) F. Lecture, one hour; laboratory, eight hours. Telescopes and astronomical observations, imaging with CCD detectors and image processing techniques. Photometry and spectroscopy of stars, galaxies, and quasars. Advanced imaging techniques such as deconvolution, adaptive optics, and interferometry. Prerequisites: Physics 52A-B-C; Physics 53 or equivalent computing experience.

144 Stellar Astrophysics (4) S of odd years. Lecture, three hours. Stars: their structure and evolution; physical state of the interior; the Hertzsprung-Russell diagram, stellar classification, and physical principles responsible for the classification; star formation; nuclear burning; giant and dwarf stars; neutron stars and black holes. Prerequisites: Physics 51B or 61B, 111A, and 112A.

145 High-Energy Astrophysics (4) S of even years. Lecture, three hours. Production of radiation by high-energy particles, white dwarfs, neutron stars, and black holes. Evolution of galactic nuclei, radio galaxies, quasars, and pulsars. Cosmic rays and the cosmic background radiation. Prerequisites: Physics 51B or 61B, 111A, and 112A.

146A-B Biophysics of Molecules and Molecular Machines (4-4) F, W. Lecture, three hours. Physical concepts and experimental and computational techniques used to study the structure and function of biological molecules and molecular machines with examples from enzyme action, protein folding, molecular motors, photobiology, chemotaxis, and vision. Prerequisite: Physics 115A or consent of instructor. Concurrent with Physics 230A-B.

147A-B-C Principles of Imaging. Lecture, three hours.

147A Principles of Imaging (4) F. Linear systems, probability and random processes, image processing, projection imaging, tomographic imaging. Prerequisite: Physics 51B or 61B or equivalent. Concurrent with Physics 233A and Engineering EECS202A.

147B Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging (4) W. Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging. Prerequisite: Physics 147A. Concurrent with Physics 233B and Engineering EECS202B.

147C Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical (4) S. Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging. Prerequisite: Physics 147B. Concurrent with Physics 233C and Engineering EECS202C.

EDUCATION

191 Field Experience in Physics Education (1 to 4) F, W, S. Students develop and perform physics assemblies at neighboring public schools. Prerequisites: Physics 7B-D-E or equivalent. Pass/Not Pass only. May be taken for a total of eight units.

192 Tutoring in Physics (1 to 2). Enrollment limited to students participating in the Society of Physics Students (SPS) tutoring program. This course satisfies no requirements other than contribution to the 180 units required for graduation. No more than 12 units may be counted toward the 180 units required. Prerequisite: Physics 7E or consent of instructor.

RESEARCH

195 Undergraduate Research (4). Open to seniors and occasionally to juniors with consent of the Department. Pass/Not Pass Only.

196A-B-C Thesis in Physics (4-4-4) F, W, S. Independent research conducted under the guidance of a faculty member. Students' research results are discussed in oral presentations, and a written proposal, progress report, and thesis are submitted. Prerequisites: Physics 113A and consent of instructor; prerequisite for 196C: satisfactory completion of the lower-division writing requirement. Physics 196A-B-C and H196A-B-C may not both be taken for credit. Physics 196C and 197 may not both be taken for credit.

H196A-B-C Honors Thesis in Physics (4-4-4) F, W, S. Independent research conducted under the guidance of a faculty member. Students' research results are discussed in oral presentations, and a written proposal, progress report, and thesis are submitted. Prerequisite for H196C: satisfactory completion of the lower-division writing requirement. Open only to participants in the Honors Program in Physics and to Physics majors participating in the Campuswide Honors Program. Physics H196A-B-C and 196A-B-C may not both be taken for credit. Physics H196C and 197 may not both be taken for credit. Formerly Physics H195, H196.

197 Research Writing for Physics Majors (4) S. Students perform a research project under the guidance of a faculty member. Written and oral proposals, a progress report, and written and oral final reports are completed. Prerequisites: Physics 111A-B, 112A-B, 113A, 115A, and satisfactory completion of the lower-division writing requirement. Only one course from Physics 197, 196C, and H196C may be taken for credit.

199 Readings on Special Topics (1 to 4). Prerequisite: consent of the Department. Pass/Not Pass Only. May be repeated for credit.

GRADUATE

206 Laboratory Skills (4 to 6) S, Summer. Lecture, three hours; laboratory, six to ten hours. Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills. Prerequisite: consent of instructor. Same as Chemistry 206. Concurrent with Physics 106.

207 Chemistry for Physicists (4). Lecture, three hours; discussion, one hour. Introduction to fundamental concepts in molecular structure and reactivity: theory of bonding, valence and molecular orbitals; structure and reactivity in inorganic chemistry; elements in molecular group theory; nomenclature in organic chemistry; and survey of macromolecules. Same as Chemistry 207.

208 Mathematics for Chemists (4). Lecture, three hours; discussion, one hour. Applications of mathematics to physical and chemical problems. Calculus of special functions, complex variables and vectors; linear vector spaces and eigenvalue problems. Differential equations. Same as Chemistry 208.

211 Classical Mechanics (4) F. Lecture, three hours. Variational principles, Lagrange's equations; applications to two body problems, small oscillation theory, and other phenomena. Hamilton's equations. Hamilton-Jacobi theory. Canonical transformations.

212A-B Mathematical Physics (4-4) F, S. Lecture, three hours. **212A:** Complex variables and integration; ordinary and partial differential equations; the eigenvalue problem. **212B:** Integral transforms; integral equations; probability and statistics; tensor analysis.

213A-B Electromagnetic Theory (4-4) W, S. Lecture, three hours. Electrostatics; magnetostatics; relativity; classical electron theory; fields in vacuum and matter; retardation; radiation and absorption; dispersion; propagation of light; diffraction; geometric optics; theories of the electric and magnetic properties of materials; scattering.

213C Modern Optics (4). Lecture, three hours. Modern optics, linear and non-linear. Waves in dispersive media, weak non-linearities, higher order interactions, light scattering, strong non-linearities, laser radiation. Prerequisites: Physics 213A-B.

214A-B Statistical Physics (4-4) S, F. Lecture, three hours. **214A:** Maxwell-Boltzmann, Bose-Einstein, Fermi-Dirac statistics; ideal and imperfect gases; thermodynamic properties of solids; transport theory. **214B:** Phase transitions; critical phenomena; cooperative phenomena; fluctuations.

214C Many Body Theory (4). Application of field theory methods, perturbative and non-perturbative, to many particle systems; second quantization, Feynman diagrams, linear response theory, and functional integral methods applied to the ground state and at finite temperature. Prerequisites: Physics 214A and 215A-B.

215A-B-C Quantum Mechanics (4-4-4) F, W, S. Lecture, three hours. **215A:** Foundations; Dirac notation; basic operators and their eigenstates; perturbation theory; spin. **215B:** Atomic physics; scattering theory, formal collision theory; semi-classical radiation theory; many body systems. **215C:** Quantization of the electromagnetic field; relativistic quantum mechanics; second quantization.

222 Continuum Mechanics (4) F. Introduction to the continuum limit and stress and strain tensors. Hydrodynamics of perfect fluids; two-dimensional problems, motion of incompressible viscous fluids, Navier-Stokes equations. Basic elasticity theory. Description of viscoelastic materials. Introduction to nonlinear behavior instabilities.

223 Numerical Methods (4) W. Lecture, three hours; laboratory, one hour. Introduction to theory and practice of modern numerical methods. Techniques are drawn from topics such as solution of differential equations, Monte Carlo methods, Fast Fourier transforms, and evaluation of special functions.

224 Discoveries and Inventions of Modern Physics (4). Lecture, three hours; discussion, one hour. Introduction to physical phenomenology intended to complement the more formal traditional physics curriculum, with topics drawn from atomic and nuclear physics, condensed matter, particle physics, plasma physics, and astrophysics.

228 Electromagnetism (4) W. Lecture, three hours; discussion, one hour. Maxwell's equations, electrodynamics, electromagnetic waves and radiation, wave propagation in media, interference and quantum optics, coherent and incoherent radiation, with practical applications in interferometry, lasers, waveguides, and optical instrumentation. Prerequisite: consent of instructor. Same as Chemistry 228.

229A-B Computational Methods (4-4). Lecture, three hours; laboratory, six hours. Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science. Prerequisite: consent of instructor. Same as Chemistry 229A-B. Physics 229A is concurrent with Physics 100.

230A-B Biophysics of Molecules and Molecular Machines (4-4) F, W. Lecture, three hours. Physical concepts and experimental and computational techniques used to study the structure and function of biological molecules and molecular machines with examples from enzyme action, protein folding, molecular motors, photobiology, chemotaxis, and vision. Concurrent with Physics 146A-B.

231 Special Topics in Computational Physics (4). Lecture, three hours. Modern symbolic and numerical techniques on state-of-the-art computers for solving problems in classical and quantum mechanics, fluids, electromagnetism, and mathematical physics. Concurrent with Physics 131. May be repeated for credit as topic varies. Formerly Physics 231A.

233A-B-C Principles of Imaging. Lecture, three hours.

233A Principles of Imaging (4) F. Linear systems, probability and random processes, image processing, projection imaging, tomographic imaging. Prerequisite: Physics 51B or 61B or equivalent. Same as Engineering EECS202A. Concurrent with Physics 147A.

233B Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging (4) W. Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging. Prerequisite: Physics 233A. Same as Engineering EECS202B. Concurrent with Physics 147B.

233C Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical (4) S. Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging. Prerequisite: Physics 233B. Same as Engineering EECS202C. Concurrent with Physics 147C.

234A Elementary Particle Physics (4) F. Lecture, three hours. Overview of Standard Model theory and phenomenology. Electromagnetic, strong and weak forces, quark model, interactions with matter, particle detectors and accelerators. Prerequisite: Physics 215C or consent of instructor.

234B-C Advanced Elementary Particle Physics (4-4) W, S. Lecture, three hours. $SU(3) \times SU(2) \times U(1)$ model of strong, weak, and electromagnetic interactions. K-meson system and CP violation, neutrino masses and mixing, grand-unified theories, supersymmetry, introduction to cosmology and its connection to particle physics. Prerequisites: Physics 234A and 235A.

235A Quantum Field Theory (4) F. Lecture, three hours. Canonical quantization, scalar field theory, Feynman diagrams, tree-level quantum electrodynamics. Prerequisites: Physics 215C and completion of first-year graduate courses.

235B Advanced Quantum Field Theory (4) W. Lecture, three hours. Path-integral techniques, loop diagrams, regularization and renormalization, anomalies. Prerequisites: Physics 235A and completion of first-year graduate courses.

238A-B-C Condensed Matter Physics (4-4-4) F, W, S. Lecture, three hours. Bonding in solids; crystal symmetry and group theory, elastic properties of crystals; lattice vibrations, interaction of radiation with matter; cohesion of solids; the electron gas; electron energy bands in solids; ferromagnetism; transport theory; semiconductors and superconductors; many-body perturbation theory. Prerequisites: Physics 214A or Chemistry 232A; Physics 215B or Chemistry 231B; Physics 228 or 213B; or consent of instructor.

239A-B-C-D Plasma Physics (4-4-4-4) S, F, W, S. Lecture, three hours. **239A:** Basic concepts, orbits, kinetic and fluid equations, Coulomb collisions, fluctuations, scattering, radiation. **239B:** Magnetic confinement, MHD equilibrium and stability, collisional transport. **239C:** Linear waves and instabilities, uniform un-magnetized and magnetized plasmas, non-uniform plasmas. **239D:** Nonlinear plasma physics, quasilinear theory, large-amplitude coherent waves, resonance broadening, strong turbulence.

240A Galactic Astrophysics (4) S. Lecture, three hours. The morphology, kinematics, and evolution of our Milky Way and other galaxies. Topics include stellar formation and stellar evolution, end states of stars (supernovae, neutron stars), the distribution of stars, interstellar gas and mass in galaxies. The Local Group.

240B Cosmology (4) F. Lecture, three hours. An introduction to modern cosmology set within the context of general relativity. Topics include the expansion history of the Universe, inflation, the cosmic microwave background, density fluctuations, structure formation, dark matter, dark energy, and gravitational lensing.

240C Radiative Processes in Astrophysics (4) W. Lecture, three hours. Exploration of radiation mechanisms (electron scattering, synchrotron emission, collisional excitation, and more) and radiative transfer through matter including absorption and emission. Includes such observational astrophysics topics as spectroscopic study of atoms and nuclei, X-rays, and cosmic rays.

241A Solar System and Extrasolar Planets (4) F. Lecture, three hours. Observational and theoretical study of the Solar System, present-day dynamical state of the Solar System (asteroids, Kuiper Belt objects, Oort cloud), planetary formation, detection of extrasolar planets and their physical properties. Prerequisites: Physics 211; 240A and 240C are highly recommended.

241B Stellar Astrophysics (4) W. Lecture, three hours. Physics of stellar interiors and equations of stellar structure. Stellar atmospheres and absorption processes. Introduction to stellar winds. Thermonuclear reactions, nucleosynthesis, and solar neutrinos. Binary stars and mass accretion. White dwarfs, supernovae, neutron stars, and black holes. Prerequisites: Physics 211, 240A.

241C Extragalactic Astrophysics (4) W. Lecture, three hours. The physics and phenomenology of galaxies; star formation, interstellar medium, and intergalactic medium. Galaxy structure and dynamics. Galaxy evolution, stellar populations, and scaling relations; the relationship between galaxy properties and environment. Galaxy clusters and active galactic nuclei. Prerequisites: Physics 211, 240A.

241D Early Universe Physics (4) S. Lecture, three hours. Includes a thorough quantum treatment of the generation of perturbations during inflation and various topics related to kinetic theory in an expanding Universe. Other topics include the astrophysics and cosmology of weakly interacting particles. Prerequisites: Physics 234A, and either 240B or 255.

245 Special Topics in Biological Physics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of biological physics that is undergoing rapid development. May be repeated for credit.

246 Special Topics in Astrophysics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of astrophysics that is undergoing rapid development. Prerequisites: Physics 236A-B-C or consent of instructor. May be repeated for credit.

247 Special Topics in Particle Physics (4) F, W, S. Lecture, three hours. Current topics in particle non-accelerator-based research fields. May be repeated for credit.

248 Special Topics in Condensed Matter Physics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of condensed matter physics that is undergoing rapid development. May be repeated for credit.

249 Special Topics in Plasma Physics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of plasma physics that is undergoing rapid development. Satisfactory/Unsatisfactory only. Prerequisites: Physics 239A-B. May be repeated for credit.

255 General Relativity (4). Lecture, three hours. An introduction to Einstein's theory of gravitation. Tensor analysis, Einstein's field equations, astronomical tests of Einstein's theory, gravitational waves.

260-299: SEMINARS AND RESEARCH

These courses are designed to acquaint students with the basic concepts and methods underlying current research activity in selected branches of physics.

260A-B-C Seminar in Condensed Matter Physics (1-1-1) F, W, S. Seminar designed to acquaint students with recent advances in solid state physics. Lecturers from the Department of Physics and Astronomy (both faculty and graduate students), other UCI departments, and other institutions. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor. May be repeated for credit.

261A-B-C Seminar in Plasma Physics (1-1-1) F, W, S. Advanced topics in plasma physics: wave propagation, nonlinear effects, kinetic theory and turbulence, stability problems, transport coefficients, containment, and diagnostics. Applications to controlled fusion and astrophysics. Satisfactory/Unsatisfactory only. Prerequisites: Physics 239A-B-C-D or equivalent.

263A-B-C Seminar in Particle Physics (1-1-1) F, W, S. Discussion of advanced topics and reports of current research results in theoretical and experimental particle physics and cosmic rays. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor. May be repeated for credit.

265A-B-C Seminar in Astrophysics (1-1-1) F, W, S. Acquaints students with current research in astrophysics. Lecturers from the Department of Physics and Astronomy and from other institutions. Satisfactory/Unsatisfactory only. May be repeated for credit.

266 Current Topics in Chemical and Materials Physics (4). Lecture, three hours; discussion, one hour. The subjects covered vary from year to year. Connection between fundamental principles and implementations in practice in science, industry, and technology. Prerequisite: consent of instructor. Same as Chemistry 266.

267A-B-C Current Problems in Particle Physics (4-4-4) F, W, S. Lecture, three hours. Presentation and discussion of current research and theory in particle physics. Lectures given by staff and students. May be repeated for credit.

269 Seminar in Teaching Physics (1) F. Lecture techniques; teaching problem-solving skills; group learning; practicum. Required of all new Teaching Assistants.

273 Technical Communication Skills (2). Lecture, one hour; discussion, three hours. Development of effective communication skills, oral and written presentations, through examples and practice. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor.

295 Experimental Research (4 to 12). With the approval of a faculty member, a student may pursue a research program in experimental physics. Typical areas include astrophysics, condensed matter physics, elementary particle physics, and plasma physics.

296 Theoretical Research (4 to 12). With approval of a faculty member, a student may pursue a research program in theoretical physics. Typical areas include astrophysics, condensed matter physics, elementary particle physics, and plasma physics.

298 Physics Colloquium (1). Seminar held each week, in which a current research topic is explored. Frequently, off-campus researchers are invited to present the seminar, and on occasion a faculty member or researcher from the Department will speak. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Reading of Special Topic (4 to 12). With special consent from a faculty member who will agree to supervise the program, a student may receive course credit for individual study of some area of physics.

395 Laboratory Teaching (1) F, W, S, Summer. Lecture, two hours. Required of and limited to teaching assistants of undergraduate laboratory courses. Designed to teach the necessary skills required of teaching assistants for these courses. Satisfactory/Unsatisfactory only. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Required of and limited to Teaching Assistants.

SCHOOL OF SOCIAL ECOLOGY

C. Ronald Huff, **Dean**

300 Social Ecology I

Social Ecology Student Services: (949) 824-6861

Graduate Counseling: (949) 824-5918

World Wide Web: <http://www.seweb.uci.edu/>

Faculty

Hoda Anton-Culver, Ph.D. St. Andrews University (Scotland), *Director of the Center for Cancer Genetics Research and Prevention, Chief of Epidemiology, and Professor of Medicine (Epidemiology and Preventive Medicine) and Social Ecology*

Zuzana Bic, MUDr. King Charles University (Czech Republic), Dr.P.H. Loma Linda University; *Lecturer with Potential Security of Employment, Social Ecology and Program in Public Health* (public health, alternative and complementary medicine, health/wellness promotion and education, chronic pain and headaches, drug abuse and its prevention)

Dean Bradford Baker, M.D. University of California, San Diego; M.P.H. University of California, Berkeley, *Director of the UCI Center for Occupational and Environmental Health and Professor of Clinical Medicine, Community and Environmental Medicine, and Social Ecology*

M. Victoria Basolo, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Social Ecology* (housing and community development policy within the context of governmental relations)

Victoria A. Beard, Ph.D. University of British Columbia, *Assistant Professor of Social Ecology* (planning in developing countries, community-based planning, poverty reduction, planning theory and population studies)

Arnold Binder, Ph.D. Stanford University, *Professor Emeritus of Social Ecology* (research methodology, juvenile delinquency, police organization and methods)

Marlon G. Boarnet, Ph.D. Princeton University, *Chair of the Department of Planning, Policy, and Design and Professor of Social Ecology and Economics* (urban economics, urban planning, urban economic development)

Scott A. Bollens, Ph.D. University of North Carolina, *Professor of Social Ecology* (ethnicity and urban planning, urban growth policy, metropolitan governance, intergovernmental approaches to planning)

Peter A. Bowler, Ph.D. University of California, Irvine, *Director of the UCI Arboretum, UC Natural Reserve System Academic Coordinator, and Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology, and Social Ecology*

Thomas C. Buchmueller, Ph.D. University of Wisconsin, Madison, *Professor of Management, Economics, and Social Ecology* (health policy and promotion)

Michael L. Burton, Ph.D. Stanford University, *Professor of Anthropology and Social Ecology* (economic, ecological, and psychological anthropology)

Lawrence F. Cahill, Ph.D. University of California, Irvine, *Associate Professor of Neurobiology and Behavior and of Social Ecology*

Kitty C. Calavita, Ph.D. University of Delaware, *Professor of Social Ecology and Sociology* (sociology of law, criminology, social deviance, immigration, and inequality)

Elizabeth E. Cauffman, Ph.D. Temple University, *Assistant Professor of Social Ecology* (adolescent development, mental health, juvenile justice, legal and social policy)

Susan Charles, Ph.D. University of Southern California, *Assistant Professor of Social Ecology* (life-span development, emotion and cognition, emotion and health)

Chuansheng Chen, Ph.D. University of Michigan, *Professor of Social Ecology and Education* (cross-cultural psychology, socialization of achievement, adolescent development)

Kenneth S. Chew, Ph.D. University of California, Berkeley, *Associate Professor of Social Ecology* (social demography, epidemiology and public health)

K. Alison Clarke-Stewart, Ph.D. Yale University, *Associate Dean of Research, School of Social Ecology, and Professor of Social Ecology and Education* (development in early childhood and the effects of variation in the social environment)

Peter Clecak, Ph.D. Stanford University, *Professor Emeritus of Social Ecology*

Simon A. Cole, Ph.D. Cornell University, *Assistant Professor of Social Ecology* (science, technology, law, and criminal justice)

Ross F. Conner, Ph.D. Northwestern University, *Associate Professor of Social Ecology* (evaluation research and social psychology, health promotion)

Susan Bibler Coutin, Ph.D. Stanford University, *Associate Professor of Social Ecology* (anthropology of law, law and society, immigration, political activism, human rights, Central America)

Thomas J. Crawford, Ph.D. Harvard University, *Senior Lecturer with Security of Employment Emeritus, Social Ecology* (attitude theory and social problems research)

Elliott Currie, Ph.D. University of California, Berkeley, *Professor of Social Ecology* (criminal justice policy in the United States and other countries; causes of violent crime; social context of delinquency and youth violence; etiology of drug abuse and the assessment of drug policy; race and criminal justice; the social and personal impact of poverty and unemployment)

Kristen Day, Ph.D. University of Wisconsin, Milwaukee, *Associate Professor of Social Ecology* (urban issues in environment-behavior studies)

Ralph Delfino, M.D. University of Chicago, Ph.D. McGill University (Canada), *Associate Professor of Medicine (Epidemiology), Pediatrics, and Social Ecology in Residence*

Sally S. Dickerson, Ph.D. University of California, Los Angeles, *Assistant Professor of Social Ecology* (health psychology, stress physiology, effects of social and emotional processes on physiology and health)

Joseph F. DiMento, Ph.D., J.D. University of Michigan, *Professor of Social Ecology and Management* (planning, land use and environmental law, use of social science in policy making, legal control of corporate behavior)

Peter Ditto, Ph.D. Princeton University, *Professor of Social Ecology* (psychological reactions to medical diagnoses, end-of-life medical decision making, the role of motivation and emotion in information processing)

John D. Dombrink, Ph.D. University of California, Berkeley, *Professor of Social Ecology and Sociology* (crime and criminal justice, deviance and social control)

C. David Dooley, Ph.D. University of California, Los Angeles, *Chair of the Department of Psychology and Social Behavior and Professor of Social Ecology* (community psychology, epidemiology, economic change)

Rufus Edwards, Ph.D. University of Medicine and Dentistry of New Jersey and Rutgers, the State University of New Jersey, *Assistant Professor of Social Ecology* (particulate and VOC air pollution, European urban environments for the EXPOLIS project, improvements in the health of rural solid fuel using communities in the developing world, cross-cutting issues of health and climate change in developing nations)

Jonathon E. Ericson, Ph.D. University of California, Los Angeles, *Professor of Social Ecology and of Community and Environmental Medicine* (environmental health science; archaeological chemistry)

Ilona S. Federenko, Ph.D. University of Trier (Germany), *Assistant Professor of Social Ecology* (psychobiology of stress, developmental psychobiology, behavior genetics)

Martha Feldman, Ph.D. Stanford University, *Professor of Social Ecology, Management, Sociology, and Political Science, and Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management* (organization theory and behavior, stability and change in organizations, decision making and information processing)

Paul J. Feldstein, Ph.D. University of Chicago, *Professor of Management, Economics, and Social Ecology, and Robert Gumbiner Chair in Health Care Management* (economics of health care)

Ajay Garde, Ph.D. University of Southern California, *Assistant Professor of Social Ecology* (urban design, urban form, sustainable growth)

Chad P. Garner, Ph.D. Oxford University, *Assistant Professor of Social Ecology and Medicine (Epidemiology) in Residence* (development of statistical genetic methods for human complex disease and in population genetics theory, focusing on the analysis of genetic variation)

Gilbert L. Geis, Ph.D. University of Wisconsin, *Professor Emeritus of Social Ecology* (crime and criminal justice)

David Theo Goldberg, Ph.D. City University of New York Graduate School and Center, *Director of the UC Humanities Research Institute and Professor of Comparative Literature and Social Ecology* (race, racism, race and the law, political theory, South Africa)

Wendy A. Goldberg, Ph.D. University of Michigan, *Associate Professor of Social Ecology and Education* (developmental psychology, children and their families, transition to parenthood, social policy)

- Michael R. Gottfredson, Ph.D. State University of New York, Albany, *Executive Vice Chancellor and Provost and Professor of Social Ecology and Sociology* (criminology, theory, crime and policy)
- Lisa Grant, Ph.D. California Institute of Technology, *Assistant Professor of Social Ecology* (earthquake geology, paleoseismology, environmental geology, seismic hazard)
- Ellen Greenberger, Ph.D. Harvard University, *Professor of Social Ecology* (developmental psychology, adolescence and social institutions, work and the family, social policy)
- Richard J. Haier, Ph.D. The Johns Hopkins University, *Professor of Pediatrics and Social Ecology in Residence*
- Jutta Heckhausen, Ph.D. University of Strathclyde, *Professor of Social Ecology* (life-span development, primary and secondary control, cultural universals and differences)
- F. Allan Hubbell, M.D., M.S.P.H. Baylor University College of Medicine, *Department Chair of Medicine, Professor of Medicine (General Internal Medicine and Primary Care) and Social Ecology*
- C. Ronald Huff, Ph.D. Ohio State University, *Dean of the School of Social Ecology and Professor of Social Ecology and Sociology* (criminology and public policy)
- Helen Ingram, Ph.D. Columbia University, *Professor of Social Ecology and Political Science, and Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation* (public policy, U.S.-Mexico relations, environmental resource management)
- Mireille Jacobson, Ph.D. Harvard University, *Assistant Professor of Social Ecology and Economics* (labor economics, health economics, economics of crime and drug policy)
- Larry Jamner, Ph.D. State University of New York at Stony Brook, *Professor of Social Ecology and Pharmacology* (health psychology, psychophysiology, algology)
- Valerie Jenness, Ph.D. University of California, Santa Barbara, *Chair of the Department of Criminology, Law and Society and Professor of Social Ecology and Sociology* (links between divorce and social control, especially law, gender, and social change and social movements)
- Paul D. Jesilow, Ph.D. University of California, Irvine, *Associate Professor of Social Ecology* (crime and criminal justice)
- Chenyang (Sunny) Jiang, Ph.D. University of South Florida, *Associate Professor of Social Ecology* (marine science, microbial ecology in marine environments)
- Bryan Kemp, Ph.D. University of Southern California, *Clinical Professor of Medicine and Social Ecology*
- Michael T. Kleinman, Ph.D. New York University, *Adjunct Professor of Community and Environmental Medicine and of Social Ecology*
- Raul Perez Lejano, Ph.D. University of California, Los Angeles, *Assistant Professor of Social Ecology* (collaborative planning, environmental decision making, planning theories)
- Richard Leo, Ph.D., J.D., University of California, Berkeley, *Associate Professor of Social Ecology* (sociology and history of American police interrogation practices, social psychology of false confessions to police, causes and consequences of miscarriage of justice in American criminal justice system)
- Linda J. Levine, Ph.D. University of Chicago, *Associate Professor of Social Ecology* (relations between cognitive and emotional development, how emotions influence attention and memory, the development of children's strategies for coping with negative emotions)
- Elizabeth F. Loftus, Ph.D. Stanford University, *UCI Distinguished Professor of Social Ecology and Cognitive Sciences* (cognitive psychology, human memory, psychology and law)
- Salvatore R. Maddi, Ph.D. Harvard University, *Professor of Social Ecology* (personality, psychopathology, health psychology, creativity)
- Richard Matthew, Ph.D. Princeton University, *Director of the Center for Unconventional Security Affairs and Associate Professor of Social Ecology and Political Science* (international relations, environmental policy, ethics)
- Cheryl Maxson, Ph.D. University of Southern California, *Associate Professor of Social Ecology* (crime and delinquency, youth violence, juvenile justice system and policing street gangs)
- Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, *Professor of Social Ecology* (environmental studies and design, organizational analysis, management and planning, and social and behavioral aspects of architecture)
- Richard McCleary, Ph.D. Northwestern University, *Professor of Social Ecology* (criminal justice, research methodology, statistics)
- Michael G. McNally, Ph.D. University of California, Irvine, *Director of the Graduate Program in Transportation Science and Associate Professor of Civil and Environmental Engineering and of Social Ecology* (travel behavior, transportation systems analysis)
- James W. Meeker, Ph.D., J.D. State University of New York, Buffalo, *Associate Dean of Student Services and Computing, School of Social Ecology, and Professor of Social Ecology and Sociology* (sociology of law, criminal justice, research methodology, statistics)
- David S. Meyer, Ph.D. Boston University, *Professor of Sociology and Social Ecology*
- Calvin Morrill, Ph.D. Harvard University, *Department Chair and Professor of Sociology and Professor of Social Ecology and Management* (anthropology of law, sociology of culture, qualitative field methods)
- Elizabeth Morrison, M.D. Brown University, *Associate Professor of Clinical Family Medicine and Social Ecology*
- Susan L. Neuhausen, Ph.D. University of Minnesota, *Professor of Medicine (Epidemiology) and Social Ecology*
- Raymond W. Novaco, Ph.D. Indiana University, *Professor of Social Ecology* (human stress, aggression, community psychology)
- Oladele Ogunseitan, Ph.D. University of Tennessee, *Professor of Social Ecology* (environmental health, microbiology, molecular ecology, environmental biotechnology, applied microbiology)
- Betty H. Olson, Ph.D. University of California, Berkeley, *Professor of Social Ecology and of Community and Environmental Medicine* (aquatic microbiology, environmental health and molecular biology, water resources)
- Cornelia Pechmann, Ph.D. Vanderbilt University, *Professor of Management and Social Ecology* (consumer behavior, advertising strategy, health care marketing, evaluation research)
- Joan Petersilia, Ph.D. University of California, Irvine, *Professor of Social Ecology* (program evaluation, public policy, juvenile justice)
- Mark P. Petracca, Ph.D. University of Chicago, *Department Chair and Associate Professor of Political Science and Associate Professor of Social Ecology*
- Henry N. Pontell, Ph.D. State University of New York, Stony Brook, *Professor of Social Ecology and Sociology* (criminal justice, sociology of law, medical sociology)
- JoAnn Prause, Ph.D. University of California, Irvine, *Lecturer with Security of Employment, Social Ecology* (statistics, quantitative epidemiology, employment typology)
- Michael D. Prislin, M.D. Georgetown University, *Associate Dean, School of Medicine, and Professor of Clinical Family Medicine (Family Medicine and Primary Care) and Social Ecology*
- Jodi Quas, Ph.D. University of California, Davis, *Assistant Professor of Social Ecology* (memory development, children's involvement in the legal system)
- Justin B. Richland, Ph.D. University of California, Los Angeles; J.D. University of California, Berkeley-Boalt Hall School of Law, *Assistant Professor of Social Ecology* (anthropology of law, legal discourse analysis and semiotics, indigenous law and politics, North American postcolonialism)
- Karen S. Rook, Ph.D. University of California, Los Angeles, *Professor of Social Ecology* (gerontology, social support systems, subjective well-being and health)
- Michael D. Rugg, Ph.D. University of Leicester, *Director of the Center for the Neurobiology of Learning and Memory, and Professor of Neurobiology and Behavior, Cognitive Sciences, and Social Ecology*
- Jean-Daniel M. Saphores, Ph.D. Cornell University, *Assistant Professor of Social Ecology, Civil and Environmental Engineering, and Economics* (environmental and natural resource economics and policy, transportation economics, planning and policy, quantitative methods)
- Carroll Seron, Ph.D. New York University, *Professor of Social Ecology* (sociology of law, sociology of professions, law and society)
- Johanna F. Shapiro, Ph.D. Stanford University, *Director of the Program in Medical Humanities and Arts and Professor of Family Medicine and Social Ecology*
- Roxane Cohen Silver, Ph.D. Northwestern University, *Professor of Social Ecology and Medicine* (stress and coping, social psychology, health psychology)
- Jennifer Skeem, Ph.D., University of Utah, *Assistant Professor of Social Ecology* (psychopathology and violence, mandated psychiatric treatment, psychology and law)
- David A. Smith, Ph.D. University of North Carolina, Chapel Hill, *Professor of Sociology and Social Ecology* (urbanization, comparative historical sociology, political sociology, world-system analysis)
- Sharon Stern, Ph.D. University of Utah, *Lecturer with Security of Employment, Social Ecology* (water pollution and treatment, environmental pollution remediation, conservation biology, health and policy)
- Mark Steyvers, Ph.D. Indiana University, *Associate Professor of Cognitive Science, Social Ecology, and Computer Science*

Daniel Stokols, Ph.D. University of North Carolina, *Professor of Social Ecology* (health impacts of environmental stressors, environmental design and social behavior)

Luis Suarez-Villa, Ph.D. Cornell University, *Professor of Social Ecology* (innovation and technology, economic and social development, regional analysis)

William C. Thompson, Ph.D. Stanford University, J.D. University of California, Berkeley, *Professor of Social Ecology* (psychology and law, criminal justice, human judgment and decision making, use of social science in appellate litigation)

George E. Tita, Ph.D. Carnegie-Mellon University, *Assistant Professor of Social Ecology* (criminology, community context of violence, urban youth gangs, homicide studies)

Rudolpho D. Torres, Ph.D. Claremont Graduate University, *Professor of Social Ecology, Chicano/Latino Studies, and Political Science* (urban political economy, Latino politics)

Susan F. Turner, Ph.D. University of North Carolina, Chapel Hill, *Professor of Social Ecology* (sentencing and corrections, applied research methods)

Frederico E. Vaca, M.D. Creighton University, *Associate Professor of Clinical Emergency Medicine and Social Ecology*

Elaine Vaughan, Ph.D. Stanford University, *Associate Professor of Social Ecology* (environmental assessment, risk perceptions, research methodology, social psychology)

James Diego Vigil, Ph.D. University of California, Los Angeles, *Professor of Social Ecology* (urban research, urban poverty, culture change, socialization and education, psychological anthropology, street gangs in cross-cultural perspective, Mexico and U.S. southwestern ethnohistory, and comparative ethnicity)

Pathik Wadwa, Ph.D. University of California, Irvine, *Assistant Professor of Psychiatry and Human Behavior and of Social Ecology* (biobehavioral processes in human pregnancy and life-span development, biobehavioral processes in breast cancer)

Carol K. Whalen, Ph.D. University of California, Los Angeles, *Professor of Social Ecology* (developmental psychopathology, childhood behavior disorders, child therapies, health psychology)

John M. Whiteley, Ed.D. Harvard University, *Professor of Social Ecology* (moral development, late adolescent to early adult development, social ecology of peace)

Argyrios Ziogas, Ph.D. University of Southern California, *Associate Adjunct Professor of Medicine (Epidemiology) and Social Ecology* (epidemiology of diseases with substantial environmental risk factors)

OVERVIEW

The School of Social Ecology is a unique interdisciplinary academic unit spanning the environmental, social, behavioral, and health sciences, as well as the relationship between law and society. The School is comprised of the Departments of Criminology, Law and Society; Environmental Health, Science, and Policy; Psychology and Social Behavior; and Planning, Policy, and Design. It has approximately 80 full-time faculty members, 2,660 undergraduate majors, and 260 graduate students. Social Ecology applies scientific methods to the study of a wide range of recurring social and environmental problems. Among issues of long-standing interest in the School are crime and justice in society, social influences on human development over the life cycle, urban and community planning, and effects of the physical environment on health and behavior. In summary, while ecology is the science of the relationship between organisms and their environments, *social ecology* is the science of the relationships between human populations and their environments.

The faculty is *multidisciplinary*. It includes psychologists with a variety of specialties (e.g., developmental, clinical, social, and environmental); sociologists; program evaluators; criminologists; lawyers; urban and regional planners; environmental health scientists; and environmental design specialists. Faculty members conduct research and teach courses that integrate concepts and perspectives of the several disciplines. This focus arises from commitment to the view that societal problems are so complex that their analysis requires *interdisciplinary* efforts (i.e., the joining of talents by people with different intellectual backgrounds). A number of faculty members are involved in interventions directed toward

improving the way groups of individuals, institutions, and communities function. A number of others are involved in interventions aimed at improving the quality and control of the environment.

Research Facilities

Social Ecology I and II and the nearby Multipurpose Academic and Administrative (MPAA) Building are wireless environments that house the School's research centers and feature many facilities for experimental research, such as wet laboratories for research and teaching in the environmental health sciences and behavioral assessment laboratories for research in human development, social relations, and legal studies. Wet laboratories are used for studying air and water pollution. Behavioral assessment laboratories are used for studying social phenomena such as parent-child interaction, cooperation among children, memory functions, hyperactivity, social support processes, and mock jury discussions.

The School also offers students up-to-date computing facilities and assistance to ensure that their skills prepare them for either advanced (graduate) work or for the changing needs of today's workplace, which increasingly demands skills in computing and information technology.

Degrees

Applied Ecology ^{1, 2}	B.S.
Criminology, Law and Society	B.A., M.A.S., Ph.D.
Environmental Analysis and Design ²	B.A.
Environmental Health Science and Policy ³	M.S., Ph.D.
Planning, Policy, and Design	Ph.D.
Psychology and Social Behavior	B.A., Ph.D.
Public Health Policy ⁴	B.A.
Public Health Sciences ⁴	B.A.
Social Ecology	B.A., M.A., Ph.D.
Urban and Regional Planning	M.U.R.P.

¹ Offered jointly with the School of Biological Sciences.

² The availability of this major is under review.

³ Admission to this program is not available.

⁴ Coordinated by the School of Social Ecology for the College of Health Sciences' Program in Public Health.

HONORS

Honors at graduation will be awarded to about 12 percent of the graduating seniors. Eligibility for such honors will be on the basis of grade point average (GPA). A minimum overall GPA of 3.5 is required. A general criterion is that students must have completed at least 72 units in residence at a University of California campus by the end of the winter quarter of the academic year in which they graduate. Final decisions concerning the awards of *summa cum laude*, *magna cum laude*, and *cum laude* are the responsibility of a committee chaired by the Associate Dean for Students. Other important factors are also considered (see page 55).

Undergraduate Program

The School of Social Ecology offers either a general interdisciplinary degree in Social Ecology or a more focused experience through degree programs in Applied Ecology; Criminology, Law and Society; Environmental Analysis and Design; Psychology and Social Behavior; Public Health Policy; and Public Health Sciences.

Change of Major. Students who wish to change their major to one offered by the School should contact the Social Ecology Student Services Office for information about change-of-major requirements, procedures, and policies. Information is also available at http://www.due.uci.edu/Change_of_Major.html.

HONORS PROGRAM IN SOCIAL ECOLOGY

The Social Ecology Honors Program provides the opportunity for selected School of Social Ecology students to pursue advanced independent study. Admission to the program is based on formal invitation and application in the spring quarter of the junior year. In order to be considered, a student must have satisfied the following requirements: completion of all lower-division Social Ecology courses required for the major; completion of at least five upper-division Social Ecology courses with a grade point average of at least 3.5 in these courses; and achievement of an overall grade point average at UCI of at least 3.2. Acceptance into the program is based upon evidence of the student's ability, interest in research, and proposed thesis project. Successful completion of the program requires two quarters of supervised, independent work on a thesis research project (Social Ecology H190A-B) and written and oral presentation of an honors thesis (Social Ecology H190W).

CAREER OPPORTUNITIES

Graduates of the School of Social Ecology bring a distinctive cross-disciplinary perspective to the job market. The School provides a solid foundation for those students who seek jobs in planning departments, mental health settings, educational institutions, and a variety of community and governmental agencies. Many Social Ecology students find that their interdisciplinary training is also useful for careers in management.

The School also provides sound preparation for students who wish to apply to graduate and professional schools of law, administration, public health, social welfare, psychology, sociology, criminology, and urban planning.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. Additional information is available in the Career Center section.

FIELD STUDY

An important aspect of the undergraduate program is its field study requirement for majors. Field study is designed to provide students with an opportunity to examine social-environmental problems as they occur in community settings; to evaluate the merit of ideas presented in the classroom; and to conduct naturalistic observations and investigations at field sites. Under the supervision of a Social Ecology faculty sponsor, students have the opportunity to test their skills in the community, to evaluate procedures and problem-solving strategies used in the work place, and to observe the links between community practices and academic ideas and issues. The settings provided for field study include a wide range of problem-oriented institutions and agencies in both the private and the public sector (e.g., Orange County Public Defender's Office; California Coastal Commission; American Red Cross; primary and secondary schools; Fairview Development Center; planning, legal, and design corporations). Students must select a placement site from those listed and approved by the School of Social Ecology. Unlisted or inappropriate placements, as well as those that could give the appearance of nepotism or preferential treatment, will not be approved. Departmental approval for field study will be determined by the Field Study Director.

Field study is open *only* to upper-division School of Social Ecology students who are in good academic standing and have completed all prerequisite course work. All field studies are taken on a Pass/Not Pass grading basis. Further information, including field study sign-up procedures and prerequisites, must be obtained from the Social Ecology Student Services Office.

Planning a Program of Study

Because there are many alternative ways to plan a program, some of which may require careful attention to specific major requirements, students should consult with the Social Ecology Student Services Office, 102 Social Ecology I, to design an appropriate program of study.

Students who elect one of the majors in the School of Social Ecology in their freshman year might begin by taking the introductory courses required by their major. It is a good idea to take these courses early because they include fundamental concepts that are widely applicable in more advanced courses. In addition, the lower-division writing requirement of the breadth requirement (category I) should be completed during the first year. In the sophomore year, the student might complete three courses toward the breadth requirement, four courses in their major, and four electives. Students who are planning to go on to graduate school can use their freshman and sophomore years to advantage by taking courses in theory, research methods, statistics, and other areas important to graduate study. In the junior and senior years, the student should take courses in the major area and should create an individualized program of study through a combination of courses and course modules which fall in an area of interest. Particular attention should be paid to planning a program of study that will ensure that major requirements are met prior to graduation.

Requirements for the Bachelor's Degree

University Requirements: See pages 59–64.

School Requirements

Criminology, Law and Society C7, Environmental Analysis and Design E8, Psychology and Social Behavior P9, Social Ecology 10, 13, 194, 195 (four units), and one additional upper-division course (four units) chosen from any department in the School of Social Ecology *or* an additional four units of Social Ecology 195. (Social Ecology 198 and 199 may not be used to fulfill this requirement.)

Breadth Requirement Limitation: With the exception of categories I, V, and VII, a student in any School of Social Ecology major may count toward breadth no more than three courses offered by the School of Social Ecology.

Departmental Requirements: Refer to individual departments.

Grade Requirement

A minimum grade average of at least C (2.0) is required: (1) overall, (2) in all courses required for the major program, including the School requirements, and (3) in the upper-division courses required for the major.

Double Majors

In order to double major within the School of Social Ecology, major requirements must be met for both majors without any overlap of upper-division courses.

Additional Curricular Options

Students in the School of Social Ecology may combine their course work with the following University programs and should consult an academic counselor for further information.

CAMPUSWIDE HONORS PROGRAM

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; telephone (949) 824-5461; e-mail: honors@uci.edu; World Wide Web: <http://www.honors.uci.edu/>.

EDUCATION

Students who plan to obtain a teaching credential or a higher degree in the field of education should consult with counselors in the UCI Department of Education early in their college career. Students completing a degree program in the School of Social Ecology may qualify for a waiver of the Single Subject Credential Examination. For additional information about teaching credentials, refer to the Department of Education section.

THE 3-2 PROGRAM WITH THE PAUL MERAGE SCHOOL OF BUSINESS

Outstanding students in the School of Social Ecology who are interested in a career in management may wish to apply for entry into The Paul Merage School of Business' 3-2 Program. Students normally apply for this program early in their junior year. See The Paul Merage School of Business section for additional information.

EDUCATION ABROAD PROGRAM

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges in countries throughout the world. Additional information is available in the Center for International Education section.

INTERDISCIPLINARY MINORS

These minors are available to all UCI students.

The **minor in Conflict Resolution** provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. See the School of Social Sciences section for information.

The **minor in Global Sustainability** trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See the Interdisciplinary Studies section for information.

The **minor in Native American Studies** is an interdisciplinary, interschool program which focuses on history, culture, religion, and the environment. See the Interdisciplinary Studies section for information.

Undergraduate Major in Social Ecology

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN SOCIAL ECOLOGY

University Requirements: See pages 59-64.

School Requirements: See page 405.

Requirements for the Major

Ten upper-division courses (numbered 100-193), selected from the Departments of Criminology, Law and Society; Environmental Health, Science, and Policy; and Psychology and Social Behavior.

Course prerequisites established by the individual departments must be satisfied. Students may, by petition, count one Social Ecology 199 course and graduate courses (numbered 200-290) toward the upper-division requirement.

Courses in Social Ecology

LOWER-DIVISION

10 Research Design (4). Lecture, three hours. An introduction to the logic behind and methods of designing research studies and experiments in Social Ecology. Statistical reasoning discussed to the extent necessary for relevant data analyses.

13 Statistical Analysis in Social Ecology (4). Lecture, three hours. Introduction to the techniques of statistical analysis in Social Ecology. Topics include probability, statistical inference, significance testing, univariate descriptive statistics, and multivariate analysis from an interdisciplinary perspective. Prerequisite: Social Ecology 10; may be taken concurrently. Restricted to majors only. No credit for Social Ecology 13 if taken after Social Science 9A, Social Science 10A, Anthropology 10A, Psychology 10A, Sociology 10A, Social Science 100A, or Social Ecology 166A.

H20A-B-C Honors: Critical Issues in the Social Sciences (6-6-6). Lecture, three hours; seminar, two hours. Major themes, methods, and works in the social sciences from an interdisciplinary perspective. Each quarter focuses on a different topic. Weekly small seminars emphasizing the development of the skills of critical thinking and quantitative analysis through regular written work are integral to the course. Prerequisite: restricted to members of the Campuswide Honors Program. Same as Social Sciences H1E-F-G. (III)

UPPER-DIVISION

111 Advanced Research Methods (4). Lecture, three hours. For students planning to conduct senior research projects or apply to graduate school in social research fields. Topics include reviewing literature, preparing a research proposal, protecting human subjects, citing scholarly work, selecting or building measures, estimating sample size, interview and presentation skills. Prerequisites: Social Ecology 10 and 13 or equivalent.

120 Health Education for University Life (4). Lecture, three hours. A survey of health issues that present a potential for high-risk behavior in the student community. Students acquire knowledge of risk and wellness factors in sexual health, stress management, fitness and nutrition, alcohol and other drug use, and health relationships. Formerly Environmental Analysis and Design E181U.

121A Peer Community Health Training (4). Lecture, three hours. Focuses on the study of health behavior theory, change models, and environmental analysis skills as applied to college student health risk issues. Students design an intervention for the UCI student community which addresses individual, environmental, or policy change in health risk behavior. Pass/Not Pass only. Prerequisite: one course from Social Ecology 120, Environmental Analysis and Design E168, Psychology and Social Behavior P139H, or consent of instructor.

121B Peer Community Health Practicum I (4). Lecture, three hours. Training sessions (one meeting per week) prepare students to serve as undergraduate teaching assistants and run a weekly discussion group for the Social Ecology 120 course. Practicum meetings (one per week) provide supervision of teaching assistant responsibilities and the student's delivery of the intervention they designed in 121A course. Pass/Not Pass only. Prerequisite: Social Ecology 121A.

121C Peer Community Health Practicum II (4). Lecture, three hours. Students receive training and supervision in the role of undergraduate teaching assistant in the Social Ecology 120 course and in the delivery of health-risk intervention in the student community. New topics of study include social marketing and health promotion in the media. Pass/Not Pass only. Prerequisite: Social Ecology 121B.

131 Social Ecology of Health Promotion (4). Lecture, three hours. Core themes of Social Ecology are examined as they apply to major areas of health promotion research and practice. Students attend lectures and work collaboratively on team projects conducted in university and community settings. Prerequisite: consent of instructor.

166A-B-C Foundations of Applied Statistics I, II, III (4-4-4). Lecture, four hours; laboratory, three hours. **166A-B:** Descriptive statistical concepts and techniques most widely used in social science research. Weekly laboratories employ computer graphics to investigate concepts. **166A:** Pass/Not Pass only. **166C:** Classical statistical inference, limited to simple random sampling or simple randomization designs. Characteristics of sampling distributions; bias, standard error, mathematical models, estimation, hypothesis testing. Same as Social Sciences 100A-B-C and Statistics 100A-B-C. (V)

166E Introduction to Statistical Computing with SAS (4) W. Lecture, two hours; laboratory, two hours. Data definition, data acquisition, and data management using SAS procedures and commands. Statistical procedures available from the SAS Statistical Software Package. SAS/GRAPH procedures for producing statistical graphics. Prerequisite: completion of one year of statistics or concurrent enrollment in Social Ecology 166C, or consent of instructor. Pass/Not Pass only. Same as Social Science 101E and Statistics 101.

181 Mentors in Higher Education (4). Seminar, three hours. Discussion of roles and functions of mentors in higher education. Specific mentoring issues include: personal skills, training, the sociocultural role of mentoring in higher education, student affirmative action, history and politics in higher education. Prerequisite: consent of instructor.

183A International Studies Forum (2). Lecture, 1.5 hours; discussion, .5 hour. A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. Pass/Not Pass only. May be taken for credit four times. Same as Humanities 183A and Social Science 183A.

183B Senior Seminar in Conflict Resolution (4). Seminar, three hours. Designed for seniors (juniors may also enroll) who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students will refine skills and theory in the study of cooperation and conflict, from local to global arenas. Same as Humanities 183B and Social Science 183B. (VII-B)

183C Senior Seminar in Conflict Resolution (4). Seminar, three hours. Continuation of Social Ecology 183B. Students write a senior research paper. Prerequisite: Social Ecology 183B and satisfactory completion of the lower-division writing requirement. Same as Humanities 183C and Social Science 183C.

186A-B Senior Seminar on Global Sustainability I, II (2-2) F, W. Seminar, two hours. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. **A:** Prepare bibliography. **B:** Prepare research proposal. In-progress grading for 186A-B, grade for sequence given upon completion of 186C. Prerequisites: senior standing, Biological Sciences 65, Environmental Analysis and Design E20, and Earth System Science 10. Same as Biological Sciences 191A-B and Earth System Science 190A-B.

186C Writing/Senior Seminar on Global Sustainability III (4) S. Seminar, four hours. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations and to prepare senior research paper. Prepare/write research paper under the direction of a faculty member. Prerequisites: Social Ecology 186A-B and satisfaction of the lower-division writing requirement. Same as Biological Sciences 191C and Earth System Science 190C.

187 Ideology and Contemporary Social Problems (4). Lecture, three hours; discussion, one hour. Examines the concept of ideology from the Enlightenment to the present, tracing it from Marx to such contemporary thinkers as R. Williams and D. Bell. The concept and "social criticism" discourse are illustrated through discussions of socialism, communism, fascism, liberalism, conservatism, capitalism.

188 Global Issues and International Perspectives (2). Lecture, 1.5 hours; discussion, 1.5 hours. Primarily for students planning to study abroad. Weekly guest lectures, giving global perspectives on culture, politics, economics, women's roles, environmental issues, language, and history. In discussion sections participants study the particular area to which they are going, and learn how to conduct themselves while there. Pass/Not Pass only. Same as Social Sciences 188.

H190A-B Honors Research (4-4). Seminar, three hours. Independent work on an individual research project in addition to participation in a mini-seminar in which faculty discuss their ongoing research. Students prepare a written proposal for a research project. **H190A:** Letter grade and Pass/Not Pass. **H190B:** Pass/Not Pass only. Prerequisites: acceptance into the Honors Program; junior or senior standing.

H190W Honors Seminar and Thesis (4). Seminar, three hours. Students write up their honors research project (H190A-B) and prepare an oral report which is presented at the honors seminar. Prerequisites: acceptance into the honors program; junior or senior standing.

194 Naturalistic Field Research (4). Lecture, three hours. Introduction to alternative models of experiential learning and to various methods of observation, assessment, and evaluation. Introduction to the nature of organizations and ethical issues that emerge from research and intervention in natural settings. Must be taken prior to Social Ecology 195. Enrollment in discussion section is required. Prerequisite: Social Ecology 10; satisfactory completion of the lower-division writing requirement; restricted to Social Ecology majors.

195 Field Study (2 to 4) F, W, S. Naturalistic observation and analysis of social issues and problems in combination with experiential learning in field placement sites in the areas of psychology and social services, criminology, and environmental studies. Prerequisites: Social Ecology 194; junior standing; restricted to Social Ecology majors. Pass/Not Pass only. May be repeated for credit.

198 Directed Studies (1 to 4) F, W, S. Prerequisite: consent of instructor. Pass/Not Pass only. May be repeated for credit.

199 Special Studies (1 to 4) F, W, S. Prerequisites: consent of instructor and junior or senior status. May be repeated for credit.

Undergraduate Major in Applied Ecology

102 Social Ecology I; (949) 824-6861

101 Biological Sciences Administration; (949) 824-5318

NOTE: The availability of this major is under review. Contact the Office of Admissions and Relations with Schools at (949) 824-6703 for information.

The Department of Environmental Health, Science, and Policy in the School of Social Ecology and the School of Biological Sciences offer a B.S. degree program in Applied Ecology. The interdisciplinary curriculum furnishes a strong undergraduate foundation in human-environment interactions, and develops skills in resource quality and management, molecular and genetic methodology for environmental protection, and field sampling techniques for data collection.

An Applied Ecology major receives the basic science training of a Biological Sciences major and utilizes these skills in a core of environmentally based courses taught in Social Ecology. Social Ecology brings to this major a unique combination of courses in Environmental Quality and Health, Planning and Public Policy, and Law and Society. This combination, together with a strong biology background contributed by the School of Biological Sciences and a general science background contributed by the School of Physical Sciences, enables students selecting this major to pursue interdisciplinary learning experiences which are difficult to achieve within traditional disciplines. The first three years of the major are very structured, leaving the last year open for students to specialize in an area of their choice.

Transfer Applicants: See page 42.

PLANNING A PROGRAM OF STUDY

It is important that students take the required science courses early, in order that the science background may be utilized in the Social Ecology courses. There are many required courses, and the student must plan carefully. For initial academic advising, students should consult the Social Ecology Student Services Office. Faculty academic advisors may be either Social Ecology or Biological Sciences faculty members.

CAREERS IN APPLIED ECOLOGY

Careers in the fields of environmental and resource management and planning are particularly suited to an Applied Ecology background. Many graduates hold technical or administrative positions in, for example, the United States Environmental Protection Agency; or in California's Regional Water Quality Control Board, Air Resources Board, Department of Fish and Game, and Department of Health and Human Services; or in various county and city agencies. A variety of firms in the private sector employ Applied Ecology graduates to prepare environmental impact reports, laboratory analyses, and planning studies. The Applied Ecology major also provides a strong academic foundation for graduate or professional study in areas such as conservation and natural resources, environmental health science, microbiology, public health, law, medicine, dentistry, planning, and administration.

The Applied Ecology major provides students with a comprehensive treatment of basic ecological principles and their relevance to human needs. As an alternate pathway, students with related interests should explore other environmental program options within The Henry Samueli School of Engineering, the School of Physical Sciences, and the School of Biological Sciences.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN APPLIED ECOLOGY

University Requirements: See pages 59–64.

Requirements for the Major

General: Economics 1; Information and Computer Science 10A, 10B, or 10C; Mathematics 2A, 2B, and either 2D, 2J, 7, or Biological Sciences 7; Chemistry 1A-B-C, 1LB-LC, 51A-B-C, and 51LA-LB; Physics 3A-B-C, 3LB-LC; Biological Sciences 93, 94, 97, 98, 99, 100L, E106, 194S, and one from D103, D104, D105, or E109; Environmental Analysis and Design E5; three courses from E103, E110, E160, E168, and Biological Sciences E179; Environmental Analysis and Design E180 and E180L.

Laboratory Courses: Two courses from the following: Biological Sciences D111L, D129L, E112L, E179L, M114L, M116L, M122L, M124L, N113L; Environmental Analysis and Design E160L, E164L, E165L, E166L.

Research or Field Study: Either eight units of Biological Sciences 199, Environmental Analysis and Design E196, or Social Ecology 199 (research), or Social Ecology 194 plus four units of Social Ecology 195 (field study).

Applied Ecology Elective Areas: A minimum of three courses selected from the following list. At least two of the three courses must be from the same category. Students should note that some courses have prerequisites. Environmental Analysis and Design E103, E110, E160, E168, and Biological Sciences E179 may be used to fulfill the General Requirement or the Applied Ecology Elective Area but may not be used to fulfill both requirements.

Environmental Biotechnology: Biological Sciences D129, E189, M122, M123, M124, M137, M138; Environmental Analysis and Design E105U, E112, E117, E160.

Environmental Health Science: Biological Sciences D143, M122; Environmental Analysis and Design E111U, E112, E117, E160, E161, E164, E169A, E169B, E172, E173, E175, E176, E177A, E177B, E178, E179, E186, E187, E188.

Environmental Law, Planning, and Public Policy: Environmental Analysis and Design E101, E105U, E107U, E108U, E109U, E111U, E112, E131U, E137U, E141U, E143U, E148U, E155U, E156U, E157U, E162, E169A, E169B, E179U, E189U.

Resource Management-Terrestrial Environments: Biological Sciences E174, E175, E181, E186; Environmental Analysis and Design E103, E105U, E110, E117, E129, E154U, E164, E167, E169A, E169B.

Water Pollution Control and Management: Biological Sciences E178, E179, E189, M122; Environmental Analysis and Design E103, E105U, E117, E137U, E155U, E160, E164, E169A, E169B, E178, E191A, E191B, E191C.

NOTE: Students may not major in both Applied Ecology and any of the School of Biological Sciences majors.

Undergraduate Program in Public Health

The B.S. in Public Health Sciences and the B.A. in Public Health Policy degree programs train students in multidisciplinary approaches to public health practice and research. The degrees explore both quantitative and qualitative aspects of public health at all levels of analysis. Graduates will advance, through selective

employment or further education, to become the new generation of public health professionals prepared to face the emerging challenges to human health from a population perspective.

Students who are interested in pursuing a premedical program should note that additional courses will be needed beyond the requirements of the public health degrees to fulfill requirements for medical school.

Students admitted to the public health program are expected to formally declare either the B.S. or B.A. degree as early as possible, but no later than the end of the sophomore year of study. Changing from one degree program to the other is possible, but will require completion of the required lower- and upper-division courses specified for each program. It is also possible for a student to enroll in both the B.S. and B.A. degree programs (double major), provided the student completes all the requirements outlined under each degree.

NOTE: The School of Social Ecology Student Services Office is coordinating the undergraduate affairs activities for the College of Health Sciences' Program in Public Health.

CAREERS FOR THE MAJORS

For graduates with the bachelor's degrees who wish to enter the job market directly, there is a plethora of opportunities in private and public organizations for entry-level personnel in public health. These include statewide and regional health care agencies (e.g., the Orange County Health Care Agency), community clinics focusing on preventive health, water and air quality management districts, biomedical companies, health-education institutions, and activist non-governmental organizations. The National Association of County and City Health Officials (NACCHO) has produced a compendium of public health career paths, many of which have become even more compelling for graduates at the proposed level.

In addition to supplying practitioners for the entry-level workforce in public health, the undergraduate degrees will also prepare students to enter graduate programs in public health.

ADMISSION TO THE MAJORS

Freshmen: There are no specific requirements for admission at the freshman level, however completion of a college preparatory high school curriculum including two years of high school biology, a combination of natural science courses including one year each of mathematics and chemistry, and courses in health science and social sciences will be helpful. Grades of B or better are recommended in all these preparatory courses.

Transfer students: Junior-level applicants with the highest grades overall and who satisfactorily complete lower-division requirements will be given preference for admission to the Public Health majors. All applicants to the B.S. degree in Public Health Sciences must complete one year of general biology and one year of general chemistry. All applicants to the B.A. degree in Public Health Policy must complete one year of courses in anthropology, economics, sociology, and/or psychology.

REQUIREMENTS FOR THE B.S. DEGREE IN PUBLIC HEALTH SCIENCES

University Requirements: See pages 59–64.

School Requirements: None

Requirements for the Major

A. Lower-Division Requirements: Public Health 1 and 2; Chemistry 1A-B-C and 1LB-LC, 51A-B-C and 51LA-LB; Biological Sciences 93, 94, 97, 98, 99; Mathematics 2A-B plus Mathematics 7 or Biological Sciences 7; three Social and Behavioral Science courses, with at least two in the same area selected from:

Psychology: Psychology and Social Behavior P9; Psychology 7A, 9A, 9B, 9C
 Sociology 1, 2, 3
 Economics 1, 13, 20A, 20B, 20C
 Anthropology 2A, 2B, 2C
 Political Science 6C, 31A, 51A
 Environmental Analysis and Design E8

- B. Upper-Division Requirements:** Environmental Analysis and Design E177A and E177B; two courses from Biological Sciences D103, D104, E109, N110; four additional upper-division courses chosen from two topic areas with at least one course in either topic area:

Epidemiology and Genetics: Biological Sciences D137, D148*, D153*, D187*, E106, M123*, M137; Environmental Analysis and Design E11U, E178, E187.

Environmental and Global Health Sciences: Biological Sciences E189, 191A-B*, 191C*; Chemistry 125; Environmental Analysis and Design E115, E125, E127, E160, E160L, E163, E164, E164L, E173, E176, E186, E191B, E191C; Earth System Science 112*.

Infectious Diseases: Biological Sciences 100L*, 124, D143, E136, E176, M114, M114L*, M116*, M116L*, M121*, M121L*, M122, M122L*, M124, M125, M137.

*Note additional prerequisites.

- C. Practicum Requirement:** Public Health 195 (8 units), taken for upper-division writing credit.

REQUIREMENTS FOR THE B.A. DEGREE IN PUBLIC HEALTH POLICY

University Requirements: See pages 59–64.

School Requirements: None

Requirements for the Major

- A. Lower-Division Requirements:** Public Health 1 and 2; three courses from Biological Sciences 9A, 9D, 10, 12B, 12D, 45, 93, 94; Mathematics 2A-B plus Mathematics 7 or Biological Sciences 7; three Social and Behavioral Science courses, with at least two in the same area selected from:

Psychology: Psychology and Social Behavior P9; Psychology 7A, 9A, 9B, 9C
 Sociology 1, 2, 3
 Economics 1, 13, 20A, 20B, 20C
 Anthropology 2A, 2B, 2C
 Political Science 6C, 31A, 51A
 Environmental Analysis and Design E8

- B. Upper-Division Requirements:** Environmental Analysis and Design E177A and E177B; eight additional upper-division courses with at least two courses in each topic area:

Health Policy and Administration: Criminology, Law and Society C121, C126, C148, C153; Economics 123A-B-C*, 124A*; Environmental Analysis and Design E101, E105U*, E112, E128U, E137U, E146U, E150U, E154U, E157U*, E172, E175, E189U; Management 183*, 160*, 188*; Political Science 121D, 171A.*

Social and Behavioral Health Sciences: Anthropology 133A, 134A, 134D, 134E; Environmental Analysis and Design E108U, E121, E178, E179U; Psychology and Social Behavior P103, P105, P106, P107, P113D, P114D, P115D, P116D, P117D, P122D, P124D, P130H, P131H, P132H*, P134H, P140H, P141H, P147C, 149C*, P150C*, P151C*, P152C*, P175P*.

*Note additional prerequisites.

**Open only to students enrolled in the Management minor or with consent of instructor.

- C. Practicum Requirement:** Public Health 195 (8 units), taken for upper-division writing credit.

NOTE: Progress toward the completion of requirements and electives will be charted on guide forms to be reviewed regularly during meetings with counselors in the undergraduate program office.

Courses in Public Health

LOWER-DIVISION

1 Principles of Public Health (4). Lecture, three hours. Introduces the major concepts and principles of public health and the determinants of health status in communities. Emphasizes the ecological model that focuses on the linkages and relationships among multiple natural and social determinants affecting health. Formerly Environmental Analysis and Design E7.

2 Case Studies in Public Health Practice (4). Lecture, three hours. Presents case studies in various themes of public health practice to demonstrate how the principles of public health were established and continue to evolve. Formerly Environmental Analysis and Design E9.

UPPER-DIVISION

101A Epidemiology I (4). Lecture, three hours. The distribution of disease and injury across time, space, and populations. Covers basic concepts and methods of descriptive epidemiology including the natural history of disease, demography, public health interventions, models, measurement, sources of data, and indices of health. Prerequisites: Social Ecology 10 and 13. Same as Psychology and Social Behavior P128H and Environmental Analysis and Design E177A.

101B Epidemiology II (4). Lecture, three hours. Covers basic concepts of analytic epidemiology and applications, including experimental and observational designs, prevention, screening, treatment and rehabilitation, infectious disease, and injury prevention. Prerequisite: Public Health 101A. Same as Psychology and Social Behavior P129H and Environmental Analysis and Design E177B.

195 Public Health Practicum (4 to 8). Experiential learning for public health majors at agencies and/or laboratories dedicated to public health practice. Prerequisites: satisfactory completion of the lower-division writing requirement; upper-division Public Health majors only. May be taken for a total of 8 units.

DEPARTMENT OF CRIMINOLOGY, LAW AND SOCIETY

Valerie Jenness, *Department Chair*

The Department of Criminology, Law and Society focuses, first, on the manifestations of criminal behavior and the methods for controlling that behavior, and second, on the relationships and interactions between social processes and legal systems. Basic courses present overviews of American legal systems with particular emphasis on criminal and juvenile justice, the forms of criminal behavior, the role of law in understanding social and psychological phenomena, and the applications of sociological theory in understanding law and legal systems. Subsequent course work provides understanding of the theoretical structures used to explain criminal behavior, the effects of crimes from the perspectives of victims, the operations of systems of justice and their underlying institutions, the goals of governmental regulation and the methods used to achieve those goals, and more advanced issues in the interactions of law and such fields as psychology, sociology, and planning. In addition, substantive areas of law, such as criminal, environmental, and family law, are introduced. The Department offers a B.A. degree program in Criminology, Law and Society.

Students are provided with opportunities to become acquainted with the varieties of behavior that society chooses to control or regulate, the methods and institutions used to achieve that control or regulation, and the approaches aimed specifically at altering unacceptable behavior. In addition, there is provision for students

to use their increasing knowledge of the law, its procedures, and institutions to enhance their understanding of the social sciences.

The course of study provides excellent preparation for law school and for graduate study in sociology, criminology, and criminal justice. Careers for students who terminate their University education at the baccalaureate level may be developed through placements in criminal justice and regulatory agencies, in organizations determining public policy, and in programs that deliver services to people who have difficulties with some aspect of the legal system.

Students are strongly encouraged to select electives in a variety of departments. Courses in areas such as Psychology, Sociology, Economics, and Political Science can provide a further context for the understanding of crime, law, and criminal justice, while courses in areas such as art history, theater, and music can enhance the quality of the student's entire life.

Field study placements are available in police departments, public defenders' offices, probation and parole agencies, the Orange County District Attorney's Office, the State juvenile detention system, the Orange County Victim/Witness Assistance Program, juvenile shelters, legislative offices, and in private legal firms.

Information on the graduate program begins on page 423.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 405.

Departmental Requirements

Ten courses (40 units) as specified below:

- A. Three upper-division required courses (12 units); students must select one course from each of the following three groups: Criminology, Law and Society (1) C101, C102, C103, C104, C105; (2) C106, C107, C108, C109, C110; (3) C111, C112, C113, C114, C115.
- B. Seven upper-division elective courses (28 units) numbered C100–C191, selected in any combination from the three areas of study within the major: (1) The Legal System, Law and Society, (2) Crime and Criminology, and (3) Formal Institutions of Social Control. (Courses taken to satisfy requirement A may not also be used to satisfy requirement B.)

Criminology, Law and Society Minor Requirements

Nine courses (36 units): Criminology, Law and Society C7, Environmental Analysis and Design E8, Psychology and Social Behavior P9, and six upper-division Criminology, Law and Society courses selected from C100–C191.

NOTE: Students pursuing a major in the School of Social Ecology may not use upper-division course work for both school, major, or minor requirements. No overlap is permitted. Social Ecology 198 and 199 may not be applied toward the minor.

Courses in Criminology, Law and Society

LOWER-DIVISION

C7 Introduction to Criminology, Law and Society (4). Lecture, three hours. Examines the major biological, sociological, and psychological explanations for crime and links them historically with prevailing systems of punishment. From classical criminology to positivism, investigates the evolution of criminological theories, their cultural and historical contexts, and their strengths and weaknesses. Formerly Criminology, Law and Society J7. (III)

UPPER-DIVISION

C100 Special Topics in Criminology, Law and Society (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Criminology, Law and Society C7 and, in some cases, consent of instructor. May be repeated for credit as topics vary. Formerly Criminology, Law and Society J100.

C101 Civil Legal System (4). Lecture, three hours. Provides an overview of the American civil legal system and of certain fundamental legal concepts as well as an introduction to legal research. Reading, briefing and debating judicial opinions, legal research, and writing an appellate legal brief. Prerequisite: Criminology, Law and Society C7. Formerly Criminology, Law and Society J101.

C102 Introduction to the Comparative Study of Legal Cultures (4). Lecture, three hours. Traces the anthropological and comparative cultural study of law from the nineteenth century to the present; briefly surveys the diversity of recorded legal cultures and critically examines key concepts which have been used to describe and classify them. Formerly Criminology, Law and Society J106.

C103 American Socio-Legal Theory (4). Lecture, three hours. Evolution of American legal theory from nineteenth century to present in historical context of other human sciences; emphasizes shifting relation between legitimacy of legal decisions and legal system's relative autonomy; social science research use within legal system. Formerly Criminology, Law and Society J103.

C104 Sociology of Law (4). Lecture, three hours. Examines law creation and law enforcement in their social and political context. Discusses the major theories of law and the modern state, and presents case studies in order to evaluate the strengths and weaknesses of these theoretical perspectives. Formerly Criminology, Law and Society J104.

C105 Psychology and the Law (4). Lecture, three hours. Psychological assumptions of American legal system and mental health aspects of provision of criminal justice services. Civil commitment, insanity defense, competence to stand trial, jury selection, eye-witness identification. Use of police, courts, correctional institutions in prevention of behavior disorder. Prerequisite: Criminology, Law and Society C7 or C101. Same as Psychology and Social Behavior P164S. Formerly Criminology, Law and Society J105.

C106 Crime and Public Policy (4). Lecture, three hours. Increase students' understanding of crime, violence, and the criminal justice system; assess students' state of knowledge on current key policy issues, examine/discuss policy-making and the use of empirical information in current U.S. policy debates. Prerequisite: Criminology, Law and Society C7. Formerly Criminology, Law and Society J125.

C107 Deviance (4). Lecture, three hours. Perspectives on deviance and criminality in behavior, institution, community, and myth. The suitability of contemporary theories of deviant behavior. Same as Sociology 156 and Psychology 177D. Formerly Criminology, Law and Society J107.

C108 Criminological Theory (4). Lecture, three hours. Explores the question of crime causation from a number of theoretical perspectives in the social sciences. Schools of thought examined include utilitarianism, positivism, human ecology, social structural approaches, social process (learning) theories, labeling, and radical-critical (political) perspectives. Prerequisite: Criminology, Law and Society C7. Formerly Criminology, Law and Society J108.

C109 Juvenile Delinquency (4). Lecture, three hours. Patterns of delinquent behavior, theories that explain behavior, current research aimed at enhancing exploratory power. Attempts to prevent and control delinquency are put in historical perspective. Development of the current juvenile justice system and evolution of modern juvenile law. Prerequisite: Criminology, Law and Society C7. Formerly Criminology, Law and Society J132.

C110 Community Context of Crime (4). Lecture, three hours. Examines the social context of high-crime communities, with special emphasis on the problems of poverty, joblessness, economic inequality, and racial discrimination. Assesses debates on the causes of these problems, and on the most effective policies to combat them. Formerly Criminology, Law and Society J155.

C111 Theories of Punishment (4). Lecture, three hours. Survey of the various schools of thought regarding formal punishment theory. The purposes of legal sanctions are examined, including those of deterrence, rehabilitation, retribution, and incapacitation. Considers problems in realizing formal goals of punishment in practice. Formerly Criminology, Law and Society J143.

C112 Legal Sanctions and Social Control (4). Lecture, three hours. Examination of criminal sanctions as mechanisms of social control. Includes the nature, function, and organization of courts as sanction generating institutions, and problems associated with punishing white-collar and corporate illegalities. Formerly Criminology, Law and Society J109.

C113 Gender and Social Control (4). Lecture, three hours. Investigates how gender and social control interface such that each determines and reflects the other. Examines how the social world is organized around sex, sexuality, masculinities, femininities. Processes that regulate and channel social life, desire, conduct, differential allocation of social status. Formerly Criminology, Law and Society J116.

C114 Miscarriages of Justice (4). Lecture, three hours. Systematically describes, explains, and analyzes the causes and consequences of the wrongful accusation, prosecution, incarceration, and sometimes even execution, of the innocent in the American criminal justice system. Formerly Criminology, Law and Society J151.

C115 Prisons, Punishment, and Corrections (4). Lecture, three hours. A review of how the U.S. punishes and rehabilitates convicted law violators. The conflicts among the major purposes of sentencing—rehabilitation, deterrence, incapacitation—are discussed, as well as the effects of different sanctions on public safety, offender rehabilitation, and justice system costs. Formerly Criminology, Law and Society J140.

C120 Law and Inequality (4). Lecture, three hours. Various aspects of the law as related to three specific areas of inequality: immigration and immigrants, race, and gender. The role of law as a tool of social reform and limitations of the legal system historically in resolving inequality issues. Formerly Criminology, Law and Society J120.

C121 Science and Law (4). Lecture, three hours. Explores how the law accommodates scientific knowledge and new technologies. Among the topics are ownership of biological materials, intellectual property in the digital age, and toxic torts. Formerly Criminology, Law and Society J112.

C122 Constitutional Law (4). Lecture, three hours. Addresses the areas of freedom of speech, freedom of religion, the right to privacy, and discrimination. Specific issues include racial and gender bias, abortion, symbolic speech, freedom of the media, defamation, advocacy of violence, and obscenity. Prerequisite: Criminology, Law and Society C7. Criminology, Law and Society C122 and Political Science 171D may not both be taken for credit. Formerly Criminology, Law and Society J102.

C123 Family Law (4). Lecture, three hours. Examines legal issues surrounding marriage, cohabitation, divorce, child custody and support, adoption, and the rights of parents and children in the family context. The findings of social science research are used to illuminate the legal issues. Prerequisite: Criminology, Law and Society C7 or C101. Same as Psychology and Social Behavior P169P. Formerly Criminology, Law and Society J123.

C125 Child Development, the Law, and Social Policy (4). Lecture, three hours. Examines how psychology research and practice can inform areas of law and social policy affecting children and adolescents. Topics include education, mental health, reproductive rights, and delinquency. Goals are to evaluate research as well as identify the costs/benefits of current policies. Prerequisites: Psychology and Social Behavior P9 or equivalent; P113D or P114D recommended. Same as Psychology and Social Behavior P165S.

C126 Drugs, Crime, and Social Control (4). Lecture, three hours. Drug abuse in the U.S.; the psychopharmacology of various drugs; biological, psychological, and sociological explanations for drug abuse. Policy issues are discussed; students will develop and defend a set of strategies for limiting harm done by drugs and drug laws. Formerly Criminology, Law and Society J126.

C127 Hate Crimes (4). Lecture, three hours. Examines the causes, manifestations, and consequences of hate crimes and the larger social context within which they occur. The politics and dynamics of intergroup violence born of bigotry and manifested as discrimination; social policy designed to control bias-motivated violence. Formerly Criminology, Law and Society J127.

C128 Environmental Law (4). Lecture, three hours. Environmental law as combination of traditional legal principles and newly created statutes, rules, and decisions applied to environmental protection. Investigates roles of courts, legislature, executive branch and administrative agencies, and private citizens attempting to regulate environmental quality. Federal and state laws utilized. Prerequisite: Environmental Analysis and Design E8. Same as Environmental Analysis and Design E105U. Formerly Criminology, Law and Society J128.

C129 International Environmental Management (4). Lecture, three hours. Network of intergovernmental organizations (the United Nations, in particular) and international nongovernmental organizations in the field of environmental management. Analysis of key international projects and sources of information. Lessons for the integration of international research expertise. Prerequisite: Criminology, Law and Society C7. Same as Environmental Analysis and Design E137U and International Studies 123. Formerly Criminology, Law and Society J129.

C130 Seminar on Gangs (4). Seminar, three hours. An overview of gangs, including the nature and definition of gangs; types of gangs; diversity of membership; theoretical explanations; criminal behavior; drug use and sales; law enforcement responses; gangs in correctional institutions; intervention and prevention strategies; and public policy issues. Formerly Criminology, Law and Society J130.

C131 Organized Crime and American Society (4). Lecture, three hours. Examination of the phenomenon of American organized crime from a sociological perspective. Explanation of methods by which organized crime is tolerated at various levels of society. Emphasis on ways in which "underworld" interests interact with legitimate economic and political institutions. Formerly Criminology, Law and Society J114.

C132 Forensic Science, Law, and Society (4). Lecture, three hours. Examines the use of "forensic science" to resolve issues arising in criminal cases including crime scene analysis, DNA testing, fingerprints, trace evidence comparisons, profiling, lie detectors, other forensic techniques; evaluation, statistical characterization, and legal admissibility of evidence; regulation of forensic laboratories.

C133 Homicide and Suicide (4). Lecture, three hours. Examines similarities and differences among homicide and suicide, two major causes of death. Formerly Criminology, Law and Society J113.

C134 Victimless Crimes (4). Lecture, three hours. Examines major theoretical, empirical, and policy-oriented research related to the design, implementation, and analysis of government intervention, through the criminal sanction, in the spheres of vice and morality. Formerly Criminology, Law and Society J134.

C135 Homicide (4). Lecture, three hours. Examines homicide from several different perspectives including: how the social, cultural, and economic environment impacts homicide levels; the measuring and categorizing of homicide to aid in the design and implementation of violence-reduction interventions, and the investigation of homicide events by law enforcement. Formerly Criminology, Law and Society J135.

C136 Forensic Psychology (4). Lecture, three hours. Presents theoretical and empirical basis for a psychological perspective of criminal behavior, particularly violent behavior. Examines violence, sexual offending, and mental disorder related to crime with regard to clinical assessment, treatment, and rehabilitation; mental health services within forensic institutions. Prerequisites: Psychology and Social Behavior P9 or equivalent, Psychology and Social Behavior P105, P175P or Criminology, Law and Society C149, or consent of instructor. Same as Psychology and Social Behavior P145C and Psychology 177F.

C137 Criminal Procedure (4). Lecture, three hours. Examines the law governing arrests (with and without a warrant); police detention; search and seizure; interrogation; use of informers, eavesdropping, wiretapping; examination and identification of suspects. Pretrial motions such as speedy trial and discovery of evidence may be covered. Formerly Criminology, Law and Society J137.

C138 Victims of Crime (4). Lecture, three hours. Examines the impact of crime upon a variety of victims, e.g., victims of child and spousal abuse, burglary, arson, robbery, and rape. Considers such topics as victim compensation, victim-offender relationships, and the secondary victimization process. Formerly Criminology, Law and Society J138.

C139 Police and Change (4). Lecture, three hours. Organizational efforts to modify police conduct are addressed by focusing on the history of policing in the United States including training, education, and the contributions of women. Formerly Criminology, Law and Society J139.

C140 Surveillance and Society (4). Lecture, three hours. Explores the development and deployment of surveillance technologies in contemporary society. The social and legal impact of surveillance technologies in such areas as crime control, privacy, trust, community, democracy, and the war on terror.

C141 Seminar in Criminology, Law and Society (4). Seminar, three hours. Selected topics in the field of criminal justice. Issues vary with the interests of the instructor and students, and include such topics as violent crime, political crimes, police discretion, and civil rights of prison inmates. Formerly Criminology, Law and Society J141.

C142 White-Collar Crime (4). Lecture, three hours. Examines criminal activity in business and corporate enterprise, organizations, and the professions. Theories regarding the causes and control of white-collar and corporate crime are covered as well as the numerous definitions of these terms. Same as Sociology 142. Formerly Criminology, Law and Society J142.

C143 Media, Intellectual Property, and Cyberlaw (4). Lecture, three hours. Explores the personal and intellectual property rights and obligations in media and on the Internet. Critically evaluates the challenge of interpreting constitutional rights in the digital world. Topics include Internet regulation, free speech, privacy, crime, biopatents, and artificial intelligence.

C144 Criminal Law (4). Lecture, three hours. Deals specifically with the substantive nature of criminal law and its historical development. Focuses on understanding the development of fundamental doctrinal principles upon which criminal law is based, including mens rea, actus reus, homicide, causation, group criminality, and exculpation. Formerly Criminology, Law and Society J144.

C145 Government Crime (4). Lecture, three hours. Examines the legal, organizational, and political issues involved in the generation and control of government lawlessness. Readings present historical and theoretical perspectives in the abuse of government authority and the ability of the legal system to control such behavior. Formerly Criminology, Law and Society J145.

C146 Social Control of Violence (4). Lecture, three hours. Studies the police as controllers of violence, as users of violence, and as victims of violence. Prerequisite: Criminology, Law and Society C7. Formerly Criminology, Law and Society J146.

C147 Law and Social Change (4). Lecture, three hours. Explores the relationship of law to its social setting by considering both law as a product of social change and law as a source or medium of change. Formerly Criminology, Law and Society J147.

C148 Geographic Information Systems (4). Lecture, two hours; laboratory, one and one half hours. Basic geographic, cartographic, and GIS concepts including computer representation of physical, political, statistical, and social aspects of space using vector and grid-based maps. Experience with extensive geographic base map files and databases through use of GIS software (ArcView 3.x). Formerly Criminology, Law and Society J148.

C149 Violence in Society (4). Lecture, three hours. Current theory and research on aggression; anger and violence as problems in individual and social functioning. Process and functions of anger examined with regard to normal behavior and psychopathology. The determinants, prevalence, and implications of violence in society are analyzed. Prerequisite: Psychology and Social Behavior P9 or equivalent. Same as Psychology and Social Behavior P175P. Formerly Criminology, Law and Society J149.

C150 The Legal Profession (4). Lecture, three hours. Role of the legal profession in modern society, the diverse professional roles lawyers play, the American legal profession compared with that of other societies. "Litigation explosion," ethical problems, interactions between lawyers and other professionals, training and socialization of new lawyers. Formerly Criminology, Law and Society J150.

C151 Cybercrimes, Investigation, Forensics, and Prosecution (4). Lecture, three hours. Examines crimes committed against persons, property, society, and the government in which a computer is used. How these computer crimes are committed, investigated, and ultimately prosecuted.

C152 Interrogation, Confession, and the Law (4). Lecture, three hours. In-depth examination of the social psychology of police interrogation in America, the evolution of American interrogation practices from the nineteenth century to the present, impact of law on police behavior and ideology, causes and consequences of false confessions, possibilities of reform. Same as Psychology and Social Behavior P156S. Formerly Criminology, Law and Society J152.

C153 Rights, Justice, and the Law (4). Lecture, three hours. Examines various ways of justifying system of rights and looks at interrelations and conflicts between various elements. Focuses on four distinct categories of rights: civil rights, property rights, welfare rights, and human rights. Formerly Criminology, Law and Society J153.

C154 Social Theory and the Law (4). Lecture, three hours. Provides theoretical tools to understand the relationship between law and society. Focuses on the connections between law and discourse, power, space and geography, economic markets, gender, race, class, democratic legitimacy, and the indeterminacy of language. Formerly Criminology, Law and Society J154.

C155 Influence, Memory, and the Law (4). Lecture, three hours. Examines the intersection of influence and memory on law with a theoretical discussion of the social psychology of influence, suggestion, and decision making. Phenomenon of coercive persuasion, social origins and perpetuation of moral panic, how it can lead to wrongful prosecution.

C156 Cross-Cultural Research on Urban Gangs (4). Lecture, three hours. Taking an urban policy approach, examines the background and contemporary traditions of gangs in several ethnic groups including African-, Asian-, and Mexican-Americans. Cross-cultural exploration of the varied facets of gang life. The major social-control institutions affecting them. Same as Chicano/Latino Studies 153. Formerly Criminology, Law and Society J156.

C164 Social Control of Delinquency (4). Lecture, three hours. Assumes familiarity with theories of juvenile delinquency, the juvenile justice system, the elements of juvenile law. Using that knowledge, students explore current research in primary and secondary prevention of delinquency, and relevant case law. Requires an original research project. Prerequisites: Social Ecology 10 and Criminology, Law and Society C109. Formerly Criminology, Law and Society J164.

C165 The Death Penalty (4). Lecture, three hours. Examines why the U.S. continues to have a death penalty when so many other countries have abandoned it. Arguments for and against the death penalty are covered.

C170 Federal Law Enforcement (4). Lecture, three hours. The peculiar legal, organizational concerns of the federal system of law enforcement and some of the crimes it is uniquely designed to address—white-collar crime, drug trafficking, racketeering, public corruption. Roles, responsibilities of the FBI, DEA, Customs, other policing agencies. Prerequisites: Criminology, Law and Society C7. Formerly Criminology, Law and Society J115.

C171 Latinos and the Law (4). Lecture, three hours; discussion, one hour. Examines a range of theoretical, empirical, and policy approaches to legal issues affecting the Latino population, with emphasis on California. Discusses topics concerning the purpose of law, the creation of law, and the enforcement of law. Same as Chicano/Latino Studies 142. Formerly Criminology, Law and Society J111.

C172 Culture Change and the Mexican People (4). Lecture, three hours. Reviews culture contact and colonization, innovation diffusion, acculturation, assimilation, culture conflict and marginality, modernization, urbanization, legal transformations. Mexico and the Southwestern U.S. are reviewed through several centuries to better appreciate the indigenous base of the Mexican people. Same as Chicano/Latino Studies 155. (VII-A)

C177 Eyewitness Testimony (4). Lecture, three hours. Faulty eyewitness testimony is a major cause of wrongful convictions. Covers the fast-growing topic of eyewitness testimony and memory for real-world events, both how psychologists study eyewitness capacity, and how the legal system has dealt with eyewitness issues. Prerequisites: Social Ecology 10 and senior standing. Same as Psychology and Social Behavior P177P.

C181 Contemporary Legal Issues (4). Lecture, three hours. An in-depth analysis of current legal issues viewed from their political and constitutional perspectives. Issues studied are determined by instructor and student interest. Prerequisite: consent of instructor. Formerly Criminology, Law and Society J181.

C185 Criminal Justice System Capacity (4). Lecture, three hours. Examination of "system capacity" in criminological and criminal justice related research and how it can be used to explain and describe current problems and practices in the American legal system. Limitations of sanctioning criminals due to political, physical space, and resource constraints. Prerequisite: Criminology, Law and Society C7. Formerly Criminology, Law and Society J185.

C191 Law and Modernity (4). Lecture, three hours. The rise and spread of Enlightenment legal traditions, social contract theory, individual rights, ideologies of "liberty, equality, fraternity"; contradictions of liberal law, its understandings of "primitive" and "civilized"; pervasive myths of property, difference, race, and rights. Reading- and writing-intensive. Same as Anthropology 127A. Formerly Criminology, Law and Society J191. (VII-B)

C196 Research Seminar in Criminology, Law and Society (4). Seminar, three hours. Special topics research seminar. Content varies with interest of instructor. Capstone research opportunity with Criminology, Law and Society faculty members. Prerequisites: upper-division standing and consent of instructor. May be repeated for credit as topics vary. Formerly Criminology, Law and Society J196.

DEPARTMENT OF ENVIRONMENTAL HEALTH, SCIENCE, AND POLICY

The Department of Environmental Health, Science, and Policy is concerned with the interactions between the physical and social environment and human health and behavior. The Department offers a B.A. degree program in Environmental Analysis and Design. This major is offered jointly with faculty in the Department of Planning, Policy, and Design. The faculty also cosponsors the B.S. degree in Applied Ecology with the School of Biological Sciences.

NOTE: The availability of the majors in Environmental Analysis and Design and in Applied Ecology is under review. Contact the Office of Admissions and Relations with Schools at (949) 824-6703 for information.

Students in the Environmental Analysis and Design degree program begin with basic courses in human ecology, environmental quality, epidemiology, environmental health sciences, and environmental public policy. Subsequent work moves toward problem-oriented courses in these areas, enriched by ongoing faculty and student research on such topics as the effects of environmental pollution; the biology and politics of water pollution; potential impacts of natural disasters; compliance with environmental regulations; the way in which changes in the community affect health and well-being of its residents; environmental stressors (e.g., crowding, smog, noise); the effects of stress on health; causes and consequences of urbanization and population change; and risk assessment.

In addition to providing basic knowledge for students in other areas, courses are relevant to professional careers in the areas of administration, environmental quality, environmental health science, environmental impact assessment, urban and regional planning, and community environmental education. Graduate and professional opportunities related to environmental analysis include urban and regional planning, architecture, environmental psychology, ecology, and public health. Special emphasis is placed upon the roles of individual citizens and community organizations, both governmental and private, in maintaining and enhancing the quality of the human environment. Field study is done in city planning departments, private consulting firms, environmental information centers, pollution control agencies, and health agencies.

Information on the graduate program begins on page 423.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 405.

Departmental Requirements

Ten courses (40 units) as specified below:

- A. Four upper-division core courses (16 units) selected from Environmental Analysis and Design E101–E120.
- B. Six upper-division specialty courses (24 units) numbered E100, E100U, E121–E193, selected in any combination from the areas of Socio-Environmental Studies, Planning and Policy Studies, Ecology and Environmental Health Science, and Public Health.

Environmental Analysis and Design Minor Requirements

Nine courses (36 units): Criminology, Law and Society C7, Environmental Analysis and Design E8, Psychology and Social Behavior P9, and six upper-division Environmental Analysis and Design courses, of which a minimum of two are selected from E101–E120U and the remainder are selected from E100, E100U, E121–E193.

NOTE: Students pursuing a major in the School of Social Ecology may not use upper-division course work for both school, major, or minor requirements. No overlap is permitted. Social Ecology 198 and 199 may not be applied toward the minor.

Environmental Design Minor Requirements

Eight courses (32 units): Environmental Analysis and Design E102U, E108U, E135U, and five additional courses selected from E104U, E105U, E132, E133, E134, E136U, E138U, E139A–B–C, E160U, E191U; Art History 145A, 145B, 145C.

NOTE: A maximum of three courses may be counted toward both the minor in Environmental Design and the majors in Environmental Analysis and Design or Social Ecology.

Epidemiology and Public Health Minor Requirements

Nine courses (36 units): Environmental Analysis and Design E5, E8, E177A, and six additional courses selected from E45U, E101, E111U, E173, E175, E176, E177B, E178, E186, E187, Psychology and Social Behavior P134H, Social Ecology 120, 130, Biological Sciences D143.

NOTE: A maximum of three courses may be applied toward both the minor in Epidemiology and Public Health and the majors in Applied Ecology, Environmental Analysis and Design, Public Health Policy, Public Health Sciences, or Social Ecology. (Environmental Analysis and Design E8 is by necessity one of the three.)

Urban and Regional Planning Minor Requirements

Nine courses (36 units): Environmental Analysis and Design E8, E107U, and seven additional upper-division Environmental Analysis and Design courses selected from E100U, E102U, E104U, E105U, E106U, E108U, E109U, E111U, E123U, E124U, E128U, E131U, E132U, E135U, E136U, E137U, E138U, E140U, E141U, E142U, E143U, E144U, E145U, E148U, E151U, E154U, E155U, E156U, E157U, E158U, E159U, E160U, E179U, E189U, E190C, E190U, E191U.

NOTE: A maximum of three courses may be counted toward both the minor in Urban and Regional Planning and the majors in Environmental Analysis and Design or Social Ecology. (Environmental Analysis and Design E8 is by necessity one of the three.)

Courses in Environmental Analysis and Design

LOWER-DIVISION

E1 Natural Disasters (4) F. Lecture, three hours. Examines the natural processes and impacts of natural disasters. The responses of our society are examined and compared with available prehistoric case studies. Basic understanding of natural processes is gained in this course. (II)

E3 Human Environments (4) W. Lecture, three hours. Study of natural and physical components of earth's environmental problems due to human activities. Topics include global air, water, soil, biodiversity, rainforests, energy, demographics, agriculture, and urbanization. Theme is sustainability. Integrated into the science are social, legal, and economic considerations. (II)

E5 Introduction to Environmental Quality and Health (4). Lecture, three hours. A preliminary survey of how pollution of the natural and physical environment affects human health. Topics include toxicology, epidemiology, risk assessment, water, food, air, noise, radiation, solid and hazardous waste. Included are elements of environmental administration, environmental education, consumer protection. (II)

E8 Introduction to Environmental Analysis and Design (4) F, W, S. Lecture, three hours. Overview of general concepts, theoretical principles, and analytical techniques for investigating environmental systems. Integrates tools from both natural and social sciences to analyze contemporary environmental challenges such as pollution, resource acquisition, facility and ecosystem design, impact assessments, the formulation of environmental policy. (III)

E15 Native American Religions and the Environmental Ethic (4) S. Lecture, three hours. Examines Native American religions and their perspectives on the human relationship to the natural environment. Topics include the rise and fall of pre-Columbian state theocracies, the ceremony of the Sacred Pipe, revitalization movements, and sacredness and ritual in contemporary life. (VII-A)

E20 People, Cultures, and Environmental Sustainability (4) Lecture, three hours. An anthropological consideration of global environmental sustainability from the perspective of human cultures and communities. Causes and consequences of population growth, natural resource management, environmental law, environmental ethics. Case studies emphasize tropical rain forests, arid lands of Africa and North America. Same as Anthropology 20A.

E45U AIDS Fundamentals (4) Lecture, three hours; discussion, three hours. Considers the biological and sociological bases of the AIDS epidemic. Topics include the history of AIDS, current medical knowledge, transmission, risk reduction, and how the community can respond. Same as Biological Sciences 45. (II)

UPPER-DIVISION

E100 Special Topics in Environmental Analysis (4) Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Environmental Analysis and Design E8 and, in some cases, consent of instructor.

E100U Special Topics in Urban and Regional Planning (4) Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisite: in some cases, consent of instructor. May be repeated for credit as topics vary.

E101 Environmental and Public Health Policy (4) Lecture, three hours. Examines factors involved in shaping public health and environmental policy. Topics include the role of science in public health policy, the function of governmental regulatory agencies, citizen participation, and economic and sociopolitical aspects of controlling infectious diseases and regulating carcinogens. Same as Psychology and Social Behavior P182P.

E102U Cultural Ecology and Environmental Design (4) Lecture, three hours. Introduction to cultural ecology and environmental and architectural design. With a view to understanding people's relationships with their built environments, the basic elements of architecture, architectural analysis, and cultural analysis are covered. Examines values in design and design for multicultural societies. Prerequisite: Environmental Analysis and Design E8.

E103 Environmental Pollution and Remediation (4) Lecture, three hours. The study of pollution—its identification, risks, and remediation. Analysis of sources of natural and anthropogenic environmental pollutants using ecological concepts, chemical fate and transport, engineering technologies, economics, and policy to provide understanding and solutions to these problems. Prerequisite: upper-division standing or consent of instructor.

E104U Urban Sociology (4) Lecture, three hours. Overview of theoretical, substantive, and policy issues in urban sociology. History of urbanization, the school of human ecology, and recent trends regarding urbanism. Time is devoted to understanding the causes and possible solutions to urban problems. Prerequisite: Environmental Analysis and Design E8.

E105U Environmental Law (4) Lecture, three hours. Environmental law as combination of traditional legal principles and newly created statutes, rules, and decisions applied to environmental protection. Investigates roles of courts, legislature, executive branch and administrative agencies, and private citizens attempting to regulate environmental quality. Federal and state laws utilized. Prerequisite: Environmental Analysis and Design E8. Same as Criminology, Law and Society C128.

E106U Human Ecology (4) Lecture, three hours. Will population growth doom the human race? Examines the influence of Malthus' *First Essay on Population* (1798) on current models of population-environment interactions and the implications of these models for action. Prerequisite: Environmental Analysis and Design E8. Formerly Environmental Analysis and Design E106.

E107U Urban and Regional Planning (4) Lecture, three hours. Important substantive areas, concepts, tools in the field of urban and regional planning. Topics include: forces that have historically guided and are currently guiding U.S. urbanization; land use, economic development, housing and community development, environmental planning; legal, environmental, governmental contexts. Prerequisite: Environmental Analysis and Design E8.

E108U Environmental Psychology (4) Lecture, three hours. Impact of the physical environment on individual and group behavior. Three basic concerns examined: (a) environmental determinants of behavior at the individual and interpersonal level; (b) social planning and urban design; and (c) methodological approaches to the study of environmental issues. Prerequisites: Social Ecology 10 and Environmental Analysis and Design E8. Same as Psychology and Social Behavior P109.

E109U Urban Public Policy (4) Lecture, three hours. Examines why and how urban policies are enacted and carried out in contemporary U.S. cities and regions. Topics include: evolution and organization of city governments and policymaking over the past century; who has the power to direct public policy and control how cities develop. Prerequisites: Social Ecology 10 and Environmental Analysis and Design E8.

E110 Environmental Geology (4) Lecture, three hours; discussion, one hour. Introduction to geologic principles and applications to environmental problems. Topics include: tectonic processes, earth materials, soils, river processes, groundwater, the coastal environment, slope failures, seismic hazards, mineral resources, and land-use evaluation based on geologic conditions. Examples from case studies. Prerequisite: Environmental Analysis and Design E1, E3, or E8.

E111U Dynamics of Human Populations (4) Lecture, three hours. Survey of measurement and theory in social demography, with applications to social and economic issues at local, regional, and global levels.

E112 Public Issues in Biotechnology (4) Lecture, three hours. Examines developments in biotechnology potentially affecting various facets of human society or warranting significant public debate. The implications for public health, environmental science, agriculture, legislation, ethics in science, public policy, economics, and technological background in genetics and ecology.

E113 Social Ecology of Peace (4) Lecture, three hours. Examination of differing definitions of the problem of achieving peace and the special problems of seeking peace in the nuclear age. Same as International Studies 121. (VII-B)

E115 Environmental Health Science (4) Lecture, three hours. Focuses on processes of exposure to environmental toxins/agents and their impact to human health and the environment. Media transport, exposure assessment, susceptibility, behavior, and health effect of several toxins are discussed.

E117 Environmental Biotechnology (4) Lecture, three hours. A comprehensive yet concise description of the field of environmental biotechnology as it relates to human environments and the global ecosystem. Students become conversant in the natural history of environmental, biotechnical developments, and the applications of biotechnology. Prerequisite: a course in biology, chemistry, ecology, or environmental science.

SOCIO-ENVIRONMENTAL STUDIES

E121 Human Stress (4) Lecture, three hours. Stress as a multidisciplinary topic: Biological, psychological, and sociological approaches to adaptation-related disorders. Effects of acute and chronic stress on emotions, physiology, and behavior. Methods of stress assessment, stress reduction, and intervention. Prerequisite: Psychology and Social Behavior P9 or equivalent. Same as Psychology and Social Behavior P127H.

E122 Social Ecology of Peace II (4) Lecture, three hours. Examination of the relationship to achieving peace, of strivings for national security and arms control, and of the basic formative and stabilizing institutions of society including government, religion, business, education, and the family.

E123U California's Population (4) Lecture, three hours. Surveys California's human population (past, present, and future) and its interactions with trends in society, government, the economy, and the environment.

E124U Leadership (4) Lecture, three hours. Examines current theory and research about the origins, aspects, and consequences of leadership. Discussions with recognized community leaders and experiential assignments designed to focus on student's own leadership potential and skills. Prerequisite: Social Ecology 10 recommended. Same as Psychology and Social Behavior P159S.

E125 Ecological Anthropology (4). Lecture, three hours. Studies relationships between human communities and their natural environments. The role of environment in shaping culture; effects of extreme environments on human biology and social organization; anthropologist's role in studying global environmental problems, e.g., African famine, destruction of tropical rain forests. Prerequisite: Anthropology 2A, 2B, or 2C. Same as Anthropology 125B. (VII-B)

E126 The Family (4). Lecture, three hours. Examination of Western family life from population and life course perspectives. Links between large-scale trends and changes in individual's family and household options. Same as Psychology and Social Behavior P168P.

E127 Nuclear Environments (4). Lecture, three hours. Understanding the impact of the nuclear age on the environment and human health through the interrelated developments of nuclear power and nuclear weapons. The early years of weapon development, catastrophic environmental pollution, perils of nuclear power in the U.S. and Russia. Same as International Studies 122. (VII-B)

E128U Race, Ethnicity, and Cities (4). Lecture, three hours. Examines racial and ethnic inequality and the influence that urbanization has in affecting race relations. Explores how race/ethnicity, urban space, housing, economic development, public education, and land policy intersect in cities, both historically and today.

PLANNING AND POLICY STUDIES

E129 Environmental Impact Analysis (4). Lecture, three hours. Examines the environmental impact assessment process. Topics include impacts associated with biophysical and socioeconomic environmental effects, whether direct, indirect, or cumulative. Analysis of project alternatives, mitigation of impacts, methodologies for measuring impacts. Legislation and case law. Examples from case studies. Prerequisite: Environmental Analysis and Design E8 or consent of instructor.

E131U Diversity and Environments (4). Lecture, three hours. Explores human diversity and power in built environments. Examines contributions of underrepresented groups to design and planning professions, and how race, class, gender affect use and perception of environments. Investigates ways to make environments and environmental professions more responsive to diversity. (VII-A)

E132U Global Environmental Issues (4). Lecture, three hours. While many agree that environmental problems threaten humankind, there is much disagreement over the nature of these threats and how to address them. This course examines global environmental issues from various perspectives in order to provide answers to these questions. Same as International Studies 120 and Political Science 143D.

E133 Advanced Environmental Psychology: Facilities Design for the Workplace (4). Lecture, three hours. Survey of major topics in the field of facilities design and management including methods of environmental programming and postoccupancy evaluation, design criteria for office automation, and facility-based strategies for promoting employee health, productivity, and improved quality of worklife. Prerequisites: Environmental Analysis and Design E8 and E108. Same as Psychology and Social Behavior P184P.

E134 Environmental Design Research Methods (4). Lecture, four hours. In-depth treatment of theoretical and empirical work relevant to selected topics in environmental psychology, followed by field work with architectural consultants. Students develop environmental evaluation instruments, collect data, and report findings to the consultants for review. Prerequisites: Social Ecology 10; Environmental Analysis and Design E8 and E108. Same as Psychology and Social Behavior P188P.

E135U Elements of Environmental Design (4). Lecture, three hours. Basic elements of environmental design such as scale, proportion, rhythm, color, sound, lighting, surfaces, texture, architectural definition of spaces, volumes, massing volumetric analysis, solids and voids, and cultural aspects of design. Excitement and creativity in design, imageability. Prerequisite: Environmental Analysis and Design E8; E102U or consent of instructor.

E136U Environmental Programming (4). Lecture, three hours. Various styles and methods of programming for buildings and building interiors. Examines information designers need; methods for acquiring, sorting, and processing information; making information more scientific, systematic, and reliable; how it can be represented; value judgments involved. Prerequisites: Environmental Analysis and Design E8; E135U or consent of instructor.

E137U International Environmental Management (4). Lecture, three hours. Network of intergovernmental organizations (the United Nations, in particular) and international nongovernmental organizations in the field of environmental management. Prerequisite: Criminology, Law and Society C7. Same as Criminology, Law and Society C129 and International Studies 123.

E138U Design and Behavior (4). Lecture, three hours. Introduces students to United States urban design and the significance of design for human well-being. Focuses on Southern California urban developments. Prerequisites: Environmental Analysis and Design E8 and E136U.

E139A-B-C Research in Environmental Design I, II, III (4-4-4). Lecture, three hours. Participating in a research project selected by the professor, students learn to frame research questions, design a research project, collect data, analyze data, and write research reports. Focus is on "qualitative research methods." Prerequisite: Social Ecology 10 or consent of instructor. Only one quarter of E139A-B-C may be used toward upper-division requirements.

E140U Survey Analysis of Urban Residents (4). Lecture, three hours. Hypotheses concerning the nature and problems of metropolitan areas are tested using Orange County data. A resident survey and the 1980 census are used to study urban social and economic issues. Empirical research projects are assigned. Prerequisites: Environmental Analysis and Design E8; Social Ecology 10 and 166A-B-C.

E141U Urban and Regional Analysis (4). Lecture, three hours. Concepts and methods in regional science with applications to planning, public policy, and environmental analysis. Spatial interaction, location, multiplier, basic activity, and input-output models and their relation to ongoing urban and regional phenomena. Prerequisites: Social Ecology 10 and 13.

E142U Technology and Economic Development (4). Lecture, three hours. Covers importance of technology for urban economic and social development. Concepts of technological innovation and diffusion, and their relevance for cities and metropolitan areas. Principles of networks and their importance for diffusion. Relationship of technology with urban infrastructure and metropolitan form. Prerequisites: Social Ecology 10 and 13 or equivalent.

E143U Social Ecology of the Borderlands (4). Lecture, three hours. An introduction to the most important socioeconomic issues affecting the urban-regional context of the U.S.-Mexico border area. Borderlands regional development, urbanization, migration, industrialization, labor market, and environmental issues are considered. Prerequisite: Environmental Analysis and Design E8. Same as Chicano/Latino Studies 162. (VII-B)

E144U Urbanization and Social Change (4). Lecture, three hours. Examines interactions between social structure and physical space: (1) the contemporary evolution of cities and their hinterlands in the U.S.; (2) patterns of urbanization in the Third World; and, as background for understanding these developments, (3) the re-emergence of cities in Medieval Europe. Prerequisite: Environmental Analysis and Design E8.

E145U Environmental Politics and Policy (4). Lecture, three hours. Provides a multifaceted foundation for the development of environmental problem-solving and policy-making skills. Examines "nature" from a range of historical and cultural perspectives. Links socio-ecological stress theories to a range of landscapes and contemporary debates. Current air, water, and land policies. Same as Political Science 141A.

E146U Public Policy and Management (4). Lecture, three hours. Exposes students to the best management practices that assure effective planning and implementation of policies and programs in government, business, and non-profit sectors. Includes guest lecturers who are proven leaders in the four principal institutions of a community: business, education, government, and nonprofit.

E148U Cities and Transportation (4). Lecture, three hours. The relationship between urban areas and transportation systems. Economic analysis of cities, transportation and urban form, highway congestion, environmental impacts of transportation, public transit, land use and transportation, and political influences on transportation planning.

E151U Housing and Urban Development Policy (4). Lecture, three hours. Surveys public policy issues and develops analytic techniques in the areas of housing and urban development. Examines a range of policy topics including housing assistance to low- and moderate-income families, housing finance system, incentives for economic development and neighborhood preservation. Recommended: previous course work in economics.

E154U Ethics and Public and Private Life: Advanced Seminar (4). Lecture, three hours. Examines ethical issues in public and private life by considering traditional moral theory in light of specific moral dilemmas, such as environmental policy, genocide, abortion, euthanasia, social welfare, and aid to other countries. Prerequisite: satisfactory completion of the upper-division writing requirement or consent of instructor. Same as Political Science 138B.

E155U Water Resource Policy (4). Lecture, three hours. Examination of contemporary water problems worldwide, with particular attention to the competing demands for water in the western U.S., and water demand by the poor in developing countries. History and analysis of U.S. water policies at local, state, and federal levels.

E156U Public Health Cost-Effectiveness Analysis (4). Lecture, three hours. Students learn how to calculate the cost-effectiveness of life-and-death public health interventions by measuring health-related quality of life, survival, and cost, and how to use cost-effectiveness information to make wise public health investment decisions in the face of limited resources.

E157U Public Policy Analysis (4). Lecture, three hours. Examines different approaches to the analysis of public policy with differing notions of what constitutes good policy, the role of government, and how citizens participate in policy-making. Suggests a policy-design perspective which builds upon other frameworks but concentrates on goals, implementation structures, tools, and rationales. Prerequisites: Environmental Analysis and Design E8 and E109U. Same as Political Science 121E.

E158U Economic Analysis of Government Behavior II (4) W. Lecture, three hours. The study of government using the tools of economics. The effects of various taxation and expenditure policies, such as social security, are examined. Prerequisites: Economics 100A-B or consent of instructor. Same as Economics 141B and Political Science 127B.

E159U Urban Economic Development Policy (4). Lecture, three hours. Theoretical and practical perspectives on local economic development policy. Integrates economic, planning, political perspectives. Overview of economic role of cities and metropolitan areas. Specific development issues include link between taxes, regulation, job growth; redevelopment planning; evaluating economic development policy.

ECOLOGY AND ENVIRONMENTAL HEALTH SCIENCE

E160 Environmental Health Microbiology of Water and Waste Water (4). Lecture, three hours. Examines microorganisms and their functions in the aquatic environment, specifically microorganisms' role in the biogeochemical cycles of nitrogen, sulfur, and mercury, and how our activities are affecting these cycles. How and why indicator organisms are used in the determination of water quality for public health. Prerequisites: Environmental Analysis and Design E5 or a general course in biology.

E160L Environmental Health Microbiology of Water and Waste Water Laboratory (4). Laboratory, three hours. Enumeration and identification of microorganisms from various aquatic environments. Examines microbial mediation of the sulfur, nitrogen, and mercury cycles and the public health aspects of water quality. Prerequisites: Environmental Analysis and Design E8 or a general course in the Biological Sciences Core curriculum; and completion of or concurrent enrollment in E160.

E160U Urban Design Principles (4). Lecture, three hours. Introduction to principles of urban design and its applications. Study of contemporary and traditional theories of urban design formulated to improve physical characteristics of built environment to facilitate an enhanced quality of life. A variety of case studies are discussed.

E161 Environmental Hydrology (4). Lecture, three hours. Provides an overview of the occurrence, distribution, and movement of water in the environment. Qualitative understanding emphasized. Quantitative methods for analyzing hydrologic processes. Human impacts on water distribution and quality. Lectures, weekly assignments, problem sets, a project, and a field trip. Prerequisites: precalculus-level mathematics and previous introductory course work in environmental geology, earth science, or chemistry helpful.

E162 Brownfields: Law and Policy (4). Lecture, three hours. Examines the legal structure and policy issues of redeveloping contaminated properties known as Brownfields. Federal and state Brownfield programs, liability and risk management, cleanup and future land use, institutional controls, community economic revitalization, legislation and policies to encourage Brownfield redevelopment. Prerequisite: Environmental Analysis and Design E8 or consent of instructor.

E163 Issues in Potable Water Reuse (4). Lecture, three hours. Provides an in-depth study of the treatment and subsequent reuse of wastewater for drinking. Analyzes existing regulations for both drinking water and reuse situations, microbial and chemical contaminants, health concerns and risk assessment. Prerequisite: Environmental Analysis and Design E8.

E164 Toxins in the Environment (4). Lecture, three hours. Uses and impact of heavy-metal toxins in the environment traced from ore bodies, product manufacture, consumption, and waste management. Routes of exposure; medical and societal impacts of these exposures. Prerequisites: Environmental Analysis and Design E8; junior standing and consent of instructor.

E164L Toxins in the Environment Laboratory (4). Laboratory, three hours. Involves planning, sampling, gathering, and analyzing data. Direct first-hand experience in carrying out a scientific research project from inception through final technical report. Prerequisite or corequisite: Environmental Analysis and Design E164. Prerequisites: E8 and either E115 or consent of instructor.

E165L Environmental Geology: Field and Laboratory (4). Lecture, one hour; laboratory, three hours. Provides weekly lecture, laboratory experiments, and demonstration of techniques in the environmental sciences. Three to five Saturday field trips as well as a four-day field trip to study specific environmental problems. Prerequisite or corequisite: Environmental Analysis and Design E110. Formerly Environmental Analysis and Design E185L.

E166L Chronological Dating Techniques Laboratory (4). Lecture, three hours; laboratory, one hour. Examines the potential and limitations of chronological dating techniques in the study of both near-term and long-term environmental processes and anthropogenic events. Case studies reflect consistency of the class. Weekly laboratory demonstrations and exercises. Prerequisite: Environmental Analysis and Design E8.

E167 Terrestrial Ecosystems (4). Lecture, three hours. A mechanistic perspective of the structure and functioning of terrestrial ecosystems. Includes the mechanisms that control plant growth, hydrology and nutrient cycling, and the roles terrestrial ecosystems play in local and global biogeochemistry. Prerequisite: Biological Sciences E106 or consent of instructor. Same as Biological Sciences E118 and Earth System Science 164.

E168 Coastal Ecosystem Health (4). Lecture, three hours. Examines the causes of coastal ecosystem degradation and strategies to restore the ecosystem balance or prevent further coastal ecosystem health degradation. Prerequisite: Environmental Analysis and Design E8.

E168L Laboratory for Exposure Assessment (4). Laboratory, three hours. Focuses on sampling strategies, collection techniques, and instrumental analysis of environmental samples from different media to determine exposure of the population. Laboratory exercises, data analysis, and report writing. Prerequisite: E115.

E169A-B Applied Ecology Seminar (3-3). Seminar, two hours. Introduces Applied Ecology majors to a variety of research occurring in industry and universities concerned with subjects addressed in the major. Selected topics include environmental health issues, water quality, hazardous waste management, biotechnology, and economic concerns in management of pollution problems. Prerequisites: Environmental Analysis and Design E8; upper-division Applied Ecology majors.

PUBLIC HEALTH

E172 Introduction to Complementary and Alternative Medicine (4). Lecture, three hours. Examines health and disease in contemporary American culture and society with definitions, models, and practices of what has come to be known as "orthodox" or "conventional" medicine. Selected "alternative" or "complementary" modes of promoting health and well-being including homeopathy, herbology, and chiropractic.

E173 Health and Global Environmental Change (4). Lecture, three hours. Overview of scientific underpinnings of global environmental change and human health consequences. Provides students with an understanding of the fundamental dependency of human health on global environmental integrity. Encourages disciplinary cross-fertilization through interaction of students in environmental, health, and policy sciences. Prerequisite: at least one upper-division course in environmental science, public health, environmental policy, and/or environmental management, or consent of instructor.

E175 Strategies of Health Promotion (4). Lecture, three hours. Examination of strategies for promoting physical and mental health at community, organizational, and individual levels. Interventions designed to promote healthier lifestyles, organizational structures, and environmental conditions. Criteria for monitoring cost-effectiveness of these programs. Prerequisite: Environmental Analysis and Design E8. Same as Psychology and Social Behavior P138H.

E176 Environmental and Occupational Health (4). Lecture, three hours. Occupational health, theory, practice, and regulations: recognition, evaluation, and control of workplace and community health hazards. Emphasizes complexities of personal and ambient environment and the view that health is an individual's response to a diverse and dynamic world. Same as Psychology and Social Behavior P142H.

E177A Epidemiology I (4). Lecture, three hours. The distribution of disease and injury across time, space, and populations. Covers basic concepts and methods of descriptive epidemiology including the natural history of disease, demography, public health interventions, models, measurement, sources of data, and indices of health. Prerequisites: Social Ecology 10 and 13. Same as Psychology and Social Behavior P128H and Public Health 101A. Formerly Environmental Analysis and Design E116.

E177B Epidemiology II (4). Lecture, three hours. Covers basic concepts of analytic epidemiology and applications, including experimental and observational designs, prevention, screening, treatment and rehabilitation, infectious disease, and injury prevention. Prerequisite: Environmental Analysis and Design E177A. Same as Psychology and Social Behavior P129H and Public Health 101B. Formerly Environmental Analysis and Design E177.

E178 Community Health: An Epidemiological Approach (4). Lecture, three hours. An examination of the distribution and dynamics of human health problems on the community level and exploration of scientific investigations used to determine circumstances under which diseases occur or health prevails. Includes environmental, genetic, and nutritional factors, and examines social ramifications. Prerequisites: Environmental Analysis and Design E8 and consent of instructor. Same as Psychology and Social Behavior P139H.

E179U Foundations of Community Health (4). Lecture, three hours. A social ecological framework for understanding community health is presented. Measures of individual and community health are compared, and the influence of personal and environmental factors on individual, group, and population health is examined. Community health promotion strategies also are discussed. Prerequisite: Environmental Analysis and Design E8. Same as Psychology and Social Behavior P126H.

E180 Field Methods for Applied Ecologists (4). Lecture, three hours; discussion, one hour. Uses descriptive format to introduce environmental analysis, methodology, and writing skills necessary to conduct research and produce written papers in scientific journal format. Corequisite: Environmental Analysis and Design E180L. Open only to senior Applied Ecology majors.

E180L Field Methods Laboratory (3). Active participation in acquisition and analysis of data. Introduction to field sampling techniques, data collection and laboratory analysis, and the production of written papers in scientific journal format. Habitats include terrestrial, aquatic, and the built environment, both natural and polluted conditions. Corequisite: Environmental Analysis and Design E180.

E186 Impacts on Human Health and Disease (4). Lecture, three hours. Examines mechanisms by which diseases are maintained and spread through human populations. Impact of disease is given historical and global perspective. Topics include infectious and genetic disease, evolution, weaponization, modernization, and public health policy.

E187 Introduction to Genetic Epidemiology (4). Lecture, three hours. Examines the methodological approaches for studying the importance of genetic factors and gene-environment interactions in human diseases. Topics include: genetic and epidemiological concepts, population studies, family studies, and applications in medicine and public health. Prerequisite: Environmental Analysis and Design E177A.

E188 Social Epidemiology (4). Lecture, three hours. Overviews evidence linking environmental factors to mental and physical disorders including such variables as socioeconomic status, income inequality, work stress, job loss, social capital, location, and other demographic characteristics. Considers measurement and research design issues of both the individual and aggregate levels. Prerequisites: Psychology and Social Behavior P9 or equivalent; Social Ecology 10; Social Ecology 13 or equivalent. Same as Psychology and Social Behavior P163S.

E189U Health Policy (4). Lecture, three hours. Considers social and economic aspects of health and disease in the United States. What are the proper roles of the individual, community, and government in improving health and health care? International comparisons will be made wherever possible.

E190B Community Response to Terrorism (4). Lecture, three hours. Examines risk perceptions and behaviors of individuals and societies in response to terrorism. Topics: unconventional and emerging threats, psychology of terror, coping and resilience, risk communication, media effects on psychological responses, public health preparedness for mass-casualty terrorism. Prerequisite: Psychology and Social Behavior P9 or equivalent. Same as Psychology and Social Behavior P191P.

E190C Ethics and International Relations (4). Lecture, three hours. Introduces students to the dynamic field of ethics and international relations. A variety of traditional and emerging perspectives are examined, skeptical views are discussed in detail, and arguments are illustrated with current cases. Same as Political Science 146A. (VII-B)

E190U Latino Metropolis (4). Lecture, three hours. Explores the processes of Latino urbanization in the United States and the spatialization of Latino identities, particularly in the context of Southern California with selected comparisons drawing from other cities. Same as Chicano/Latino Studies 154. (VII-A)

E191A Seminar in Environmental Health, Science, and Policy (4). Seminar, four hours. Current topics relevant to the field of environmental health, science, and policy are covered in-depth in a seminar format. Possible subjects include hazardous and biological pollutants in soil, water, air; remediation technologies; water conflicts; regulations pertaining to contaminants. Prerequisite: upper-division standing or consent of instructor. May be taken twice for credit as topics vary.

E191B Bioindicators of Environmental Pollution (4). Lecture, three hours. Focuses on bioindicators of environmental pollution in the soil, air, and water studies at the ecosystem, organism, and gene/molecule level. Includes economic, policy, and social implications of these sentinels. Prerequisite: upper-division standing or consent of instructor.

E191C Air Pollution, Climate, and Health (4). Lecture, three hours. Introduction to how air pollutants are emitted into the atmosphere, physical and meteorological processes that affect transport, and the influence of air pollutants on global warming. How people are most exposed to air pollutants and differences in developed and developing areas. Prerequisite: Environmental Analysis and Design E3, E5, E8, or consent of instructor.

E191U Urban Design and Graphics Studio (4). Lecture, three hours. Introductory course organized around a variety of assignments to encourage learning by design in a studio setting. Students work on design projects and graphic representation assignments to learn practical aspects of urban design.

E192U Technology Analysis (4). Lecture, three hours. Covers concepts of interest for policy-making and technology analysis, dealing with invention, innovation, and the socioeconomic impacts of new technologies. Comparative assessments of new technologies and their national and regional impacts on organizations, sectors, and activities. Prerequisites: Social Ecology 10 and 13.

E193U Decisions, Games, and Other Public Policy Analytics (4). Lecture, three hours. A number of alternative approaches to policy analysis are taken up, beginning with the rational model and leading into postpositivist approaches, including studying institutional coherence, interpretive analysis, and others.

E194U Institutional Analysis: Studying Programs and Practices (4). Lecture, three hours. Study of the methods of examining institutions from macro, intermediate, and micro scales of analysis. Provides a wide range of skills for program analysis ranging from standard program evaluation to interpretive analytics. Prerequisites: upper-division standing and consent of instructor.

E196A-B Applied Ecology Research (4-4). Lecture, one hour; laboratory, eight hours. Basic introduction to research and laboratory research techniques: experimental design, laboratory skills, biostatistics, library research. Students undertake a two-quarter project focusing on environmental health of humans or of flora and fauna associated with environments that are impacted by human activities. Corequisite: first year of Biological Sciences Core. Prerequisites: general chemistry; Biological Sciences 100L or Environmental Analysis and Design E103, or consent of instructor. In-progress grading.

DEPARTMENT OF PSYCHOLOGY AND SOCIAL BEHAVIOR

C. David Dooley, **Department Chair**

The Department of Psychology and Social Behavior is concerned with human behavior in social contexts. A major objective is to investigate how different social environments (e.g., the family, school, workplace, culture) affect health and human behavior across the life span. The Department's faculty share a strong commitment to interdisciplinary scholarship and research that has the potential for application to important societal problems. Students begin with basic course work in developmental psychology, health and preclinical (abnormal) psychology, and social and environmental psychology. Subsequent courses cover such topics as social, emotional, and cognitive development in children, adolescents, adults, and the elderly; behavior disorders and developmental psychopathology; cultural, social, and personality influences on behavior; attitude formation and change; health psychology; cognition and emotion; stress and coping; psychology and the law; and counseling and therapy. Opportunities are available to work with faculty members on research in these and other areas. Obtaining research experience as an undergraduate also provides a valuable background for entry into many graduate programs. The Department offers a B.A. degree program in Psychology and Social Behavior.

Students are given a foundation that will enable them to pursue graduate work in psychology, public health, health services, social work, counseling, or education, or to work after graduation from UCI in both the private and public sectors. Field study opportunities include hospital settings, social service agencies, educational institutions, and community health clinics and counseling centers, among others.

Students should be aware that psychology courses are offered in several different departments and programs at UCI. Students interested in developmental, clinical, social, emotional, health, cross-cultural, or environmental psychology, or in psychology and the law, are advised to consult the course listings here in the Department of Psychology and Social Behavior section. These courses offer students a solid foundation in general psychology. Students interested in language, perception, sensorimotor integration, memory, learning, mathematical psychology, and neuroscience are advised to consult the course listings in the Department of Cognitive Sciences and the School of Biological Sciences sections of the *Catalogue*.

Information on the graduate program begins on page 423.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 405.

Departmental Requirements

Ten courses (40 units) as specified below:

A. Three upper-division Psychology and Social Behavior core courses (12 units), one from each of these areas:

1. Lifespan Developmental Psychology (P106)
2. Health and Pre-Clinical Psychology (P103, P105, P107)
3. Social and Environmental Psychology (P108, P109).

B. Three upper-division specialty courses (12 units), one from each of these areas:

1. Developmental Psychology (P113D–P117D)
2. Health and Pre-Clinical Psychology (P125H–P143H and P144C–P155C)

3. Social and Environmental Psychology (P156S–P167S and P168P–P193P).

C. Four additional courses (16 units) selected from the specialty areas in requirement B above or from those courses numbered P119D–P124D and P192A–Z (a maximum of two courses from P192A–Z may be counted toward the major). NOTE: P100 may be used as a specialty course but not as a core course, and P196 and Social Ecology H190A may be counted as upper-division specialty courses upon petition.

Psychology and Social Behavior Minor Requirements

Nine courses (36 units): Criminology, Law and Society C7, Environmental Analysis and Design E8, Psychology and Social Behavior P9, and six upper-division Psychology and Social Behavior courses selected from P100–P193.

NOTE: Students pursuing a major in the School of Social Ecology may not use upper-division course work for both school, major, or minor requirements. No overlap is permitted. Social Ecology 198 and 199 may not be applied toward the minor.

Excellence in Research in Psychology and Social Behavior

High-achieving students majoring in Psychology and Social Behavior can earn Excellence in Research in Psychology and Social Behavior by participating in a two-component program consisting of faculty-supervised research and courses in methodology and statistics. Students apply to the program coordinator at the end of their junior year. To be eligible for the program, students must have earned an overall 3.2 GPA at UC, with grades of B or above in the required methodology and statistics courses (Social Ecology 10, 13, 111, and Psychology and Social Behavior P190). Applicants should also submit a three-page statement of their research interest and a letter of recommendation from a Psychology and Social Behavior faculty member who has worked with the student during at least two quarters of the junior year in P196 or Social Ecology 198 or 199 and judges the student prepared to embark on a senior research project. Successful completion of the program requires faculty-mentored research (Social Ecology H190A-B) and completion of a senior research thesis or a report at a research conference (Social Ecology H190W).

Courses in Psychology and Social Behavior

LOWER-DIVISION

P9 Introduction to Human Behavior (4). Lecture, three hours. Introduction to models of human development and mental health, and the application of scientific methods to the study of social behavior. Differences among individual, group, and societal levels of analysis and intervention emphasized. (III)

UPPER-DIVISION

P100 Special Topics in Social Behavior (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of instructor. Prerequisites: Psychology and Social Behavior P9 or equivalent, and consent of instructor. May be repeated for credit as topics vary.

P103 Health Psychology (4). Lecture, three hours. Theory and research are considered as they contribute to an understanding of the role of psychological processes in health and illness. The distinction between prevention and treatment of illness is established, and a variety of psychosocial interventions are elaborated. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P105 Abnormal Behavior (4). Lecture, three hours. Survey of disorders organized by the diagnostic categories of the American Psychiatric Association. Interdisciplinary orientation combines environmental, psychological, and organic perspectives on etiology and treatment. Prerequisite: Psychology and Social Behavior P9 or equivalent; Social Ecology 10. Psychology and Social Behavior P105 and Psychology 120A may not both be taken for credit.

P106 Life Span Developmental Psychology (4). Lecture, three hours.

Addresses the major issues, concepts, and methods of life span developmental psychology. The fundamental theories, distinctive methods, and the physical, perceptual, cognitive, social, motivational, and emotional development for each developmental phase of the life course are considered. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P107 Clinical Child Psychology (4). Lecture, three hours. Examines

research and theory concerning childhood psychopathology and behavior disorders. Diagnosis and assessment, early identification of high-risk children, fear and phobias, antisocial behavior, childhood psychoses, autism, depression, hyperactivity and attention deficit disorders, ethical and policy implications of identifying children who are different. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127C.

P108 The Social Animal (4). Lecture, three hours. Theories and research exploring social behavior and social influences on behavior. Topics include methods of social research, attitude formation and change, social perception, the social self, stereotypes and prejudice, conformity, obedience, altruism, aggression, interpersonal relationships and love, and group behavior. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P109 Environmental Psychology (4). Lecture, three hours. Impact of the physical environment on individual and group behavior. Three basic concerns examined: (a) environmental determinants of behavior at the individual and interpersonal level; (b) social planning and urban design; and (c) methodological approaches to the study of environmental issues. Prerequisites: Social Ecology 10 and Environmental Analysis and Design E8. Same as Environmental Analysis and Design E108U.

DEVELOPMENTAL PSYCHOLOGY

P113D Child Development (4). Lecture, three hours. Examines social, emotional, and intellectual growth and development between the ages of 2 and 12 years. Prerequisite: Psychology and Social Behavior P9 or equivalent. Psychology and Social Behavior P113D and Psychology 120D may not both be taken for credit.

P114D Adolescent Development (4). Lecture, three hours. Examines current research on the biological, social, and cultural contexts of adolescent development. Topics include the impacts of puberty, adolescents' decision-making competencies, changes in family and peer relationships, identity development, and psychosocial problems such as depression and problem behavior. Prerequisite: Psychology and Social Behavior P9 or Psychology 7A or equivalent. Psychology and Social Behavior P114D and Psychology 21A may not both be taken for credit.

P115D Infant Development (4). Lecture, three hours. Study of human development from conception through the first two years of life, covering processes and events in the domains of physical, social, and cognitive development. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127I.

P116D Adult Development (4). Lecture, three hours. Examines why and how we change (with attention to gains as well as losses) from ages 25–65 and the nature and sources of continuity over time. Topics include physical and intellectual functioning, personality, coping strategies, and social roles and relationships. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127A.

P117D Gerontology (4). Lecture, three hours. Examines stereotypes and myths associated with aging; physiological and psychological changes that accompany old age; distinguishes behavior changes due to aging *per se* from those due to historical and socioeconomic factors; political, social aspects of old age in contemporary society. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127G.

P119D Cognition and Emotion (4). Lecture, three hours. Examines relations between cognition and emotion. How have the relations between cognition and emotion been construed historically? How closely related are cognitive and emotional development? How do emotions influence reasoning and memory? How similar is emotional experience across cultures? Prerequisite: Psychology and Social Behavior P9 or equivalent.

P120D Cognitive Development (4). Lecture, three hours. Examines theories on nature of cognitive development. Discusses behaviorist theories on role of the environment including those of Vygotsky and Piaget, and recent evidence from cognitive psychologists stressing the importance of knowledge and skills within specific domains. Prerequisite: Psychology and Social Behavior P9 or equivalent. Psychology and Social Behavior P120D and Psychology 141D may not both be taken for credit.

P121D Human Sexuality (4). Lecture, three hours. A broad survey of human sexuality encompassing genetic factors, physiological and anatomical development, customary and atypical forms of behavior, reproductive processes, and cultural determinants. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P122D Development of Gender Differences (4). Lecture, three hours. Examination of research on how sexes differ in physiology, cognitive functioning, personality, and social behavior. Sex-differentiated development from the prenatal period through adulthood. Explanations for male-female differences are sought, focusing on biological (genetic, hormonal), and social (familial, cultural) mechanisms. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127D.

P123D Perspectives on Child Rearing (4). Lecture, three hours. Impact of different child rearing practices on the development of personality and character. Effects on development of variations in structure and dynamics of the family and school; consequences of group care, working mothers, and the one-parent family. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P124D Human Development in Cross-Cultural Perspective (4). Lecture, three hours. Human development in diverse cultures (e.g., Asian, American, and African). Special emphasis on East-West contrasts and when East meets West (i.e., Asian-American experiences). Topics include parenting, family relations, language and cognition, schooling and academic achievement, and morality. Prerequisites: Psychology and Social Behavior P9 or equivalent; Social Ecology 10.

HEALTH AND PRE-CLINICAL PSYCHOLOGY

P125H The Hardiness Approach to Stress Management (4). Lecture, three hours. Hardiness is a new development within psychology involving a combination of motivations and skills that extensive research has shown enhances performance, conduct, morale, stamina, and health. Combines study of hardiness research with strategies for improvement of personal hardiness through a series of exercises.

P126H Foundations of Community Health (4). Lecture, three hours. A social ecological framework for understanding community health is presented. Measures of individual and community health are compared, and the influence of personal and environmental factors on individual, group, and population health is examined. Community health promotion strategies also are discussed. Prerequisite: Environmental Analysis and Design E8. Same as Environmental Analysis and Design E179U.

P127H Human Stress (4). Lecture, three hours. Stress as a multidisciplinary topic. Biological, psychological, and sociological approaches to adaptation-related disorders. Effects of acute and chronic stress on emotions, physiology, and behavior. Methods of stress assessment, stress reduction, and intervention. Prerequisite: Psychology and Social Behavior P9 or equivalent. Same as Environmental Analysis and Design E121.

P128H Epidemiology I (4). Lecture, three hours. The distribution of disease and injury across time, space, and populations. Covers basic concepts and methods of descriptive epidemiology including the natural history of disease, demography, public health interventions, models, measurement, sources of data, and indices of health. Prerequisites: Social Ecology 10 and 13. Same as Environmental Analysis and Design E177A and Public Health 101A.

P129H Epidemiology II (4). Lecture, three hours. Covers basic concepts of analytic epidemiology and applications, including experimental and observational designs, prevention, screening, treatment and rehabilitation, infectious disease, and injury prevention. Prerequisite: Psychology and Social Behavior P128H. Same as Environmental Analysis and Design E177B and Public Health 101B.

P130H Psychoneuroimmunology (4). Lecture, three hours. Examines the interactive relationships of behavioral-neural-hormonal-immune systems and how these relationships contribute to the maintenance of health and to the development of disease. Topics include: psychosocial factors, stress, disease and immunity; behavioral dispositions toward immune-related disorders. Prerequisites: Psychology and Social Behavior P9 or equivalent, P127H or consent of instructor.

P131H Child Health Psychology (4). Lecture, three hours. Exploration of psychological antecedents, concomitants, and consequences of medical illnesses in children. Children's beliefs about health, illness, and medication; the role of stress; coronary-prone behavior; therapeutic adherence and physician-patient interaction; coping with chronic illness; effects of a child's illness on family. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent; Social Ecology 10 recommended. Same as Psychology 127H.

P132H The Human Pain Experience (4). Lecture, three hours. Examines the physiological and sociocultural correlates of human pain perception. Emphasis on laboratory and clinical methods of measuring acute and chronic pain; social influences on the experience and communication of pain; biopsychosocial approaches to pain control. Prerequisites: Psychology and Social Behavior P9 or equivalent and any upper-division course from the Health or Pre-Clinical Psychology areas.

P134H Behavioral Medicine (4). Lecture, three hours. Examines biobehavioral aspects of health and illness, focusing on how stress contributes to or exacerbates disease processes. Background information on psychosomatic medicine and stress models and detailed examination of specific organ systems emphasizing the reactivity of these systems to stress. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P135H Sports Psychology (4). Lecture, three hours. Psychological components of athletic performance with regard to scientific and practical issues. Roles of cognitive processes, physiological arousal, and emotion. Various personality factors related to performance, competition, and coaching. Strategies for improving athletic performance for individual and team competition. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P138H Strategies of Health Promotion (4). Lecture, three hours. Examination of strategies for promoting physical and mental health at community, organizational, and individual levels. Interventions designed to promote healthier lifestyles, organizational structures, and environmental conditions. Criteria for monitoring cost-effectiveness of these programs. Prerequisite: Environmental Analysis and Design E8. Same as Environmental Analysis and Design E175.

P139H Community Health: An Epidemiological Approach (4). Lecture, three hours. An examination of the distribution and dynamics of human health problems on the community level and exploration of scientific investigations used to determine circumstances under which diseases occur or health prevails. Includes environmental, genetic, and nutritional factors, and examines social ramifications. Prerequisites: Environmental Analysis and Design E8 and consent of instructor. Same as Environmental Analysis and Design E178.

P140H Beliefs, Attitudes, and Health Behaviors (4). Lecture, three hours. Examines health-relevant beliefs, attitudes, and behaviors from a social psychological perspective. Topics include: self-control; obesity; sexual behavior; medication errors, stress, perceived control and social support; happiness and well-being; changing health attitudes and behaviors; self-disclosure and health. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P141H Clinical Health Psychology (4). Lecture, three hours. Role of behavior in etiology, treatment, and prevention of certain diseases. Behavioral intervention including biofeedback, stress-, pain-management, health habit counseling, and other skills to assist patients make cognitive, emotional, and behavioral changes needed to cope with disease or achieve better health. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P142H Environmental and Occupational Health (4). Lecture, three hours. Occupational health, theory, practice, and regulations: recognition, evaluation, and control of workplace and community health hazards. Emphasizes complexities of personal and ambient environment and the view that health is an individual's response to a diverse and dynamic world. Same as Environmental Analysis and Design E176.

P143H Psychology and Emotion (4). Lecture, three hours. General theories of emotion and research regarding cognitive, behavioral, physiological, and subjective experience of emotion. Specific topics include emotion regulation, emotion and health, emotional intelligence, and emotional development. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127E.

P144C Personality (4). Lecture, three hours. Comparison of the major theories of personality. Provides a frame of reference for understanding lifestyles, development, maturity, and psychopathology. Emerging research themes are used to identify promising lines of personality theorizing. Prerequisite: Psychology and Social Behavior P9 or equivalent. Psychology and Social Behavior P144C and Psychology 120P may not both be taken for credit.

P145C Forensic Psychology (4). Lecture, three hours. Presents theoretical and empirical basis for a psychological perspective of criminal behavior, particularly violent behavior. Examines violence, sexual offending, and mental disorder related to crime with regard to clinical assessment, treatment, and rehabilitation; mental health services within forensic institutions. Prerequisites: Psychology and Social Behavior P9 or equivalent, Psychology and Social Behavior P105, P175P or Criminology, Law and Society C149, or consent of instructor. Same as Criminology, Law and Society C136 and Psychology 177F.

P146C Clinical Psychology (4). Lecture, three hours. Overview of theories, assessment techniques, research methodologies and intervention approaches in clinical psychology. Psychodynamic, behavioral, humanistic, and cognitive perspectives are examined along with ethical and professional issues. Prerequisites: Psychology and Social Behavior P9 or equivalent; Social Ecology 10; Psychology and Social Behavior P105. Formerly Psychology and Social Behavior P106.

P147C Psychological Testing and Assessment (4). Lecture, three hours. Laboratory-seminar exploration of diverse methods of assessing, analyzing, and recording behavior. Includes methods of direct behavioral observation, structured (analog) assessments, rating scales, interviewing, and self-monitoring. Development of assessment skills and their application in intervention and research programs. Prerequisite: Psychology and Social Behavior P9 or equivalent; P105 or P146C. Social Ecology 10 recommended.

P149C Behavior Modification (4). Lecture, three hours. Principles and methods of behavior modification derived from psychological theories of learning. Considers applications of behavior techniques to treat childhood disorders, school problems, juvenile delinquency, marital and sexual problems, alcoholism, and eating disorders. Behavioral interventions in community and industrial settings. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent; Psychology 122C or consent of instructor. Same as Psychology 127B.

P150C Cognitive Behavior Therapy (4). Lecture, three hours. Presentation of principles and procedures of therapeutic interventions based on cognitive-behavior methods. Cognitive factors in learning, emotional arousal, psychological disorder, and psychotherapy reviewed. Introduces the application of cognitive behavioral methods to problems of depression, anxiety, anger, pain, and impulsivity. Prerequisites: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent; Psychology 122C or consent of instructor. Same as Psychology 147C.

P151C Child Therapies (4). Lecture, three hours. Examines research methodologies, empirical data, and implications of diverse intervention strategies. Primary topics include psychotherapy process and outcome, family therapies, behavioral intervention, cognitive behavior modification, pediatric psychopharmacology, and ethical and social policy implications of intervening in other people's lives. Prerequisites: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent; Psychology 122C or consent of instructor. Social Ecology 10 recommended. Same as Psychology 127T.

P152C Developmental Psychopathology (4). Lecture, three hours. Research and theory of origins, course, and outcomes of disordered behavior. Continuity and change in patterns of behavior; environmental challenges and buffers; stress and competence in children; vulnerable and invincible children; children of mentally ill parents; families at risk; childhood antecedents of adult disorders. Prerequisites: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent; Psychology 120A or consent of instructor; Social Ecology 10 recommended. Same as Psychology 177P.

P153C Existential Psychology (4). Lecture, three hours. Overall emphasis on life's meaning and direction as an unfolding expression of the pattern of decisions engaged in by each person. Topics include relevant personality and developmental theory, research, and philosophy, as well as applied consideration of diagnostic testing and psychotherapy. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P154C Peer Counseling I (4). Lecture, three hours. Focuses on the development of basic counseling skills and knowledge of specific issues related to the student population. Students are required to provide supervised coaching and counseling services to the campus community. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P155C Peer Counseling II (4). Second quarter of two-quarter course which focuses on the development of basic counseling skills and knowledge in specific issues related to the student population. Prerequisites: Psychology and Social Behavior P9 or equivalent, P154C, and consent of instructor.

SOCIAL AND ENVIRONMENTAL PSYCHOLOGY

P156S Interrogation, Confession, and the Law (4). Lecture, three hours. In-depth examination of the social psychology of police interrogation in America, the evolution of American interrogation practices from the nineteenth century to the present, impact of law on police behavior and ideology, causes and consequences of false confessions, possibilities of reform. Same as Criminology, Law and Society C152.

P157S Attitudes and Behavior (4). Lecture, three hours. Intended for students interested in theory and research on how attitudes influence, and are influenced by, behavior. Topics include: voting behavior, Fishbein and Ajzen's theories of reasoned action and planned behavior, attitude accessibility, prejudice and discrimination, and cognitive dissonance theory. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 127S.

P158S Social Relationships (4). Lecture, three hours. Examines major issues, concepts, and methods in the scientific study of social relationships. Topics include relationship formation and dissolution, friendships and love relationships, loneliness, bereavement, societal influences on close relationships, significance of close relationships for health and well-being. Prerequisites: Psychology and Social Behavior P9 or equivalent; Social Ecology 10.

P159S Leadership (4). Lecture, three hours. Examines current theory and research about the origins, aspects, and consequences of leadership. Discussions with recognized community leaders and experiential assignments designed to focus on student's own leadership potential and skills. Social Ecology 10 recommended. Same as Environmental Analysis and Design E124U.

P161S Psychology of Subjective Well-Being (4). Lecture, three hours. Introduces recent empirical developments in subjective well-being, an emerging field of psychology devoted to the study of happiness and life satisfaction. The antecedents and consequences of psychological well-being are discussed in relation to various demographic, personality, cross-cultural, developmental, and cognitive factors. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P162S Error and Bias in Social Judgment (4). Lecture, three hours. Examines how people encode, reason about, and remember social information and explores how biases and shortcomings in social perception, judgment, and memory are central to understanding both effective social functioning and many forms of maladaptive behavior and social conflict. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P163S Social Epidemiology (4). Lecture, three hours. Overviews evidence linking environmental factors to mental and physical disorders including such variables as socioeconomic status, income inequality, work stress, job loss, social capital, location, and other demographic characteristics. Considers measurement and research design issues of both the individual and aggregate levels. Prerequisites: Psychology and Social Behavior P9 or equivalent; Social Ecology 10; Social Ecology 13 or equivalent. Same as Environmental Analysis and Design E188.

P164S Psychology and the Law (4). Lecture, three hours. Psychological assumptions of American legal system and mental health aspects of provision of criminal justice services. Civil commitment, insanity defense, competence to stand trial, jury selection, eye-witness identification. Use of police, courts, correctional institutions in prevention of behavior disorders. Prerequisite: Criminology, Law and Society C7 or C101. Same as Criminology, Law and Society C105.

P165S Child Development, the Law, and Social Policy (4). Lecture, three hours. Examines how psychology research and practice can inform areas of law and social policy affecting children and adolescents. Topics include education, mental health, reproductive rights, and delinquency. Goals are to evaluate research as well as identify the costs/benefits of current policies. Prerequisites: Psychology and Social Behavior P9 or equivalent; P113D or P114D recommended. Same as Criminology, Law and Society C125.

P166S Family, Society, and Education (4). Lecture, three hours. Examines the development of children's academic and cognitive competence in social context. Effects of parental beliefs, home environment, school environment, peer norms, community norms, cultural values. Effects of selected demographic factors such as ethnicity, parental SES, maternal employment, birth order. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P168P The Family (4). Lecture, three hours. Examination of Western family life from population and life course perspectives. Links between large-scale trends and changes in individual's family and household options. Same as Environmental Analysis and Design E126.

P169P Family Law (4). Lecture, three hours. Examines legal issues surrounding marriage, cohabitation, divorce, child custody and support, adoption, and the rights of parents and children in the family context. The findings of social science research are used to illuminate the legal issues. Prerequisite: Criminology, Law and Society C7 or C101. Same as Criminology, Law and Society C123.

P170P Work and Family (4). Lecture, three hours. Effects of employment and unemployment on mental health and marital quality; effects of work on parenting and child development; corporate and social policies for "families that work"; young adults' decision-making about work and family. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P171P Impacts of Divorce (4). Lecture, three hours. Examines divorce in historical, economic, and, primarily, psychological contexts, emphasizing recent research pertaining to the impacts of divorce on children, families, and society. Prerequisite: Psychology and Social Behavior P9, or Psychology 9A-B-C, or equivalent. Same as Psychology 1771.

P175P Violence in Society (4). Lecture, three hours. Current theory and research on aggression; anger and violence as problems in individual and social functioning. Process and functions of anger examined with regard to normal behavior and psychopathology. The determinants, prevalence, and implications of violence in society are analyzed. Prerequisite: Psychology and Social Behavior P9 or equivalent. Same as Criminology, Law and Society C149.

P176P Violence and Ideas Concerning the Social Order (4). Seminar, three hours. Historical and philosophical perspectives of violence as a way to enhance social science views. Violence as a problem of the social order. The state of nature, the social contract, and human destructiveness explored in conjunction with overviews of violence and warfare. Prerequisite: Psychology and Social Behavior P9 or equivalent and consent of instructor.

P177P Eyewitness Testimony (4). Lecture, three hours. Faulty eyewitness testimony is a major cause of wrongful convictions. Covers the fast-growing topic of eyewitness testimony and memory for real-world events, both how psychologists study eyewitness capacity, and how the legal system has dealt with eyewitness issues. Prerequisites: Social Ecology 10 and senior standing. Same as Criminology, Law and Society C177.

P182P Environmental and Public Health Policy (4). Lecture, three hours. Examines factors involved in shaping public health and environmental policy. Topics include the role of science in public health policy, the function of governmental regulatory agencies, citizen participation, and economic and sociopolitical aspects of controlling infectious diseases and regulating carcinogens. Same as Environmental Analysis and Design E101.

P184P Advanced Environmental Psychology: Facilities Design for the Workplace (4). Lecture, three hours. Survey of major topics in the field of facilities design and management including methods of environmental programming and postoccupancy evaluation, design criteria for office automation, and facility-based strategies for promoting employee health, productivity, and improved quality of worklife. Prerequisites: Environmental Analysis and Design E8 and E108U. Same as Environmental Analysis and Design E133.

P188P Environmental Design Research Methods (4). Lecture, four hours. In-depth treatment of theoretical and empirical work relevant to selected topics in environmental psychology, followed by field work with architectural consultants. Students develop environmental evaluation instruments, collect data, and report findings to the consultants for review. Prerequisites: Social Ecology 10; Environmental Analysis and Design E8 and E108. Same as Environmental Analysis and Design E134.

P190 Applied Statistics in Psychological Research (4). Lecture, three hours; discussion, one hour; laboratory, one hour. Covers statistical techniques used to describe and make generalizations about phenomena represented by data. Hands-on experience in data analysis and interpretation using statistical software (SPSS, STATA) is emphasized. Topics include data visualization, ANOVA, multiple regression, and categorical data analyses. Prerequisite: Social Ecology 13 or equivalent.

P191A Child in the Family, School, and Community (4). Lecture, three hours. The ecological study of contexts in which the child develops and is socialized: the family, school, peer group, media, and community. Examines the impact of societal influences, such as culture, religion, economics, politics, and technology. Prerequisite: Psychology and Social Behavior P9 or equivalent. Formerly P112D.

P191D Motivation (4). Lecture, three hours. History, major theories, methods, and applications of motivational psychology, with emphasis on European approaches. Origins of the field in personality, learning, cognition, and activation research. Recent innovations in motivational and volitional self-recognition. Current approaches, major debates, empirical research programs. Prerequisites: Psychology and Social Behavior P9 or equivalent, and P106; and P108 or Environmental Analysis and Design E108U. Psychology and Social Behavior P191D and Psychology 121M may not both be taken for credit.

P191E Development of Motivation Across the Life Span (4). Major concepts in motivation and self-regulation as they develop during the phases of life. Topics include: development of action in infants; childhood conceptions about competence; causal attributions for success and failure; beliefs about control; goal-engagement and disengagement across adulthood. Prerequisites: Psychology and Social Behavior P9 or equivalent, and either P106 or P191D.

P191H Introduction to Biopsychology (4). Introductory overview of the biology of behavior with a focus on the structure and function of the brain. Selected behaviors (e.g., eating, sleeping) and psychological states (e.g., stress, psychiatric disorders) are addressed from a biopsychological perspective. Prerequisite: Psychology and Social Behavior P9 or equivalent.

P191P Community Response to Terrorism (4). Lecture, three hours. Examines risk perceptions and behaviors of individuals and societies in response to terrorism. Topics: unconventional and emerging threats, psychology of terror, coping and resilience, risk communication, media effects on psychological responses, public health preparedness for mass-casualty terrorism. Prerequisite: Psychology and Social Behavior P9 or equivalent. Same as Environmental Analysis and Design E190B.

P192A History of Psychology (4). Lecture, three hours. A history of the development of various schools and systems of psychological thought. Prerequisite: Psychology and Social Behavior P9 or equivalent, or Psychology 7A or 9A-B-C, or consent of instructor. Same as Psychology 120H.

P192B Organizational/Industrial Psychology (4). Lecture, three hours. Introduction to applied psychology in organizations, including personnel testing, selection, training and evaluation, job and classification analysis, job satisfaction and motivation, organizational development, leadership, market research and consumer psychology. Potential ethical problems are discussed. Prerequisite: Psychology and Social Behavior P9 or equivalent, or consent of instructor. Same as Psychology 122I.

P192E Perception and Sensory Processes (4). Lecture, three hours. A general introduction to the scientific study of sensory processes and perceptual phenomena, with special emphasis on the visual system. Prerequisite: Psychology and Social Behavior P9, or Psychology 7A or 9A-B, or equivalent, or consent of instructor. Psychology and Social Behavior P192E or Psychology 130A may not be taken for credit if taken after Psychology 131A or 131B. Same as Psychology 130A.

P192F Human Attention (4). Lecture, three hours. Reviews and discusses methods of research, current data, and current theories in the field of human attention. Prerequisite: Psychology and Social Behavior P9, or Psychology 7A or 9A-B-C, or equivalent. Same as Psychology 134A.

P192G Cognitive Science (4). Lecture, three hours. Introduction to investigations of the structure and function of the mind, from viewpoints of computation, neuroscience, philosophy, and cognitive psychology. Topics include: perception, attention, knowledge representations, learning and memory, action, reasoning, and language. Prerequisite: Psychology and Social Behavior P9, or Psychology 7A or 9B, or equivalent. Same as Psychology 140C.

P192I Principles of Learning Theory (4). Lecture, three hours. Investigation of the learning and memory processes of humans and animals. Basic experimental approaches to learning and memory, empirical results, and theoretical interpretations of the evidence are discussed. Prerequisite: Psychology and Social Behavior P9, or Psychology 7A or 9A, or equivalent. Same as Psychology 140L.

P192J Human Memory (4). Lecture, three hours. Developments in the area of memory; history of memory research; theories of the nature of memory. Visual memory, recognition memory, high-speed scanning, free recall, short-term memory, mnemonics, retrieval, relationship of memory to thinking. Selected theoretical formulations for memory. Prerequisite: Psychology and Social Behavior P9, or Psychology 7A or 9B, or equivalent. Psychology 46A may not be taken for credit after Psychology and Social Behavior P192J or Psychology 140M. Same as Psychology 140M.

P192K Human Problem Solving (4). Lecture, three hours. Modern developments in the psychology of human problem solving. Topics include: concept identification, arithmetic, sets, logic puzzles, story problems, group problem solving, and theorem proving. Prerequisite: Psychology and Social Behavior P9, or Psychology 7A or 9A-B-C, or equivalent. Same as Psychology 143P.

P192L Introduction to Cognitive Neuroscience (4). Lecture, three hours; discussion, one hour. Introduction to the neural basis of human perceptual, motor, and cognitive abilities. Topics include sensory perception, motor control, memory, language, attention, emotion, frontal lobe function, functional brain imaging, and neuropsychological disorders. Prerequisite: Psychology and Social Behavior P9 or equivalent, or Psychology 9A-B or Biological Sciences 35, or consent of instructor. Same as Psychology 160A.

P192P Perceptual Neuroscience (4). Lecture, three hours; discussion, one hour. Examines the physiology of cortical networks underlying human perceptual experience. Prerequisite: Psychology 160A or consent of instructor. Same as Psychology 161P.

P196 Research Seminar in Psychology and Social Behavior (4). Seminar, three hours. Special topics research seminar. Content varies with interest of instructor. Capstone seminar for students who have conducted research with, or have a background in, the research topics of the Psychology and Social Behavior faculty member offering this seminar in a given quarter. Prerequisites: upper-division standing and consent of instructor. May be repeated for credit as topics vary.

DEPARTMENT OF PLANNING, POLICY, AND DESIGN

World Wide Web: <http://www.seweb.uci.edu/ppd>
Marlon G. Boarnet, **Department Chair**

The Department of Planning, Policy, and Design utilizes an interdisciplinary approach to the study of urban and regional planning, public policy issues, and the built environment. The Department faculty devote their scholarly and teaching efforts to theory-driven and empirically oriented urban research and their interests include urban and community development, environmental policy, health promotion and policy, and urban design and behavior. The faculty focus on education in urban, social, public policy, and environmental problems.

The Department offers the Ph.D. degree in Planning, Policy, and Design; the Master of Urban and Regional Planning professional degree (fully accredited by the national Planning Accreditation Board); and an undergraduate minor in Urban and Regional Planning. The Department's graduate degree programs feature innovative teaching often involving students in community projects, and a significant degree of accessibility by students to faculty members.

The 19 full-time faculty members in the Department are productive and influential scholars. The Department's teaching, research, and graduate training utilize UCI's proximity to both urban centers and planned communities, as well as the University's location within the dynamic and multicultural Southern California and Pacific Rim regions. Collaborative academic and research ties are maintained with UCI's Institute of Transportation Studies, Center for Global

Peace and Conflict Studies, Newkirk Center for Science and Society, Focused Research Group on International Environmental Policy, Center for Community Health, Community Outreach Partnership Center, Center for Unconventional Security Affairs, Center for Organizational Research, and the Urban Water Research Center.

The common mission linking the Department's undergraduate, master's, and doctorate-level instruction and faculty research efforts is to bring applied research to the cause of bettering individuals, neighborhoods, communities, and regions. Southern California has grown dramatically over the past four decades and will soon become the nation's largest urban corridor. The challenges to maintain the quality of life, provide employment opportunities, and reduce the deep socioeconomic disparities of this bi-national and multicultural metropolitan region are enormous. Extremely diverse, multiethnic communities face the necessity of solving their problems in ways that are acceptable to their populations. Older central city areas that are vital to the region face issues of social and economic sustainability. The need to create employment opportunities, through the application of new technologies in industries and services, will be a constant feature of an urban region undergoing such population increases. At the same time, urban growth and transportation will have to meet increasingly stringent environmental regulations that can safeguard the population's health and quality of the diverse natural environments. The urban design and landscape of most communities stand to be reshaped as never before, as the building stock ages and the need to redevelop intensifies.

The Department is grouped into four major clusters, each addressing sets of important issues to contemporary society. Faculty members and students who study **urban and community development** examine contemporary planning approaches to managing local, community, and regional development and explore the spatial dynamics of urbanization in diverse settings and how public policy can guide urban and regional growth to balance environmental and economic concerns. Faculty members and students engaged in **design-behavior research** investigate the interrelationships of people and their socio-physical environments at all scales, from micro to macro, with emphasis on urban design and community-scale issues. Faculty members and students who examine **environmental policy** focus on the environment and natural resources as important policy and planning issues and provide a clear understanding about how politics, economics, ethics, and institutions affect planning and policy choices. Finally, faculty members and students who study **health promotion and policy** investigate issues at the interface between (1) urban planning and health policy and (2) community and individual health. They examine the public welfare, psychological, and health implications of social and physical planning, and the techniques and goals of public health policy making.

Ph.D. in Planning, Policy, and Design: See page 427.

Master of Urban and Regional Planning: See page 425.

Urban and Regional Planning Minor Requirements

Nine courses (36 units): Environmental Analysis and Design E8, E107U, and seven additional upper-division Environmental Analysis and Design courses selected from E100U, E102U, E104U, E105U, E106U, E108U, E109U, E111U, E123U, E124U, E128U, E131U, E132U, E135U, E136U, E137U, E138U, E140U, E141U, E142U, E143U, E144U, E145U, E148U, E151U, E154U, E155U, E156U, E157U, E158U, E159U, E160U, E179U, E189U, E190C, E190U, E191U.

Course descriptions for undergraduate courses are available in the Department of Environmental Health, Science, and Policy section.

NOTE: A maximum of three courses may be counted toward both the minor in Urban and Regional Planning and the majors in Environmental Analysis and Design or Social Ecology. (Environmental Analysis and Design E8 is by necessity one of the three.)

GRADUATE PROGRAMS

Graduate training in the School of Social Ecology is organized around the study of contemporary problems in the social and physical environment. Emphasis is placed primarily upon theory and research that have implications for policy and intervention. Problems are investigated from the complementary perspectives of a multidisciplinary faculty that includes specialists in social, developmental, clinical, environmental, and health psychology; urban and regional planning, public policy, and architecture; urban sociology; law and society; criminology; environmental health sciences; and public health.

Among issues of long-standing interest in the School are crime and justice in society, social influences on health and human development over the life course, and the effects of the physical environment on health and human behavior. The graduate curriculum emphasizes an interdisciplinary orientation, training students to draw upon the knowledge offered by several of the traditional academic fields in order to examine important social, legal, and environmental problems from a perspective of breadth as well as depth.

The School offers M.A., M.A.S., M.S., M.U.R.P., and Ph.D. degree programs. Doctoral students have the opportunity to pursue an individualized course of study in the principles and methods of social ecology for the Ph.D. in Social Ecology. Additional degree programs offered are: Ph.D. in Criminology, Law and Society; Ph.D. in Planning, Policy, and Design; and Ph.D. in Psychology and Social Behavior. Master's degrees include the M.A. in Social Ecology; the M.A. in Social Ecology with a concentration in Demographic and Social Analysis; the M.A.S. in Criminology, Law and Society; and the Master of Urban and Regional Planning. In addition, many students in the Ph.D. programs in Criminology, Law and Society and in Psychology and Social Behavior obtain an M.A. in Social Ecology on the way to their Ph.D. NOTE: Admission is not available to the M.S. or Ph.D. programs in Environmental Health Science and Policy or to the Ph.D. in Social Ecology with a concentration in Environmental Analysis and Design.

Social Ecology faculty members apply diverse methods of scientific inquiry to study social and environmental problems. Evaluation research, legal research, questionnaire and survey methods, field research, naturalistic observation, and quasi-experimental techniques receive emphasis along with laboratory experimentation. Collaborative research with faculty members is an important component of graduate education in the School.

A sampling of faculty research and teaching interests includes human stress; health promotion; biobehavioral bases of health and illness; program evaluation; economic change and behavioral disorders; atypical child development; adaptive aging; end-of-life medical decision-making; violence and aggression; legal sanctions and deterrence; the socio-cultural context of law; white-collar and organized crime; gangs; police work; wrongful conviction/miscarriages of justice; transitions to parenthood; personality and psychopathology; effects of chemical and social environments on early child development; urban growth management and policies; transportation policies; poverty and homelessness; community design and development; regional economic development; water quality and water policy; air quality; biotechnology; epidemiology; the use of scientific information in public policy formation and litigation; community approaches to HIV/AIDS prevention; the health impacts of work environments; environmental health sciences; and processes involved in environmental regulation.

ADMISSION

Students should submit their complete application file including the application form, transcripts, three letters of recommendation, and Graduate Record Examination (GRE) scores by December 15 if they are applying to the Department of Psychology and Social Behavior, or by January 15 if they are applying to the Department of Criminology, Law and Society, or the Department of Planning, Policy, and Design. The deadline for the M.A.S. in Criminology, Law and Society is in April and specific deadline information is available from the Graduate Coordinator for the Department of Criminology, Law and Society; telephone (949) 824-1442. Call the Graduate Student Services Office for additional information; telephone (949) 824-5918.

NOTE: Admission is not available to programs offered by the Department of Environmental Health, Science, and Policy.

CAREER OPPORTUNITIES

Ph.D. graduates enjoy a wide variety of career opportunities and have succeeded in obtaining positions in academic institutions such as Stanford University; Rutgers University; The Johns Hopkins University; Temple University; University of California, Los Angeles; University of California, San Diego; University of Colorado; University of Kansas; University of Minnesota; the University of Oregon; the University of Wisconsin; Indiana University; Carnegie-Mellon University; The University of Texas at Austin; Arizona State University; and the City University of New York. Other graduates have established research and administrative careers in government agencies and private firms throughout the United States and Canada, including the National Institutes of Health; the Toronto Department of Public Health; Environmental Protection Agency; Centers for Disease Control; Food and Drug Administration; U.S. Department of Agriculture; Metropolitan Water District; Air Resources Board; Orange County Department of Health Services; The United Cerebral Palsy Foundation; The Philadelphia Geriatric Center; The New Mexico Tumor Registry; Orange County Superior Court; Southern California Metropolitan Water District; and in marketing and research firms such as the Yankelovich Group and McGuire Environmental Consultants. Master of Urban and Regional Planning graduates are employed in top urban planning consulting firms and in cities and counties throughout California and beyond.

Master's Programs

M.A. IN SOCIAL ECOLOGY

The M.A. degree in Social Ecology option is available to those students who have been admitted to one of the Ph.D. degree programs in Criminology, Law and Society; Psychology and Social Behavior; or Planning, Policy, and Design. In very rare circumstances a student may be admitted directly to the M.A. degree program in Social Ecology. Consult with the Graduate Student Services Office before submitting an application or for additional questions; telephone (949) 824-5918.

Each M.A. degree student is assigned a faculty advisor with whom the student discusses an individual program of education. The M.A. degree program in Social Ecology requires a thesis and satisfactory completion of seven approved courses (28 units), including the Seminar in Social Ecology (Social Ecology 200), Research Methods (Social Ecology 201, or its departmental equivalent), and at least one additional approved course in statistics or methodology. Other courses should be selected with regard to the student's academic and career objectives, and must be approved by the faculty advisor. The seven required courses must include at least five graduate courses and must be exclusive of any directed study, independent study, or thesis courses (Social Ecology 298, 299, or 295). A grade of B or better must be achieved in all courses. Students are

advanced to candidacy for the M.A. degree, and a thesis committee is appointed, after a review of their graduate work and thesis plans by a faculty committee.

M.A. IN SOCIAL ECOLOGY WITH A CONCENTRATION IN DEMOGRAPHIC AND SOCIAL ANALYSIS

The M.A. in Social Ecology with a concentration in Demographic and Social Analysis offers training in the practical research skills needed to address analytical problems confronting society, business, government, and the nonprofit sector. The concentration emphasizes the Pacific Rim and issues defining Southern California's population, such as immigration, changing household and family structure, racial and economic inequalities, and the impact of local and regional population growth. Informed by the interdisciplinary field of demography, the program draws on faculty and courses in the Schools of Social Ecology and Social Sciences.

The concentration in Demographic and Social Analysis offers the option of additional professional certification for doctoral students already admitted to the School of Social Ecology. Admission, core course, and thesis requirements are identical to those for the general M.A. in Social Ecology. In addition, students must complete 12 units of designated electives in population issues or research methods. Up to two upper-division undergraduate courses may be approved to fulfill the elective requirement. Students interested in this concentration should call the Graduate Counseling Office at (949) 824-5924 for more information.

M.A.S. IN CRIMINOLOGY, LAW AND SOCIETY

The Master of Advanced Study (M.A.S.) in Criminology, Law and Society, the first online degree program of its kind in the University of California system, prepares professionals for leadership positions in the criminal justice and legal communities. The curriculum emphasizes theoretical and practical applications on topics that are central to crime and its control, social policy, and the law. In keeping with one of the main tenets of the School of Social Ecology, faculty and students approach topics from a multidisciplinary perspective.

This program is ideally suited for professionals interested in or working in the criminal justice or legal fields who are seeking a graduate degree for career advancement. The program consists of 52 units of course work completed over a two-year period (six quarters) plus a one-week in-residence requirement during the first summer. In lieu of a thesis, students are required to take a capstone course in the winter quarter of the second year of study. A degree is awarded upon completion of 10 required courses, plus three elective courses. One traditional face-to-face course taken on the UCI campus, in an accelerated format (five days), is required at the beginning of a student's course of study, with the remaining courses all completed online.

M.S. IN ENVIRONMENTAL HEALTH SCIENCE AND POLICY

NOTE: Admission to this program is not available.

The Master of Science (M.S.) in Environmental Health Science and Policy (EHSP) trains environmental professionals for applied analytical and administrative positions in environmental health businesses, government, and the nonprofit sector. In common with the doctoral program in EHSP, training focuses on the integration of natural and social science knowledge for the promotion of human health within a sustainable ecosystem. M.S. students must complete a core of five required courses: Environmental Health Science (EHS) I, II, III; Data Analysis, Part A (Social Ecology 264A); and Data Analysis, Part B (Social Ecology 264B) or Ecological Modeling (Social Ecology 252); and three electives. Students must also complete a field study of about six months in duration, resulting in

a defended Master's thesis and degree completion within two to three years.

MASTER OF URBAN AND REGIONAL PLANNING

The Master of Urban and Regional Planning (M.U.R.P.) program trains professionals in contemporary methods related to planning. The program is fully accredited by the national Planning Accreditation Board and has 19 core full-time faculty. Students gain familiarity with planning problems and practices through a series of courses on the growth and development of metropolitan areas, and the environmental, economic, and social challenges that modern communities face. This program views planners as mediators between the market-driven forces of metropolitan change and the environmental, economic, and social impacts of such change.

The M.U.R.P. degree program requires the completion of 72 units, distributed between core and elective courses. Required courses are History of Urban Planning (U202); Theoretical Foundations of Planning (U203); Microeconomics Analysis for Urban Planning (U206); Quantitative Analysis for Planners (U214); Development Control Law and Policy or Environmental Law and Policy (U207 or U252); Analytical Methods for Planning (U215); Regional Analysis or Housing or Demographics for Planners (U223 or U246 or U228); Professional Report (U292); and two quarters of Urban Planning Studio (U280A-B). Master's degree specializations include community development and social policy; economics and public policy; land use policy; environmental policy and planning; transportation policy; community health planning; and urban design and behavior. In addition, a written comprehensive examination or a professional report is required during the second year of the program. Successful completion of the examination or professional report is required before the degree can be awarded. A thesis is not required.

Some of the specific planning issues addressed include the environmental, social, health, and economic impacts of urban and regional development; regional growth management; state and municipal fiscal policy; poverty-related concerns; urban design; the operation of housing and land markets; land-use law and regulation; transportation planning; and planning for urban development in newly industrialized countries. Students are provided with a rigorous foundation in the tools that public and private sector planners use, and also with the intellectual wherewithal to use these tools effectively in addressing planning problems.

Practical experience in community planning in the form of part-time planning internships is strongly encouraged and supported as part of a student's education. Additionally, a two-quarter Planning Studio in the second year of study links classroom learning to work on a community-based and client-based planning project. Students have access to geographic information systems (ARC-GIS) courses. Students also have full access to computer laboratories in the two Social Ecology buildings which are equipped with word processing, statistical, spreadsheet, and database programs; electronic mail, and World Wide Web browsers.

The range of employment opportunities for professional planners in the public and private sectors is expanding due to rapid metropolitan growth, rising concerns over health and environmental issues, and the continuing need for redevelopment and social services in older communities. Career paths exist in government agencies dealing with urban planning; economic development; transportation planning; regional growth management; air quality and water treatment; public utilities; health care organizations and public health agencies; and conservation organizations and agencies. Many employment possibilities also exist with private consulting firms specializing in environmental impact assessment, with residential and commercial development firms, and many engineering and architectural firms.

Concurrent Master's Degree Program with Civil and Environmental Engineering

The Department of Planning, Policy, and Design (PPD) and the Department of Civil and Environmental Engineering (CEE) in The Henry Samueli School of Engineering offer a concurrent degree program that allows students to earn both a master's in Civil Engineering (M.S.) and a master's in Urban and Regional Planning (M.U.R.P.) in two years (instead of in more than three years). The concurrent degree program requires 72 units of study and is organized around two tracks: (1) transportation systems, and (2) environmental hydrology and water resources. The program core comprises 15 graduate courses for the transportation systems track, and 13 graduate and two undergraduate courses for the environmental hydrology and water resources track.

Students choose between a thesis option and a comprehensive examination option. The thesis option requires completion of 72 units of study (eight of which may be taken in conjunction with the thesis research); completion of an original research project and the writing of a thesis to describe it; completion of required core courses; and completion of enough units of approved electives to meet the total requirement of 72 units. The comprehensive examination option also requires completion of 72 units of study as well as a professional report, which represents a substantial piece of planning practice, as the capstone event. These units of study include core courses and enough units of approved electives to meet the total requirement of 72 units, with no redundancy of core courses in either PPD or CEE. Electives may include as many as eight units of independent study or approved undergraduate courses.

Undergraduates seeking admission to the concurrent master's degree program should have a strong record of course work in disciplines related to civil engineering and urban planning, and they must meet the requirements for admission in both departments. For more information about these requirements, see <http://www.eng.uci.edu/cee/grad/requirements>, and <http://www.seweb.uci.edu/ppd/admissions.uci>.

Ph.D. Programs

The doctoral programs offered by the School of Social Ecology prepare students for academic careers in research and teaching. Graduates also are well qualified for employment in private or government agencies, where they can bring advanced academic training, strong methodological and statistical skills, and special expertise to such issues as environmental health and design; urban and regional planning; criminal justice; and social policies affecting mental and physical health across the life course. The normal time for completion of the Ph.D. degree is either five or six years, depending upon the specific program.

Each incoming Ph.D. student is assigned a faculty advisor with whom the student should meet at least once every quarter to discuss an individualized program of graduate education.

A student may be formally advanced to candidacy for the Ph.D. degree when all requirements except the dissertation have been completed, and when the student's dissertation plan has been approved by the candidacy committee appointed by the School of Social Ecology, on behalf of the Dean of Graduate Studies and the Graduate Council. The student will appear before this committee for an oral examination. The dissertation plan will include a thorough examination of the history of the problem being proposed for investigation, its current status, the way in which the proposed research will further knowledge, a detailed specification of the proposed method of investigating the problem, and a description of the planned methods for analyzing the data collected. The normal time for advancement to candidacy is either three or four years, depending upon the program. In no case will students be allowed to advance to candidacy after the end of their fifth year of study.

Formal advancement to candidacy for the Ph.D. degree will be approved by the Dean of Graduate Studies upon recommendation by a unanimous vote of the student's candidacy committee. Alternatively, the committee may recommend a course of action to strengthen the student for advancement to candidacy at a future date. When the student is advanced to candidacy, a doctoral committee will be appointed on behalf of the Graduate Council. The doctoral committee, ordinarily consisting of three members of the faculty, will supervise the preparation and completion of the doctoral dissertation. The dissertation should be completed and accepted within one to two years, and no later than three calendar years after the student's advancement to candidacy.

All Ph.D. students who have not been advanced to candidacy will be formally evaluated by members of the Social Ecology faculty at the end of each year. At that time, the faculty may recommend that the student continue toward the Ph.D. degree, complete the M.A. degree only, or cease graduate studies in the School. Evaluation of Ph.D. students who have advanced to candidacy is the responsibility of the student's doctoral dissertation committee.

Ph.D. IN SOCIAL ECOLOGY

The Ph.D. program in Social Ecology allows students to develop a tailored course of graduate study that draws upon the knowledge of several traditional academic disciplines. This is a small distinguished program intended for genuinely interdisciplinary doctoral students. The emphases of this training program are in keeping with the academic mission of the School, namely, its emphases on an ecological approach to research and policy, an interdisciplinary approach to research and community intervention, and the application of theory and research to community problem solving. Students are encouraged to integrate the diverse theoretical and methodological insights of several disciplines in order to analyze important social and environmental problems from a perspective of breadth as well as depth. In doing so, students gain familiarity with the classic and contemporary literature in social ecology and with the application of the ecological paradigm, as it has evolved in the natural and behavioral sciences. This program is ideally suited for independent students who wish to develop a unique interdepartmental program of study in consultation with faculty from several departments.

Each incoming student takes Seminar in Social Ecology (Social Ecology 200), Research Methods (Social Ecology 201), two approved quarters of graduate-level statistics, one additional approved research methods course, and six elective courses, chosen in consultation with the faculty advisor. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. Students are encouraged to become involved in research in their first year of study by participating in the research projects of the faculty. Students complete a supervised research project before they begin work on their doctoral dissertation. Research is broadly construed to include experimental methods, questionnaire and interview studies, systematic field observation, secondary analyses, and legal analyses. This predissertation research project should be completed during the second year in residence and must be evaluated and approved by a committee of three faculty members.

Students complete the breadth requirement during their third year of study. This is accomplished through successful completion of either a written comprehensive examination or the submission of a major paper or series of papers that intensively examine specific substantive problems and bodies of research. Preferably, the perspective taken should be multidisciplinary, but a single disciplinary approach is acceptable if it is more congruent with the student's educational goals and is acceptable to the student's committee. Each student's plans for completing the breadth requirement are developed in collaboration with a committee of three Social

Ecology faculty members. Students are encouraged to meet with this committee as early as possible during their graduate career and are required to do so no later than the third quarter of their second year. When the student's plans have been approved and implemented, the examining committee will determine whether the breadth requirement was successfully completed, and will recommend additional academic work if it is deemed necessary. The normal time for advancement to candidacy is three years. The fourth, and possibly fifth, years of study are devoted to developing and defending a dissertation proposal and conducting dissertation research.

Ph.D. IN SOCIAL ECOLOGY WITH A CONCENTRATION IN ENVIRONMENTAL ANALYSIS AND DESIGN

NOTE: Admission to this program is not available.

The doctoral concentration in Environmental Analysis and Design prepares students to conduct research on questions of vital importance to professionals in environmental analysis and evaluation and on related questions on the formulation of environmental and health policy. These questions reflect an overarching concern with the effects of the natural and built environments on the health and social well-being of humans.

This doctoral concentration particularly focuses on insights from a social ecological perspective. One of the concentration's strengths is its research sequence which spans the disciplines within the Department of Environmental Health, Science, and Policy and the Department of Planning, Policy, and Design. Students typically choose the majority of their graduate classes from those two departments, although students are encouraged to take classes across the campus to improve their knowledge of related fields as well.

Students conduct analyses of sociocultural, behavioral, biological, chemical, and physical factors that influence health and well-being of humans, including public and private sector policy as well as the environment as a whole. They are also trained to evaluate the effectiveness of interventions designed to enhance the health of individuals and the community as a whole. The curriculum and diversity of faculty within the concentration afford unique opportunities for multidisciplinary research and training.

Potential employment sources for graduates include academic and research institutions; state and federal agencies; policy-making organizations; national, community, and workplace health-promotion programs; and a diverse range of consulting firms ranging from engineering to design.

Each incoming student takes the five core courses required of most Ph.D. students, noted earlier, and eight elective courses drawn from the focal areas within this concentration: Environmental Analysis, Environmental Policy, Earthquake Geology and Environmental Hazard, Social Epidemiology, and Environmental Health. The elective courses cover topics such as environmental health risks, behavioral epidemiology, demography, and technological hazards and change. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. Students are expected to become involved in research activities in their first year of graduate study. Students complete a supervised research project before they begin work on their doctoral dissertation. This predissertation research project should be completed during the second year in residence (preferably by the end of the winter quarter of the second year). The research project must be evaluated and approved by a committee of three faculty members. Students complete the breadth requirement, described earlier, during their third year of study. The normal time for advancement to candidacy is three years. The fourth and fifth years of study are devoted to developing and defending a dissertation proposal and conducting dissertation research.

Ph.D. IN CRIMINOLOGY, LAW AND SOCIETY

The study of crime, institutional responses to illegal behavior, and the interaction of law and society are the foci of the doctoral program in Criminology, Law and Society. Students examine issues related to the etiology of crime, the process of changing criminal behavior, social regulation, the civil justice system, and the social and cultural context of law.

Students gain familiarity with a number of subjects including sentencing; crime rates; modes of modifying criminal behavior; police behavior; white collar and organized crime; policies against hate crimes; behavior of courts, juries, and regulatory agencies; environmental law; immigration lawmaking; Native American justice issues; and the interaction among law, culture, and identity. In general, students are introduced to the leading classical and contemporary issues in criminology, law and society and to ways of understanding them through interdisciplinary research. The program aims to develop theoretical sophistication and to prepare the graduate student for faculty positions at major universities; and for research and administrative work in institutions in the legal system, the criminal justice system, and related organizations.

In addition to the four core courses required of most Ph.D. students (Social Ecology 200, two additional quarters of graduate-level statistics, and one additional approved research methods course), students take at least five required courses, Research Methods (C201), Crime and Public Policy (C230), Theories of Crime, (C235), Law and Society, (C239), and Legal Reasoning, (C237), and three elective courses in Criminology, Law and Society. These elective courses should be chosen in consultation with the student's faculty advisor. Students become involved in research activities from the earliest stages of their training and complete an independent, supervised research project during the second year of graduate study. Methods of research may include questionnaires and surveys, systematic field observation, computer simulation, legal analyses, and archival research. Students complete a written comprehensive examination during year three, which requires them to demonstrate mastery of major theoretical, substantive, and methodological issues in criminology, law and society. The normal time for advancement to candidacy is four years (three years for students who entered with a master's degree). The fourth and, possibly, fifth years of study are devoted to developing and defending a dissertation proposal and completing dissertation research. The normal time for completion of the Ph.D. is six years, and the maximum time permitted is seven years. (For students who entered with a master's degree the time to degree is five years, with a maximum of six years.) All Ph.D. students in the Criminology, Law and Society program are required to pass a final oral defense of the dissertation. Opportunities for field placements in legal and criminal justice settings also are available.

Ph.D. IN ENVIRONMENTAL HEALTH SCIENCE AND POLICY

NOTE: Admission to this program is not available.

Human health and the integrity of the natural environment are interdependent. More now than ever, challenges in public health and the environment must be faced using knowledge both from the social and the natural sciences. The graduate program in Environmental Health Science and Policy (EHSP) is rooted in existing disciplines, but emphasizes cross-disciplinary research that is emerging from common bases that span both the social and the natural sciences. To optimize flexibility, including options for primary emphasis on laboratory and field work, the curriculum is organized around four concentrations. The concentration in Environmental Biotechnology provides training in the use of microbial, genetic, or molecular applications for environmental monitoring, environmental cleanup,

and public health prevention and diagnostics of environmental hazards. The concentration in Environmental Health Science expands the conventional focus of this discipline to approach research questions in an ecological context. The concentration in Environmental Management and Policy explores the linkages between physical environmental problems and the social institutions that are both their cause and solution. The concentration in Epidemiology and Public Health embeds traditional approaches in these fields within a framework of physical, natural, and social systems.

Within each concentration, students are expected to develop interests in particular substantive problems, for example, those of the core faculty, including water quality monitoring and bioremediation, toxic metals in the environment (their characterizations, exposure levels, and health effects), international conflict and cooperation in resource management, epidemiology of environmental cancers as well as of violence and injury-prevention. Students are prepared to become active researchers, able to assume positions in higher education, government, commerce, or the nonprofit sector in environmental health sciences and related fields.

Students must elect one of the four EHSP concentrations within their first year. For all concentrations, students must complete a core of five required courses: Environmental Health Science (EHS) I, II, III; Data Analysis, Part A (Social Ecology 264A); and Data Analysis, Part B (Social Ecology 264B) *or* Ecological Modeling (Social Ecology 252). In addition, students must complete six approved electives relating to their respective concentrations. Consistent with the program's multidisciplinary nature, elective courses may be drawn not only from within the Department of Environmental Health, Science, and Policy but (with approval) from throughout the School of Social Ecology and the campus (including, for example, the College of Health Sciences and the Schools of Biological Sciences, Physical Sciences, and Engineering). After the second year, students must submit a written doctoral research proposal. Advancement to doctoral candidacy is achieved upon successful defense of the proposal during an oral, comprehensive qualifying examination. In addition, doctoral students must serve a minimum of three quarters as a teaching assistant. The normal time for advancement to candidacy is three years. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. All Ph.D. students in the Environmental Health Science and Policy program are required to pass a final oral defense of the dissertation.

Ph.D. IN PLANNING, POLICY, AND DESIGN

The Planning, Policy, and Design doctorate program trains scholars to have national and international prominence in the analysis of social problems related to the built and natural environments. Faculty strengths span planning, policy, and design, and faculty are at the cutting edge of teaching and research that examines the interplay of these three currently distinct approaches.

There is a growing recognition that many pressing social problems require perspectives that combine an understanding of planning, policy process, and the built environment. For example, efforts to control transportation problems by building neighborhoods that encourage alternatives to the automobile require an understanding of travel behavior and human interactions with the built environment. Understanding how to reduce tobacco use requires an appreciation of how behavior is shaped by programmatic interventions, community settings and norms, and policy tools. Environmental cooperation across national borders often requires understanding of political processes, infrastructure systems, and metropolitan structure and governance in regions, such as the U.S.-Mexico border, where population is concentrated in urban settlements that span the border. And, issues of public safety are increasingly related to the design of public and private spaces, and how those spaces are used and regulated.

In all of these areas, public and private officials are increasingly working on topics that span the boundaries of several traditional academic disciplines. The PPD program is designed to give students a strong background in one of four specializations and thus to produce scholars and practitioners capable of responding to the complexity of problems facing contemporary society.

The PPD program offers four specializations—urban and community development, design-behavior research, environmental policy, and health promotion and policy. **Urban and Community Development** examines contemporary planning approaches to managing local, community, and regional development. Students explore the spatial dynamics of urbanization in diverse settings and how public policy can guide urban and regional growth to balance environmental and economic concerns. **Design-Behavior Research** investigates the inter-relationships of people and their socio-physical environments at all scales, from micro to macro, with emphasis on urban design and community-scale issues. The School of Social Ecology is an international leader in environment design research since the field's earliest developments. **Environmental Policy** focuses on the environment and natural resources as important policy and planning issues. A clear understanding about how politics, economics, ethics, and institutions affect planning and policy choices is the emphasis of this specialization. The School has among the largest concentrations of environmental policy faculty of any planning department in the United States. **Health Promotion and Policy** focuses on the interface between planning and community and individual health, examining the public welfare, psychological, and health implications of social and physical planning; and the techniques and goals of public health policy making.

The Ph.D. curriculum is composed of three parts: (1) Planning, Policy, and Design core (required of all students); (2) area cores (each student affiliates with one of four areas of specialization and is required to complete the core courses for that area); and (3) electives. All doctoral students take a total of 16 four-unit graduate courses, distributed across these three types of courses.

Required courses in the Planning, Policy, and Design core are Seminar in Social Ecology (Social Ecology 200); Research Design (U297); two courses in research methods/data analysis chosen from among the following: Data Analysis A (Social Ecology 264A), Data Analysis B (Social Ecology 264B), and Qualitative Research Methods: Overview (U209); and two courses selected in consultation with a faculty advisor that provide disciplinary/theoretical orientation.

In total, PPD students complete 72 units of study in their first two years. Participation in a faculty-supervised research project is required during the second year of study. The second year includes preparation for, and completion of, a comprehensive examination. The normal time for advancement to candidacy is four years. Following this, dissertation research begins. The normative time for completion of the Ph.D. in Planning, Policy, and Design is six years, and the maximum time permitted is seven years. All Ph.D. students in the Planning, Policy, and Design Program are required to pass a final oral defense of the dissertation.

Graduates with a doctorate degree in Planning, Policy, and Design are employed in a wide array of activities, ranging from university teaching and research, to administrative and research-oriented positions in governmental agencies, international organizations, non-profit organizations, and private consulting practices.

PH.D. IN PSYCHOLOGY AND SOCIAL BEHAVIOR

The Department of Psychology and Social Behavior offers a Ph.D. program in Psychology and Social Behavior. The main goal of this program is to train behavioral scientists to apply theory and methods in psychology, together with perspectives and knowledge from allied disciplines, to the analysis of human behavior and health

across the life span and in diverse sociocultural contexts. This program values both basic and applied research that is relevant to the improvement of individual, community, and societal functioning. Emphasis is placed on the integration of knowledge from several subspecialties in psychology in order to understand the antecedents and developmental course of adaptive or maladaptive behavior and on the conduct of research that has implications for social policies, programs, and interventions.

Training in this program emphasizes four core areas of psychology. The specialization in **Developmental Psychology** focuses on the development of individuals at various periods in the life course and the effects of varying social and cultural contexts on cognitive, social, and health outcomes. **Health Psychology** focuses on identifying, evaluating, and enhancing the psychosocial and behavioral factors that promote mental and physical health, prevent disease, and optimize medical treatments. The specialization in **Psychopathology and Behavioral Disorder** focuses on psychological, biobehavioral, and social environmental mechanisms that influence the development, expression, and amelioration of psychopathology and behavioral disorder. **Social and Personality Psychology** focuses on the interrelations among attitudes, perceptions, motives, emotions, and personality characteristics as they affect individual functioning, interpersonal processes, and intergroup relations. In addition, several faculty offer courses and conduct research in the area of **Psychology and Law**, dealing with such issues as the malleability of memory processes, the ability of jurors to understand scientific evidence, the impact on children and adolescents of contact with the legal system, and the response of the legal system to individuals with severe personality disorders.

Students will learn to understand human behavior from a social ecological, contextual perspective. They will be exposed to the major theories in each specialization and learn various social science research methods. All students are encouraged to become actively involved in research from the earliest stage of their training. Through close association with faculty members and participation in the faculty's research projects, students learn to conduct methodologically sophisticated research that addresses contemporary psychological and social issues. Current research teams are investigating stress, coping, and social support; biobehavioral mechanisms of cardiovascular reactivity; personality factors that increase resilience to health threats; child care and its effects on child development; transitions across the life course; the effects of divorce and custody arrangement; adaptive aging; end-of-life medical decision making; culture and adolescent psychosocial development; culture, self, and well-being; relations between cognitive and emotional development; emotion regulation; memory and eyewitness testimony; violence and anger management; the development of health-risking and health-protecting behaviors during childhood and adolescence; economic stress and psychopathology/behavioral disorders; and assessment of and responses to environmental and health risks.

All students take eight required core courses: Seminar in Social Ecology (Social Ecology 200), Research Methods in Psychology (P201), Quantitative Methods in Psychology (P264A), Advanced Quantitative Methods in Psychology (P264B), an additional research methods/data analysis course from an approved list, Applied Psychological Research (P209A), Professional Issues in Psychology (P231), and Research Directions in Psychology and Social Behavior (P294A-B-C). The course on Applied Psychological Research (P209A) introduces students to the scientific, professional, and ethical issues involved in conducting and translating psychological research in a variety of applied settings. Some students may wish to take a complementary (optional) course, Applied Psychological Research in Community Settings (P209B), that provides the opportunity for a supervised research internship

in an appropriate community setting. The three-quarter course Research Directions in Psychology and Social Behavior (P294A-B-C) allows students to increase their breadth of knowledge regarding contemporary issues and controversies in psychology and social behavior by participating in the Department's weekly colloquium series and interacting with visiting scholars and other speakers. Additional courses are required for each specialization: Health Psychology (P258) and Biobehavioral Bases of Health and Illness (P273) for the Health Psychology specialization; Social Psychology (P214) and Personality (P233) for the Social and Personality Psychology specialization; Psychopathology and Behavioral Disorder (P239) and Ecological Context of Behavioral Disorder (P243) for the Psychopathology and Behavioral Disorder specialization; and, for each of these specializations, two elective courses from a specified list. The Developmental Psychology specialization requires Developmental Psychology (P220), two life-span courses, plus one additional course from approved developmental electives.

Finally, all students are required to select a minor specialization and complete one required specialization course and one elective course in this area. The minor specialization and elective courses should be chosen according to the plan that best meets the needs of the individual student, as determined in consultation with the student's faculty advisor and the departmental graduate advisor. In addition to courses offered by the Department of Psychology and Social Behavior and the School of Social Ecology, students may take courses offered by other departments in other schools such as the Departments of Cognitive Science, Anthropology, and Sociology in the School of Social Sciences and the Department of Neurobiology and Behavior in the School of Biological Sciences.

Students complete a supervised research project during their second year culminating in a paper that may form the basis for a publication. They take a written comprehensive examination during their third year, which requires them to demonstrate mastery of the principles of social ecology and of major theoretical, substantive, and methodological issues in the study of their major and minor specializations and in the psychology of human behavior. The normal time for advancement to candidacy is four years. The fourth year, and possibly fifth year, is devoted to developing and defending a dissertation proposal and completing dissertation research. The normal time for completion of the Ph.D. is six years. Students must complete all requirements for the Ph.D. in Psychology and Social Behavior no later than their seventh year of study, adjusted for any approved leaves of absence that may have been taken. It is expected that most students will complete the degree requirements well in advance of this deadline. All Ph.D. students in the Psychology and Social Behavior program are required to pass a final oral defense of the dissertation.

Potential employment sites for graduates of the program include academic institutions, research organizations, government policy institutes, health care and human services settings (e.g., hospitals, schools, community agencies), and a variety of private sector employers. The Ph.D. Program in Psychology and Social Behavior specializes in the training of researchers, not in the training of clinical practitioners.

Graduate Courses

SOCIAL ECOLOGY

200 Seminar in Social Ecology (4). Students are introduced to the classic and contemporary literature of human and social ecology and are expected to use the ecological paradigm to analyze social phenomena of interest to the differing subprograms.

201 Research Methods (4). In-depth analysis of the conceptualization of research and the design of appropriate research strategies. Topics covered are experimental design, questionnaire and interview construction, and observation techniques. Prerequisite: previous course work in statistics.

254 Research Design and Data Analysis (4). Examines the practical implications of linkages between research methods and data analysis. Considers the underlying assumptions of common statistical procedures (e.g., regression and ANOVA analysis) and how certain methodological choices can render their usage questionable.

261 Strategies of Theory Development (4). The goals are (1) to examine key issues and controversies facing the development of social ecological theory, and (2) to encourage students to develop their own abilities as theorists. Strategies for enhancing creative hypothesis formation are emphasized.

264A-B Data Analysis (4). Provides an appreciation and understanding of statistics necessary to conduct applied research. Topics include approaches to and presentation of data, robust statistics, standardization techniques, multivariate regression, and analysis of variance. Prerequisite: graduate standing or consent of instructor.

266A Structural Equation Modeling (4). The general structural equation model is developed including path models, recursive and nonrecursive structural models, multiple indicator models, and confirmatory factor models. Use of LISREL and other software for estimating model parameters is covered. Prerequisites: Social Ecology 264A-B or consent of instructor.

266B Applied Logistic Regression (4). Develops statistical models to be used where the dependent variable is dichotomous. Applications to be considered include cohort and case-control analyses. Prerequisites: Social Ecology 264A-B or consent of instructor.

266C Analysis of Statistical Power (4). Statistical power is a crucial aspect of hypothesis testing. Students learn how to interpret statistical power; how to calculate statistical power for most common designs; and how to design experiments and quasi-experiments to optimize power. Prerequisites: Social Ecology 264A-B; and graduate standing or consent of instructor.

266D Analysis of Survival Data (4). Provides an introduction to survival analysis methods for the analysis of change in discrete dependent variables. Focuses on data collection strategies for obtaining longitudinal data and continuous-time hazards models. Communicates the variety and power of multivariate hazard models.

266E Applied Longitudinal Data Analysis (4). Longitudinal data feature measurements over a continuum and are often conceptualized as a trajectory describing the evolution of the response "over time." Course emphasizes use of the linear mixed model for the analysis of normally distributed, longitudinal responses. Prerequisites: Social Ecology 264B or Psychology and Social Behavior P264B or equivalent; graduate standing.

275 Special Topics in Social Ecology (2 to 4). Topics covered vary with interests of the instructor. Prerequisite: consent of instructor. May be repeated for credit.

290A Descriptive Multivariate Statistics I (4). Lecture, four hours; laboratory, two hours. Mathematical tools to organize and illuminate the multivariate methods. Multiple regression analysis. Multi-dimensional scaling and cluster analysis. Statistical computing via MDS(x), DMDP, and SPSS. Students must enroll in the laboratory section which meets on Wednesdays. Satisfactory/Unsatisfactory grading only. Prerequisite: Social Science 100A-B-C or equivalent. Same as Informatics 207 and Social Science 201A.

290C Sampling Techniques and Estimation Methods (4). Review of confidence interval estimates derived from simple random samples followed by presentation of techniques for improving precision of sample-generated estimates that take account of realistic issues. Methods for dealing with bias and nonsampling errors. Prerequisite: Social Ecology 166A-B-C or equivalent. Same as Social Science 201C and Management 290.

291 Program Evaluation (4). Students are introduced to the use of research techniques and statistical methods in assessing the effectiveness of social programs. Different evaluative models are discussed using examples of actual program evaluations. Prerequisites: Social Ecology 201 and two quarters of graduate-level statistics. Intended for students in the Ph.D. program.

295 Master's Thesis Research and Writing (4 to 8). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only.

296 Doctoral Dissertation Research and Writing (4 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only.

297 Field Studies (2 to 4) F, W, S

298 Directed Studies (2 to 4) F, W, S

299 Independent Study (2 to 8) F, W, S. Prerequisite: consent of instructor. May be repeated for credit.

399 University Supervised Teaching (2 to 4) F, W, S. Required of and limited to Teaching Assistants. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only.

CRIMINOLOGY, LAW AND SOCIETY

C201 Research Methods (4). An introduction to techniques of inductive methodologies, including qualitative interviewing and participant observation, and deductive methodologies, including survey research and experimental and quasi-experimental design. Provides a sound overview of research methodology with tools to pursue specific methods in greater design. Prerequisite: graduate standing or consent of instructor.

C207 Development Control Law and Policy (4). Investigates legal and institutional frameworks for development control. Review of constitutional issues implicated in land-use regulation. Traces development control historically and analyzes contemporary approaches to land-use control which reflect environmental and economic development concerns. Prerequisite: graduate standing. Same as Urban and Regional Planning U207.

C210 Introduction to Criminology, Law and Society (4). Familiarizes students with the interrelated fields of criminology, law and society studies, and criminal justice studies. Organized around three well-established interdisciplinary literatures: criminology, sociological studies, and criminal justice studies. Prerequisite: graduate standing or consent of instructor.

C211 Legal Institutions and Society (4). Acquaints students with the institutions of U.S. legal system and its operations, as well as with the constitutional framework undergirding this system, and defines the relationship between U.S. citizens and government at a variety of levels. Prerequisite: graduate standing or consent of instructor.

C212 Police, Courts, and Corrections (4). Focuses on basic policy issues in the administration of the criminal justice system. The key elements of the criminal justice system are police, courts, and corrections. Prepares students for continued study of these organizations. Prerequisite: graduate standing or consent of instructor.

C213 Crime and Social Deviance (4). Examines the major social scientific perspectives on criminal and deviant behavior. Specific deviant and criminal activities are described and explained using established theoretical frameworks. Prerequisite: graduate standing or consent of instructor.

C214 Research Methods (4) Structures research methodology, the approach to developing and evaluating knowledge of the sciences for use in criminal justice professional activities. Special emphasis on differentiating scientific approaches from pseudo-science. Prerequisite: graduate standing or consent of instructor.

C215 Applied Statistics (4). Provides a basis for the use of fundamental statistical analysis techniques for solving public policy and management problems through a series of assignments, examinations, and online discussions and demonstrations. Prerequisite: graduate standing or consent of instructor.

C216 Public Policy, Crime, and Criminal Justice (4). Increases understanding of crime, violence, and the criminal justice system. Assesses the state of knowledge on key policy issues of our time. Discusses the contribution of communities, schools, employment, drugs, guns, and alcohol to crime and violence. Prerequisite: graduate standing or consent of instructor.

C217 Leadership (4). Introduces concepts, ideas, and theories about leadership and its operation. Explores leadership concepts through interviews with leaders from the community and fellow classmates. Prerequisite: graduate standing or consent of instructor.

C218 Social Problems, Law, and Policy (4). Capstone course for the M.A.S. program in Criminology, Law and Society. Students choose a social problem related to crime, criminal justice, and law; relate the problem to legal and social issues; and devise a plan of action to research the problem. Open to M.A.S. students only.

C219 Hate Crime (4). Examines the causes, manifestations, and consequences of hate crimes, as well as the larger social context within which they occur, are reacted to, and seem to be proliferating. Prerequisite: graduate standing or consent of instructor.

C220 Law, Violence, and Human Rights (4). Examines how adequately law and liberal theories of the state recognize, explain, and delegitimize political violence, particularly the violence committed by states. Addresses theories of the state within which human rights law is embedded, the ethnographies of violence, the legal use of force. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 246D.

C221 Sentencing and Corrections (4). Reviews U.S. attempts to punish and rehabilitate convicted law violators. Conflicts among major purposes of sentencing (rehabilitation, deterrence, incapacitation, and retribution) are discussed, as well as effects of different sanctions on public safety, offender rehabilitation, and justice system costs. Prerequisite: graduate standing or consent of instructor.

C222 Street Ethnography (4). Focuses on urban street populations, especially gangs, and outlines some of the major conceptual and theoretical issues related to this topic and the processes of street socialization. Methods of inquiry include mapping, ethnohistory, survey questionnaires, and other quantitative techniques. Prerequisite: graduate standing or consent of instructor. Same as Chicano/Latino Studies 217.

C223 Introduction to Spatial Analysis and Statistics (4). Provides an introduction to and overview of the applications of spatial data analysis techniques in empirical social science research. Prerequisite: graduate standing or consent of instructor.

C224 Organizational Perspectives on the Legal System (4). Familiarizes students with organization theory and research as ways to make sense of, navigate, and act on the legal system. Acquaints students with major frameworks in organization theory and their application to the system of legal organizations. Prerequisite: graduate standing or consent of instructor.

C230 Crime and Public Policy (4). Discusses the measurement of violent crime; violent offenders and their victims; theoretical explanations of violence; the contribution of the media, drugs, guns, and alcohol to violence; and how the justice system treats and punishes violent offenders. Prerequisite: graduate standing or consent of instructor.

C232 Juvenile Delinquency (4). Examines the major theoretical perspectives regarding the onset, persistence, and desistance of juvenile delinquency and examines empirical evidence for each perspective. Prerequisite: graduate standing or consent of instructor.

C233 Historical Criminology (4). Enables students to have a better understanding of the discipline of criminology as well as the ability to read, think, and write about criminology as a historically situated form of knowledge. Prerequisite: graduate standing or consent of instructor.

C235 Theories of Crime (4). Examines classical and contemporary theories of crime and crime control with special emphasis on the implications of theory for public and social action. Prerequisite: graduate standing or consent of instructor.

C236 Gender and Power in Law and Society (4). Focuses on questions of gender and sexuality in law and society studies. Drawing on a variety of theoretical frameworks, especially feminist legal theory, examines social processes and structures related to legal regulation, inequality, and social change. Prerequisite: graduate standing or consent of instructor.

C237 Legal Reasoning (4). Introduction to law and legal process; use of legal source materials; history and assumptions underlying modern legal reasoning. Key jurisprudential perspectives, development and application of constitutional doctrines (focus on equal protection and right of privacy), and procedure and evidence issues. Prerequisite: graduate standing or consent of instructor.

C238 White-Collar Crime (4). Examines the illegal behavior of individuals who commit crimes in the course of their employment. Special attention will be paid to ways in which power and organizational structure affect the behavior of the white-collar offenders. Prerequisite: graduate standing or consent of instructor.

C239 Law and Society (4). Discusses the major schools in the sociology of law from the early years to the present. Addresses the differences among the schools and locates them in their historical and intellectual context. Presents case studies, comparing the utility of these theoretical traditions. Prerequisite: graduate standing or consent of instructor.

C245 Social Science and the Legal Process (4). Examines the use (and misuse) of social science in the legal process, focusing on role of social science evidence in trial and appellate decision making. Test-case litigation in which social science has been used to challenge laws or support reform. Prerequisite: graduate standing or consent of instructor.

C248 Geographic Information Systems (4). Prepares students to become proficient interactive users of GIS within organizations. Areas covered include: basic geographic, cartographic, and GIS concepts; five steps for learning substantive and procedural materials; and experience with the leading GIS software, geographic base map files, and databases. Prerequisite: graduate standing or consent of instructor.

C249 Law and Morality (4). Examines major theoretical, empirical, and policy-oriented research related to the design, implementation, and analysis of government intervention, through the criminal sanction, in the spheres of vice and morality. Prerequisite: graduate standing or consent of instructor.

C251 Qualitative Criminological Analysis (4). Examines issues and strategies involved in the collection and analysis of qualitative data. Application of qualitative research methods with respect to criminology, law and society. Prerequisite: graduate standing or consent of instructor.

C252 Issues in Environmental Law and Policy (4). Treatment of legal and policy strategies for promoting environmental protection and deterring environmental degradation within the context of other societal objectives. Topical approach with a focus on problems of special interest to criminologists and to environmental policy specialists. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design U252.

C255 Public Policy (4). Explores different approaches to public policy analysis, the diverse conceptions of the goals and objectives that should be served by policy, and the appropriate role of the policy analyst. Policy consequences are traced to indirect and subtle incentives and disincentives. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design U221 and Political Science 221A.

C263 Eyewitness Testimony (4). Examines the evidence that shows that faulty eyewitness memory is the major cause of wrongful convictions. Explores what the legal system thinks of eyewitness testimony and how the legal system has dealt with eyewitness issues. Prerequisite: graduate standing or consent of instructor. Same as Psychology and Social Behavior P263. Formerly C264.

C265 Memory and the Law (4). Examines the controversial topic of repressed memory, or perception and memory of real-world events. Prerequisite: graduate standing or consent of instructor. Same as Psychology and Social Behavior P265.

C275 Special Topics in Criminology, Law and Society (4). Topics covered vary with interests of instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

C276 Social Deviance (4). Provides an in-depth examination of the field of social deviance. Major perspectives are examined in relation to policy issues concerning causation and control of deviant behavior. Prerequisite: graduate standing or consent of instructor.

C296 Doctoral Dissertation Research and Writing (2 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

C298 Directed Studies (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

C299 Independent Study (2 to 8). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

ENVIRONMENTAL HEALTH, SCIENCE, AND POLICY

E205 Coastal Ecosystem Health (4). Examines the causes of coastal ecosystem degradation and strategies to restore the ecosystem balance or to prevent further coastal ecosystem health degradation. Prerequisite: graduate standing or consent of instructor. Same as Ecology and Evolutionary Biology 275.

E224 Environmental Health Sciences I: Introduction to Environmental Health Science (4). Convergence of agents (chemical, physical, biological, or psychosocial) in the environment can emerge as diseases influenced by social, political, and economic factors, allowing them to become rooted in society. How these agents from various spheres come together and impact human health. Prerequisite: graduate standing or consent of instructor. Formerly E225.

E225 Environmental Health Sciences II: Advanced Environmental Health Science (4). Explores the complex relationships among exposure processes and adverse health effects of environmental toxins focusing on specific chemicals, sources, transport media, exposure pathways, and human behaviors. Techniques of environmental sampling for exposure assessment are discussed. Prerequisite: graduate standing or consent of instructor. Formerly E224.

E226 Environmental Health Sciences III: Epidemiology (4). Presents descriptive and experimental approaches to the recognition of the causal association of disease in the general population, as these approaches apply to populations using different student designs and models from the literature. Prerequisite: graduate standing or consent of instructor.

E227 Environmental Health Sciences V: Biostatistics (4). Designed to help students develop an appreciation for the statistician's view of the research process, emphasizing biomedical research. Instills an understanding of how statistical models are used to yield insights about the data that form evidence-based understanding of the world around us. Prerequisites: graduate standing and consent of instructor.

E228 Public Health Cost-Effectiveness Analysis (4). Examines using cost-effectiveness information to allocate limited resources to maximize health benefits to a population; defining and measuring cost, survival, and health-related quality of life; and how to calculate cost-effectiveness using decision trees and Markov simulation models. Prerequisite: graduate standing or consent of instructor. Same as Psychology and Social Behavior P228 and Planning, Policy, and Design U226.

E229 Introduction to Biostatistics and Epidemiology for Medical Fellows (4). Designed to prepare medical fellows and other physicians for rotations in research programs. Understanding of basic biostatistics and study design, and interdependencies between the two. Application of principles in evaluation of medical literature for guidance on patient care and public health policy. Prerequisites: medical degree and consent of instructor.

E231 Earthquakes and Seismic Hazard (4). Provides an overview of earthquakes and introduction to seismic hazard. Topics include characteristics and effects of earthquakes, sources of earthquakes, seismic hazard assessment, introduction to earthquake loss estimation and mitigation. California examples are emphasized. Prerequisite: graduate standing or consent of instructor.

E232 Seminar in Paleoseismology (4). Provides an introduction to paleoseismology and its applications. Topics include data collection methods, data analysis, earthquakes in different tectonic environments, and applications to seismic hazard assessment and fault characterization. Prerequisite: graduate standing or consent of instructor.

E247 Air Pollution, Climate, and Health (4). Emission of air pollutants into the atmosphere, physical and meteorological processes that affect transport, and influence on global warming. Concepts of how and where people are most exposed, and how exposures and health effects differ in developed and developing regions. Prerequisite: graduate standing or consent of instructor.

E248 Human Exposure to Environmental Contaminants (4). Introduces founders of conceptual thought that environmental contaminants can impact health. Theory and principles of exposure assessment, the continuum from emissions of a contaminant into the environment to evidence of health effects in a population. Prerequisite: graduate standing or consent of instructor.

E250 Cancer Epidemiology (4). Concentrates on understanding how epidemiology plays a role in the search for cancer etiology, prevention, control, and treatment; gives an overview of cancer research with an appreciation of the multidisciplinary nature of the field. Prerequisite: Environmental Analysis and Design E226.

E251 Genetic Epidemiology (4). Concentrates on the role of genetic factors in the etiology of disease in human populations with an objective of disease control and prevention, and the role of interactions of genetic factors and environmental exposures in the occurrence of disease. Prerequisite: Environmental Analysis and Design E226.

E252 Ecological Modeling (4). Introduces students to the basic principles of modeling, and demonstrates the complex temporal and spatial relationships found in environmental science. Lectures and readings survey the broadest possible range of mathematical models found in the environmental-ecological literature. Prerequisite: graduate standing or consent of instructor.

E253 Remediation of Environmental Pollutants (4). Topics include sources of natural and anthropogenic environmental pollutants using ecological concepts, chemical fate and transport, engineering and biological remediation technologies, economics, policy to provide understanding and solutions to these problems. Prerequisite: graduate standing or consent of instructor.

E254 Topics in Environmental Health Promotion and Education (4). Focuses on design of intervention strategies dependent on the environmental agent, exposure to assessment, SES, health effects, stakeholders, and support base. Programmatic design includes media selection, communication/education, and pre/post surveys. Analysis of transborder and local environmental health promotion programs. Prerequisite: graduate standing or consent of instructor.

E263 Potable Reuse (4). Provides an in-depth study of the treatment and subsequent reuse of wastewater for drinking. Analyzes existing regulations for both drinking water and reuse situations, microbial and chemical contaminants, hydrogeology, health concerns, and risk assessment. Prerequisite: graduate standing or consent of instructor.

E285 Seminar in Environmental Health, Science, and Policy (2). Topics relevant to the field of environmental health, science, and policy are covered in depth. Included are: hazardous and biological pollutants in soil, water, air; remediation technologies; water conflicts; and regulations pertaining to contaminants. Prerequisite: graduate standing or consent of instructor.

E290 Grant Writing in Environmental Health Sciences Seminar (4). Teaches graduate students fundamentals of grant writing through introduction to funding sources, the missions of these sources, and how differences in mission statements translate into different goals within a proposal. Prerequisite: graduate standing or consent of instructor.

E293 Environmental Health Science IV: The Lead Case (4). The social ecology of lead use and presence in subsistence goods and the environment, examined from earliest prehistory to the present. Lead has specific health impacts throughout human development. Public policy and surveillance are discussed. Prerequisite: graduate standing or consent of instructor.

E295 EHSP Master's Thesis Research and Writing (4 to 8). Prerequisite: advancement to candidacy and graduate standing. Satisfactory/Unsatisfactory only. May be repeated for credit.

E297 EHSP Graduate Field Seminar (2 to 4). Serves as a bridge between course work in environmental health sciences and policy and the undertaking of independent research. Helps guide students in developing their pre-thesis/pre-dissertation research project. Prerequisite: graduate standing or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

E298 EHSP Directed Studies (2 to 4). Prerequisite: graduate standing or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

E299 EHSP Independent Study (2 to 8). Prerequisite: graduate standing or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

PSYCHOLOGY AND SOCIAL BEHAVIOR

P201 Research Methods in Psychology (4). In-depth examination of the conceptualization of research problems and linkages between theory and the design of appropriate strategies for empirical research in psychological science. Topics include experimental and quasi-experimental designs, reliability and validity of measurement and non-experimental procedures. Prerequisite: graduate standing or consent of instructor.

P203 Development of Gender Differences (4). Evaluation of research on gender differences in physiology, psychology, and social behavior from the prenatal period through adulthood. Topics include cognitive skills, moral reasoning, achievement, prosocial behavior, aggression, and mental health. Examination of psychological and biological theories and explanations for gender differences. Prerequisite: graduate standing or consent of instructor.

P204 Adolescence (4). Considers pubertal and cognitive changes and their social consequences; the family, peer group, school, and cultural contexts in which adolescence is embedded; and selected psychosocial issues including autonomy, identity, health, and well-being. Prerequisite: graduate standing or consent of instructor.

P209A Applied Psychological Research (4). Focuses on scientific and professional issues in the field of psychology. Topics include communication skills; intervention approaches; collaboration, consultation, and referral; and ethical issues associated with at-risk populations research. Prerequisite: graduate standing or consent of instructor.

P209B Applied Psychological Research in the Community (4). Explores research and practice in the field of psychology. Students are placed in an actual field placement practicum. Prerequisites: P209A and graduate standing.

P214 Seminar in Social Psychology (4). Presents an overview of selected theoretical and empirical topics in social psychology including social influence and conformity, altruism and aggression, persuasion and attitude change, self and social perception, and social cognition. Prerequisite: graduate standing or consent of instructor.

P218 Infancy (4). Covers development from conception through the second year. Focus is on research and theory concerning infants' physical, social, cognitive, perceptual, emotional, and language development. Also covers transition to parenthood and family context of infant development. Prerequisite: graduate standing or consent of instructor.

P220 Developmental Psychology (4). Examines key concepts and research methods in the study of life span development. Considers different models of development; contextual and ecological perspectives; the nature of plasticity; continuity and change over time. Introduces research designs and statistical procedures for studying human development. Prerequisite: graduate standing or consent of instructor.

P223 Cross-Cultural Developmental Psychology (4). Examines human development in diverse cultures (e.g., Asian, American, and African). Cultural diversity within the U.S. and acculturation of various ethnic groups also discussed. Topics include parenting, family relations, language and cognition, schooling and academic achievement, and morality. Prerequisite: graduate standing or consent of instructor.

P226 Emotion in Psychology (4). Covers original and recent theories of emotions and how they guide current research. Specific topics include neuroanatomical structure of emotion, life-span emotional development, and health and emotion. Prerequisite: graduate standing or consent of instructor.

P228 Public Health Cost-Effectiveness Analysis (4). Examines using cost-effectiveness information to allocate limited resources to maximize health benefits to a population; defining and measuring cost, survival, and health-related quality of life; and how to calculate cost-effectiveness using decision trees and Markov simulation models. Prerequisite: graduate standing or consent of instructor. Same as Environmental Health, Science, and Policy E228 and Planning, Policy, and Design U226.

P230 Adulthood (4). Focuses on early and middle adulthood. Examines the extended period of transitioning to adulthood; changes in relationships with family members; impact of major role-related experiences (e.g., spouse, parent, worker) on development and well-being; continuity and change in personality and social identities. Prerequisite: graduate standing or consent of instructor.

P231 Professional Issues in Psychology (4). Examines a variety of issues related to the professional socialization and development of graduate students in psychology. Topics include the publication process, sources of research funding, alternative employment options, competitiveness on the job market, and the academic career route. Prerequisite: graduate standing or consent of instructor.

P233 Personality (4). Provides a frame of reference for understanding personality and its role in life-span development, the relationship of the individual to society, and both mental and physical illness. Prerequisite: graduate standing or consent of instructor.

P234 Childhood (4). Examines the development of children from two to 12 years of age, covering the areas of cognition, language, emotion, and social relations. Emphasizes recent research and contemporary theory and the ecological context of child development. Presumes familiarity with theories and basic principles of development. Prerequisite: graduate standing or consent of instructor.

P236 Issues in Human Development (4). Examines selected issues that have current research salience and policy significance, such as day care, parental employment and family functioning, sex differences in adults' well-being; developmental psychopathology; and the importance of social ties among the elderly. Prerequisite: Psychology and Social Behavior P220, graduate standing, or consent of instructor. Formerly P236A-B.

P238 Child Psychopathology (4). Examination of etiology, classification, and developmental pathways of disorders, as well as risk and resilience factors, during the childhood/adolescent years. Discussion of genetic influences and contextual risk factors as well as internalizing and externalizing disorders. Prerequisite: graduate standing or consent of instructor.

P239 Psychopathology and Behavior Disorders (4). Explores the antecedents, characteristics, course, outcomes, and options for the prevention or management of various forms of psychopathology and behavior disorder. Focuses on psychological and biobehavioral mechanisms that influence the development, expression, and amelioration of maladaptation. Prerequisite: graduate standing or consent of instructor.

P243 Ecological Context of Behavioral Disorder (4). Surveys the epidemiology of behavioral and other health disorders as they may be affected by socioeconomic status, income disparity, employment stress, adverse employment change, and other social environmental factors. Reviews measurement and design issues in advancing research in this area. Prerequisite: graduate standing or consent of instructor.

P244 Personality Research and Assessment (4). Examines the nature of personality as it influences research and assessment approaches. Discusses adequacy criteria for personality research and addresses applications to student research and practice needs and interests. Prerequisite: graduate standing.

P245 Psychological Assessment (4). Familiarizes students with psychological assessments in intelligence, clinical diagnosis, personality, and neuropsychological functioning. Exposure to administering, scoring, and interpreting assessments. Special focus on psychometrics (e.g., reliability and validity), test construction, and ethical responsibilities. Prerequisite: graduate standing or consent of instructor.

P250 Emotion, Reasoning, and Memory (4). Examines research and theory on emotion from the perspective of cognitive psychology. Topics include the effects of emotions on attention, memory, and problem solving; the relations between emotional and cognitive development; flash-bulb memories of intense emotional experiences; eyewitness testimony. Prerequisite: graduate standing or consent of instructor.

P258 Health Psychology (4). Interdisciplinary exploration of emerging fields of health psychology and behavioral medicine. Topics: role of stress in the development and treatment of medical problems; sociocognitive determinants of health and illness; interpersonal health transactions; behavioral approaches to medical problems such as diabetes, obesity, hypertension. Prerequisite: graduate standing or consent of instructor.

P262 Interpersonal Processes and Health (4). Examines traditions of research linking interpersonal processes to emotional or physical health. Topics include: role of social support in ameliorating stress, effects of social control on health-compromising behaviors, adverse effects of social relationships on health, causes of deficient social relationships. Prerequisite: graduate standing or consent of instructor.

P263 Eyewitness Testimony (4). Examines the evidence that shows that faulty eyewitness memory is the major cause of wrongful convictions. Explores what the legal system thinks of eyewitness testimony and how the legal system has dealt with eyewitness issues. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C263. Formerly P264.

P264A Quantitative Methods in Psychology (4). Statistical techniques for inference in psychological research including point, interval, and effect size estimation to establish test association between variables. Techniques from General Linear Model include single- and multifactor analysis of variance with use of linear contrasts and post hoc comparisons. Prerequisite: graduate standing or consent of instructor.

P264B Advanced Quantitative Methods in Psychology (4). Focuses on proper specification of multivariable regression models with emphasis on inferences using OLS and logistical regression. Emphasizes framework for assessing interaction and other complex relationships between response and predictor variables. Use of statistical software to analyze data. Prerequisite: Psychology and Social Behavior P264A.

P265 Memory and the Law (4). Examines the controversial topic of repressed memory, or perception and memory of real-world events. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society P265.

P268 Coping with Stressful Life Events (4). Explores how individuals cope with serious life crises (e.g., illness, bereavement), life transitions, and daily stressors. Considers how such events impact on people's cognitions, emotions, and health, and the role of others in the coping process. Prerequisite: graduate standing or consent of instructor.

P270 Multilevel Models (4). Introduces contemporary statistical models associated with nested, hierarchical, or clustered data. Topics include multi-level thinking in theory, growth curve modeling, intraindividual variation, cross-sectional multilayered data, hypothesis-testing, statistical power, effect size estimation, and available software packages. Prerequisite: graduate standing or consent of instructor.

P272 Psychoneuroendocrinology (4). Introduction to a new and multidisciplinary research field investigating the interactions between the brain, hormones, and behavior. After an introduction to relevant neuroendocrine concepts, covers current research topics in the field including stress, memory, development, and psychopathology. Prerequisite: graduate standing or consent of instructor.

P273 Biobehavioral Aspects of Health and Illness (4). Examines the behavior-physiology interactions of some major bodily systems: the nervous, cardiovascular, gastrointestinal, and endocrine systems. Analysis of normal and abnormal states of these systems as they relate to tissue injury, disease, and rehabilitation. Prerequisite: graduate standing or consent of instructor.

P275 Special Topics in Psychology and Social Behavior (4). Topics covered vary with interests of instructor. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

P287 Employment and Family Functioning (4). Examines men's and women's employment in the context of the family. Focus is on the effects of work on adult well-being, parenting, marital quality, and child development. Includes social policies that impact the workplace and family. Prerequisite: graduate standing or consent of instructor.

P290 Research in Developmental Psychology (4). Introduces graduate students to research conducted by individual faculty members in the area of developmental psychology. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P291 Research in Health Psychology (4). Introduces graduate students to research conducted by individual faculty members in the area of health psychology. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P292 Research in Psychopathology and Behavior Disorder (4). Introduces graduate students to research conducted by individual faculty members in the area of psychopathology and behavior disorder. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P293 Research in Social and Personality Psychology (4). Introduces graduate students to research conducted by individual faculty members in the area of social and personality psychology. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P294A-B-C Research Directions in Psychology and Social Behavior (2-2-2) F, W, S. Introduces students to the current research of faculty, graduate students, and visitors to the Department of Psychology and Social Behavior. Includes examination of contemporary research issues and controversies, as well as issues related to students' development as professionals. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor.

P295 Research in Psychology and Law (4). Introduces graduate students to research conducted by individual faculty members in the area of psychology and law. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor.

P296 Doctoral Dissertation Research and Writing (4 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

P298 Directed Studies in Psychology and Social Behavior (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P299 Independent Studies in Psychology and Social Behavior (2 to 8). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

PLANNING, POLICY, AND DESIGN

U202 History of Urban Planning (4). Introduction to the historical roots and fundamental perspectives of urban and regional planning. Exploration of the significant historical phases and personalities which have shaped the profession. The roles and responsibilities, the limitations and potential, of urban planning. Prerequisite: graduate standing or consent of instructor.

U203 Theoretical Foundations of Planning (4). Intellectual excursion into central themes in policy and planning, including philosophy of the market, institutionalization of space, hypostatizations of policy, constructions of communities, logics of spatial analysis. Objective is engagement of the professional in thoughtful reflections on practice and institutions. Prerequisite: graduate standing or consent of instructor.

U205 Environmental Economics and Policy (4). Provides a broad introduction to environmental economics and to environmental policy. Environmental problems facing the United States and Europe are analyzed, and whenever possible, the environmental problems facing developing countries. Prerequisite: graduate standing or consent of instructor.

U206 Microeconomic Analysis for Urban Planning (4). Provides students with a working knowledge of basic microeconomic concepts. Emphasizes applications related to urban planning and policy analysis. Topics covered include demand analysis, firm behavior, market structure, public goods, externalities, and the role of economics in land markets. Prerequisite: graduate standing or consent of instructor.

U207 Development Control Law and Policy (4). Investigates legal and institutional frameworks for development control. Review of constitutional issues implicated in land-use regulation. Traces development control historically and analyzes contemporary approaches to land-use control which reflect environmental and economic development concerns. Prerequisite: graduate standing. Same as Criminology, Law and Society C207.

U208 California's Population (4). Provides a non-specialist introduction to social demography through a focus on California population. Surveys historical and current trends in the State's growth, its industries and occupations, and its ethnic and racial makeup. Prerequisite: graduate standing or consent of instructor.

U209 Qualitative Research Methods: Overview (4). Introduces fundamentals and philosophical underpinnings of "qualitative" research and anti-positivistic inquiry. Explores the nature and varieties of qualitative inquiry. Overview of selected methods from among ethnography, naturalistic field research, case study, phenomenology, ethnomethodology, ethnoarchaeology, critical approaches. Prerequisite: graduate standing or consent of instructor.

U211 Urban Design and Behavior (4). Acquaints students with vocabulary, history, theories, process, and trends in urban design, and the relationship of design to human well-being. The local environment is used as a resource and a laboratory. Prerequisite: graduate standing and consent of instructor.

U212 Transportation Planning (4). Introduces current topics in transportation planning. Includes an analysis of the economic role of transportation in urban areas, land-use impacts of transportation projects, traffic congestion, air quality, alternatives to the automobile, and other transportation topics. Prerequisite: graduate standing.

U214 Quantitative Analysis for Planners (4). Introduces students to the basic statistical concepts used to address issues of public concern. Prepares students to perform, interpret, and evaluate quantitative data analyses commonly used in professional studies. Prerequisite: graduate standing or consent of instructor.

U215 Analytical Methods for Planning (4). Emphasizes the development of analytical techniques proven useful in the fields of management and administration. Topics include multiple regression, cost-benefit analysis and discounting, decision trees, and other techniques useful for the purposes of community analysis and planning. Prerequisite: graduate standing or consent of instructor.

U218A-B Advanced Research Methods for Planning (4-4). Provides in-depth training in research methods enabling students to conduct and critically evaluate research on planning and public policy. Statistical inference, data analysis, applied econometric methods. Regression techniques, OLS, heteroskedasticity, time series analysis, discrete choice analysis, panel data, and instrumental variables. Prerequisites: graduate standing and consent of instructor. Formerly U208A-B.

U219 Advanced Planning Theory (4). Focused readings and discussions aimed at developing a foundation for critical research into the theories and epistemologies of planning and policy. Topics include the liberal, communitarian, communicative, and other conceptions of nationality; praxis, hermeneutics, and policy; topologies of justice and social fracture. Prerequisite: graduate standing or consent of instructor.

U220 Qualitative Methods: Fieldwork and Data Collection (4). Covers fieldwork, data collections techniques, and related issues for anti-positivistic research. Data collection techniques include observation, physical traces, participation, in-depth interview. Data checks include veracity, detail, completeness, rigor. Prerequisite: graduate standing or consent of instructor.

U221 Public Policy (4). Explores different approaches to public policy analysis, the diverse conceptions of the goals and objectives that should be served by policy, and the appropriate role of the policy analyst. Policy consequences are traced to indirect and subtle incentives and disincentives. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C255 and Political Science 221A.

U223 Regional Analysis (4). Major concepts and techniques of regional analysis, with applications for urban and regional planning and public policy-making. Definition of regions, processes of economic change, regional structure, location of activities, and analysis of selected policy issues. Emphasis on practical applications. Prerequisite: graduate standing or consent of instructor.

U224 Environmental Politics and Policy (4). Reviews and critiques literature on discussion topics including: the nature and effectiveness of the environmental movement and environmental policies; the role of science and technology; the use of economic incentives in policy; decentralization of decision making; and creating arenas for public involvement. Prerequisite: graduate standing or consent of instructor. Same as Political Science 224A.

U225 Local Economic Development (4). Analyzes the economic development process. Attention is given to economic theories of local development and practical implications of those theories. Topics include local economic development and poverty, tax incentives, infrastructure credits, effects of government competition for economic activity. Prerequisite: graduate standing.

U226 Public Health Cost-Effectiveness Analysis (4). Examines using cost-effectiveness information to allocate limited resources to maximize health benefits to a population; defining and measuring cost, survival, and health-related quality of life; and how to calculate cost-effectiveness using decision trees and Markov simulation models. Prerequisite: graduate standing or consent of instructor. Same as Environmental Health, Science, and Policy E228 and Psychology and Social Behavior P228.

U227 Qualitative Methods: Case Study (4). Deals with case study as a qualitative, anti-positivistic research method. Discussion focuses on the essential nature of case study research, quality of case study, rigor, design, implementation, analysis, data collection techniques, analysis, and writing. Prerequisite: graduate standing or consent of instructor.

U228 Demographics for Planning and Policy (4). Provides planning and policy practitioners with a condensed, nonspecialist orientation to the sources, applications, and interpretation of population statistics, and conveys the steps used in constructing local-area population forecasts and projections. Prerequisite: graduate standing or consent of instructor.

U229 Communities and Health (4). Increasingly, communities rather than individuals are seen as the locus of change for making communities healthier. Reviews different theoretical approaches, analyzes programs in the U.S. and abroad, and undertakes a critical evaluation of their success. Prerequisites: graduate standing and consent of instructor.

U231 Transportation and the Environment (4). Explores environmental impacts of transportation from several perspectives, including planning, industrial ecology, and economics. The main focus is on motor vehicle transportation, especially cars. Prerequisite: graduate standing or consent of instructor.

U232 Diversity and Urban Environments (4). Explores diversity and power in the use and design of the physical environment. Examines how people differ in their relationships to environments on the basis of gender, race/ethnicity, age, socioeconomic status, physical abilities, sexuality, religion, and culture.

U233 Transportation, Transit, and Land-Use Policy and Planning (4). Places students into a specific transportation public policy situation to devise real solutions, with the goal of helping students understand factors in land use, travel behavior, politics, and finance that shape transportation planning policy choices. Prerequisite: graduate standing or consent of instructor.

U234 Environmental Analysis (4). Explores theory and methods for the analysis of environmental patterns and their linkage to policy. Involves discussions on fundamentals of theories for analysis, along with hands-on instruction on analytical methods. Topics include: spatial analysis, risk representation, and sustainability planning. Prerequisite: graduate standing or consent of instructor.

U236 Community Design (4). Provides an overview of the current condition of urban design in the United States. Topics include the academic environment, the retail environment, multi- and single-family residential environments, the office environment, and new urban design tools. Prerequisite: graduate standing or consent of instructor.

U237 Introduction to Geographic Information Systems (4). Application of Geographic Information Systems (GIS) to the field of urban and regional planning. Emphasizes current issues that occur in actual implementation settings. Lecture/discussion followed by laboratory demonstrating the area of GIS discussed. Offers "hands-on" student usage of GIS software.

U238 Advanced Geographic Information Systems (4). Extends study of geographic information systems to more advanced issues, including data sources, data conversion, relational database integration, software customization, and spatial and three-dimensional analysis. Prerequisite: Planning, Policy, and Design U237.

U240 International Environmental Policy (4). Explores causes and effects of environmental problems and the effectiveness of different adaptation or restoration strategies and how they are closely linked to ways in which political, economic, demographic, and cultural systems interact among themselves and ecological systems.

U241 Health Promotion and Planning (4). Focuses on health and health care in the United States, but discussion of global health issues and/or international comparisons will be made whenever possible. Considers both the social and economic aspects of health and disease. Prerequisite: graduate standing or consent of instructor.

U242 Regional Development Theory (4). Regional economic development concepts and studies, with applications for urban and regional planning, and public policy-making. Roles and performance of economic sectors, technological innovation, and communications in the process of development. Analysis of regional development policies and programs. Prerequisite: graduate standing or consent of instructor.

U244 Land-Use Policy (4). Examination of the role of public policy in guiding growth and development in urban and suburban environments. Description of a wide-ranging set of growth policies, the rationales underlying their use, controversies and legal constraints, and evaluation of their effectiveness. Prerequisite: graduate standing.

U246 Housing Policy (4). Examines the theories and practices of housing policy and the relationship of housing to larger neighborhood, community, and regional development issues. Considers the roles of private for-profit and not-for-profit developers, lenders, and all levels of government in the provision of housing. Prerequisites: basic statistics and consent of instructor.

U252 Issues in Environmental Law and Policy (4). Treatment of legal and policy strategies for promoting environmental protection and deterring environmental degradation within the context of other societal objectives. Topical approach with a focus on problems of special interest to criminologists and to environmental policy specialists. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C252.

U253 Site Planning (4). Examines site specific, neighborhood, and community site planning from the site designer and local government perspectives. By reviewing actual discretionary case applications and case studies, students learn how regulatory, environmental, and government constraints influence site planning. Prerequisite: graduate standing or consent of instructor.

U260 Grant Writing for Community Planning and Development (4). Introduces students to grant writing and processes involved in generating funding for nonprofit programs and community research projects. Prerequisite: graduate standing or consent of instructor.

U264 Planning, Policy, and Design Seminar (1). For first- and second-year doctoral students. Topics include professional development; refereed journal publication process; academic conference presentations; and the job market for doctoral students in and out of academia. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

U265 Urban and Community Development Seminar (1). For first- and second-year doctoral students. Topics include scholarship related to the urban and community development area. Discussion of assigned articles and book chapters and how they relate to urban and community development. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

U273 Global Urbanization (4). Examines the spread of cities worldwide in the twentieth century. What are the political and economic causes of this processes? What are the social-cultural, political, economic effects? How is contemporary urbanization linked to global restructuring of other kinds? Prerequisites: graduate standing, consent of instructor. Same as Social Science 254J and Sociology 252A.

U275 Special Topics in Urban Planning (4). Special topics in urban and regional planning are offered from time to time, but not on a regular basis. Course content varies with interest of the instructor. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

U276 Principles of Environmental Design (4). Explores the principles and processes of design in the built environment, including graphic analysis and behavioral programming. Prerequisite: graduate standing or consent of instructor.

U278 Culture, Community, and Space (4). Covers how cultures relate to natural and built physical environments. Ways in which culture influences space; ways space influences culture. Concepts for understanding the interrelationship, including values, norms, traditions, religion, and place attachment. Culture and cities, urban form, ethnic communities. Prerequisite: graduate standing or consent of instructor.

U279 Power and Empowerment in Organizations (4). Studies different ways of thinking about power and the use of power in organizations. First considers different ways of understanding power and then deals with various forms of empowerment including assistance, participatory democracy, and workplace empowerment. Prerequisite: graduate standing or consent of instructor.

U280A-B Urban Planning Studio (4-4). Offers a practical, problem-solving approach that involves students in varied planning projects. Projects expose students to data gathering, analysis, graphic presentation, politics, law, citizen participation, report writing, and public speaking. Projects emphasize the surrounding metropolitan area. Prerequisite: graduate standing.

U282 Urban Design Studio for Planners: An Introduction (4). Introductory urban design for planners. Organized around a variety of assignments to encourage learning by design in a studio setting. Students work on design projects and drawing assignments to learn practical aspects of urban design. Prerequisite: graduate standing or consent of instructor.

U283 Public Management (4). Introduction to inclusive management. To make effective use of public resources, public managers are inventing ways of managing that alter relationships within organizations, between organizations, between sectors, and with the public. Requires rethinking fundamentals such as leadership and motivation. Prerequisite: graduate standing or consent of instructor. Same as Political Science 222A.

U288 Environment-Behavior Studies (4). Provides an overview of major theoretical and research perspectives within the field of environment-design research/environment-behavior studies (EBS). Reviews contributions to EBS from architecture, planning, geography, psychology, sociology, and other fields. Prerequisite: graduate standing or consent of instructor.

U292 Professional Report (4). Workshop designed to assist M.U.R.P. students in conducting their professional reports. Students select topics, design projects, conduct professional investigations, and write up reports.

U296 Doctoral Dissertation Research and Writing (2 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

U297 Research Design (4). Provides training in research design and methods. Students learn how to evaluate the strength of research findings based on the methods used by a researcher and learn to use lessons from the course to develop a research proposal. Prerequisite: graduate standing or consent of instructor.

U298 Directed Studies in Urban Planning (2 to 4). Prerequisites: graduate standing and consent of instructor. May be repeated for credit.

U299 Independent Study in Urban Planning (2 to 8). Prerequisites: graduate standing and consent of instructor. May be repeated for credit.

SCHOOL OF SOCIAL SCIENCES

Barbara A. Doshier, **Dean**

Social Science Plaza

Undergraduate Counseling: (949) 824-6803

Graduate Counseling: (949) 824-5924

World Wide Web: <http://www.socsci.uci.edu/>

Faculty

Dennis J. Aigner, Ph.D. University of California, Berkeley, *Professor of Management and Economics*

Edwin Amenta, Ph.D. University of Chicago, *Professor of Sociology*

Gian Aldo Antonelli, Ph.D. University of Pittsburgh, *Professor of Logic and Philosophy of Science*

Marigee Bacolod, Ph.D. University of California, Los Angeles, *Assistant Professor of Economics*

Stanley Bailey, Ph.D. University of California, Los Angeles, *Assistant Professor of Sociology*

Nina Bandelj, Ph.D. Princeton University, *Assistant Professor of Sociology*

Jeffrey A. Barrett, Ph.D. Columbia University, *Department Chair and Professor of Logic and Philosophy of Science*

William H. Batchelder, Ph.D. Stanford University, *Professor of Cognitive Sciences*

Frank D. Bean, Ph.D. Duke University, *Professor of Sociology*

Matthew N. Beckmann, Ph.D. University of Michigan, *Assistant Professor of Political Science*

Duran Bell, Ph.D. University of California, Berkeley, *Professor of Economics*

Bruce Berg, Ph.D. Indiana University, *Associate Professor of Cognitive Sciences*

Victoria Bernal, Ph.D. Northwestern University, *Associate Professor of Anthropology*

Volodymyr Bilotkach, Ph.D. University of Arizona, *Assistant Professor of Economics*

Marlon G. Boarnet, Ph.D. Princeton University, *Chair of the Department of Planning, Policy, and Design and Professor of Social Ecology and Economics*

Tom Boellstorff, Ph.D. Stanford University, *Assistant Professor of Anthropology*

Dan Bogart, Ph.D. University of California, Los Angeles, *Assistant Professor of Economics*

John P. Boyd, Ph.D. University of Michigan, *Professor Emeritus of Mathematical Anthropology*

William A. Branch, Ph.D. University of Oregon, *Assistant Professor of Economics*

Myron L. Braunstein, Ph.D. University of Michigan, *Professor Emeritus of Cognitive Sciences*

Scott D. Brown, B.S. University of Newcastle, *Assistant Professor of Cognitive Sciences*

Susan K. Brown, Ph.D. University of Washington, *Assistant Professor of Sociology*

David Brownstone, Ph.D. University of California, Berkeley, *Department Chair and Professor of Economics*

Jan K. Brueckner, Ph.D. Stanford University, *Professor of Economics*

Alison Brysk, Ph.D. Stanford University, *Professor of Political Science*

Thomas C. Buchmueller, Ph.D. University of Wisconsin, Madison, *Professor of Management, Economics, and Social Ecology*

Michael L. Burton, Ph.D. Stanford University, *Professor of Anthropology and Social Ecology*

Michael Butler, J.F., Society of Fellows, Harvard University, *Professor Emeritus of Social Sciences*

Carter Butts, Ph.D. Carnegie Mellon University, *Assistant Professor of Sociology*

Robert W. Byde, Ph.D. University of California, Irvine, *Lecturer in Cognitive Sciences*

Kitty C. Calavita, Ph.D. University of Delaware, *Professor of Social Ecology and Sociology*

Teresa Caldeira, Ph.D. University of California, Berkeley, *Associate Professor of Anthropology*

Francesca M. Cancian, Ph.D. Harvard University, *Professor Emerita of Sociology*

Frank Cancian, Ph.D. Harvard University, *Professor Emeritus of Anthropology*

Christopher S. Carpenter, Ph.D. University of California, Berkeley, *Assistant Professor of Management and Economics*

Leo R. Chávez, Ph.D. Stanford University, *Director of Chicano/Latino Studies and Professor of Anthropology*

Jiawei Chen, Ph.D. The John Hopkins University, *Assistant Professor of Economics*

Charles F. Chubb, Ph.D. New York University, *Professor of Cognitive Sciences*

Carol M. Cicerone, Ph.D. University of Michigan, *Professor Emerita of Cognitive Sciences*

Linda Cohen, Ph.D. California Institute of Technology, *Professor of Economics*

Benjamin N. Colby, Ph.D. Harvard University, *Professor Emeritus of Anthropology*

Thomas N. Cornsweet, Ph.D. Brown University, *Professor Emeritus of Cognitive Sciences*

Michel Crozier, Docteur en Droit, University of Paris and University of Lille, and Docteur d'Etat, University of Paris, *Professor of Political Science*

Russell J. Dalton, Ph.D. University of Michigan, *Professor of Political Science*

James N. Danziger, Ph.D. Stanford University, *Professor of Political Science*

William Demopolous, Ph.D. University of Western Ontario, *Professor of Logic and Philosophy of Science*

Louis DeSipio, Ph.D. University of Texas at Austin, *Associate Professor of Chicano/Latino Studies and Political Science*

Arthur S. DeVany, Ph.D. University of California, Los Angeles, *Professor Emeritus of Economics*

John D. Dombink, Ph.D. University of California, Berkeley, *Professor of Social Ecology and Sociology*

Barbara A. Doshier, Ph.D. University of Oregon, *Dean of the School of Social Sciences and Professor of Cognitive Sciences*

Michael D'Zmura, Ph.D. University of Rochester, *Department Chair and Professor of Cognitive Sciences*

David Easton, Ph.D. Harvard University, *UCI Distinguished Research Professor of Political Science*

Jean-Claude Falmagne, Ph.D. University of Brussels, *Professor Emeritus of Cognitive Sciences*

Katherine Faust, Ph.D. University of California, Irvine, *Associate Professor of Sociology*

Martha Feldman, Ph.D. Stanford University, *Professor of Social Ecology, Management, Sociology, and Political Science, and Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management*

Paul J. Feldstein, Ph.D. University of Chicago, *Professor of Management, Economics, and Social Ecology, and Robert Gumbiner Chair in Health Care Management*

Cynthia Feliciano, Ph.D. University of California, Los Angeles, *Assistant Professor of Chicano/Latino Studies, Sociology, and Education*

Raúl Fernández, Ph.D. Claremont Graduate School, *Professor of Chicano/Latino Studies and Social Sciences*

Gordon J. Fielding, Ph.D. University of California, Los Angeles, *Professor Emeritus of Social Sciences*

Mark Fisher, M.D. University of Cincinnati, *Department Chair and Professor of Neurology and Professor of Anatomy and Neurobiology and of Political Science*

James J. Flink, Ph.D. University of Pennsylvania, *Professor Emeritus of Social Sciences*

David John Frank, Ph.D. Stanford University, *Associate Professor of Sociology and Education*

Linton Freeman, Ph.D. Northwestern University, *Research Professor of Sociology*

Creel Froman, Ph.D. Northwestern University, *Professor Emeritus of Political Science*

Paula Garb, Ph.D. U.S.S.R. Academy of Sciences, *Associate Director of International Studies and Associate Adjunct Professor of Anthropology*

Lisa García Bedolla, Ph.D. Yale University, *Assistant Professor of Chicano/Latino Studies and Political Science*

Robert Garfias, Ph.D. University of California, Los Angeles, *Professor of Anthropology*

- Michelle Garfinkel, Ph.D. Brown University, *Professor of Economics*
 Amihai Glazer, Ph.D. Yale University, *Professor of Economics*
 Gilbert Gonzalez, Ph.D. University of California, Los Angeles, *Professor of Social Sciences and Chicano/Latino Studies*
 Michael R. Gottfredson, Ph.D. State University of New York, Albany, *Executive Vice Chancellor and Provost and Professor of Social Ecology and Sociology*
 Richard H. Granger, Ph.D. Yale University, *Professor of Computer Science and Cognitive Sciences*
 Susan Greenhalgh, Ph.D. Columbia University, *Professor of Anthropology*
 Bernard N. Grofman, Ph.D. University of Chicago, *Professor of Political Science and Economics*
 Emily D. Grossman, Ph.D. Vanderbilt University, *Assistant Professor of Cognitive Sciences*
 Gregory Hickok, Ph.D. Brandeis University, *Professor of Cognitive Sciences*
 Donald Hoffman, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
 Lawrence A. Howard, Ph.D. University of California, Irvine, *Lecturer in Cognitive Sciences*
 C. Ronald Huff, Ph.D. Ohio State University, *Dean of the School of Social Ecology and Professor of Social Ecology and Sociology*
 Matthew L. Huffman Ph.D. University of California, Santa Barbara, *Associate Professor of Sociology*
 Tarow Indow, Ph.D. Keio University, *Professor Emeritus of Cognitive Sciences*
 Helen Ingram, Ph.D. Columbia University, *Professor of Social Ecology and Political Science, and Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation*
 Jun Ishii, Ph.D. Stanford University, *Assistant Professor of Economics*
 Geoffrey J. Iverson, Ph.D. New York University, *Professor of Cognitive Sciences*
 Mireille Jacobson, Ph.D. Harvard University, *Assistant Professor of Social Ecology and Economics*
 Ivan Jeliaskov, Ph.D. Washington University in St. Louis, *Assistant Professor of Economics*
 Valerie Jenness, Ph.D. University of California, Santa Barbara, *Chair of the Department of Criminology, Law and Society and Professor of Social Ecology and Sociology*
 Kent E. Johnson, Ph.D. Rutgers University, *Assistant Professor of Logic and Philosophy of Science*
 Joseph G. Jorgensen, Ph.D. Indiana University, *Professor Emeritus of Social Sciences*
 Philippe Jorion, Ph.D. University of Chicago, *UCI Chancellor's Professor of Management and Economics*
 Marek Kaminski, Ph.D. University of Maryland, *Associate Professor of Political Science*
 Mary-Louise Kean, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
 George Kent, Ph.D. University of California, Berkeley, *Professor Emeritus of Social Sciences*
 Claire Jean Kim, Ph.D. Yale University, *Associate Professor of Asian American Studies and Political Science*
 Jerome Kirk, Ph.D. The Johns Hopkins University, *Professor Emeritus of Sociology*
 Igor Kopylov, Ph.D. University of Rochester, *Assistant Professor of Economics*
 David LaBerge, Ph.D. Stanford University, *Professor Emeritus of Cognitive Sciences*
 Charles Lave, Ph.D. Stanford University, *Professor Emeritus of Economics*
 Jennifer Lee, Ph.D. Columbia University, *Associate Professor of Sociology*
 Michael D. Lee, Ph.D. University of Adelaide, *Assistant Professor of Cognitive Sciences*
 Karen Leonard, Ph.D. University of Wisconsin, *Co-Director of the Center for Asian Studies and Professor of Anthropology*
 Christine Lofgren, Ph.D. University of California, Irvine, *Director of the Farm School and Lecturer in Cognitive Sciences*
 Elizabeth F. Loftus, Ph.D. Stanford University, *UCI Distinguished Professor of Psychology and Social Behavior, Criminology, Law and Society, and Cognitive Sciences*
 R. Duncan Luce, Ph.D. Massachusetts Institute of Technology, *UCI Distinguished Professor Emeritus of Cognitive Sciences and Economics*
 Cecelia Lynch, Ph.D. Columbia University, *Director of the Center for Global Peace and Conflict Studies and Associate Professor of Political Science*
 Gary S. Lynch, Ph.D. Princeton University, *Professor of Psychiatry and Human Behavior and of Cognitive Sciences*
 Craig MacAndrew, Ph.D. University of Chicago, *Professor Emeritus of Psychology*
 Penelope Maddy, Ph.D. Princeton University, *UCI Chancellor's Professor of Logic and Philosophy of Science and of Mathematics*
 David B. Malament, Ph.D. Rockefeller University, *UCI Distinguished Professor of Logic and Philosophy of Science*
 Virginia Mann, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences and Education*
 George E. Marcus, Ph.D. Harvard University, *UCI Chancellor's Professor of Anthropology*
 Julius Margolis, Ph.D. Harvard University, *Professor Emeritus of Economics*
 Richard Matthew, Ph.D. Princeton University, *Associate Professor of Social Ecology and Political Science*
 William M. Maurer, Ph.D. Stanford University, *Department Chair and Associate Professor of Anthropology*
 Robert May, Ph.D. Massachusetts Institute of Technology, *Professor of Logic and Philosophy of Science*
 Michael McBride, Ph.D. Yale University, *Assistant Professor of Economics*
 Anthony McGann, Ph.D. Duke University, *Assistant Professor of Political Science*
 James L. McGaugh, Ph.D. University of California, Berkeley, *Research Professor of Neurobiology and Behavior and of Cognitive Sciences*
 Martin C. McGuire, Ph.D. Harvard University, *Professor of Economics and Clifford and Elaine Heinz Chair in the Economics and Public Policy of Peace*
 Richard B. McKenzie, Ph.D. Virginia Polytechnic Institute and State University, *Professor of Management and Economics, and Walter B. Gerken Chair in Enterprise and Society*
 Marshall Medoff, Ph.D. University of California, Berkeley, *Lecturer in Economics*
 James W. Meeker, Ph.D., J.D. State University of New York, Buffalo, *Associate Dean of Student Services and Computing, School of Social Ecology, and Professor of Social Ecology and Sociology*
 David S. Meyer, Ph.D. Boston University, *Professor of Sociology and of Planning, Policy, and Design*
 Fabio Milani, B.A. Bocconi University (Italy), *Acting Assistant Professor of Economics*
 Kristen R. Monroe, Ph.D. University of Chicago, *Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Professor of Political Science*
 Michael J. Montoya, Ph.D. Stanford University, *Assistant Professor of Anthropology and Chicano/Latino Studies*
 Patrick Morgan, Ph.D. Yale University, *Professor of Political Science and Thomas T. and Elizabeth C. Tierney Chair in Peace Studies*
 Calvin Morrill, Ph.D. Harvard University, *Department Chair and Professor of Sociology and Professor of Social Ecology and Management*
 Louis Narens, Ph.D. University of California, Los Angeles, *Professor of Cognitive Sciences*
 David Neumark, Ph.D. Harvard University, *Professor of Economics*
 Robert Newcomb, Ph.D. University of California, Santa Barbara, *Senior Lecturer with Security of Employment, Social Sciences*
 Nicholas R. Novello, Ph.D. University of California, Irvine, *Lecturer in Social Sciences*
 Min Ouyang, Ph.D. University of Maryland, *Assistant Professor of Economics*
 Jack W. Peltason, Ph.D. Princeton University, *President Emeritus of the University of California, UCI Chancellor Emeritus, and Professor Emeritus of Political Science*
 Mark P. Petracca, Ph.D. University of Chicago, *Department Chair and Associate Professor of Political Science and Associate Professor of Social Ecology*
 Joy Pixley, Ph.D. Cornell University, *Assistant Professor of Sociology*
 Dale Poirier, Ph.D. University of Wisconsin, Madison, *Professor of Economics*
 Andrew J. Policano, Ph.D. Brown University, *Dean of The Paul Merage School of Business and Professor of Management and Economics*
 Francesca Athene Polletta, Ph.D. Yale University, *Associate Professor of Sociology*
 Henry N. Pontell, Ph.D. State University of New York, Stony Brook, *Professor of Social Ecology and Sociology*
 M. Ross Quillian, Ph.D. Carnegie-Mellon University, *Professor Emeritus of Political Science*
 Priya Ranjan, Ph.D. Columbia University, *Associate Professor of Economics*
 Jen'nan Read, Ph.D. University of Texas at Austin, *Assistant Professor of Sociology*

- Gary Richardson, Ph.D. University of California, Berkeley, *Assistant Professor of Economics*
- Belinda Robnett, Ph.D. University of Michigan, *Associate Professor of Sociology*
- A. Kimball Romney, Ph.D. Harvard University, *Professor Emeritus of Anthropology*
- Shawn Rosenberg, M. Litt. University of Oxford, *Professor of Political Science and Social Psychology*
- Michael D. Rugg, Ph.D. University of Leicester, *Director of the Center for the Neurobiology of Learning and Memory, and Professor of Neurobiology and Behavior, Cognitive Sciences, and Social Ecology*
- Vicki L. Ruiz, Ph.D. Stanford University, *Professor of Chicano/Latino Studies and History*
- Rubén G. Rumbaut, Ph.D. Brandeis University, *Professor of Sociology*
- Donald G. Saari, Ph.D. Purdue University, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics*
- Kourosh Saberi, Ph.D. University of California, Berkeley, *Associate Professor of Cognitive Sciences*
- Kamal Sadiq, Ph.D. University of Chicago, *Assistant Professor of Political Science*
- Wayne Sandholtz, Ph.D. University of California, Berkeley, *Professor of Political Science*
- Jean-Daniel M. Saphores, Ph.D. Cornell University, *Assistant Professor of Social Ecology, Civil and Environmental Engineering, and Economics*
- Barbara W. Sarnecka, Ph.D. University of Michigan, *Assistant Professor of Cognitive Sciences*
- Michael J. Scavio, Ph.D. University of Iowa, *Lecturer in Cognitive Sciences and Social Sciences*
- William R. Schofield, Ph.D. Princeton University, *Director of the Center for the Study of Democracy and Professor of Political Science*
- Tonya L. Schuster, Ph.D. University of California, Riverside, *Lecturer in Sociology*
- Caesar D. Sereseres, Ph.D. University of California, Riverside, *Associate Dean for Undergraduate Studies, School of Social Sciences, Acting Director of International Studies, and Associate Professor of Political Science*
- Paul Shirey, Ph.D. University of California, Irvine, *Lecturer in Economics and Social Sciences*
- Stergios Skaperdas, Ph.D. The Johns Hopkins University, *Professor of Economics*
- Brian Skyrms, Ph.D. University of Pittsburgh, *Director of the Minor in the History and Philosophy of Science and UCI Distinguished Professor of Logic and Philosophy of Science and of Economics*
- Kenneth A. Small, Ph.D. University of California, Berkeley, *Professor Emeritus of Economics*
- David A. Smith, Ph.D. University of North Carolina, Chapel Hill, *Professor of Sociology and Social Ecology*
- David A. Snow, Ph.D. University of California, Los Angeles, *Professor of Sociology*
- Etel Solingen, Ph.D. University of California, Los Angeles, *Professor of Political Science and Chair of the Steering Committee of the UC Institute on Global Conflict and Cooperation (IGCC)*
- Dorothy J. Solinger, Ph.D. Stanford University, *Co-Director of the Center for Asian Studies, Co-Director of the Minor in Asian Studies, and Professor of Political Science*
- George Sperling, Ph.D. Harvard University, *UCI Distinguished Professor of Cognitive Sciences and of Neurobiology and Behavior*
- Ramesh Srinivasan, Ph.D. Tulane University, *Assistant Professor of Cognitive Sciences*
- Preston Kyle Stanford, Ph.D. University of California, San Diego, *Associate Professor of Logic and Philosophy of Science*
- Judith Stepan-Norris, Ph.D. University of California, Los Angeles, *Professor of Sociology*
- Mark Steyvers, Ph.D. Indiana University, *Associate Professor of Cognitive Sciences, Psychology and Social Behavior, and Computer Science*
- Yang Su, Ph.D. Stanford University, *Assistant Professor of Sociology*
- Kaushik Sunder Rajan, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Anthropology*
- James M. Swanson, Ph.D. The Ohio State University, *Chief of the Child Development Center and Professor of Pediatrics and Cognitive Sciences*
- Rein Taagepera, Ph.D. University of Delaware, *Professor Emeritus of Political Science*
- Katherine Tate, Ph.D. University of Michigan, *Professor of Political Science*
- Gary Thom, Ph.D. Yale University, *Professor Emeritus of Political Science*
- Rodolfo D. Torres, Ph.D. Claremont Graduate School, *Professor of Social Ecology, Chicano/Latino Studies, and Political Science*
- Bernard Tranel, Ph.D. University of California, San Diego, *Professor of Linguistics*
- Judith Treas, Ph.D. University of California, Los Angeles, *Professor of Sociology*
- Yuliya V. Tverdova, M.P.A. Binghamton University, *Assistant Professor of Political Science*
- Carole J. Uhlaner, Ph.D. Harvard University, *Associate Professor of Political Science*
- Robert Uriu, Ph.D. Columbia University, *Associate Professor of Political Science*
- Kurt Van Dender, Ph.D. Katholieke Universiteit Leuven (Belgium), *Assistant Professor of Economics*
- Deborah Vargas, Ph.D. University of California, Santa Cruz, *Assistant Professor of Chicano/Latino Studies*
- Roxanne Varzi, Ph.D. Columbia University, *Assistant Professor of Anthropology*
- Sheila Vaughn, Ph.D. United States International University, *Lecturer in Cognitive Sciences*
- Feng Wang, Ph.D. University of Michigan, *Associate Professor of Sociology*
- W. C. Watt, Ph.D. University of Pennsylvania, *Professor Emeritus of Cognitive Sciences*
- Martin P. Wattenberg, Ph.D. University of Michigan, *Professor of Political Science*
- Kai F. Wehmeier, Ph.D. Westfälische Wilhelms-Universität Münster, *Associate Professor of Logic and Philosophy of Science*
- Christian Werner, Ph.D. The Free University of Berlin, *Professor Emeritus of Economics*
- Douglas R. White, Ph.D. University of Minnesota, *Professor of Anthropology*
- Joseph L. White, Ph.D. Michigan State University, *Professor Emeritus of Social Sciences*
- Charles E. (Ted) Wright, Ph.D. University of Michigan, *Associate Professor of Cognitive Sciences*
- Valerie Wright, Ph.D. Fuller Theological Seminary, *Lecturer in Cognitive Sciences and Social Sciences*
- John I. Yellott, Jr., Ph.D. Stanford University, *Professor Emeritus of Cognitive Sciences*
- Mei Zhan, Ph.D. Stanford University, *Assistant Professor of Anthropology*

Visiting Distinguished Professorships

The School sponsors a program of Visiting Distinguished Professorships that exposes students to seminal thinkers in the social sciences. The professorships normally are of a quarter's duration. Participants have included Martin Bronfenbrenner, Professor of Economics (Duke University) and Fellow of the American Academy of Arts and Sciences; Philip Converse, Robert C. Angell Professor of Political Sciences and Sociology (University of Michigan), President of the American Political Science Association, and member of the National Academy of Sciences and the American Academy of Arts and Sciences; Beatrice Whiting, Professor of Anthropology and Education Emeritus, Graduate School of Education (Harvard University), and member of the American Academy of Arts and Sciences; John Whiting, Professor of Social Anthropology (Harvard University) and member of the American Academy of Arts and Sciences; James Coleman, Professor of Sociology (University of Chicago) and member of the National Academy of Sciences and the American Academy of Arts and Sciences; and Robin M. Williams, Department of Sociology (Cornell University) and member of the American Academy of Arts and Sciences and the National Academy of Sciences.

OVERVIEW

Undergraduate and graduate education in the School of Social Sciences at UCI represents a commitment to modern social science. The classic subject areas of anthropology, economics, geography, linguistics, political science, psychology, and sociology are included in the School's educational programs, but these programs go well beyond the traditional disciplines and can be characterized by the following emphases.

First, the faculty recognizes the value of systematic empirical observation and quantitative analysis in the study of human behavior. Developments in computer science and in mathematics oriented toward the problems of the social sciences, and the refinement of techniques for the observational, experimental, and

statistical study of human behavior, have contributed major new elements to social science. Students in the School of Social Sciences will become familiar with the mathematical, computational, and statistical tools underlying modern social science.

Second, many of the most interesting questions in the study of human behavior cannot be fixed within the traditional disciplinary boundaries. Some of the new and evolving areas which cross orthodox boundaries are political sociology, public policy, cognitive anthropology, and psycholinguistics. Therefore many courses and course modules are built around these interdisciplinary social science phenomena rather than representing social science disciplines.

Third, the School emphasizes the design of hypotheses and of systems of interrelated ideas as an essential part of scientific pursuit. Consequently, the educational programs place substantial emphasis on understanding social science phenomena through the development of theories that can be used to guide empirical studies.

Educational opportunities for students in the School of Social Sciences extend well beyond attendance at courses. Students may develop independent study proposals in cooperation with interested faculty members or may investigate social science applications via off-campus internships. They are invited to participate in the quarterly evaluation of courses and instructors, to propose new courses and other modifications in existing programs, to nominate candidates for visiting faculty appointments, and to serve on School committees. The School provides a variety of opportunities for faculty-student interaction, and students will find the faculty, administration, and academic counseling staff of the School highly accessible and responsive.

Special Facilities

The School of Social Sciences maintains several special facilities for research and education.

The **Social Sciences Research Laboratory**, used for both faculty and student research, occupies the entire fourth floor of the Social Sciences Laboratory Building. The facility contains 40 experiment and control rooms and several specialized facilities including a virtual reality facility and cognition laboratory.

The **Farm School**, a small, open, and ungraded elementary school located in a rural setting adjacent to the campus, serves as a research facility for faculty and students having interests in children and how they learn. Undergraduates receive course credit for assisting staff teachers, for developing educational materials, and for observing and analyzing child behavior at the school.

Three **Computer Laboratories** provide access to networked systems, where students can work on assignments using full-featured word-processing, database, graphics, and statistical packages. In addition, these computers provide students with access to e-mail, Internet services, and the World Wide Web. The Social Science Plaza facility contains state-of-the-art, high-tech lecture halls and is fully Internet accessible.

The **Social Sciences Academic Resource Center (SSARC)** provides personal assistance to all Social Sciences students on finding research opportunities, off-campus internships, and graduate and professional programs. The Center maintains a library of graduate school catalogues, Statement of Purpose tips and handouts, and GRE, GMAT, LSAT, and CBEST registration booklets and test preparation information. In addition, it offers a database of community and professional internships for students to attain hands-on experience in their field of study. SSARC is fully staffed and provides Internet access to students, disseminates information on scholarships, and conducts workshops on graduate school and other related post-baccalaureate opportunities.

The **Social Sciences Undergraduate Counseling Office** provides general and detailed information about UCI, the School of Social

Sciences, and specific requirements exclusive to the majors and minors in the School to students, faculty, administrators, and the general public. SSUGCO is fully staffed with academic counselors who speak one-on-one with students regarding their UCI academic career as well as opportunities beyond the classroom. There are also eight peer academic advisors available to undergraduates for walk-in advising regarding requirements and classes. For more information, visit <http://www.socsci.uci.edu/ugc/>.

Centers for Research

The multidisciplinary **Center for Cognitive Neuroscience** is aimed at bringing together faculty and students interested in understanding the relation between cognitive abilities and the neural systems that support them. Center participants include 11 faculty and their laboratory members. Active areas of research in participating laboratories include visual and auditory perception, motor control, memory, speech and language, and attention, among others. This research is carried out using a variety of methods such as fMRI, EEG, MEG, TMS, as well as patient-based neuropsychological approaches.

The **Center for Decision Analysis**, located in the Institute for Mathematical Behavioral Sciences (IMBS) in the School of Social Sciences, is a specialized research center where the objective is to facilitate interaction and common research goals among scientists whose purpose is to formulate precisely and test theories of human behavior. This is to be interpreted in a wide sense as manifested by the membership which spans the following areas: anthropology, cognitive science, economics, engineering, logic and philosophy of science, mathematics, political science, and sociology. Additional faculty come from management science and psychobiology.

To describe the focus, consider the fruitful symbiotic relationship that has existed for millennia between mathematics and the physical sciences. A goal of IMBS is to generate a similar relationship between mathematics and the behavioral and social sciences. With high-power social scientists (several are members of the National Academy) providing insights about the field and working with the mathematicians who are involved, new mathematical approaches to analyze these issues are being developed and new kinds of mathematical questions are being raised. For more information, visit <http://www.imbs.uci.edu/>.

The **Center for the Study of Democracy (CSD)** continues the work of the UCI Focused Research Program on Democratization that was founded in 1991 and sponsors research and training on the process of democratic transition and the expansion of the democratic process in already established democracies. CSD includes a multidisciplinary faculty from four UC campuses.

CSD's activities are focused on three areas. First, faculty administer a graduate training program on empirical democratic theory. The National Science Foundation selected UCI in 1995 as a national center for the training of doctoral students in democratization issues; the five-year NSF grant provides funding for graduate fellowships and other training activities.

Second, the Democracy research program aims at improving the democratic process in the United States and other established democracies as we enter the next century. The program focuses on reforms to increase the ability of citizens to express their preferences and have these preferences represented within the democratic process.

Third, CSD supports research on the development of sustainable democracies in Eastern Europe, East Asia, and other new democracies. The New Democracies Initiative contributes to the promotion of democracy in these formerly authoritarian systems. For more information visit the Center for the Study of Democracy's Web site at <http://www.democ.uci.edu/democ>.

The **UCI Interdisciplinary Center for the Scientific Study of Ethics and Morality** was established in 2003 by a group of scholars interested in recent scientific research that yields insight on the origins and causes of morality. In creating the Center, UCI faculty both address a topic that is becoming one of the new frontiers in science and reflect critically on the moral implications of this new frontier.

The Center focuses on the etiology of ethical behavior and differs in several important ways from existing centers dedicated to the discussion of ethics. Traditional academic approaches tend to originate in philosophical, foundational, or religious discussions of ethics. They tend to be humanistic in orientation and emphasize abstract, theoretical considerations of what constitutes ethics and morality. The Center complements this traditional approach and explores the scientific and/or the empirically verifiable factors that influence morality, using a variety of methodologies that examine factors contributing to and driving moral action in a variety of social, psychological, and biological contexts. The Center encourages ties between scholars interested in ethics in humanities and the sciences—including social science, social ecology, biological sciences, and medicine—building on the interdisciplinary tradition at UCI, complementing, rather than duplicating, existing efforts. For more information, visit <http://www.socsci.uci.edu/ethicscenter/>

The **Center for Global Peace and Conflict Studies (CGPACS)** is a multidisciplinary research unit housed in the School of Social Sciences. The mission of CGPACS is to promote research on international problems and processes. The Center's current research emphases include: weapons of mass destruction, especially biological weapons; international governance, focusing on the evolution of international norms and institutions; citizen peace building; international environmental cooperation; and religion in international affairs. CGPACS also sponsors research conferences and public colloquia on topics of current significance. The Center's Margolis Lecture brings to UCI high-profile speakers who have played active roles in international affairs. Recent Margolis Lectures have featured Justice Louise Arbour, former chief prosecutor for the International Criminal Tribunals; Chinese democracy activist Wei Jinsheng; Congressman Christopher Cox; former Secretary of State Warren Christopher; and former Secretary of Defense William Perry. For more information about CGPACS visit the Web site at <http://hypatia.ss.uci.edu/gpacs>.

The purpose of the **UCI Center for Research on Immigration, Population, and Public Policy** is to foster and conduct basic and policy-relevant research on international migration and other population processes, with a main focus on U.S. immigration. In order to encourage multi-investigator, multidisciplinary, and interdisciplinary research projects, the Center organizes informal discussions of ideas for future research projects, "brainstorming" sessions about research funding opportunities, "brown-bag" presentations of research findings, and workshops and conferences. Much of the Center's research focuses on the multigenerational incorporation experiences of immigrant groups in the United States, especially those occurring in diverse contexts such as Southern California. Investigations of this type often devote as much attention to what happens to the children and grandchildren of immigrants as to what happens to immigrants themselves. For more information, visit <http://www.cri.uci.edu/>.

The **Center for Research on Latinos in a Global Society (CRLGS)** was formed in the 1999–2000 academic year. Since its founding, the Center has hosted a research colloquia series, published a series of working papers, provided grants for graduate and undergraduate students, and coordinated a series of focused research groups of faculty and graduate students. Over the next several years, CRLGS research projects will assess the political and social incorporation of Latinos in Orange County and measure community attitudes toward resources and barriers. For more information, visit <http://www.socsci.uci.edu/crlgs/index.htm>.

Degrees

Anthropology	B.A., M.A., Ph.D.
Economics	B.A., M.A., Ph.D.
International Studies	B.A.
Philosophy ¹	M.A., Ph.D.
Political Science	B.A., M.A., Ph.D.
Psychology	B.A., Ph.D.
Social Science	B.A., M.A., Ph.D.
Sociology	B.A., M.A., Ph.D.
Transportation Science ²	M.S., Ph.D.

Within the Ph.D. in Social Science is an optional concentration in *Mathematical Behavioral Sciences*, supervised by an interdisciplinary group of faculty.

Within the M.A. in Social Science, students may apply directly to the concentration in Demographic and Social Analysis; for those enrolled in a Ph.D. program at another institution, the M.A. concentration in Mathematical Behavioral Sciences is available.

¹ Jointly administered by the Department of Philosophy in the School of Humanities.

² Supervised by the Interdepartmental Group in Transportation Science. See the Interdisciplinary Studies section of the *Catalogue*.

NOTE: The B.A. degree program in Linguistics is not available.

HONORS

Graduation with Honors. Of the graduating seniors, no more than 12 percent will receive honors: approximately 1 percent *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. The selection for these awards is based on winter quarter rank-ordered grade point averages. To be eligible for honors at graduation, the student must, by the end of winter quarter of the senior year, have submitted an Application for Graduation; be officially declared a Social Sciences major; have completed at least 72 units while in residence at a UC campus by the end of the winter quarter of the academic year in which they graduate; have all corrections to the academic record processed by the Registrar's Office; if completing the Language Other Than English breadth requirement with a language exemption test, pass the test by the end of winter quarter; and be able to verify completion of all course work by the end of the spring quarter of the senior year. Other factors are also considered (see page 55).

Dean's Honor List. The quarterly Dean's Honor List is composed of students who have received a 3.5 grade point average while carrying a minimum of 12 graded units.

Departmental Honors Programs. Most departments in the School of Social Sciences offer an Honors Program (refer to the departmental information). Upon successful completion of the Honors Program, students graduate with Honors in their respective majors and their transcripts note that they were in the Honors Program.

Honor Societies. Several departments in the School of Social Sciences belong to a national honor society. Eligibility is based on satisfying the requirements of the specific honor society. In the School of Social Sciences, these national honor societies include: Lambda Alpha Kappa (Anthropology), Omicron Delta Epsilon (Economics), Pi Omicron of Pi Sigma Alpha (Political Science), Psi Chi (Psychology), Pi Gamma Mu (International Studies and Social Science), and Alpha Kappa Delta (Sociology).

Order of Merit. The Dean of the School of Social Sciences' Order of Merit award recognizes the most outstanding graduating undergraduates and graduate students for their academic achievements, contributions to the School, and service to the campus and community.

Kathy Alberti Award for Graduate Student Excellence. This award recognizes a graduate student who holds truly outstanding promise as a future professor or teacher.

Alumni Academic Excellence Scholarship. This scholarship recognizes an undergraduate for outstanding academic performance and service to the School, campus, and community.

The Ruth Fulton Benedict Prize. This prize recognizes outstanding writing in anthropology by an undergraduate.

David Easton Award. This award is given for the outstanding qualifying paper written by a Political Science graduate student during the preceding academic year.

Harry Eckstein Award for the Outstanding Undergraduate Honors Thesis. This award is given annually for the best honors thesis written by a Political Science major.

Harry Eckstein Memorial Fund. The Harry Eckstein Memorial Fund is presented annually to Political Science graduate students conducting research toward the completion of the Ph.D. in Political Science at UCI. Recipients of the award are designated as Eckstein Scholars.

The Justine Lambert Prize in Foundations of Science. This award is given every other year to the best submitted graduate paper on the foundations of logic, mathematics, and the empirical sciences. The competition is open to all graduate students at UCI, regardless of department or school affiliation.

Frank Lynch Transfer Student Scholarship. This scholarship is given to an outstanding community college transfer student in the School of Social Sciences.

Alice B. Macy Outstanding Undergraduate Paper Award. This award is given to a Social Sciences undergraduate student in any discipline for a paper that demonstrates original research.

The Malinowski Prize for Undergraduate Research. This award recognizes outstanding original research in the area of anthropology.

Outstanding Legal Scholar Scholarship. This scholarship is given to an undergraduate who has achieved outstanding academic achievement as well as contributing to the UCI Law Forum program.

Thomas W. McGillin Scholarship. This scholarship is given to an undergraduate who is a first-generation citizen of this country with at least one foreign-born parent.

Jack and Suzie Peltason Scholarship. This award is given at the discretion of the department chair to support and facilitate the education of undergraduate Political Science majors. All undergraduate Political Science majors are eligible to apply.

Pi Omicron Award for Outstanding Political Science Major. This award is given annually by UCI's Pi Omicron Chapter of Pi Sigma Alpha to a graduating senior Political Science major who best exemplifies a commitment to academic excellence and public service.

A. Kimball Romney Outstanding Graduate Paper Award. This award is given to a Social Sciences graduate student in any discipline for a paper that demonstrates original research.

David Rosten International and Community Service Scholarship. This scholarship is awarded to an undergraduate who is planning a career in public service in either the domestic or international community.

Elena B. and William R. Schonfeld Scholarship. This scholarship is awarded annually in the School of Social Sciences to the outstanding undergraduate who combines excellence in scholarship with dedication to the University community and the highest level of achievement in other fields. The award is available to students with one year remaining prior to graduation.

School of Social Sciences Outstanding Graduate Scholarship Award. This award is for high intellectual achievement by a Social Sciences graduate student.

School of Social Sciences Outstanding Graduate Student Service Award. This award is for contributions to the Social Science community, including the intellectual growth of others.

School of Social Sciences Outstanding Undergraduate Honors Thesis Award. This award is for the outstanding undergraduate honors thesis.

Gary Singer Scholar Athlete Award. This award is for a student athlete who has outstanding academic achievement as well as contributions to their sport.

Robin M. Williams Award. This award is given to an undergraduate student and a graduate student for the best research paper in the field of sociology.

Undergraduate Program

PLANNING A PROGRAM OF STUDY

Since there are many alternative ways to plan a program, some of which may require careful attention to specific major requirements, students should consult with the School of Social Sciences Undergraduate Counseling Office to design an appropriate program of study.

Students who select one of the School majors in their freshman year might begin by taking the one-digit courses required by their major and one of the mathematics sequences listed under Part A of the School requirements. It is a good idea to take these courses early since they include fundamental concepts that will be widely applicable in more advanced courses. In addition, the lower-division writing requirement of the breadth requirement (Category I) should be completed during the first year. In the sophomore year, the student might complete the course on computing, three courses toward the breadth requirement, four courses in the social sciences, and four electives. Students who are planning to go on to graduate school can use their freshman and sophomore years to advantage by taking courses in theory, research methods, mathematics, and other areas important to graduate study. In the junior and senior years, the student should take courses in the major area and should create an individualized program of study through a combination of courses and course modules which fall in an area of interest. Particular attention should be paid to planning a program of study that will ensure that major requirements are met prior to graduation.

Change of Major. Students who wish to change their major to one offered by the school should contact the Social Sciences Undergraduate Counseling Office for information about change-of-major requirements, procedures, and policies. Information is also available at http://www.due.uci.edu/Change_of_Major.html.

Double Majors

In order to double major within the School of Social Sciences, major and school requirements must be met for *both* majors with no overlap of courses except for those used to satisfy the mathematics, computer technology, and introductory social science requirements. The mathematics and computer courses need only be taken once. Only two introductory social science classes are needed, provided this also meets the requirements of both major programs. The same two-digit and upper-division courses may *not* be used to meet the requirements of more than one major program. For example, a student who wishes to major in Psychology and Anthropology may take one of the mathematics sequences, Information and Computer Science 10A, 10B, or 21, or Social Science 3A, and may use Introduction to Psychology and Introduction to Anthropology to meet the major and School requirements for both programs. However, two different sets of two-digit and upper-division courses must be taken to complete the major and School requirements of the two programs.

Mathematics and Social Sciences

The mathematics requirement stems from the nature of modern social science. The concepts and terms of mathematics, statistics, and computers are an important part of the social scientist's vocabulary. Basic knowledge of these tools is necessary to an understanding of current literature in the social sciences, to the analysis of data, and to an intelligent use of social science models. Each candidate for a degree in the School of Social Sciences is expected to have a basic knowledge of probability, statistics, and computing. In addition, for students who are preparing for graduate school in an area of social science, it will be important to supplement the minimal mathematics requirements with additional courses related to mathematics and social science methodology. The particular courses which would be recommended are not specified here, however, since they are highly dependent on the major emphasis of the student. Students who are preparing for graduate study should consult their advisors to determine a program of study which will give them the research skills necessary for successful graduate work.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59-64.

School Requirements

- A. Familiarity with basic mathematical, computational, and statistical tools underlying modern social sciences. This requirement is met by passing a three-course sequence in mathematics (Anthropology 10A-B-C, Mathematics 2A-B, 7, Psychology 10A-B-C, Social Science 10A-B-C, Social Science 100A-B-C, or Sociology 10A-B-C). (NOTE: School of Social Sciences majors may not take Social Science 9A-B-C to fulfill the mathematics requirement.) Computer education is essential for a complete social science education. This requirement can be satisfied by passing *Information and Computer Science* 10A, 10B, or 21, or Social Science 3A. Departments may have preferences for specific courses. See your major department for acceptable courses. This course requirement should be taken during the student's first year.
- B. An understanding of the fundamental concepts, analytical tools, and methods of social science. This requirement is met by taking two four-unit introductory courses in the School of Social Sciences bearing a one-digit course number. (Such courses include Anthropology 2A, 2B, 2C, 2D; Economics 1; Linguistics 3; Logic and Philosophy of Science 4A, 4B; Political Science 6A, 6B, 6C; Psychology 7; Social Science 1A, 5A, 5B, 5C, 5D; Sociology 1.) These courses normally should be taken during the student's first year. (NOTE: This requirement may be fulfilled by option B of the departmental requirements for students majoring in Political Science.)
- C. An understanding of important advanced areas in social science. This requirement is met by passing satisfactorily nine four-unit upper-division courses in the School of Social Sciences, where at least three of these courses comprise core courses or a module. (NOTE: The major in Social Science requires 11 four-unit upper-division courses.) For modules which are listed with more than three courses, the student may normally elect to take any subset of three courses in the module. Appropriate substitutions may be made upon petition.
- D. Four additional four-unit social science courses from any level.

Students are reminded that the Pass/Not Pass option is not applicable to course requirements A through D above or to any additional requirements listed for specific major programs. However, *Information and Computer Science* 10A, 10B, 21, and Social Science 100A are exceptions to this rule and may be taken Pass/Not Pass.

Courses used to meet requirements B through D above are included in the computation of the grade point average in courses required in the major program.

Maximum Overlap Between Major and Minor Requirements:

Students completing both a major and a minor within the School of Social Sciences may count courses taken to fulfill the School's mathematics and computer science requirement toward satisfaction of both the major and the minor. No other course overlap is allowed.

TRANSFER STUDY RECOMMENDATIONS

The School recommends that students wishing to transfer to UCI do the following:

1. Complete the Intersegmental General Education Transfer Curriculum (IGETC) prior to transfer to UCI.
2. Refer to <http://www.assist.org/> for information about community college courses that will fulfill UCI lower-division major requirements.

Specific course recommendations:

Prospective Economics majors: complete a second semester of calculus (in addition to the courses required for transfer-student admission; see the Department of Economics section).

Prospective International Studies majors: complete two semesters of foreign language at the intermediate level.

Prospective Psychology majors: complete a three-course sequence in introductory, physiological, and either social or abnormal psychology.

TRANSFER STUDENTS

Freshmen and Sophomores: Students transferring to UCI as freshmen or sophomores will fulfill the regular requirements of the four-year program either through work at UCI or through transfer credit for comparable work elsewhere.

Juniors: Following review by the School of Social Sciences, it may be determined that junior transfer students electing to major in one of the School's degree programs, who have good records at other accredited colleges and universities, have satisfied School requirement B and the University requirements. However, all transfer students must fulfill the upper-division writing breadth requirement (category I) while at UCI. Students anticipating transfer to UCI in their junior year should plan their curriculum so as to anticipate the special mathematics requirement (School requirement A). Every effort will be made to accommodate individual variation in background, provided students are prepared to commit themselves to intensive work in areas of deficiency. Ordinarily, the typical two-year program for junior transfers is simply the last two years of the regular four-year program, except that students who have not satisfied the mathematics requirements of the School should plan to do so in the junior year and must do so before graduation.

Seniors: Students wishing to graduate with a degree in the School by transferring to UCI in their senior year should plan their work carefully to ensure that the requirements can be met in one year of residence. In general, differences between the program at UCI and programs elsewhere make senior transfers difficult.

SERVICE LEARNING, COMMUNITY SERVICE, AND INTERNSHIPS

Service learning is a meaningful activity that integrates service within the curriculum. It is an opportunity for students to make positive contributions to underserved and marginalized communities through academic courses, field studies, and internships. Service learning provides out-of-class experiences to reinforce understanding of academic theory while addressing serious community concerns. When combined with a structured curriculum having research components, students can explore the role of the social scientist and help seek solutions to problems affecting society. The

School of Social Sciences' philosophy is to practice research, service, and good citizenship.

The School actively supports service learning through its philosophy of enhancing the learning process by motivating, inspiring, and teaching students how to recognize and accept their civic responsibilities. The goal is to educate students about social issues and provide them with the necessary tools to solve the difficult problems society faces. Under the guidance and supervision of faculty and staff, students are offered the opportunity to experience personal, professional, social, and intellectual growth through the following School of Social Sciences programs: public- and private-sector internships, community service, field studies, and the specialization in Public and Community Service within the major in Social Science.

UNDERGRADUATE PROGRAMS IN K-12 EDUCATION

Undergraduate students who wish to pursue a career in the field of K-12 education are well-served in the School of Social Sciences and the Department of Education. The following interrelated programs provide opportunities for students to gain knowledge and experience in this important area.

Minor in Educational Studies

The minor in Educational Studies allows students to explore a broad range of issues in the field of education and provides a strong foundation for K-12 teaching. Both introductory and advanced courses are included, giving students a solid preparation for later teacher credential programs and many related occupations. NOTE: A Statement of Intent is required of all students wishing to enroll in this minor. See the Department of Education section of the *Catalogue* for more information.

Multiple Subject and Single Subject (Social Science) Preparation

Course work in the Social Science major (Social Sciences for Secondary School Education specialization) provides excellent preparation for students wishing to obtain a multiple subject teaching credential. Students who take additional course work can satisfy the subject matter requirement for a single subject teaching credential in social science. NOTE: Official enrollment in the single subject program is required to satisfy this requirement. The Counseling Office in 370D Social Science Tower can provide details.

Department of Education Programs

The Department of Education provides many other opportunities for prospective educators, including: a mentoring program which provides students with valuable experience while they work with credentialed teachers; UC Links, a program in which undergraduates tutor K-8 students in after-school settings; and advising services provided by counselors who assist students in planning future careers in education. Further information about these programs is available from the Department of Education counselors at 2001 Berkeley Place.

Students interested in obtaining a teaching credential should see the Department of Education section of the *Catalogue* for information.

SPECIAL PROGRAMS

3-2 Program with The Paul Merage School of Business

Outstanding students who are interested in a career in management may wish to apply for entry into The Paul Merage School of Business' 3-2 Program. Students normally apply for this program early in their junior year. See The Paul Merage School of Business section for additional information.

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman

through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; telephone (949) 824-5461; e-mail: honors@uci.edu; World Wide Web: <http://www.honors.uci.edu/>.

Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. Additional information is available in the Center for International Education section.

Interdisciplinary Minors

A variety of interdisciplinary minors are available to all UCI students. The **minor in Conflict Resolution**, sponsored by the International Studies program in the School of Social Sciences, provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. The curriculum includes training to become a certified mediator in the State of California.

Information about the following minors is available in the Interdisciplinary Studies section of the *Catalogue*.

The **minor in Chicano/Latino Studies** is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, film, drama, music) accomplishments in the Chicano/ Latino communities.

The **minor in Global Sustainability** trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

The **minor in the History and Philosophy of Science** explores how science is actually done and how it has influenced history, and is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences.

The **minor in Native American Studies** focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis.

Information about the following interdisciplinary minors is available in the School of Humanities section.

The **minor in African American Studies** offers undergraduate students an opportunity to study those societies and cultures established by the people of the African diaspora and to investigate the African American experience from a variety of disciplinary perspectives and theoretical approaches.

The **minor in Archaeology** introduces students to modern archaeological theory and practice, to different approaches and theoretical frameworks used in the reconstruction of cultures based on their material remains, and the use of such approaches and frameworks in a comparative context that emphasizes one geographic area.

The **minor in Asian American Studies** examines the historical and contemporary experiences of Asians after their arrival in the United States and seeks to provide an awareness of the history, culture (e.g., literary and creative art accomplishments), psychology, and social organization of Asian American communities.

The **minor in Asian Studies** creates opportunities for students to explore Asian topics in a variety of fields, to develop advanced language skills, and to acquire broader perspectives.

The **minor in Latin American Studies** is designed to develop in students an awareness, knowledge, and appreciation of Latin American issues in the areas of language, history, culture, literary studies,

sociology, anthropology, political science, health, folk medicine, and creative (art, dance, film, drama, music) accomplishments.

The minor in Religious Studies focuses on the comparative study of religions in various cultural settings around the world and seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society.

The minor in Women's Studies fosters critical and creative analysis of the various disciplinary perspectives—historical, political, economic, representational, technological, and scientific—that have (or have not) constituted women, gender, and sexuality as objects of study. Women's Studies also offers a **minor in Queer Studies**.

CAREERS IN SOCIAL SCIENCES

Business and industry often look to social science graduates to fill positions in management, finance, marketing and advertising, personnel, production supervision, and general administration. In the public sector, a wide variety of opportunities are available in city, county, state, and federal government. Teaching is a frequently chosen career at all levels from elementary school teacher to professor. In addition, many graduates enter professional practice, becoming lawyers, psychologists, researchers, or consultants in various fields.

Because all Social Sciences degrees involve an educational program that is interdisciplinary and that prepares students to understand quantitative methods of data analysis, graduates of the School are well-positioned for research and analysis careers at all levels of government and in private firms. Their solid grounding in contemporary social science methods and their familiarity with a broad spectrum of social scientific thinking gives them an excellent foundation for the pursuit of further training in graduate and professional programs.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. Additional information is available in the Career Center section.

Graduate Program

The School of Social Sciences offers graduate training in the following areas: Anthropology (Ph.D. in Anthropology), Cognitive Sciences (Ph.D. in Psychology), Economics (Ph.D. in Economics), Logic and Philosophy of Science (Ph.D. in Philosophy), Mathematical Behavioral Sciences (Ph.D. in Social Science), Politics and Society (Ph.D. in Political Science), and Sociology (Ph.D. in Sociology). In addition, an interdisciplinary concentration in Public Choice is offered within the programs in Economics and Political Science, a specialized concentration in Transportation Economics is offered within the program in Economics, an emphasis in Social Networks is offered within the Mathematical Behavioral Sciences concentration, and a concentration in Political Psychology is offered within the program in Political Science. When an applicant's interests lie outside of or across these areas, the Associate Dean of Graduate Studies, School of Social Sciences, may, on rare occasions, appoint a three-member faculty committee to guide an independent course of study for the Ph.D. degree in Social Science.

The M.A. degree in Anthropology, Economics, Philosophy, Political Science, Social Science, or Sociology may be conferred upon students in Ph.D. programs after completion of the necessary requirements.

Additionally, the M.A. degree program in Social Science with a concentration in Demographic and Social Analysis is supervised by faculty from the Schools of Social Sciences and Social Ecology. Students may apply directly to this M.A. program.

The M.S. and Ph.D. degree program in Transportation Science is supervised by an interdepartmental faculty group. Information is available in the Interdisciplinary Studies section of the *Catalogue*.

In cooperation with the UCI Department of Education, students enrolled in a School of Social Sciences graduate program may choose to pursue a teaching credential while working toward their degree. After completion of requirements for an M.A. degree, students may apply for admission into the credential program administered by the Department of Education. As required by law, the applicant must pass the California Basic Educational Skills Test (CBEST), obtain a Certification of Clearance, and successfully complete the appropriate subject area examination or an approved subject-matter program. A detailed description of the program may be obtained from the Social Sciences Graduate Office or the Department of Education.

ADMISSION

Potential graduate students should apply by January 15 to receive fullest consideration for financial aid. Applicants should indicate the title of the degree sought (Anthropology, Economics, Political Science, Psychology, or Social Science), and the academic area of concentration (see above). All applicants are required to submit Graduate Record Examination General Test scores. Letters of recommendation and the applicant's statement of interest are important factors in the admission decision.

In addition to the University admission requirements described in the Office of Graduate Studies section, individual graduate programs may prescribe special requirements or expectations of applicants, subject to the approval of the Graduate Council. Such requirements are minimum standards only; successful applicants typically must exceed them by a substantial margin.

FINANCIAL SUPPORT

Many students receive financial support in the form of fellowships, teaching assistantships, or research assistantships available under grants to individual faculty. Before accepting an offer of admission with financial support for the first year, applicants should inquire about the likelihood of such support in future years. Occasionally, a newly admitted student may receive a multiyear commitment of some specified financial support, but this is not the rule. Students are also advised to seek aid from sources external to the University. (NOTE: Teaching assistantships do not include remission of fees or nonresident tuition.)

LENGTH OF STUDY AND RESIDENCE

The normal time for completion of the Ph.D. degree is either five, six, or seven years, depending upon the specific program. See the department sections for information.

Students admitted to the M.A. concentration in Demographic and Social Analysis should be able to earn the M.A. within one to two years.

Because the intellectual training offered by the School requires full-time study and constant contact with the faculty, the School does not accept part-time students.

COMMUNITY OUTREACH

The **Ambassador's Council** has been created to promote and enrich the School by supporting new and existing schoolwide/department projects. It collectively acts as an official student in discussing program development with administrators and department chairs and other faculty.

The **Citizen Peacebuilding Program** at UCI is a distinctive international clearinghouse for research, education, and action on public peace processes. The Program focuses on how citizens participate in these activities to prevent violent conflict and, if violence

occurs, to promote reconciliation and sustainable peace. The purpose is to significantly contribute to the theory and practice of conflict resolution.

Through the **Global Connect** program, the School of Social Sciences is hoping to connect its academic and human capital with selected underrepresented schools within Orange County. Through in-class lectures and interactive lessons, students are introduced to the concepts and realities of global markets, post-cold war political identities, borderless social issues (literacy, hunger, AIDS), international organizations (the World Bank, the United Nations) and the multidimensional themes of globalization.

HABLA is a broad-spectrum Latino-focused educational outreach program based in the School of Social Sciences and created by Professor Virginia Mann in June 2000 with the support of the Orange County Children and Families Commission. Its purpose is to increase the school readiness of disadvantaged children ages two–four years, by uniting faculty and students at UCI with the Santa Ana Unified School System, local Families Resource Center, Americorp/VISTA, FACT, and the national Parent Child Home Program (PCHP).

Jumpstart was established on the UCI campus by School of Social Sciences Professor Virginia Mann in 2003. Students involved as Jumpstart members are paired with children participating in pre-school programs in the local Orange County area. The purpose is to help young students develop language, literacy, and social skills. Social Sciences undergraduates usually serve with Jumpstart for a full school year. The UCI Jumpstart program recruits, trains, and supervises UCI students to work with Head Start and other early-childhood programs in low-income communities of Orange County.

The School of Social Sciences' **Summer Academic Enrichment Program (SAEP)** is designed to enhance the academic experience of first-generation university, low-income students. SAEP's goal is to strengthen specific analytical and research skills and to prepare participants for graduate school.

DEPARTMENT OF ANTHROPOLOGY

4229 Social Science Plaza B; (949) 824-7602
Bill Maurer, **Department Chair**

Anthropology is the comparative study of past and present human societies and cultures. The Department of Anthropology at UCI is at the forefront of addressing issues in contemporary theory and ethnographic methods within the discipline. The Department has a strong interdisciplinary bent, with research and teaching interests in economic anthropology, political and legal anthropology, the anthropology of finance, social history and social change, the anthropology of science, technology and medicine, identity and ethnicity, gender and feminist studies, urban anthropology, modernity and development, religion, visual anthropology, and the arts and expressive culture. The Department also has a strong emphasis on the study of contemporary issues, especially those concerned with emergent, fluid, and complex global phenomena such as international flows of goods, peoples, images, and ideas; the relationship between global processes and local practices; immigration, citizenship, and refugees; population politics; violence and political conflict; ethnicity and nationalism; gender and family; food, health, and technological innovation; law; development and economic transformation; urban studies; and environmental issues. Geographic regions of expertise include China, Southeast Asia, South Asia, Oceania, Europe, Latin America, the Caribbean, East Africa, Latino communities of the United States, and diasporic and transnational communities in the United States and abroad.

Undergraduate Program

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 442.

Departmental Requirements for the Major

School requirements must be met and must include 12 courses (48 units) as specified below:

- A. Anthropology 2A.
- B. Anthropology 2B, 2C, or 2D.
- C. Anthropology 30A or 30B.
- D. Three topical courses (12 units) from Anthropology 120–159, 170–179).
- E. Two courses (eight units) on a geographical area, from Anthropology 160–169.
- F. Four additional elective courses (16 units) from Anthropology 30A, 30B, 40–179, 180A.

Students are strongly encouraged to take Anthropology 180A after they have had at least three courses beyond Anthropology 2A and 2B, 2C, or 2D. Students are also strongly encouraged to take both Anthropology 30A and 30B.

The faculty encourages Anthropology majors or minors to study abroad and experience a different culture while making progress toward degree objectives. The Center for International Education, which includes the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of many worldwide opportunities. For example, EAP offers excellent opportunities to study anthropology at many universities abroad; courses taken abroad can be used to fulfill departmental requirement C, D, and E. Study abroad also can provide opportunities for cross-cultural experience, field research, and foreign language training. The Undergraduate Research Opportunities Program (UROP) provides funding for independent field research. See the Center for International Education and the Undergraduate Research Opportunities Program sections of the *Catalogue* for additional information.

Honors Program in Anthropology

The Honors Program in Anthropology is designed to allow undergraduates to pursue field research and write an honors thesis on topics of their choice under the guidance of Department of Anthropology faculty members. Research projects typically involve a combination of library research, exploratory ethnographic interviews, participant observation, and systematic data collection and analysis. The program is open to all senior Anthropology majors with a grade point average of 3.3 or better overall, with 3.5 in Anthropology courses (at least five courses). Successful completion of the Honors Program and the honors thesis satisfies the upper-division writing requirement. Students must apply to be admitted into the Honors Program. The application form is available on the Departmental Web site (<http://www.anthro.uci.edu>); in the Department office (SSPB 4229); and in the School of Social Sciences Counseling Office (SST 370D).

Although course work for the Honors Program does not start until the senior year, it is highly recommended that during the spring quarter of the junior year, students find a professor willing to serve as their research project advisor on the basis of a mutually acceptable abstract that indicates the goal and significance of their project. If extensive research is to be undertaken at this time, students enroll in Anthropology 199.

During the fall quarter of the senior year, students enroll in Anthropology H190A and write a proposal describing their

research question, the relevant background literature, and the method of data collection and analysis. Field work for the project may begin during this quarter.

In the winter quarter of the senior year, students begin or continue ethnographic field research by enrolling in Anthropology H190B. Field research typically combines exploratory field research with fixed format data collection methods.

In the spring of the senior year, students enroll in Anthropology H191 and complete a senior honor thesis that is typically 40 to 80 pages long. Honor theses are read and evaluated by the advisor and the Undergraduate Program Director.

Anthropology Minor Requirements

Requirements for the minor in Anthropology are met by taking seven Anthropology courses (28 units) as specified below:

- A. Anthropology 2A.
- B. Anthropology 2B, 2C, or 2D.
- C. Anthropology 30A or 30B.
- D. Two topical courses (eight units) from Anthropology 120–159, 170–179).
- E. Two courses (eight units) on a geographical area, from Anthropology 160–169.

Medical Anthropology Minor Requirements

Requirements for the minor in Medical Anthropology are met by taking seven Anthropology courses (28 units) as specified below:

- A. Anthropology 2A.
- B. Anthropology 2B, 2C, or 2D.
- C. Anthropology 30A or 30B.
- D. Anthropology 134A.
- E. Three topical courses (12 units) from among the following: Anthropology 121D, 128B, 133A, 134D, 134E, 134G, 136K; Anthropology 129, 139 (special topics, by petition to the Undergraduate Director); Sociology 154.

Residence Requirement for the Minor: The four required upper-division courses must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program provided course content is approved in advance by the Undergraduate Director of the Department of Anthropology.

NOTE: Students may complete only one of the following programs: the major in Anthropology, the minor in Anthropology, or the minor in Medical Anthropology.

Interdisciplinary Minor in Archaeology

An interdisciplinary minor in Archaeology is offered by the Department of Art History. See the School of Humanities section of the *Catalogue* for information.

Graduate Program

Participating Faculty

Victoria Bernal: Feminist theory, capitalism and social transformation, the Islamic revival, civil society, globalization, and cyberspace
 Tom Boellstorff: Sexuality, postcoloniality, HIV/AIDS, mass media and popular culture, language and culture, Indonesia, Southeast Asia
 Michael Burton: Economic anthropology, ecological anthropology, psychological anthropology, gender, Africa, Micronesia
 Teresa Caldeira: Urban violence; spatial segregation and urban changes in multicultural societies; citizenship, individual rights, and conceptions of the body; racism; gender, critical urban studies, and contemporary developments in social theory; Brazil
 Frank Cancian: Economic anthropology, inequality, peasants; Mexico

Leo R. Chávez: International migration, Latin American immigrants, medical anthropology, transnational communities, cultural analysis of popular images

Benjamin Colby: Culture theory and cultural pathology, content analysis, psychological anthropology, cognition, narrative structures, psychoneuro-immunology; Japan, Mesoamerica, women's health and well-being in Orange County

Robert Garfias: Ethnomusicology, ethnicity

Susan Greenhalgh: Social studies of science, technology, and medicine; politics of population reproduction, modernity/globalization, feminism/gender, China, Taiwan, Pacific Rim

Karen Leonard: Social history of India, caste, ethnicity and gender, Asian-Americans and Muslim Americans, religion, ethnicity, class, and gender

George E. Marcus: Distributed knowledge systems, aesthetic influences on diverse practices of rationality; the changing metaculture of the anthropological research process, challenges to secularism, the study of intellectuals and power, the decline of elites, transcultural networks; Europe and Oceania

Bill Maurer: Anthropology of law, globalization, transnationalism, citizenship and nationalism, finance capital, identity, Caribbean

Michael J. Montoya: Social inequality and health; race and ethnicity; social and cultural studies of science, technology, and medicine; the participation of ethnic populations in biomedical research; the U.S./Mexican border, critical bioethics

A. Kimball Romney: Experimental and psychological anthropology, quantitative and cognitive anthropology

Kaushik Sunder Rajan: Biotechnology, capitalism, comparative ethnography, genomics, globalization, nation-state, political economy, post-colonialism, science and technology studies, subjectivity; India

Roxanne Varzi: Media, youth culture, religion and public space; Iran

Douglas White: Cross-cultural research, mathematical anthropology, social networks, longitudinal analysis, development and social change

Mei Zhan: Medical anthropology, cultural and social studies of science, globalization, transnationalism, gender, China, the United States

Affiliated Faculty

Etienne Balibar: French and comparative literature, literary and social theory, Marxism and postmodernism

Duran Bell: Economics, economic anthropology

Susan Bibler Coutin: Law, culture, immigration, human rights, citizenship, political activism, Central America

John P. Boyd: Kinship, social networks, mathematical anthropology

Carol Burke: Folklore, cultural studies

Lara Deeb: Islam, gender, modernity, religious movements, transnational feminism, public sphere, Middle East and North Africa, Lebanon

J. Paul Dourish: Human-computer interaction, computer-supported cooperative work

Paula Garb: Anthropology of conflict and conflict resolution, ethnic and environmental conflict in the former U.S.S.R.

Inderpal Grewal: Feminist theories of internationalism and transnationalism, cultural studies, South Asia and its diasporas

Bonnie Nardi: Human-computer interaction, activity theory, cultural responses to technology development

Kavita Philip: Transnational studies of science and technology; feminist technocultures; gender, race, globalization, and postcolonialism; environmental history; and new media theory

Justin B. Richland: Anthropology of law, legal discourse analysis and semiotics, indigenous law and politics, North American postcolonialism

Gabriele Schwab: Nineteenth-century English and comparative literature; modernism; American literature; contemporary theory; literature and psychoanalysis; feminist and gender studies; cultural studies and criticism; Native American literatures

Jennifer Terry: Cultural studies, science and technology studies, formations of sexuality, American studies in transnational perspective

Alladi Venkatesh: New media, information technologies, marketing, postmodern theory and marketing, cross-cultural consumer behavior

James Diego Vigil: Urban, psychology, socialization and educational anthropology, sociocultural change, urban poverty, Mexico and U.S. Southwest ethnohistory, comparative ethnicity

The Department of Anthropology offers a Ph.D. degree program in Anthropology. The program focuses on social and cultural anthropology, with a strong focus on understanding emergent processes and systems at a number of scales, including the national and transnational level. Areas of teaching emphasis include: the anthropology of modernity and development; political, legal, and economic anthropology; ethnographic method; and the anthropology of science, technology, and medicine. In addition, Ph.D. students have the option of enrolling in a Feminist Studies or a Critical Theory emphasis, both of which involve interdisciplinary work with departments and centers in the School of Humanities. The Department's faculty members have interests in ethnicity, gender, international migration, science, technology and medicine, law and finance, urban anthropology, youth culture, and social networks. The program also provides rigorous training in ethnographic method. The Department is committed to fostering new and innovative approaches to anthropological inquiry in a pluralistic and intellectually open academic environment. Program faculty take diverse theoretical and methodological approaches to a variety of substantive issues. They are united, however, in a willingness to question taken-for-granted theoretical premises and analytic frames, and to engage in good-faith intellectual dialogue about alternative models and approaches.

ADMISSION

Students are admitted to the program based on their application materials and evidence of scholarly potential, including grade point average, GRE scores, and letters of recommendation.

REQUIREMENTS

Students must complete a one-year Proseminar in Anthropology during their first year and one course in Anthropological Fieldwork during their second year. In addition, students are required to complete two quarters of Statistics, one course in Research Design, and six elective courses in Anthropology, which are selected in consultation with their advisor and which normally cover a coherent area of specialization within the field. All course work must be completed before a student is advanced to candidacy. Students must demonstrate competence to read one foreign language, in accordance with the requirements of the Ph.D. degree in Anthropology.

At the end of the first year, students must pass a formal evaluation which is made by the Department of the basis of (1) the first-year course work and (2) examinations to be taken as part of the Proseminar. Students should advance to candidacy by the end of the third year; the advancement to candidacy examination is based on a research proposal, a review of relevant literature, and an annotated bibliography. The fourth (and, in many cases, some or all of the fifth) year is normally devoted to extended anthropological fieldwork. The sixth year (in some cases, also part of the fifth) is devoted to writing the dissertation, in close consultation with the advisor. The normal time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Feminist Studies Emphasis

A graduate emphasis in Feminist Studies is available. Refer to the School of Humanities' Women's Studies section of the *Catalogue* for information.

Critical Theory Emphasis

A graduate emphasis in Critical Theory is available. Refer to the School of Humanities' Critical Theory Emphasis of the *Catalogue* for information.

Courses in Anthropology

LOWER DIVISION

2 Introduction to Anthropology. Basic introduction to anthropology. These courses can be taken in any order.

2A Introduction to Sociocultural Anthropology (4). Introduction to cultural diversity and the methods used by anthropologists to account for it. Family relations, economic activities, politics, gender, and religion in a wide range of societies. Stresses the application of anthropological methods to research problems. (III, VII-B)

2B Introduction to Biological Anthropology (4). Evolutionary theory and processes, comparative primate behavior, primate fossil record, human variation, and the adequacy of theory, i.e., fit of theory and empirical data. (III)

2C Introduction to Archaeology (4). Archaeological theory and cultural processes with emphasis on the American Southwest, Mesoamerica, and Mesopotamia. (III)

2D Introduction to Language and Culture (4). Explores what the study of language can reveal about ourselves as bearers of culture. After introducing some basic concepts, examines how cultural knowledge is linguistically organized and how language might shape our perception of the world. Same as Linguistics 68. (III)

10A-B-C Probability and Statistics (4-4-4). An introduction to probability and statistics. Emphasis on a thorough understanding of the probabilistic basis of statistical inference. Emphasizes examples from anthropology, sociology, and related social science disciplines. Same as Sociology 10A-B-C. Students who receive credit for Anthropology 10A-B-C may not receive credit for Psychology 10A-B-C, Social Ecology 13, Social Science 9A-B-C or 10A-B-C, or Sociology 10A-B-C. (V)

20A People, Cultures, and Environmental Sustainability (4). An anthropological consideration of global environmental sustainability from the perspective of human cultures and communities. Causes and consequences of population growth, natural resource management, environmental law, environmental ethics. Case studies emphasize tropical rain forests, arid lands of Africa and North America. Same as Environmental Analysis and Design E20.

30A Global Issues in Anthropological Perspective (4). Explores anthropological perspectives on issues of importance in an increasingly global society. Topics vary from year to year; may include emphases on ethnic conflict; identity; immigration and citizenship; religion and religious diversity; medical anthropology; legal anthropology; development and economic change; gender.

30B Ethnography and Anthropological Methods (4). Explores the role of ethnography in anthropological and other social research. Provides theoretical and reflective readings on ethnography, as well as practical exercises in ethnographic method, to explore ethnography's traditional place as anthropology's main methodological contribution to the social sciences.

41A Origins of Global Interdependence (4). Offers a general overview of the rise of global interdependence in political, economic, demographic, and cultural terms. Considers what drove people from relative isolation into intensified intercourse with one another, and investigates the consequences of this shift. Same as International Studies 11. (VII-B)

85A Cultures in Collision: Indian-White Relations Since Columbus (4). An introductory survey of topics such as: indigenous religious belief and socio-political organization, stereotypic "images," intermarriage, the fur trade, Native leaders, warfare, and contemporary issues. Slides, films, and trips to local museums enhance student learning. Same as Sociology 65. (VII-A)

89 Special Topics in Anthropology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

UPPER-DIVISION

121A Kinship and Social Organization (4). Organization of social life primarily in preindustrial societies. Theories of kinship, marriage regulations, sexual behavior, and social roles. Comparisons of biological, psychological, sociological, and economic explanations of social organization. (VII-B)

121D Cross-Cultural Studies of Gender (4). Familiarizes students with the diversity of women's experiences around the world. Gender roles and relations are examined within cultural and historical contexts. A central concern is how class, race, and global inequalities interact with women's status. Prerequisite: Anthropology 2A or 2B. (VII-B)

121E Women, Race, and Social Movements in Latin America (4). Analyzes the emergence and transformation of social movements in Latin America from the 1980s to the present. Focuses on two groups of protagonists: women (who organized various types of movements), and Black Latin Americans (whose organization has been limited). (VII-B)

121G Political Anthropology (4). Utilizes anthropological accounts of Western and non-Western societies to question conventional ways of thinking about power and politics. Classical traditions in political anthropology are critiqued; an alternative view is presented through recent anthropological political analyses of topics such as class, gender, aesthetics, and popular culture.

121H Social Inequality: Anthropological Perspectives (4). Concrete anthropological and sociological studies from across the world, including the United States, are compared to give perspectives on social status, power, economic differences, race, ethnicity, and gender. Prerequisite: one course in Anthropology, Economics, Political Science, or Sociology. Same as Sociology 165A. (VII-B)

121J Urban Anthropology (4). Cultural roles of urban centers and processes or urbanization in comparative perspective, focusing on nonwestern, nonindustrial societies of past and present; relationship between modern urban centers and Third World peoples. Migration, urban poverty, adaption, social and political integration of rural folk in urban settings in Africa, Asia, Latin America. (VII-B)

125A Economic Anthropology (4). Economic systems in comparative perspective: production, distribution, and consumption in market and non-market societies; agricultural development in the third world. Prerequisite: one course in general science, anthropology, economics, geography, or sociology. Same as Economics 152A. (VII-B)

125B Ecological Anthropology (4). Studies relationships between human communities and their natural environments. The role of environment in shaping culture; effects of extreme environments on human biology and social organization; anthropologist's role in studying global environmental problems, e.g., African famine, destruction of tropical rain forests. Prerequisite: Anthropology 2A, 2B, or 2C. Same as Environmental Analysis and Design E125. (VII-B)

125F Culture and Evolution (4). Explores interacting historical cultures in changing political, economic, religious, social, and conflictual contexts over several millennia to the present. (VII-B)

125M Community Change and Transnational Development (4). Focuses on community, national, and international perspectives on findings and applications of anthropological and economic research concerning development and social change. Anthropological critiques of development processes, development agencies, and development economics.

125P-Q Evolution of Social Formations I, II (4-4). 125P: Models and ethnographic descriptions of noncommodity economic relationships of the form that characterize intergroup and intragroup economic processes of many tribal societies. Includes analyses of gift exchange and resource allocation within the household. 125Q: Devoted entirely to supervised research by class members. Prerequisites: Economics 20A-B; Economics 152A or Anthropology 125A recommended. Prerequisite for 125Q: satisfactory completion of the lower-division writing requirement. Same as Economics 152P-Q. (VII-B)

125S The Anthropology of Money (4). Anthropological approaches to monetary systems; impact of money on subsistence economies; cultural history of money in the west; and modern transformations of money. Also considers recent developments in the cultural history of money, "securitization," credit alternative currencies, and digital cash.

125X Immigration in Comparative Perspective (4). Examines issues related to the migration and settlement of immigrants. Although the focus is on the Mexican migration to the United States, comparisons are also made to immigrant groups from Korea, Japan, Southeast Asia, Central America, the Caribbean, and Europe. Same as Chicano/Latino Studies 161. (VII-A)

125Y South Asian American Experience (4). Examines and compares the experiences of South Asian immigrants in the U.S. over time. Looks at the economic, political, and social positions of the immigrants, with special emphasis on religious changes and the changes in the second and later generations. Same as Asian American Studies 151F.

125Z Muslim Identities in North America (4). Explores multiple identities of Muslims in North America, including indigenous Muslims (e.g., African American Muslims and Sufis) and immigrants of many national origins. Explores religious, political, cultural, ethnic, class differences among American Muslims, turning to Islamic institutions near UCI to conduct small research projects. Same as Asian American Studies 142. (VII-A)

126G Marriage and Bridewealth (4). The rules by which children are positioned within a social system and by which men claim rights over women vary widely among societies. Analyzes these rules on the basis of a formal theory of wealth allocations between and among corporate groups that challenge neoclassical models. Prerequisites: Anthropology 2A and Economics 20A-B, or consent of instructor. Same as Economics 152M.

127A Law and Modernity (4). The rise and spread of Enlightenment legal traditions, social contract theory, individual rights, ideologies of "liberty, equality, fraternity"; contradictions of liberal law, its understandings of "primitive" and "civilized"; pervasive myths of property, difference, race, and rights. Reading- and writing-intensive. Same as Criminology, Law and Society C191. (VII-B)

128A Introduction to Science Studies (4). Explores the ways in which science and technology have been conceived of in the Social Sciences through the twentieth century. Emphasis on recent literature in Science and Technology Studies (STS), especially writings that concern the relationship of science to power and politics.

128B Race, Science, and Disease (4). Contemporary issues of race, ethnicity, and the science of disease. "Race" as a biological, social, legal, and cultural construct is examined from three interlinked axes: genetic ideologies, disease explanations, and social inequalities. Historical and current analyses of health and inequality. Same as Chicano/Latino Studies 176. (VII-A)

128C Culture, Power, and Cyberspace (4). Explores cultural and political implications of the infotech revolution and the ways new media are used around the world, new cultural practices and spaces (e.g., cybercafes), debates surrounding the meanings of these new technologies, and their implications for transforming society.

129 Special Topics: Social and Economic Anthropology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

132A Psychological Anthropology (4). Cultural differences and similarities in personality and behavior. Child-rearing practices and consequent adult personality characteristics, biocultural aspects of child development and attachment, evolutionary models of culture and behavior, politically linked personality, cognitive anthropology, psychology of narrative forms, comparative national character studies. Prerequisite: Anthropology 2A or Psychology 7A or Psychology 9A-B-C. Same as Psychology 173A.

133A Latinos/Latinas and Medicine (4). Introduction to medical social science perspectives of Latinos/Latinas in a variety of settings. Emphasis placed on understanding the intersection of immigration, mental health, gender, reproduction, and spirituality in analyzing how the experience of health and illness is shaped by these factors. Same as Chicano/Latino Studies 175. (VII-A)

134A Medical Anthropology (4). Introduces students to cross-cultural perspectives and critical theories in anthropological studies of medicine. Special attention is given to diverse ways of understanding bodies, illnesses, and therapeutic practices in our changing world. (VII-B)

134D Culture and Health (4). Explores America's cultural diversity by examining differing systems of belief and behavior in relation to illness, curing, disease, practitioner behavior, and use of conventional medical services. Groups focused on include Native Americans, African Americans, Latinos, and Asians. Same as Chicano/Latino Studies 172.

134E Ways of Healing (4). Designed to explore and discover the diverse ways humans have devised to heal themselves. The theoretical premise is that social ties are an essential ingredient to successful healing and, indeed, protection against the onset of illness.

134G HIV/AIDS in a Global Context (4). Examines issues concerning cultural conceptions of HIV infection and disease worldwide. Topics include treatment and prevention, identity and behavior, risk, ethnicity, gender, youth, sexuality, activism, drug use, illness, religion, the clinical encounter, national belonging, and the pharmaceutical industry. Prerequisite: satisfactory completion of the lower-division writing requirement. (VII-B)

135A Religion and Social Order (4). An anthropological exploration of religious belief and practices in diverse social and historical contexts. Emphasis placed on selected non-western traditions of the sacred, and on issues of power, ritual, moral order, and social transformation. (VII-B)

135H Religion in South Asia (4). Introduction to South Asian civilization looking not only at Hinduism and Islam but at the socioeconomic and political systems which have supported religious traditions. (VII-B)

135I Modern South Asian Religions (4). Nineteenth- and twentieth-century developments in Hinduism, Islam, and Sikhism are covered, with emphasis on changing forms as well as contents of religious movements.

136A Nationalism and Ethnicity in the Contemporary World (4). An exploration of the concepts of identity, culture, ethnicity, race, and nation through ethnographic cases, with a view to asking larger questions: How do people create nativeness and foreignness? How does "culture" get worked into contemporary racisms and nationalisms?

136B History of Anthropological Theory (4). A review of competing approaches in anthropological theory from the nineteenth century to the present, covering social evolutionism, functionalism, structuralism, and cultural relativism, as well as more recent intellectual movements and issues such as feminism, cultural studies, poststructuralism, and postmodernism.

136D Conflict Management in Cross-Cultural Perspective (4). Examines theories of conflict management. Analyzes how conflict is mitigated in diverse cultures: at the interpersonal level, between groups, and on the international scale. Students discuss readings, hear from conflict management practitioners, and simulate negotiations. Same as Political Science 154G. (VII-B)

136G Colonialism and Gender (4). An anthropological enquiry into the ways colonial relations of power have been structured and gendered throughout the world, and to what effect. Examines the social locations of men and women in the everyday exercises of colonial and imperial power.

136K The Woman and the Body (4). Probes culture and politics of the female body in contemporary American life. Focusing on "feminine beauty," examines diverse notions of beauty, bodily practices, and body politics embraced by American women of different classes, ethnicities, and sexualities. (VII-A)

137A Reading Images Culturally (4). Students are provided with the analytical tools necessary to undertake research on visual representations. Images, as cultural productions, are steeped in the values, ideologies, and taken-for-granted beliefs of the culture which produced them. Of concern are representations of race, identity, gender, and the "Other." Same as Chicano/Latino Studies 116.

138M Music as Expressive Culture (4). Fundamental requirements for development of a musical tradition. Guiding structural principles which must be agreed upon for new forms of expression to be understood and accepted. How members of society develop their own individual musical cultures and how these permit them to interact with the personal cultures of others.

138N Readings in Ethnomusicology (4). A guided introduction survey through some of the written research in the field of ethnomusicology. Assigned readings and class discussion. Prerequisite: consent of instructor.

138O Music and Society in the Ottoman Sphere (4). The unique character of Ottoman society created a musical culture which spread throughout much of Eastern Europe and into much of the Arabic speaking world. This influence is still clearly manifest in these regions as well as in Turkey. (VII-B)

138P Music of Asia (4). A survey of the major music traditions of Asia and a consideration of the broad cultural and historical patterns which brought them about. Discusses the interaction and development of regional forms and communicates something of the value systems underlying these forms. (VII-B)

138Q Latino Music: A View of Its Diversity and Strength (4). A survey of the musics of the many Latin cultures of the Americas including Mexico, Central and South America, as well as the Caribbean, and of those many Latin cultures which thrive and survive in the United States. Same as Chicano/Latino Studies 115A. (VII-B)

138R Cross-Cultural Parameters of Popular Music (4). A consideration of popular music in the U.S. and abroad. How is pop defined and what does its evolution in other cultures tell us about our own pop music? The course will consider how the various cultures within the U.S. fit into the pop music scene, how they modify it today, and how they have in the past. (VII-A)

138S Music of Greater Mexico (4). A wide range of musics exist in Mexico, and in the Mexican traditions within the United States. From the indigenous traditions of Mexico and the ancient Aztec and Mayan civilizations through the Colonial and Revolutionary periods, the variety of Mexican music is explored. Same as Chicano/Latino Studies 115B.

138T Africa and Afro-American Music (4). Africa's range of musical languages had a profound influence on the musics of the Americas. Covers sub-Saharan Africa and Afro-American musics of Latin America and the United States. Explores the survival of cultural characteristics and diffusion of musical ideas. (VII-A)

139 Special Topics in Cultural and Psychological Anthropology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

141A Ancient Civilizations of Mexico and the Southwest (4). The prehistory and cultural evolution of the civilizations which originated in Mexico, including the Olmecs, Aztecs, Toltecs, Maya, and Zapotec, as well as the Pueblos of the Southwestern U.S. Topics include the origins of food production and of the state, political and social history, ancient cities, and the Spanish conquest.

149 Special Topics in Archaeology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

161T Field Research: Asian Immigrants and Refugees in Orange County (4). Instruction in field work methodology via research projects involving the local communities of immigrants and refugees from Asia. Open only to School of Social Sciences majors. (VII-A)

162A Peoples and Cultures of Latin America (4). Surveys the prehistory of Latin America and its indigenous cultures, emphasizing the impact of colonial rule, capitalism, and twentieth-century transformations. Emphasis on communities from several countries. In some years, emphasis on comparisons between the Latin American and Caribbean experiences. (VII-B)

162B Indian North America (4). A survey of indigenous peoples in North America: American Indians, Alaska Natives, First Nations, Native Americans. Tribal populations and geographic distributions, political and social organization, sovereignty, self-determination, intergovernmental relations; cultural continuity and change; management, preservation, development of environments/resources. Prerequisite: satisfaction of the lower-division writing requirement. (VII-A)

163A Peoples of the Pacific (4). The cultural history and recent developments among the Pacific peoples of Polynesia, Micronesia, Melanesia, New Guinea, and Australia. (VII-B)

163I Transforming China (4). Focuses on transformations in the everyday life in post-socialist China. Explores topics including privatization, consumerism, urbanization, rural development, national and ethnic identities, religion, family, gender, sexuality, medicine, food, pop culture, transnationalism, and globalization. (VII-B)

163K Korean Society and Culture (4). Introductory background to the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework. Same as East Asian Languages and Literatures 130 and Sociology 175A. (VII-B)

164A African Societies (4). Comparative studies of the cultures and societies of Sub-Saharan Africa, with emphasis on critical study of colonialism and postcoloniality, social transformation, and the politics of identity. Prerequisite: Anthropology 2A.

164P Peoples and Cultures of Post-Soviet Eurasia (4). Examines the cultures and political conflict of the more than 130 indigenous ethnic groups in the European and Asian territories of the former U.S.S.R. Emphasis is on the theoretical issues of ethnicity, nationalism, and conflict management. Same as Political Science 154F. (VII-B)

169 Special Topics in Area Studies (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

174A World Cultural Comparisons (4). Introduction to ethnology/ethnography, comparative research and theory, culminating in processes of discovery and hypotheses testing using world cultural databases to which students can contribute. Prerequisite: satisfaction of the lower-division writing requirement. (VII-B)

176A Exploring Society Through Photography (4). Students explore society through presentation, interpretation, and discussion of their own photographs. A few common exercises at the beginning of the quarter are followed by individual projects. Photography as social observation and the relation of photographs in an essay are stressed. Prerequisite: basic darkroom techniques or the digital equivalent. Same as Social Science 182A and Sociology 114A.

179 Special Topics: Methods and Formal Representations (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies.

SPECIAL COURSES

180A Anthropology Majors Seminar (4-4-4). A course in anthropological theory designed especially for majors in Anthropology. Different issues are considered in different years. Prerequisite: Anthropology major only or consent of instructor.

190 Senior Thesis (4). May be taken a total of three times. Prerequisite: consent of instructor.

H190A Honors Research Workshop (4) F. Students articulate the goals and significance of their research projects. Written work consists of an eight- to fifteen-page research proposal, due by quarter's end, describing the research question, the relevant literature, and methods of data collection and analysis. Prerequisites: open only to students in the Honors Program in Anthropology; consent of instructor.

H190B Honors Field Research (4) W. Students begin or continue ethnographic field research that combines exploratory field research (e.g., participant-observation, interviews, study of archival and documentary materials) with fixed format data collection methods (e.g., standardized interviews, behavioral observations). Prerequisite: Anthropology H190A; consent of instructor.

H191 Honors Senior Thesis (4) S. Student drafts a senior honor thesis (typically) with the following sections: problem statement, literature review, ethnographic background, description of the methods, results, and conclusions. Prerequisites: Anthropology H190A, H190B; satisfaction of the lower-division writing requirement; consent of instructor.

197 Field Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Group Directed Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

GRADUATE

202A-B-C Proseminar in Anthropology (4-4-4). Year-long intensive introduction to the history of anthropological thought and reading in classical and contemporary ethnography for first-year graduate students. Prerequisite: graduate standing or consent of instructor.

208A Anthropological Fieldwork Methodology (4). A survey of anthropological fieldwork methodology techniques, including attention to contemporary analysis of fieldwork. Prerequisite: graduate standing or consent of instructor.

208B Seminar on Content Analysis (4). A research course on systematic analysis of visual and verbal material. Possibilities include coding answers to open-ended questions, scoring thematic apperception (picture) tests, analyzing films and narratives. Tailored to the particular research projects of students. Prerequisite: graduate standing.

210A-B-C Graduate Statistics I, II, III (4-4-4). Statistics with emphasis on applications in sociology and anthropology. Examines exploratory uses of statistical tools in these fields as well as univariate, bivariate, and multivariate applications in the context of the general linear model. Prerequisites: graduate standing, consent of instructor. Same as Social Science 255M-N-P.

221A Family and Life History (4). Interdisciplinary and comparative work in family and life history. Prerequisite: graduate standing or consent of instructor. Same as Social Science 253A.

222A Analysis of Relational Data (4). A practicum in social networks data analysis focusing on the special problems raised by data sets that embody relations. Log-linear and quadratic assignment procedures are stressed along with multidimensional scaling and other representational models. Prerequisites: graduate standing; consent of instructor. Same as Social Science 201G, 241C, and 256A, and Sociology 225A.

222B Network Theories of Social Structure (4). Explores communicative, social, political, economic, and other flows of behavior using foundational network concepts and measures such as centrality, group, role, pattern, and system. Defines social structure, processes that generate structures, and behavioral consequences of structural rather than individual dispositional properties. Prerequisite: graduate standing or consent of instructor. Same as Social Science 241B.

222D Social Networks and Dynamics (4). Network dynamics provides an integrated anthropological basis for modeling cultural, sociocognitive, and social network phenomena. Students convert data relevant to research questions into a network format, explore themes and materials that provide a basis for research findings, and write up results in a term project. Prerequisite: graduate standing.

223A Research Design (4). Data collection, organization, and analysis in ethnographic or quasi-experimental settings, including interviewing, participant observations, behavior observations, and questionnaires. Research design issues include sampling, longitudinal research, and comparative research. Emphasis on the integration of qualitative and quantitative data. Prerequisite: graduate standing or consent of instructor. Anthropology 223A and Sociology 265 may not both be taken for credit.

225A Grant and Proposal Writing (4). Focuses on production, critique, and revision of student research proposals. A practical seminar designed to improve student proposals, help students through the application processes, and increase students' chances of obtaining support for their research. Prerequisite: graduate standing or consent of instructor. Same as Social Science 255C.

230A Anthropology and History (4). An examination of the complex, long-standing relationship between anthropology and history. Themes include: history, culture, and colonialism; history and the power to represent; nostalgia and the uses of the past in struggles over "national history." Prerequisite: graduate standing or consent of instructor. Same as Social Science 251A.

233A U.S. Latinos, Culture, Medical Beliefs (4). Examines culture, social history, and medical beliefs of U.S. Latinos. Examines the development of issues related to identity, alternative medical practices and beliefs, sexuality, family, gender, and religious beliefs as they relate to contemporary Latinos. Same as Chicano/Latino Studies 212.

233B Health and Medicine Among Latinos and Latinas (4). Examines contemporary issues of health beliefs, health practices, reproduction, political economy, immigration, access to medical care, culture competency, medicalization, biomedicine, and disease as they relate to U.S. Latinas and Latinos. Same as Chicano/Latino Studies 213.

234B Gender and Globalization (4). Teases out gender implications of transformations in global culture and political economy. By examining processes such as globalization of production and investment, spread of religious fundamentalisms, and extension of mass media throughout the world, maps out terrain for future ethnographic and theoretical work. Same as Social Science 254K.

235A Transnational Migration (4). The immigrant experience will be examined in order to explore how specific theoretical issues are examined empirically. These issues include ethnic enclave formation, gendered differences in migration and settlement, class differences, the migration of indigenous groups, identity formation, and issues of representation. Same as Social Science 254A.

240A Economic Anthropology (4). Classic and contemporary theory in economic anthropology. Case studies from Latin America (primarily Mexico and the Andes), Africa, and the Pacific. Substantive topics include non-market exchange, markets and marketplaces, households, gender, management of common property (fisheries, pastoral lands, forests), labor, development, and change. Prerequisite: graduate standing or consent of instructor. Same as Social Science 254E.

242A The Politics of Ethnography (4). Explores the way that ethnographies are linked to wider contexts within which they are produced. Through examination of recent critiques of ethnographic writing, and a series of cases, shows how ethnography is bound up with the politics of representation. Prerequisite: graduate standing or consent of instructor. Same as Social Science 254F.

245A Seminar in Political Anthropology (4). Explores anthropological approaches to politics. Covers a range of issues and topics, including: theories of culture, power, and hegemony; approaches to colonial and post-colonial relations of global inequality; and ethnographic approaches to the modern state. Prerequisite: graduate standing or consent of instructor. Same as Social Science 254H.

246B Law, Colonialism, and Nationalism (4). Origins and spread of law in colonial and nationalist contexts: law's role in constituting and policing difference. Recent theoretical approaches; property in things and people; human and indigenous rights; "customary" law; legal foundations of nationalism; resistance to/through law; globalization. Prerequisite: graduate standing. Same as Social Science 254M.

246C Nations, States, and Gender (4). Explores the ways in which nations, nationalism, states, and citizenship are gendered relations and processes. Questions include: How do women construct themselves as political subjects, and how are constructions of citizenship and discourses of rights gendered? Same as Social Science 253Q.

246D Law, Violence, and Human Rights (4). Examines how adequately law and liberal theories of the state recognize, explain, and delegitimize political violence, particularly the violence committed by states. Addresses theories of the state within which human rights law is embedded, the ethnographics of violence, the legal use of force. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C220.

247A Structuralism and Post-Structuralism (4). Traces recent theoretical discussions and arguments over the philosophical and historical "subject" from structuralist decenterings toward the characteristically "post-structuralist" contemporary concern with the historical and political constitution of subjectivities and subject positions. Prerequisite: graduate standing or consent of instructor. Same as Social Science 252G.

248A Approaches to Globalization (4). Historical and contemporary approaches to the world economy, emphasizing anthropological questions of culture, power, identity, inequality. Examines "neo-imperialism," "late capitalism," accumulation, global markets, urban space, the state, business and policy globalization discourse, "local" responses to and instantiations of the "global." Prerequisite: graduate standing or consent of instructor. Same as Social Science 254L.

250A The Cultural Politics of Visual Representation (4). Develops a theoretical framework for analyzing and reading visual images. Images, as cultural productions, are steeped in the values, ideologies, and taken-for-granted beliefs of the culture which produced them and a political economy that is class, race, and gender inflected.

250B Cybersociality (4). Explores questions of sociality in cyberspace, including what social theories and ethnographic methods are effective in studying online cultures. Topics include general issues like indexicality, reference, temporality, spatiality, and embodiment, and topics such as language, gender, ethnicity, property, and inequality. Prerequisite: graduate standing.

251A Reading Seminar in Science Studies (4). Reading- and writing-intensive seminar that explores various genres of writing about science and technology. Specific emphasis and readings vary from year to year. Special attention to relationships among science studies, cultural anthropology, and social theory. Prerequisite: graduate standing or consent of instructor.

259A, B, C Dissertation Writing Seminar (4, 4, 4). Intended for advanced, post-fieldwork Anthropology graduate students. Emphasis on the presentation of research design and results, problems of ethnographic writing, and qualitative and quantitative data and analysis. Prerequisites: post-fieldwork; graduate standing in Anthropology or consent of instructor.

289 Special Topics in Anthropology (4). Special topics vary from quarter to quarter. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

290 Dissertation Research (4 to 12). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

299 Independent Study (4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

DEPARTMENT OF COGNITIVE SCIENCES

3221 Social Science Plaza B; (949) 824-3771
Michael D'Zmura, **Department Chair**

The Department of Cognitive Sciences is committed to the investigation of the abstract, complex structures that underlie human cognition: language, thought, memory, learning, sensorimotor integration and perception. The main areas of research strength within the Department are visual and auditory perception, experimental psychology, cognitive psychology, mathematical psychology, and cognitive neuroscience.

Undergraduate Program

Students should be aware that psychology courses are offered in several different departments and programs. Students interested in general psychology including the areas of development, clinical, perception, learning, memory, cognitive processes, and neuroscience are advised to consult the course listings here in the Department of Cognitive Sciences section. These courses are designed to provide students with a strong foundation in general psychology. Students interested in other areas of psychology are advised to consult the course listings in the School of Social Ecology and the School of Biological Sciences sections.

In anticipation that the number of students who are qualified to elect Psychology as a major will exceed the number of positions available, students applying for admission for fall 2007 should be sure to file their application before November 30, 2006.

Change of Major: Information about change-of-major requirements, procedures, and policies is available in the School of Social Sciences Undergraduate Counseling Office and at http://www.due.uci.edu/Change_of_Major.html.

Excellence in Psychological Research: Psychology majors doing independent research under Psychology 199 may be eligible for participation in the Undergraduate Research Opportunities Program (UROP). Participants can obtain research funding and have the opportunity to have their research papers published in a peer-reviewed student journal or to present them at a special conference of UCI student research. Guidelines for the program are available from the Department of Cognitive Sciences office.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 442.

Departmental Requirements for the Major in Psychology

School requirements must be met and must include 18 courses (70 units) as specified below:

A. Psychology 9A-B-C.

B. Two introductory courses (eight units) in the social sciences chosen from Anthropology 2A or 2B, Economics 1, Linguistics 3, Political Science 6A, 6B, or 6C, Sociology 1, or, by petition, one or two quarters of Social Science H1E, H1F, or H1G, when topic is not psychology.

C. A one-quarter course and laboratory in experimental psychology or research methods selected from Psychology 112A and 112LA, 112G and 112LG (requires 112F and 112LF as prerequisites), 112M and 112LM, or 112P and 112LP. (Psychology 112F and 112LF were previously numbered 115A and 115LA.).

NOTE: These courses have as prerequisites Psychology 9A-B-C and one year of mathematics/statistics (see course listings). These prerequisites are strictly enforced. Psychology 112A, 112LA are the first quarter of a multi-quarter sequence that

satisfies the upper-division writing requirement and allows students to plan and conduct research projects. Students taking these courses should plan to continue in them through at least the second quarter. Students who intend to fulfill the upper-division writing requirement in some other way should consider taking Psychology 112M, 112LM, or 112P, 112LP to fulfill the laboratory requirement.

- D. Four upper-division Psychology core courses are required (16 units). These courses are designated with the ending number "0" and include the following: Psychology 120A, 120D, 120H, 120P, 130A, 140C, 140L, 140M, 160A.
- E. Seven additional courses (four or more units each) with emphasis in psychology, distributed as follows:
- (1) No more than one of the seven may be lower-division. Psychology 7A, 11E, 46A, 56L, 76M may not be used to fulfill this requirement.
 - (2) Three of the upper-division courses used to satisfy requirements D and E must be taken from one of the following modules: Psychology 110–119 (Research Methodologies), 120–129 (General Psychology), 130–139 (Perception and Sensory Processes), 140–149 and 150–159 (Learning and Cognition and Semiotics and Language combined), 160–169 (Cognitive Neuroscience), and 170–179 (Interdisciplinary Studies).
 - (3) Certain courses offered in the School of Biological Sciences and the School of Social Ecology may be used in partial satisfaction of this requirement. A total of three of these courses (12 units) may be used in this way with a maximum of two from either of these Schools.
- The courses that may be used in this way are those in the Department of Cognitive Sciences' course listings numbered Psychology 127, 147, and 177, as well as Psychology and Social Behavior P109 (same as E108U), P121D, P134H, P164S (same as C105), and Biological Sciences D137, E174, N110, N159.
- (4) No more than two of the courses (each of four or more units) may be numbered 190–199.

NOTE: Psychology majors are strongly encouraged to take Biological Sciences 1A-B and 35 in satisfaction of the natural sciences portion of the breadth requirement (Category II). Furthermore, it is strongly recommended that students who intend to pursue postbaccalaureate work in psychology take the Psychology 112A-B-C sequence. Most psychology graduate programs require statistics (which, at UCI, may be satisfied by taking Psychology 10A-B-C, Social Science 10A-B-C, or Social Science 100A-B-C), but some require calculus (which, at UCI, may be satisfied by taking Mathematics 2A-B).

Honors Program in Psychology

The two-year honors program in Psychology is open to selected juniors who are majoring in Psychology. It provides thorough grounding in research methods and culminates with the opportunity for basic research in some area of psychology under faculty supervision. The program has a limited number of openings and seeks to attract outstanding students who plan to undertake postgraduate education in some field of the psychological sciences. Admission to the program is based on a formal application that is normally submitted in the spring quarter of the sophomore year. Applicants should have an overall grade point average of at least 3.2 and a grade point average of at least 3.5 in psychology courses, although this requirement may be waived in unusual cases.

During the junior year, students who participate in the program are expected to enroll in Honors Experimental Psychology (H111A-B-C), and in the fall quarter of the Honors Seminar in Psychology

(H101A). As seniors, following successful completion of these junior-year requirements, Psychology honors students are enrolled in the Honors Seminar in Psychology (H101B-C) in the fall and spring quarters. Participants in the honors program are expected to complete course work beyond the breadth requirement in one or more of the following areas: biological sciences, mathematics, computer science, physical science, linguistics, philosophy. The honors seminar may be used to satisfy two of the courses required by Part E of the Psychology major requirements. To graduate with Honors in Psychology, a student must successfully complete the requirements for the B.A. degree in Psychology with an overall grade point average of 3.2 and a grade point average of at least 3.5 in Psychology courses. In addition, Honors students must successfully complete a senior honors thesis as part of the senior-year course work.

¹ Either Psychology 10A-B-C, Social Science 10A-B-C, or Social Science 100A-B-C, with Psychology 10 and Social Science 100 recommended for those planning to attend graduate school in Psychology.

² Psychology core course, an upper-division course with the ending number "0."

Psychology Minor Requirements

Requirements for the minor in Psychology are met by taking seven or eight psychology courses (28 or 32 units) as specified below:

- A. Psychology 7A (for the 28-unit minor) or 9A-B-C (for the 32-unit minor).
- B. Three upper-division Psychology courses chosen from the following core courses in Psychology: 120A, 120D, 120H, 120P, 130A, 140C, 140L, 140M, 160A.
- C. For students who take Psychology 7A, three additional psychology courses (four or more units each) no more than one of which is a lower-division course. For students who take Psychology 9A-B-C, two additional upper-division Psychology courses (four or more units each). Psychology 190–199 cannot be used to fulfill this requirement.
- D. In addition, the School mathematics and computer science requirement (School requirement A) must be satisfied.

Graduate Program

Participating Faculty

William Batchelder: Mathematical models of learning and memory, mathematical psychology, and measurement
 Bruce Berg: Psychoacoustics of complex sounds, auditory attention
 Myron Braundstein: Visual perception and computer applications
 Scott D. Brown: Mathematical models of reaction time and practice
 Charles F. Chubb: Visual perception, psychophysics, neural networks
 Barbara Doshier: Memory, information processing, attention, perception
 Michael D'Zmura: Vision, psychophysics, perception
 Jean-Claude Falmagne: Mathematical behavioral sciences
 Emily D. Grossman: Neural basis of biological motion perception
 Gregory Hickok: Neural organization of language and cognition
 Donald Hoffman: Human and machine vision, recovery of three-dimensional structure from image motion, visual recognition of objects by their shape
 Tarow Indow: Mathematical models in visual space, color space, and human memory
 Geoffrey J. Iverson: Cognitive science and mathematical models
 Mary-Louise Kean: Linguistic theory and biological foundations of higher mental processes
 R. Duncan Luce: Mathematical behavioral science; measurement theory, utility theory, response times
 Virginia Mann: Speech perception and its development, the development of reading ability, developmental dyslexia
 Louis Narens: Measurement, logic, and metacognition
 Kourosh Saberi: Brain and signal detection, genetics
 Barbara Sarnecka: Cognitive development
 George Sperling: Vision, perception, information processing
 Ramesh Srinivasan: Perception, development, and cortical dynamics
 Mark Steyvers: Computational models of memory, reasoning, and perception
 W.C. Watt: Cognitive semiotics
 Charles E. (Ted) Wright: Motor control, skill learning, timing
 John I. Yellott, Jr.: Mathematical psychology and visual perception

GRADUATE STUDY IN THE COGNITIVE SCIENCES

The Department of Cognitive Sciences offers a Ph.D. degree program in Psychology, with a specialization in cognitive science, to prepare students for research and teaching careers in academia, industry, and government. The emphasis is on modern techniques of experimentation and theory construction. Special attention is given to providing hands-on research experience and equipping students with sophisticated mathematical and computing skills. The Department has 25 faculty; two are members of the National Academy of Sciences, and many serve as editors or editorial board members of leading professional journals, and as members of NSF and NIH study panels. Many Cognitive Sciences faculty are also members of UCI's Institute of Mathematical Behavioral Sciences, and the Department is generally regarded as one of the world's leading centers for mathematically oriented research in cognitive psychology. The Department is also allied closely to the School's Center for Cognitive Neuroscience. Some Cognitive Sciences

faculty participate in the Interdepartmental Neuroscience Program. See the School of Biological Sciences section of the *Catalogue* for information about this graduate "gateway" program.

ADMISSION

In addition to meeting the general requirements for admission, applicants should have acquired a background in mathematics equivalent to at least one year of calculus. Advanced course work in some of the following fields is highly desirable: psychology, computer science, mathematics, physical sciences, biology, logic, and linguistics. Standard requirements for admission include Graduate Record Examination (GRE) scores for tests taken within the past five years, official transcripts of all college course work, and at least three letters of recommendation. Applicants whose first language is not English must also take the Test of English as a Foreign Language (TOEFL) and achieve a score of 213 or higher on the computer-based exam or 550 or higher on the paper-based exam. As an alternative to the TOEFL, candidates for admission may submit scores from the Academic Modules of the International English Language Testing System (IELTS), in which case an overall minimum score of 7 is required, with a score of no less than 6 on any individual module. Applicants who are not citizens of countries where English is either the primary or dominant language as approved by the UCI Graduate Council and who apply for a teaching assistantship, must pass the Test of Spoken English (TSE), or the Speaking Proficiency English Assessment Kit (SPEAK) examination, with a score of 50 or more. The IELTS can serve as an alternative to the Test of Spoken English (TSE) when the applicant also scores 8 or higher on the "Speaking" module of the Test.

To receive full consideration for fellowship and assistantship awards, applications must be received by December 15. Late applications may be considered until July 1 on a space-available basis. Since the program starts in the fall quarter, students are not normally admitted in the winter or spring, though exceptions may be made. Application materials may be obtained by contacting the Social Sciences Graduate Office.

REQUIREMENTS FOR THE DOCTORAL DEGREE IN PSYCHOLOGY

Each student is expected to take three course sequences in the first year. These include a three-quarter proseminar sequence that covers areas such as learning, memory, perception, and language (Psychology 202A-B-C). The second is a quantitative research methods sequence that covers the areas of probability, statistics, and experimental design (Psychology 203A-B-C). The third is a computational research methods sequence that covers programming for experiments and data analysis (Psychology 205A-B). Suitable substitutes may be made with written approval of the Department's Director of Graduate Studies. Completion of the quantitative research methods sequence may be extended over two years if warranted by the background or needs of the student. Additional advanced course work in other fields relevant to the student's interests will supplement the required courses. Students are expected to enroll in the Cognitive Sciences Research Seminar (Psychology 201A-B-C) during all quarters in residence prior to passage of the advancement-to-candidacy examination.

In addition, students must take at least five more courses prior to advancement to candidacy. These courses are normally taken from at least three of the following seven modules: Foundations (Psychology 200–209); Human Cognition (Psychology 210–229); Methodologies and Models (Psychology 230–239); Virtual Reality (Psychology 240–249); Human Performance (Psychology 250–259); Cognitive Neuroscience (Psychology 260–269); and Sensation and Perception (Psychology 270–289).

Each student is expected to carry out theoretical/empirical research during the first two years. By the end of the second year, each student should have completed a research project of a scope and nature that is potentially publishable in a professional journal. Every student is assigned a faculty advisor, and the advisor is responsible for assisting in the planning and other facets of the project. Students are required to present a talk to the Cognitive Sciences Research Seminar, based on their research project, by the end of the spring quarter of their second full year in the graduate program. (Another forum for the second-year talk may be substituted with the written approval of the Graduate Director.)

By the following fall quarter, students are required to write a paper based on their research project. The paper must be approved by the student's advisor and the Director of Graduate Studies.

At the end of each academic year the faculty of the Department meet to discuss and provide feedback on the progress of each student in the program.

Requirements for the M.A. Degree

NOTE: Although the Department does not have an M.A. program, students may earn an M.A. degree as part of the Ph.D. program.

The student must: (1) complete the required course work as outlined above; (2) present a talk and submit an approved paper, both based on empirical/theoretical research, as described above; and (3) fulfill a computer-programming language requirement by completing satisfactorily the computational research methods sequence Psychology 205A-B or by demonstrating proficiency in use of a programming language for cognitive sciences research as assessed by two faculty members and approved by the Graduate Director.

Requirements for Advancement to Candidacy

The requirements for advancement to candidacy are: (1) the student must meet the requirements listed above for the M.A. degree; (2) the student must, in addition, form a five-member faculty committee selected according to Graduate Studies policy. The committee will examine the student on a topic which is determined in consultation with the committee. A written document describing the student's work on this topic must be submitted to the committee prior to advancement. The student must demonstrate an understanding of the background and issues for the research topic and show sufficient preparation and creativity to undertake planning for a dissertation project (e.g., by describing a possible experimental design or outlining a possible theoretical development); and (3) students are required to advance to candidacy by the end of the fall quarter of their third year in the program.

Requirements for the Ph.D. Degree

The requirements for the Ph.D. degree are: (1) the student must formally present and defend a written dissertation proposal to a committee of at least three members selected according to Graduate Studies requirements. The dissertation proposal presentation may take place as part of the examination for Advancement to Candidacy, in which case, that five-member committee will approve the dissertation proposal; (2) the proposal must be approved prior to the final dissertation defense (usually at least three months before to allow time for the candidate to incorporate suggestions and changes required by the committee); (3) prior to the approval of the final version of the dissertation the student is expected to defend the dissertation in a public colloquium announced with at least one week's notice; and (4) all requirements for the Ph.D. degree must be fulfilled within three years after advancement to candidacy.

The normal time for advancement to candidacy is three years. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is six years.

Courses in Psychology

LOWER DIVISION

7A Introduction to Psychology (4) F, W, S, Summer. Weekly topics include human development, memory and problem solving, learning theory, perception, biological mechanisms, emotions and motivation, personality theory, social psychology, and behavior disorders. Students have the opportunity to volunteer for participation in several ongoing laboratory experiments. Formerly Psychology 7. No credit for Psychology 7A if taken after 9A-B-C. (III)

9A-B-C Psychology Fundamentals (4-4-4) F, W, S. A year-long sequence designed to provide freshman Psychology majors with an in-depth survey of general psychology. Topics include biological bases of behavior, sensation, perception, cognition, development, personality, psychopathology, and social psychology. Prerequisite: freshman Psychology major; consent of instructor. No credit for Psychology 7A if taken after 9A-B-C. (III)

10A-B-C Probability and Statistics in Psychology I, II, III (4-4-4). An introduction to probability and statistics. Emphasis on thorough understanding of the probabilistic basis of statistical inference. Examples drawn primarily from psychology. Prerequisite or corequisite for 10A: Psychology 9A. Students who receive credit for Psychology 10A-B-C may not receive credit for Anthropology 10A-B-C, Social Ecology 13, Social Sciences 9A-B-C or 10A-B-C, or Sociology 10A-B-C. (V)

11E Social Psychology of Higher Education (4). Focuses on issues and concerns unique to freshmen enrolled at a major research institution. Theoretical framework for understanding the role of higher education in today's society. The field of research and inquiry from a social/psychological perspective. Critical understanding of key issues. Although designed for freshmen, beneficial for all students.

13T Fundamentals, Pragmatics, and Ethics of Psychological Testing (4). Basic principles of psychological testing including test type, selection, structure, procedure, ethics, cultural factors, and interpretation are presented to better equip potential user, consumer, or interpreter of psychological tests in future personal and professional settings. Prerequisite: Psychology 7A. (III)

21A Adolescent Psychology (4). Focuses on psychosocial dynamics of today's adolescents in America emphasizing the quest for identity, independence, values, and sexual orientation. The influence of society, family, school, and peers is analyzed. Strategies for helping troubled adolescents are discussed. Prerequisite: Psychology 7A or 9A-B-C. Psychology 21A and Psychology and Social Behavior P114D may not both be taken for credit. (III)

21F Psychology and the Family (4). Examines theories, research, implications, and applications of psychology as they relate to the understanding of family structure, process, development, and change. Prerequisite: Psychology 7A or 9A-B-C.

23A Principles of Applied Psychology (4). Introduction to the understanding of human functioning through cognitive and behavioral analysis and application. (III)

24A Life-Span Development (4). Combines developmental and clinical psychology concepts to explore major life transition stages and adjustment challenges faced by individuals across the life span. Introductions to personality development and coping adaptively with these changes are covered. Prerequisite: Psychology 7A or 9A-B-C.

46A Introduction to Human Memory (4). Covers the core concepts of modern research and theorizing about human memory, including structural subdivisions (e.g., perceptual memory, short-term memory, long-term memory), different measures of memory (e.g., recall, reorganization), and some practical applications of memory research (e.g., mnemonics). Prerequisite: Psychology 7A or 9A-B-C. Psychology 46A may not be taken for credit after Psychology 140M or Psychology and Social Behavior P192J. (III)

56L Acquisition of Language (4). What children say, what they mean, and what they understand. Theories about the learning of language by one-, two-, and three-year olds. Comparison of kinds of data on which these theories are based. Same as Linguistics 51. (III)

76M Language and the Mind (4). The relationship of knowledge of grammar to mental processes and mental representations. How linguistic behavior is rule governed. Same as Linguistics 52.

78A Introduction to Social Psychology (4). Studies sociological contributions to theory and research in social psychology, with focus on the social influences on personality, attitudes, beliefs, and behavior; socialization, human groups, and social interaction. Same as Sociology 31. (III)

89 Special Topics in Lower-Division Psychology (4). Prerequisites vary. May be repeated for credit as topic varies.

UPPER DIVISION

H101A-B-C Honors Seminar in Psychology I, II, III (4-4-4). Focuses on the research activities and honors thesis research projects of each student and on the research of various Cognitive Sciences faculty. Students discuss their research interests in the early and later stages of their projects. Research projects and write-ups are required. Restricted to students in the Honors Program in Psychology. H101B: Pass/Not Pass only.

RESEARCH METHODS

H111A Honors Experimental Psychology (4) F. Emphasis on design of experiments and analysis of results. Experiments are conducted in laboratory sections. Corequisite: Psychology H111LA. Prerequisites: Psychology 9A-B-C; either Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, Social Science 100A-B-C, Mathematics 2A-B-C, or Mathematics 2A-B and 7. Open only to students in the Honors Program in Psychology or by consent of instructor. Psychology 111A and 112A may not both be taken for credit.

H111LA Honors Experimental Psychology Laboratory (2) F. Corequisite: Psychology H111A.

H111B Honors Advanced Experimental Psychology (4) W. Design and analysis of multivalent, factorial, and correlational studies. Students prepare proposals for independent research. Corequisite: Psychology H111LB. Prerequisite: Psychology H111A or Psychology 112A. Open only to students in the Honors Program in Psychology or by consent of instructor.

H111LB Honors Advanced Experimental Psychology Laboratory (2) W. Corequisite: Psychology H111B.

H111C Honors Research in Experimental Psychology (4) S. Each student conducts a research project in experimental psychology. The projects are discussed in a seminar format. Written reports on each project are submitted at the end of the quarter. Prerequisite: Psychology H111B or 112B. Open only to students in the Honors Program in Psychology or by consent of instructor.

NOTE: Students who wish simply to fulfill the laboratory/research-methods requirement in one quarter should take Psychology 112M or 112P. Students also wishing an opportunity to conduct their own research and fulfill the upper-division writing requirement should take either Psychology 112A-B-C or 112F-G.

112A Experimental Psychology (4) F. Emphasis on design of experiments and analysis of results. Experiments are conducted in laboratory sections. Corequisite: Psychology 112LA. Prerequisites: Psychology 9A-B-C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, Social Science 100A-B-C, Mathematics 2A-B-C, or 2A-B and 7. Only one course from Psychology 111A, 112A, and 112F-G may be taken for credit.

112LA Experimental Psychology Laboratory (2) F. Corequisite: Psychology 112A.

112B Advanced Experimental Psychology (4) W. Design and analysis of multivalent, factorial, and correlational studies. Students prepare proposals for independent research. Corequisite: Psychology 112LB. Prerequisite: Psychology 112A, 112LA. Only one course from Psychology 112B and 112F-G may be taken for credit.

112LB Advanced Experimental Psychology Laboratory (2) W. Corequisite: Psychology 112B.

112C Research in Experimental Psychology (4) S. Each student conducts a research project in experimental psychology. The projects are discussed in a seminar format. Written reports on each project are submitted at the end of the quarter. Prerequisite: Psychology 112B, 112LB. Only one course from Psychology 112C and 112F-G may be taken for credit.

112F-G Behavioral Research (4-4) F, W. A two-quarter introduction to the practice of behavioral research: generating research ideas, finding and reading previous research, research methods, quantifying observations, sampling, drawing inferences from data, and writing up results. Students propose and conduct their own research project with approval. Corequisite: Psychology

112LF-LG. Prerequisites for 112F: Psychology 9A-B-C and one of the following series: Psychology 10A-B-C, or any other 10A-B-C sequence in the School of Social Sciences, or Social Science 100A-B-C, or Mathematics 2A, 2B, 7. Prerequisites for 112G: completion of the lower-division writing requirement and a passing grade in 112F. Only one sequence from Psychology 112F-G and 112A-B-C may be taken for credit. Psychology 112F and 112M may not both be taken for credit.

112LF-LG Behavioral Research Laboratory (2-1) F, W. Corequisite: Psychology 112F-G.

112M Research Methods in Psychology (4) F. Research methods in psychology for majors who wish to fulfill this requirement separately from upper-division writing. Covers both experimental and descriptive research methods, analysis of results, and reading the psychological literature. Research experience is provided in laboratory sections. Corequisite: Psychology 112LM. Prerequisites: Psychology 9A-B-C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, Social Science 100A-B-C, or Mathematics 2A-B and 7. Psychology 112M and 112F may not both be taken for credit. May not be taken for credit after completion of any other Psychology 112 course.

112LM Research Methods in Psychology Laboratory (2) F. Corequisite: Psychology 112M.

112P Research in Perception and Psychophysics (4). Introduction to design and practice of experiments: students perform auditory, visual, tactile, or other experiments. Emphasis on methodology, finding and reading previous research, generating research ideas, statistical analysis. Students propose and conduct their own final research project with approval. Corequisite: Psychology 112LP. Prerequisites: Psychology 9A-B-C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, Social Science 100A-B-C, or Mathematics 2A-B and 7; Psychology 130A.

112LP Research in Perception and Psychophysics Laboratory (2). Corequisite: Psychology 112P.

113T Introduction to Psychological Tests and Measurements (4). Principles of psychological measurement, including elementary psychophysics, psychometrics, test theory, and the measurement of abilities, attitudes, traits, and interests. Reliability and validity of psychological measurements. Prerequisites: Psychology 7A or 9A-B-C; Psychology 10A or any other 10A course in the School of Social Sciences or equivalent.

114A Informal and Formal Reasoning (4). Examines human reasoning, focusing on scientific argument and elementary logic. Involves the translation of informal arguments from everyday language into logic. Specific feedback allows students to pace themselves through this computer-assisted course. Weekly informal classroom discussions.

114C Computers and Psychology (4). Introduction to computer applications in applied and research psychology, including automated psychological assessment, diagnosis, prescription developments, artificial intelligence applications, and "expert systems." Prerequisite: Psychology 112A, 112F, 112M, or 112P.

114I Interactive Computer Graphics (4). An introduction to the background and skills necessary to construct and animate complex virtual reality environments. Prerequisites: acquaintance with elementary linear algebra and an ability to program in C++. Concurrent with Psychology 240A.

114M MATLAB Programming (4). MATLAB is a mathematical software package for solving quantitative problems often encountered in experimental psychology. Topics include rudiments of programming, statistical analysis of data, matrix algebra, signal processing, graphic visualization, and simulated models of cognitive and perceptual processes. Concurrent with Psychology 235M.

114Q Design and Implementation of Auditory Experiments (4). Topics include physics and measurement of sounds, digital signal processing (DSP), recording/processing of speech and music, generating complex sounds (e.g., FM and AM), use of sound level meter and artificial ear (coupler), digital filtering, signal mixing, autocorrelation and cross-correlation. Prerequisite: Psychology 114M or consent of instructor. Concurrent with Psychology 238.

119 Special Topics in Research Methodologies (1 to 4). Prerequisites vary. May be repeated for credit as topic varies.

GENERAL PSYCHOLOGY

120A Abnormal Psychology (4). Introduction to psychopathology and behavioral deviations, and the concepts of theories regarding these conditions. Prerequisite: Psychology 7A or 9C. Psychology 120A and Psychology and Social Behavior P105 may not both be taken for credit.

120D Developmental Psychology (4). A general introduction to the study of the physical, intellectual, social, and emotional development of the child from birth to adulthood. Prerequisites: Psychology 7A or 9A. Psychology 120D and Psychology and Social Behavior P113D may not both be taken for credit.

120H History of Psychology (4). A history of the development of various schools and systems of psychological thought. Prerequisites: Psychology 7A or 9A-B-C, or Psychology and Social Behavior P9, or equivalent, or consent of instructor. Same as Psychology and Social Behavior P192A.

120P Personality Theories (4). A survey of the evolution of personality theory during this century. An overview of major perspectives in the field, with special attention to Freud, Jung, and Adler. Prerequisite: Psychology 7A or 9C. Psychology 120P and Psychology and Social Behavior P144C may not both be taken for credit.

121A Creative Learning in Children (6) F, W, S. Seminar, two hours; field work, six hours. Students assist in teaching children at the Farm School, recording and studying their interactions with the children, and developing materials for use in the School. The Farm School is ungraded; the children range in age from five to twelve. May be taken for credit three times.

121M Theories of Motivation (4). Factors affecting the behavioral performance of organisms. A survey of theoretical and empirical approaches to the physiological, psychological, and social factors which generate behavior. Prerequisites: Psychology 7A or 9A-B-C. Psychology 121M and Psychology and Social Behavior P191D may not both be taken for credit.

121S Psychology of Sleep and Dreaming (4). Covers the physiology, neurochemistry, and neuroanatomy associated with sleep, contemporary sleep theory, REM and NREM, phenomenology, sleep disorders, examination of differences between conscious and unconscious cognitive function, the history of sleep and dream theories from ancient time to present day.

122C Clinical Psychology (4). Provides overview of the clinical psychology field including theories and techniques used in counseling and testing.

122I Organizational/Industrial Psychology (4). Introduction to applied psychology in organizations, including personnel testing, selection, training and evaluation, job and classification analysis, job satisfaction and motivation, organizational development, leadership, market research and consumer psychology. Potential ethical problems are discussed. Prerequisite: Psychology and Social Behavior P9 or equivalent or consent of instructor. Same as Psychology and Social Behavior P192B.

123P Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 143 and Philosophy 143.

127A Adult Development (4). Examines why and how we change (with attention to gains as well as losses) from ages 25-65 and the nature and sources of continuity over time. Topics include physical and intellectual functioning, personality, coping strategies, and social roles and relationships. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P116D.

127B Behavior Modification (4). Principles and methods of behavior modification derived from psychological theories of learning. Considers applications of behavior techniques to treat childhood disorders, school problems, juvenile delinquency, marital and sexual problems, alcoholism, and eating disorders. Behavioral interventions in community and industrial settings. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent; Psychology 122C or consent of instructor. Same as Psychology and Social Behavior P149C.

127C Clinical Child Psychology (4). Examines research and theory concerning childhood psychopathology and behavior disorders. Diagnosis and assessment, early identification of high-risk children, fear and phobias, antisocial behavior, childhood psychoses, autism, depression, hyperactivity and attention deficit disorders, ethical and policy implications of identifying children who are different. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P107.

127D Development of Gender Differences (4). Examination of research on how sexes differ in physiology, cognitive functioning, personality, and social behavior. Sex-differentiated development from the prenatal period through adulthood. Explanations for male-female differences are sought, focusing on biological (genetic, hormonal), and social (familial, cultural) mechanisms. Prerequisites: Psychology 9A-B-C, Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P122D.

127E Psychology and Emotion (4). General theories of emotion and research regarding cognitive, behavioral, physiological, and subjective experience of emotion. Specific topics include emotion regulation, emotion and health, emotional intelligence, and emotional development. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P143H.

127G Gerontology (4). Examines stereotypes and myths associated with aging; physiological and psychological changes that accompany old age; distinguishes behavior changes due to aging *per se* from those due to historical and socioeconomic factors; political, social aspects of old age in contemporary society. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P117D.

127H Child Health Psychology (4). Exploration of psychological antecedents, concomitants, and consequences of medical illnesses in children. Children's beliefs about health, illness, and medication; the role of stress; coronary-prone behavior; therapeutic adherence and physician-patient interaction; coping with chronic illness; effects of a child's illness on family. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent; Social Ecology 10 recommended. Same as Psychology and Social Behavior P131H.

127I Infant Development (4). Study of human development from conception through the first two years of life, covering processes and events in the domains of physical, social, and cognitive development. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P115D.

127S Attitudes and Behavior (4). Intended for students interested in theory and research on how attitudes influence, and are influenced by, behavior. Topics include: voting behavior, Fishbein and Ajzen's theories of reasoned action and planned behavior, attitude accessibility, prejudice and discrimination, and cognitive dissonance theory. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P157S.

127T Child Therapies (4). Examines research methodologies, empirical data, and implications of diverse intervention strategies. Primary topics include psychotherapy process and outcome, family therapies, behavioral intervention, cognitive behavior modification, pediatric psychopharmacology, and ethical and social policy implications of intervening in other people's lives. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent; Psychology 122C or consent of instructor; Social Ecology 10 recommended. Same as Psychology and Social Behavior P151C.

128 Trends in Psychology (0). Explores current trends in different fields of psychology. Two units of workload credit. Prerequisite: consent of instructor. Pass/Not Pass only. May be repeated for credit as topics vary.

129 Special Topics in General Psychology (1 to 4). Prerequisites vary. May be repeated for credit as topic varies.

PERCEPTION AND SENSORY PROCESSES

130A Perception and Sensory Processes (4). A general introduction to the scientific study of sensory processes and perceptual phenomena, with special emphasis on the visual system. Prerequisites: Psychology 7A or 9A-B, or Psychology and Social Behavior P9, or equivalent, or consent of instructor. Psychology 130A may not be taken for credit after 131A or 131B. Same as Psychology and Social Behavior P192E.

131A Vision (4). Visual perception and the anatomy and physiology of the visual system. Topics include: the retina and the visual pathway; visual sensitivity; color vision; spatial vision; motion perception; and the development of the visual system. Psychology 130A may not be taken for credit after Psychology 131A. Same as Biological Sciences N182.

131B Hearing (4). Auditory perception, the anatomy and physiology of the auditory system, and the physics of sound. Topics include: neural transduction of sound, sensitivity, sound localization, complex sound perception, and hearing loss. Prerequisites: Psychology 9A-B; upper-division standing or consent of instructor. Psychology 130A may not be taken for credit after 131B.

131C Advanced Perception and Sensory Process (4). A continuation of Psychology 131A and 131B. In-depth study of selected topics, emphasizing the way questions in sensory and perceptual research are formulated and pursued. Prerequisites: Psychology 9A-B; 131A and 131B or consent of instructor.

131D Vision, Visualization, and Computer Graphics (4). More than one-half of the human brain is devoted to processing visual information. This course provides an overview of visual processing, visualization, and computer graphics, and also introduces elementary concepts in linear algebra and in linear systems. Prerequisites: Mathematics 2A, Psychology 9B, Information and Computer Science 21, or similar courses recommended. Formerly Psychology 114P.

133P Advanced Topics in Visual Perception (4). Topics in vision related to ophthalmology and optometry. Course for students considering a career in eye care. Prerequisites: upper-division standing; Psychology 130A or consent of instructor.

134A Human Attention (4). Reviews and discusses methods of research, current data, and current theories in the field of human attention. Prerequisites: Psychology 7A or 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P192F.

134R Visual Attention Research (2). Review and discussion of current research on the role of attention in the perception of visual patterns. Experiments are designed, run, and analyzed. Students have the option of participating as subjects or writing a term paper. Prerequisites: upper-division standing; Psychology 7A or 9A-B-C; consent of instructor.

135D Perceptual Development (4). Human perceptual development is examined from birth through childhood with emphasis on localization, discrimination, and pattern recognition abilities in vision and audition. The role of perceptual development in cognition is evaluated. Prerequisites: Psychology 130A and upper-division standing.

135M The Mind/Body Problem (4). What is consciousness and what is matter and how are the two related? How can brains have minds? This multidisciplinary course draws on information from the fields of computer vision, artificial intelligence, cognition, neurophysiology, philosophy, and psychophysics.

139 Special Topics in Perception and Sensory Processes (4). Prerequisites vary. May be repeated for credit as topic varies.

LEARNING AND COGNITION

140C Cognitive Science (4). Introduction to investigations of the structure and function of the mind, from viewpoints of computation, neuroscience, philosophy, and cognitive psychology. Topics include: perception, attention, knowledge representations, learning and memory, action, reasoning, and language. Prerequisite: Psychology 7A or 9B, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P192G.

140L Principles of Learning Theory (4). Investigation of the learning and memory processes of humans and animals. Basic experimental approaches to learning and memory, empirical results, and theoretical interpretations of the evidence are discussed. Prerequisite: Psychology 7A or 9A, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P192I.

140M Human Memory (4). Developments in the area of memory; history of memory research; theories of the nature of memory. Visual memory, recognition memory, high-speed scanning, free recall, short-term memory, mnemonics, retrieval, relationship of memory to thinking. Selected theoretical formulations for memory. Prerequisite: Psychology 7A or 9B or Psychology and Social Behavior P9 or equivalent. Psychology 46A may not be taken for credit after Psychology 140M. Same as Psychology and Social Behavior P192J.

141A Education and Children (4). Students tutor children in an educational setting and reflect on their experiences by documenting events and analyzing them. Pass/Not Pass only. May be taken for credit three times.

141D Cognitive Development (4). An analysis of intellectual development from birth through maturity. Mechanisms of cognitive growth from Piagetian and current information processing theories are examined. Recent research on developmental changes in concept formation, knowledge structures, memory skills, and problem-solving strategies is presented. Prerequisites: Psychology 120D and upper-division standing. Psychology 141D and Psychology and Social Behavior P120D may not both be taken for credit.

141J-K-L Jumpstart: Early Language, Literacy, and Social Development (4-4-4) F, W, S. An experiential course integrated with lecture material in the field of child development and education. Students are expected to attend lectures, complete assignments, and commit a total of eight hours per week as mentors of disadvantaged preschool children. Prerequisite: consent of instructor. May be taken for credit three times. Same as Education 141A-B-C.

142I Psychology of Learning, Abilities, and Intelligence (4). Overview of classic positions on the mind, human abilities, and intelligence, especially as related to academic achievement. Contrasting views: psychometric versus information processing; experimental versus correlational research. Prerequisite: introductory course in psychology, or consent of instructor. Same as Education 176.

143D Choice and Decision Models (4). Introduction to some of the main concepts in the study of individual decision making. The interplay of empirical observation and mathematical theory is emphasized. Prerequisites: elementary mathematical formalism, including sets, relations, functions, and basic concepts of probability.

143H Human Factors (4). The application of knowledge of human characteristics to the design of equipment, facilities, and environments for human use. Research on attention, perception, learning, and decision-making are applied to problems involving aviation, space, highway safety, industrial safety, consumer products, human-computer interaction, and aging. Prerequisite: upper-division standing or consent of instructor.

143P Human Problem Solving (4). Modern developments in the psychology of human problem solving. Topics include: concept identification, arithmetic, sets, logic puzzles, story problems, group problem solving, and theorem proving. Prerequisites: Psychology 7A or 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P192K.

143R Psychology of Reading (4). Surveys the major components of skilled reading and the determinants of successful reading acquisition. Examination of contemporary models of skilled reading. Focuses on models of the development of reading. Research on the causes of developmental dyslexia. Prerequisite: Psychology 7A or 9A-B-C; Psychology 140C or Linguistics 150A; satisfactory completion of the lower-division writing requirement.

144A-B-C HABLA: Language Intervention for Disadvantaged Children (4-4-4). Trains students (fall quarter) to deliver home visits (winter and spring) that promote school readiness among two-four year-olds from low SES and educational backgrounds. Covers fundamentals of child language, literacy, cognitive development; procedures, ethics of home visitation. Work with parents and children to create better home literacy and language environment. Prerequisites: must pass an interview by instructor, be fluent in English and one other language (Spanish most typically), must have experience with preschool children and be culturally sensitive. Same as Chicano/Latino Studies 191A-B-C and Social Science 186A-B-C.

145P-Q-R Attention and Learning Deficits in Children I, II, III (4-4-4). Learning in normal and attention-deficit disordered children. Covers the normal developmental course of learning and a variety of deficits. Includes field work with attention-deficit disordered children. Prerequisite: consent of instructor.

146M Writing About Memory (4). Covers a broad range of texts, literary, philosophical, and scientific, each probing the nature of memory and its meaning in human life. Readings are drawn from across many disciplines and many perspectives. Prerequisites: Psychology 7A or 9B or equivalent; satisfactory completion of the lower-division writing requirement.

147C Cognitive Behavior Therapy (4). Presentation of principles and procedures of therapeutic interventions based on cognitive-behavior methods. Cognitive factors in learning, emotional arousal, psychological disorder, and psychotherapy reviewed. Introduces the application of cognitive behavioral methods to problems of depression, anxiety, anger, pain, and impulsivity. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P150C.

149 Special Topics in Cognition and Learning (4). Prerequisites vary. May be repeated for credit as topics vary.

SEMIOTICS AND LANGUAGE

156A Psychology of Language (4). Examines modern research in psycholinguistics. Focuses on theoretical issues and empirical findings in brain-language research, speech perception, speech production, sentence processing, lexical access, language acquisition, and reading development. Same as Linguistics 150.

159 Special Topics in Semiotics and Language (1 to 4). Prerequisites vary. May be repeated for credit as topics vary.

COGNITIVE NEUROSCIENCE

160A Introduction to Cognitive Neuroscience (4). Introduction to the neural basis of human perceptual, motor, and cognitive abilities. Topics include sensory perception, motor control, memory, language, attention, emotion, frontal lobe function, functional brain imaging, and neuropsychological disorders. Prerequisites: Psychology 9A-B or Biological Sciences 35, or consent of instructor, or Psychology and Social Behavior P9 or equivalent. Same as Psychology and Social Behavior P192L.

161 Language and the Brain (4). Analysis of current research on the biological bases of human linguistic capacity. Development, focusing on hemispheric specialization and plasticity; localization of specific linguistic functions in adults, with emphasis on study of aphasia; relation of linguistic capacity to general cognitive capacity, considering research on retardation. Prerequisite: Biological Sciences 35 or N110, or consent of instructor. Same as Linguistics 158 and Biological Sciences N160. Formerly Psychology 156B.

161P Perceptual Neuroscience (4). Examines the physiology of cortical networks underlying human perceptual experience. Prerequisite: Psychology 160A or consent of instructor. Same as Psychology and Social Behavior P192P.

161V Cognitive Neuroscience of Vision (4). Explores the neural basis of our visual experience, including visual perception, face and object recognition, attention, and visual awareness. Emphasis placed on evidence acquired from neuroimaging, neuronal recordings, patient literature, and brain stimulation. Prerequisite: Psychology 160A.

162A Neurobiology of Learning and Memory (4). How the brain and behavior change as a result of experience, with an emphasis on identifying the neurochemical processes through which memory is stored and the parts of the brain that are involved. Prerequisite: Biological Sciences 35 or N110. Same as Biological Sciences N158. Formerly Psychology 145B.

162B Human Memory Disorders (4). Focuses on models and methods of assessing human memory and its disorders. Exposure to conventional and new assessment devices provided. Prerequisite: Psychology 46A or consent of instructor. Formerly Psychology 146D.

163A Genetics of Sensory and Cognitive Processes (4). Introduction to genetic bases of sensory and cognitive functions. Mutations affecting vision, hearing, learning, and memory in animal model systems. General and specific cognitive abilities and failures in humans. Environmental effects on gene regulation, origin of new functions, and quantitative genetics. Prerequisites: Psychology 9A-B-C or consent of instructor. Formerly Psychology 167.

169 Special Topics in Cognitive Neuroscience (4). Prerequisites vary. May be repeated for credit as topics vary.

INTERDISCIPLINARY STUDIES

173A Psychological Anthropology (4). Cultural differences and similarities in personality and behavior. Child-rearing practices and consequent adult personality characteristics; biocultural aspects of child development and attachment; evolutionary models of culture and behavior; politically linked personality; cognitive anthropology; psychology of narrative forms; comparative national character studies. Prerequisite: Psychology 7A or 9A-B-C, or Anthropology 2A. Same as Anthropology 132A.

174A Asian American Psychology (4). Examines the social and psychological concerns of Asian Americans, e.g., coping with racial prejudice, maintaining bicultural identities, dealing with cross-cultural conflicts in interracial relationships, and trying to reconcile generational differences between immigrant parents and their American-born children. Same as Asian American Studies 141. (VII-A)

174B Social Psychology of African American Families (4). Social psychological analysis of African American families from an Afro-centric perspective with examination of historical and contemporary factors which affect their structure and functioning and the psychosocial development of family members. Issues and challenges in the twenty-first century. (VII-A)

174C Adolescent Psychology in Urban American Society (4). Psychosocial dynamics of adolescents in American society; their ongoing quest for identity, independence, values, moral and cognitive development, peer group relationships, sexuality and sex role preference. Analysis of power struggle between adolescent subcultures and institutions of dominant society.

174D Adolescent Psychological Disorders (4). Examines how predictable internal and external adolescent conflicts involving self, family, society become intensified until a breakdown in coping pattern occurs. Specific syndromes indicative of increased adolescent stress as well as major psychological, social, and psychiatric treatment approaches are discussed. Prerequisites: senior standing; Psychology or Social Ecology majors only; one previous course in adolescent psychology.

174E Psychology of the African American (4). Historical overview of the development of Black psychology and the African American frame of reference. Topics include personality development, psychological assessment, issues in education, Black mental health, and the role of the African American psychologist in the community. (VII-A)

174F Chicano/Latino Psychology (4). Examines research and literature investigating Chicano/Latino ethnicity as a variable influencing behavior. Explores mental health needs and issues of Chicano/Latinos and discusses competent, sensitive methods of mental health service delivery. Prerequisite: Psychology 7A or 9A-B-C. Same as Chicano/Latino Studies 171. (VII-A)

174G Psychology of Ethnic Children and Adolescents (4). Reviews specific psychological issues and challenges experienced by African American, Asian American, Mexican/Latino American, and Native American children and adolescents. Broaden understanding of how cultural factors influence human behavior and increase cultural/ethnic awareness as it relates to assessment and psychotherapy. (VII-A)

176A Political Psychology (4). Examination of how psychological theory and research may be used to better understand political thought and behavior. Drawing on theories of learning, cognition, and personality, discusses such topics as the formation of political attitudes, the process of political decision-making, and the nature of political leadership. Same as Political Science 128A.

177D Deviance (4). Perspectives on deviance and criminality in behavior, institution, community, and myth. The suitability of contemporary theories of deviant behavior. Same as Sociology 156 and Criminology, Law and Society C107. Previously Psychology 178D.

177F Forensic Psychology (4). Presents theoretical and empirical basis for a psychological perspective of criminal behavior, particularly violent behavior. Examines violence, sexual offending, and mental disorder related to crime with regard to clinical assessment, treatment, and rehabilitation; mental health services within forensic institutions. Prerequisites: Psychology and Social Behavior P9 or equivalent, Psychology and Social Behavior P105, P175P or Criminology, Law and Society C149, or consent of instructor. Same as Criminology, Law and Society C136 and Psychology and Social Behavior P145C.

177I Impacts of Divorce (4). Examines divorce in historical, economic, and, primarily, psychological contexts, emphasizing recent research pertaining to the impacts of divorce on children, families, and society. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent. Same as Psychology and Social Behavior P171P.

177P Developmental Psychopathology (4). Research and theory of origins, course, and outcomes of disordered behavior. Continuity and change in patterns of behavior; environmental challenges and buffers; stress and competence in children; vulnerable and invincible children; children of mentally ill parents; families at risk; childhood antecedents of adult disorders. Prerequisites: Psychology 9A-B-C, or Psychology and Social Behavior P9, or equivalent; Psychology 120A or consent of instructor; Social Ecology 10 recommended. Same as Psychology and Social Behavior P152C.

178N Social Psychology of Networks (4). Review of network methods used in small group and organizational research. Discussion of social psychological literature relevant to the network study of cognitive social structure, exchange and communication, identity negotiation, and social control. Case study of network datasets exemplifies research issues. Same as Sociology 135.

179 Special Topics in Interdisciplinary Studies (1 to 4). Prerequisites vary. May be repeated for credit as topic varies.

190 Senior Thesis (4-4-4). In progress grading. Prerequisite: consent of instructor.

197A-Z Field Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198A-Z Directed Group Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. Students may enroll in only one 199 per quarter. May be repeated for credit as topic varies.

GRADUATE

201A-B-C Cognitive Sciences Research Seminar (1.3-1.3-1.4) F, W, S. Weekly reports and colloquia by faculty, students, and visitors. Prerequisite: admission to graduate program in Cognitive Sciences or consent of instructor.

202A-B-C Proseminar in the Cognitive Sciences (1-4-4) F, W, S. Year-long intensive introduction to the conceptual foundations and basic research results in the cognitive sciences for first-year graduate students. Prerequisite: graduate standing or consent of instructor.

203A Discrete Mathematics and Probability (4). Logic and set theory are covered during the first three weeks, using an interactive computer system. The remaining seven weeks are devoted to probability theory and cover elementary concepts from sample spaces to Chebychev's Inequality and the moment generating function. Prerequisite: graduate standing.

203B Introduction to Mathematical Statistics (4). An introduction to statistical estimation and statistical inference. Topics include sufficiency and the Rao-Blackwell Theorem, completeness and the Lehmann-Scheffe Theorem. The method of maximum likelihood is explored in some detail. Inference in linear models covers regression and analysis of variance.

203C Experimental Design (4). Discussion of the logic of experimental design and inferential statistics. Presentation of mathematical ideas from behind analyses of variance and covariance, analysis of counted data; main emphasis on research applications rather than mathematical formulations. Prerequisite: graduate standing or consent of instructor.

204A, B, C Professional and Laboratory Skills (2.7, 2.7, 2.6) Using a variety of formats, this course allows students to develop and practice their professional skills and introduces students to equipment and technical procedures used for a variety of research. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing in Psychology or consent of instructor. May be repeated for credit.

205A Computational and Research Methods with MATLAB (4). Introduces rudiments of programming, statistical analysis and probability theory, graphic visualization, GUI design, spectral analysis, and simulation models using MATLAB, a software package for solving quantitative problems often encountered in experimental psychology.

205B Running Experiments Using MATLAB (4). Provides an in-depth introduction to writing MATLAB programs to run auditory and visual experiments. Topics covered include program structure, stimulus generation, presentation, and data collection. Prerequisite: Psychology 205A or consent of instructor.

213 The Mind/Body Problem (4). Course is multidisciplinary, drawing on information from the fields of quantum physics, computer vision, artificial intelligence, cognition, neurophysiology, philosophy, and psychophysics.

219 The Development of Language and Communication Skills (4) . Introduction to developmental psycholinguistics, emphasizing interplay between language development and conceptual development. Topics include biological bases of language, role of prelinguistic experience, word learning including relation to categorization, syntactic development, and development of conversational skills such as turn-taking and establishing reference. Prerequisite: graduate standing or consent of instructor.

229 Special Topics in Human Cognition (1.3 to 4). Current research in brain/behavior relationships, human memory, and learning theory is presented. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

231P Topics of Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 243 and Philosophy 243.

233A-B-C Observer Theory I, II, III (4-4-4). Provides framework for mathematical analysis of perception/cognition and its relation to the physical world. Permits a unified treatment of perceptual and physical interactions and lays the foundation for a nondualistic, nonreductionistic science. Mathematical aspects include a study of Markovian dynamic systems. Prerequisite: graduate standing or consent of instructor.

234A-B Mathematical Models of Cognitive Processes I, II (4-4). Mathematical models of various cognitive processes developed since 1960, including learning, memory, perception, psycholinguistics, and problem solving. Models are formulated in different mathematical languages: calculus, algebra, logic, probability, and computer. Difficulties in testing and validating models discussed. Prerequisite: graduate standing or consent of instructor.

235M MATLAB Programming (4). MATLAB is a mathematical software package for solving quantitative problems often encountered in experimental psychology. Topics include rudiments of programming, statistical analysis of data, matrix algebra, signal processing, graphic visualization, and simulated models of cognitive and perceptual processes. Concurrent with Psychology 114M.

236 Multivariate Time Series Analysis (4). Introduces multivariate time series analysis theory and methods emphasizing computational methods in spectral analysis, autoregressive modeling, information theory, principal and independent components analysis, and nonlinear dynamics. Applications to human neuroimaging data are extensively discussed. Prerequisite: Psychology 235M or equivalent.

236F Advanced Statistical Methods in fMRI Analysis (4). Introduces advanced statistical methods used in inferring and exploratory fMRI analysis. Topics include hierarchical general linear modeling, parameter estimation variance components, design optimization, parametric designs, factor methods such as principle components, independent components, and path analysis. Prerequisite: Psychology 235M or 265C.

237A-B Cognitive Modeling I, II (4-4). Covers a range of computational models in psychology (e.g., connectionist, dynamic systems, symbolic, artificial life) using practical modeling exercises, class presentations, and individual modeling projects. Promising projects are expected to lead to conference presentations. Prerequisite: previous knowledge of cognitive modeling not necessary. Some skill in computer programming desirable, but not required. Any programming language (e.g., Matlab, C/C++, Mathematica) may be used; even a spreadsheet program such as Excel could potentially be used.

238 Auditory Signal Processing and Experimental Design (4). Topics include physics and measurement of sounds, digital signal processing (DSP), recording/processing of speech and music, generating complex sounds (e.g., FM and AM), use of sound level meter and artificial ear (coupler), digital filtering, signal mixing, autocorrelation and cross-correlation. Prerequisite: Psychology 235M or consent of instructor. Concurrent with Psychology 114Q.

239 Special Topics in Methodology and Models (1.3 to 4). Current research in cognitive sciences methodologies, concepts, and models is presented. May be repeated for credit as topics vary. Formerly Psychology 249.

240A Interactive Computer Graphics (4). An introduction to the background and skills necessary to construct and animate complex virtual reality environments. Prerequisites: acquaintance with elementary linear algebra and an ability to program in C++. Concurrent with Psychology 114I.

240C Virtual Reality: Research Applications (4). An in-depth examination of the application of virtual reality techniques in a variety of research areas. Students implement a large-scale virtual reality project. Prerequisite: Psychology 240B.

249 Special Topics in Virtual Reality (1.3 to 4). Current research in virtual reality techniques, principles, and concepts. May be repeated for credit as topics vary. Prerequisite: graduate standing or consent of instructor.

254 Human Information Processing (4). Detailed introduction to speed-accuracy tradeoff experimental procedures; speed-accuracy tradeoff issues; quantitative modeling of temporal aspects of human information processing. Prerequisite: graduate standing or Honors Program in Psychology undergraduate with consent of instructor.

259 Special Topics in Human Performance (1.3 to 4). Current research in the human issue involved with sensation, perception, and cognition. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary. Formerly Psychology 269.

260A Cognitive Neuroscience (4). Introduction to cognitive neuroscience. Discusses the neural basis of higher cognitive functions such as perception, attention, language, memory, and executive function as understood from functional brain imaging, neuropsychological disorders, and other neuroscience techniques.

261N Cortical Neuroscience (4). Physiology of the cerebral cortex, theoretical neuroscience, and the neural basis of perception. Prerequisite: Psychology 260A or consent of instructor.

265A-B Introduction to Functional MRI (4-4). Describes the fundamentals of imaging the human brain function using Magnetic Resonance Imaging (MRI). **265A:** Basic MRI physics and image acquisition for fMRI; experimental design for fMRI. **265B:** Fundamentals of fMRI data processing and analysis; fMRI data acquisition and analysis lab.

266 Genetic Bases of Sensory and Cognitive Processes (4). Explores genetic bases of sensory and cognitive functions. Mutations affecting vision, hearing, learning, and memory in animal model systems. General and specific cognitive abilities and failures in humans. Environmental effects on gene regulation, origin of new functions, and quantitative genetics. Prerequisite: graduate standing or consent of instructor.

269 Special Topics in Cognitive Neuroscience (1.3 to 4). Current research in cognitive neuroscience. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

271A, B, C Perception Seminar (1.3, 1.3, 1.4). Participants, who include faculty interested in auditory and visual perception/psychophysics, along with interested graduate students, make research presentations and discuss current publications. The seminar also serves as a forum for presentations by visiting researchers. Satisfactory/Unsatisfactory only.

274 Physiological Bases of Visual Perception (4). Covers visual perception and the anatomy of physiology of the visual system. Topics include: the retina and visual pathway; visual sensitivity; color vision; spatial vision; motion perception; and development of the visual system. Prerequisites: graduate standing, consent of instructor.

275 Spatial Hearing (4). Explores models of space perception, auditory virtual reality and image externalization, depth perception, motion perception, auditory object formation, spatiotemporal processing, binaural cross-correlation, and recent technological advances. Prerequisite: graduate standing or consent of instructor.

289 Special Topics in Sensation and Perception (1.3 to 4). Current research in the reception and processing of visual and auditory stimuli presented. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

290 Dissertation Research (4 to 12). Prerequisites: consent of instructor, graduate standing, psychology major only. May be repeated for credit.

299 Individual Study (4 to 12). Prerequisites: consent of instructor, graduate standing. May be repeated for credit.

DEPARTMENT OF ECONOMICS

3223 Social Science Plaza B; (949) 824-5788
David Brownstone, Department Chair

Economics is concerned with the way individuals or societies allocate scarce resources and distribute goods and services. Any situation requiring choice among competing alternatives can be viewed as an economic problem. Economic courses enable students to study the way individuals make these choices (microeconomics), the way governments make these choices (public choice), and the aggregate consequences of these choices (macroeconomics). In addition, the Economics curriculum addresses international trade, money and banking, and economic development of the less developed nations.

The Department of Economics is composed of faculty with interests in a broad range of areas within micro- and macroeconomics, and the evaluation of public policy. It is especially strong in empirical microeconomics including transportation, energy, industrial organization, labor, and urban development; in political economy and public choice; in economic history; and in econometrics. Members of the Department maintain close ties with members of the Department of Political Science and The Paul Merage School of Business. Members of the Department maintain affiliations with the Institute for Mathematical Behavioral Sciences, the Institute of Transportation Studies, the Institute of Global Conflict and Cooperation, the Center for the Study of Democracy, and the program in International Studies.

Undergraduate Program

The Department offers majors in Economics, Business Economics, and Quantitative Economics, and an optional specialization in International Issues and Economics available to students in all three majors. In addition, an Honors Program in Economics is open to high-achieving students in all three majors.

NOTE: Students may complete only one of the three Economics majors.

ADMISSION TO THE MAJORS

Freshmen: Preference will be given to those who rank the highest using the selection criteria as stated in the Undergraduate Admissions section of this *Catalogue*.

Transfer-Student Applicants: Transfer applicants with the highest grades overall who satisfactorily complete course prerequisites will be given preference for admission. All applicants must complete one course in microeconomics, one course in macroeconomics, and one semester or two quarters of approved calculus.

Change of Major. Information about change-of-major requirements, procedures, and policies is available in the School of Social Sciences Undergraduate Counseling Office and at http://www.due.uci.edu/Change_of_Major.html.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 442.

Departmental Requirements for the Major in Economics

This major is designed for students seeking a broad education applicable to occupations in business, law, and government or as preparation for graduate school in the social sciences. School requirements must be met and must include 17 courses as specified below.

- A. Economics 20A-B.
- B. Economics 15A-B.
- C. Mathematics 2A-B and 4.
- D. Economics 100A-B-C.
- E. Economics 122A.
- F. Six additional Economics courses, one of which may be lower-division.

Sample Program — Economics Majors

Freshman

Economics 20A-B
2 Lower-division writing courses
Mathematics 2A-B, 4
Lower-division Economics elective
2 Social Sciences intro. courses
2 Breadth

Sophomore

Economics 100A-B-C
Economics 15A-B
Social Sciences computer requirement
5 Breadth

Junior

Economics 122A
4 Upper-division Economics courses
2 Breadth
Electives

Senior

3 Upper-division Economics courses
Electives

Departmental Requirements for the Major in Quantitative Economics

The Department strongly urges students to consider the major in Quantitative Economics, which best prepares them for careers in business and finance, for law school, for M.B.A. programs, and for graduate studies in the social sciences. School requirements must be met and must include 19 courses as specified below.

- A. Economics 20A-B.
- B. Mathematics 2A-B, 3A, and 4.
- C. Economics 105A-B-C.
- D. Statistics 120A-B-C.
- E. Economics 123A-B.
- F. Five additional Economics courses, including at least four four-unit upper-division courses and one that satisfies the upper-division writing requirement. The upper-division electives must include two Quantitative Electives selected from Economics 109 (when the topic is either Game Theory or Asymmetric Information), 123C, 131A, and 135. Additional courses may be added to this list; up-to-date information is available at <http://www.economics.uci.edu/>.

NOTE: Students who are double majoring in Quantitative Economics and Mathematics may (i) substitute Mathematics 2D-E for Mathematics 4, (ii) substitute an upper-division probability and statistics sequence taught in the Mathematics Department for Statistics 120A-B-C, and (iii) substitute three upper-division Mathematics electives for upper-division Economics electives.

Sample Program — Quantitative Economics Majors

Freshman

Economics 20A-B
2 Lower-division writing courses
Mathematics 2A-B, 3A, 4
2 Social Sciences intro. courses
2 Breadth

Sophomore

Economics 105A-B-C
Statistics 120A-B-C
Social Sciences computer requirement
4 Breadth

Junior

Economics 123A-B
4 Upper-division Economics courses
2 Breadth
Electives

Senior

3 Upper-division Economics courses
Electives

Departmental Requirements for the Major in Business Economics

The Business Economics major is for students seeking a business orientation in their study of economics. It does not replicate the traditional undergraduate business school curriculum. Instead, it offers a more tightly focused curriculum that is guided by the rigorous logic and integrative perspective of economics. School requirements must be met and must include 20 courses as specified below.

- A. Economics 20A-B.
- B. Economics 15A-B.
- C. Economics 25.
- D. Mathematics 2A-B and 4.
- E. Economics 100A-B-C.
- F. Economics 122A-B.

- G. Seven additional Economics courses, including at least four four-unit upper-division courses. Two of the electives must be selected from the following Business Electives list: Economics 129 (when the topic is Business Forecasting), 131A, 132A, 134A, 142A-B-C, 145, and 161A-B-C; and two of the electives must be selected from the following Management Electives list: Economics 139 (when the topic is Managerial Accounting), 149 (when the topic is Managerial Economics or Business Decisions), and 169 (when the topic is Economics of International Business). It is strongly recommended that students satisfy the upper-division writing requirement with one of the Economics electives.

Sample Program — Business Economics Majors

Freshman

Economics 20A-B
2 Lower-division writing courses
Mathematics 2A-B, 4
Economics 25
2 Social Sciences intro. courses
2 Breadth

Sophomore

Economics 100A-B-C
Economics 15A-B
Social Sciences computer requirement
5 Breadth

Junior

Economics 122A-B
4 Upper-division Economics courses
2 Breadth
Electives

Senior

3 Upper-division Economics courses
Electives

Specialization in International Issues and Economics

Students in any of the three Economics majors may complete the specialization in International Issues and Economics. Admission to the specialization requires approval in advance by the Economics Department. The admissions process begins with completing a form at the Department office. This approval should be applied for after the student has completed Economics 20A-B, but no later than the end of the junior year.

The specialization requires the completion of:

- A. International Studies 11 and 12 and Economics 13.
- B. Three upper-division international Economics elective courses selected from Economics 148I-J-K, 161B-C, 162A, 163, 164A, and 169.
- C. Three additional international breadth elective courses selected from International Studies 111A, 112A, 120, 121, 122, 123, 179; Political Science 141A, 141B, 141C, 141D, 143D, 143E; Environmental Analysis and Design E100 (when the topic is International Environmental Issues); History 21A, 21B, 21C, 101. At most, only one lower-division elective may be taken.

Honors Program in Economics

Undergraduates in any of the three Economics majors may complete the Honors Program in Economics. Entry into the program requires a 3.4 GPA or better in upper-division Economics courses and an overall GPA of 3.2 or better. Undergraduates hoping to enter the program must apply no later than the spring quarter of their junior year. Applicants must have the Undergraduate Advisor sign the application form. Students in the Honors Program must complete an honors thesis and the two-quarter Economics Honors Colloquium (Economics H190A-B; satisfies the upper-division writing requirement).

Graduate Program

Participating Faculty

Marigee Bacolod: Labor economics, econometrics, and microeconomics
 Duran Bell: Models of social processes
 Volodymyr Bilotkach: Industrial organization, transportation economics, and microeconomics
 Dan Bogart: Economic history, institutions, infrastructure and economic development
 William A. Branch: Macroeconomics
 David Brownstone: Econometrics and transportation economics
 Jan K. Brueckner: Urban economics, public economics, industrial organization, and housing finance
 Jiawei Chen: Empirical industrial organization, econometrics, finance
 Linda R. Cohen: Political economy, social choice, government regulation, and government policy toward research and development
 Art DeVany: Economic theory, industrial organization
 Gordon J. Fielding: Urban and transportation economics
 Michelle R. Garfinkel: Macroeconomics, political economy and conflict
 Amihai Glazer: Political economy
 Jun Ishii: Industrial organizations, regulated industries, applied econometrics
 Ivan Jeliakov: Econometrics, applied econometrics, empirical macroeconomics, and monetary economics
 Igor Kopylov: Microeconomics, decision theory, game theory
 Charles A. Lave: Transportation economics
 R. Duncan Luce: Theory of measurement, individual decision theory, response times
 Julius Margolis: Political economy of national defense and government behavior
 Michael McBride: Microeconomics, game theory, political economy
 Martin C. McGuire: Public finance, international trade, economics of peace and security
 Fabio Milani: Macroeconomics, monetary economic, time-series econometrics, international money and finance
 David Neumark: Labor economics
 Min Ouyang: Macroeconomics, industrial organization, computational economics
 Dale Poirier: Econometrics, both theoretical and empirical, specializing in Bayesian econometrics
 Priya Ranjan: International trade
 Gary Richardson: Economic history, immigration, institutions, and economic development
 Donald G. Saari: Social choice, voting theory, economic theory and mathematical economics
 Stergios Skaperdas: Economic theory, political economy
 Kenneth A. Small: Urban economics, transportation economics, discrete-choice econometrics, environmental economics
 Kurt Van Dender: Transportation economics, urban economics, and public finance
 Christian Werner: Mathematical geography

Affiliated Faculty

Dennis J. Aigner: Statistical and econometric methodology, efficiency estimation
 Frank Bean: Immigration, population, public policy
 Marlon G. Boarnet: Urban planning, urban economic development
 Thomas C. Buchmueller: Economics of health care
 Michael L. Burton: Economic anthropology, cognitive anthropology; kinship, gender, and households
 Frank Cancian: Economic anthropology, comparative social inequality
 Christopher Carpenter: Health economics, labor economics, and policy evaluation
 Paul J. Feldstein: Economics of health care
 Bernard Grofman: Mathematical models of decision making, electoral rules and reapportionment
 Mireille Jacobson: Health economics
 Philippe Jorion: Empirical research in investment, global portfolio investments, predicting the risk and return of foreign currencies, managing financial risk, and derivatives markets
 Marek Kaminski: Voting models, democratization, political consequences of electoral laws
 Richard McKenzie: Public choice
 Andrew Policano: Macroeconomics, monetary theory and policy

Jean-Daniel Saphores: Environmental and natural resource economics and policy
 Brian Skyrms: Game theory and decision making
 Carole J. Uhlaner: Comparative political participation, formal models of political behavior

The Department of Economics offers a Ph.D. degree program in Economics. Drawing upon the School's strong quantitative tradition, it specializes in public choice, transportation economics, urban economics, econometrics, and applied microeconomics. Admission is highly selective and is limited to students whose interests mesh closely with those of the faculty. By requiring a high degree of overlap between faculty and student research interests, the program offers extensive faculty contact within a tutorial framework. Motivated and well-qualified students find the graduate program highly attractive because of its small size and its great flexibility. Self-discipline and an inquiring mind are prerequisites.

ADMISSION

The deadline for application for admission is January 15 for fall quarter. Students are admitted for winter or spring quarters only under exceptional circumstances. Late applications are considered on a space-available basis. All applicants must take the Graduate Record Exam (GRE) prior to the application deadline. Applicants whose primary language is not English must also submit Test of English as a Foreign Language (TOEFL) scores. To be considered for any financial aid (including a teaching assistantship), students who are not citizens of countries where English is either the primary or dominant language as approved by the UCI Graduate Council must submit a passing score from the Test of Spoken English (TSE).

REQUIREMENTS

All students must show competence in the core areas of microeconomics, macroeconomics, and econometrics. This is done by taking the three-quarter required course sequences in microeconomics and macroeconomics, and the four-quarter required course sequence in econometrics.

A student can take the oral candidacy examination after completing the 10 required core courses with no grade lower than a B and with a grade point average across all graduate courses of at least 3.25. The student must also complete a research paper that consists of an extended literature review in a subfield approved by the graduate committee or a replication and extension of an empirical paper published in a refereed economics journal. A well-prepared student should take this oral examination at the end of the fourth or fifth quarter. The normal time for advancement to candidacy is two years (six quarters).

Students also must master two fields of applied economics by taking a two-course sequence (possibly including independent reading courses) and writing a research paper in each field. Students also must enroll for at least four quarters in the graduate colloquium, in which attendance at regular Economics faculty research colloquia is supplemented by discussion of the papers presented and additional reading. Students are encouraged to become conversant with areas of current economic research early in their graduate careers, in order to facilitate a timely transition from meeting course and field requirements to thinking through a dissertation research plan.

Two or three quarters before the expected completion of the dissertation, the dissertation committee will organize an oral examination of the candidate's dissertation prospectus. Ordinarily, the prospectus will describe in detail the dissertation, and will typically be accompanied by at least one completed chapter of the dissertation.

Students are expected to complete their dissertation by the end of their fifth year. The maximum time permitted for completion of the Ph.D. is six years.

Concentration in Transportation Economics

Students can also pursue a Ph.D. in Economics with a concentration in Transportation Economics. This option draws upon the transportation researchers on the campus within the School of Social Sciences, The Henry Samueli School of Engineering, The Paul Merage School of Business, and the School of Social Ecology. Students benefit from association with the Institute of Transportation Studies, which facilitates student research by providing research assistantships and interdisciplinary seminars on all modes of transportation.

Requirements for the concentration are the same as those described above with the following three exceptions: (1) instead of the third quarter of microeconomics and macroeconomics, students may substitute specified courses such as Discrete Choice Econometrics (Economics 223A), Advanced Travel Demand Analysis (Engineering CEE220A), or Operations Research for Management (Management 201B); (2) one of the student's two required fields of competence must be transportation economics; the other must be a related field such as urban economics, labor economics, industrial organization, or a transportation-related field from outside economics (such as travel demand and flow theory, urban and transportation policy analysis, environmental impacts of transportation, or urban and transportation planning) subject to the approval of the Director of Graduate Studies for Economics; and (3) students must take at least one additional course from a list of designated courses in transportation and related subject areas.

Concentration in Public Choice

Students can also pursue a Ph.D. degree in Economics with a concentration in Public Choice. This is an interdisciplinary field, at the intersection of Economics and Political Science, which draws on quantitative tools to model the functioning of political institutions. Faculty from the Departments of Economics, Political Science, and Logic and Philosophy of Science and from The Paul Merage School of Business are involved in research that supports the concentration.

Students who elect this concentration are admitted under the normal procedures for the program in Economics and must fulfill all the requirements for the Economics degree with the following modifications: (1) one of the student's two required fields of competence must be public choice; included is a three-quarter core course in public choice, Economics 270A-B-C, which is jointly organized by faculty in the Departments of Economics and Political Science. (A background in economic theory is a prerequisite to this sequence.) The requirement for competence in a second field may be met with a one-quarter course, instead of two, if it provides sufficient fluency in the field; and (2) students must obtain a background knowledge in political science equivalent to that provided by a one-year undergraduate survey course, if they do not already have it.

RESEARCH FACILITIES

UCI is a major research university with an excellent library, as well as special interlibrary loan arrangements with other University of California libraries. The School of Social Sciences provides a computer laboratory. The Economics Department has a small library with current journals and unpublished working papers from other universities. Students also have access to advanced computing resources as well as PC and UNIX laboratories. Three Organized Research Units, the Institute of Transportation Studies, the Center for Research on Information Technology and Organizations, and the Institute for Mathematical Behavioral Sciences, provide research opportunities for graduate students.

Courses in Economics

NOTE: Students are reminded that each quarter of a sequential course (i.e., Economics 100A-B-C) must be taken in order. Priority for admission to upper-division Economics courses is given to Economics majors and International Studies majors.

LOWER-DIVISION

1 Introduction to Economics (4) F, W, S. An analysis of the problems society faces in organizing itself to provide goods and services. How decisions of government, business, and the individual relate to current economic problems such as unemployment, inflation, poverty, and environmental pollution. Open only to non-Economics majors. Credit will not be given for Economics 1 if taken concurrently or after Economics 20A-B. (III)

13 Global Economy (4) S. Acquaints students with the fundamental patterns of the global economy. Emphasizes the historical roots and political implications of economic choices. Same as International Studies 13. (VII-B)

15A-B Probability and Statistics in Economics I, II (4-4) F, W. An introduction to probability, statistics, and econometrics. Emphasis on a thorough understanding of the probabilistic basis of statistical inference. Examples from economics. Prerequisites: Mathematics 2A-B and 4. Formerly Economics 110A-B.

17 An Economic Approach to Religion (4) F. Introduction to how basic economic concepts such as demand, supply, consumption, production, competition, free-riding, innovation, regulation, and rent-seeking can be applied to understand observed religious behavior. (III)

20A-B Basic Economics I, II (4-4) F, W. 20A: The fundamentals of microeconomics. The behavior of firms and of consumers: markets, supply/demand, utility maximization, resource allocation, and efficiency. 20B: The fundamentals of macroeconomics. Government behavior: monetary and fiscal policy, inflation, and unemployment. (III)

25 The Economics of Accounting Decisions (4). Introduction to accounting concepts and principles, including the accounting model and accounting style, transaction analysis, and preparation of financial statements. An analysis of the similarities and differences between accounting and economic concepts (e.g., value, profits). Prerequisite: Economics 20A. Formerly Economics 102A.

UPPER-DIVISION

100-119: GENERAL ECONOMICS

100A-B-C Intermediate Economics I, II, III (4-4-4) F, W, S. Determinants of supply and demand; operation of competitive and monopolistic markets; imperfections of the market system, explanations of unemployment, inflation, recessions; public policy for macroeconomic problems. Prerequisites: Economics 20A-B and Mathematics 2A or equivalent. For 100B: Economics 100A. For 100C: Economics 100B. Economics 100A-B-C and 105A-B-C may not both be taken for credit.

101A-B Advanced Macro- or Microeconomics (4-4). 101A: Consumption and investment theories. Theories of money demand and supply. 101B: A presentation of the theory of production and distribution, relying heavily upon formal mathematical models. Prerequisites: Economics 100A-B-C and Mathematics 2A-B and 4.

104A History of Economic Thought (4). Discussion of the principal schools of economic thought. Emphasis on ideas expressed by Smith, Malthus, Ricardo, Marx, Jevons, J.B. Clark, Bohm-Bawerk, Wicksell, Marshall, and Keynes. Assignments include readings (in English) of important selections from the original works. Prerequisite: Economics 20A-B.

105A-B-C Intermediate Quantitative Microeconomics and Macroeconomics I, II, III (4-4-4) F, W, S. An advanced and mathematical version of Economics 100A-B-C for students in the Quantitative Economics major. Prerequisites: Economics 20A-B and Mathematics 2A-B, 3A, and 4. Economics 105A-B-C and 100A-B-C may not both be taken for credit.

109 Special Topics in Economic Theory (4). Prerequisites vary. May be repeated for credit as topic varies.

116 Game Theory (4). An introduction to non-cooperative game theory. Topics include Nash Equilibrium, Subgame perfect equilibrium, dynamic games, bargaining, repeated games, and cooperation. Prerequisites: Economics 15A-B and 100A.

120-124: QUANTITATIVE METHODS

122A-B Applied Econometrics I, II (4-4). Introduction to econometrics emphasizing practical applications in microeconomics and macroeconomics. Prerequisites: Economics 15A-B, 20A-B. Economics 122A-B and 123A-B may not both be taken for credit.

123A-B-C Econometrics I, II, III (4-4-4) F, W, S. **123A-B:** Specification, estimation, and testing of econometric models. Applications in various areas of microeconomics and macroeconomics. **123C:** Seminar course in which students do an original econometric research project. Prerequisites: Mathematics 2A-B and 4 or equivalent; Statistics 120A-B-C and Economics 100A-B-C. For 123C: satisfactory completion of the lower-division writing requirement. Economics 123A-B and 122A-B may not both be taken for credit.

124A Time Series Analysis (4). Introduction to the basic techniques of time series analysis. Univariate time series models and forecasting. Multivariate models. Transfer function models. Relations between time series models and econometric models. Prerequisite: Economics 123A.

129 Special Topics in Quantitative Methods (4). Prerequisites vary. May be repeated for credit as topic varies.

130-139: FINANCIAL ECONOMICS

131A The Economics of Risk and Uncertainty (4). The theory of insurance and joint-ownership of risky enterprises; optimal procedures for the allocation of uncertain payoffs. Prerequisites: prior or concurrent enrollment in Economics 15A-B or equivalent; Economics 100A-B.

132A Portfolio Selection and Capital Market Theory (4). Optimal design of portfolios based upon mean-variance characteristics. An examination of the efficiency of present-day capital markets. Prerequisites: Economics 15A-B or equivalent; Economics 100A-B-C.

134A Corporate Finance (4). Provides an overview of the modern theory and practice of corporate finance and focuses on two fundamental financial decisions; investment as well as financing. Prerequisite: Economics 100A-B-C.

135 Mathematics of Finance (4). Introduces the mathematics of finance with an emphasis on financial derivatives. After a review of certain tools from probability, statistics, and elementary differential and partial differential equations, concepts such as hedging, arbitrage, Puts, Calls, and the design of portfolios are discussed. Prerequisites: Mathematics 2A-B-J. Same as Mathematics 176.

139 Special Topics in Financial Economics (4). Prerequisites vary. May be repeated for credit as topic varies.

140-149: ECONOMICS OF PUBLIC AND PRIVATE ORGANIZATIONS

141A-B-C Economic Analysis of Government Behavior I, II, III (4-4-4). The study of government using the tools of economics. **141A:** The influence of voters' preference on governmental policy; Arrow's impossibility theory; the Downsian theory of voting. **141B:** The effects of various taxation and expenditure policies, such as social security. **141C:** Research course in which students write a paper testing one of the theories covered in the first two quarters of the sequence. Prerequisite: Economics 100A-B. Same as Political Science 127A-B-C. Economics 141B also same as Environmental Analysis and Design E158U.

142A-B-C Industrial Organization I, II, III (4-4-4) F, W, S. **142A:** The theory of market structure. Imperfect markets, government policies, and industry performance. **142B:** Regulation and antitrust theory and performance in industries. **142C:** Research in industrial organization. Prerequisites: Economics 15A-B and 100A-B. For 142C: satisfactory completion of the lower-division writing requirement.

144A-B-C Urban Economics I, II, III (4-4-4). **144A:** Focus on spatial impact of economic process within urban areas. **144B:** Emphasizes economic theory and the assessment of the urban problem including housing, transportation, environmental quality, and public finance. **144C:** Allows students to apply knowledge of urban and transportation economics in the conduct of individual research. Prerequisites: Economics 15A-B, 20A-B, or equivalent. For 144C: satisfactory completion of the lower-division writing requirement.

144T Mathematical Analysis of Transportation Networks (4). Models of transportation demand; optimal utilization of transportation networks; cost-benefit analysis of network design projects; the economic impact of transportation networks. Prerequisites: Economics 20A-B. Same as Social Science 118A.

145E Economics of the Environment (4). Surveys economic aspects of natural resources, pollution, population, and the environment. Examines the causes of pollution, e.g., air, water, noise, toxic waste, and nonoptimal utilization of certain resources, e.g., fisheries; analysis of public policies regarding these problems. Emphasis on microeconomic aspects of environmental problems. Prerequisites: prior or concurrent enrollment in Economics 15A-B and 122A or equivalent; Economics 100A-B.

145F Economics of the Environment II (4). Applications of the tools covered in Economics 145E to such topics as global warming, destruction of the ozone layer, and emissions trading. Emphasis on independent research papers. Syllabus and classes include writing technique. Prerequisites: Economics 15A-B, 145E, and satisfactory completion of the lower-division writing requirement.

145L Economics of Law (4). Examination of several economic concepts which are useful in understanding legal rules: externalities, the assignment of property rights, and Coase's theorem. Examples are drawn from the fields of pollution control, no-fault insurance, medical malpractice, and product liability. Prerequisites: Economics 100A-B or concurrent enrollment in Economics 100B.

146 Public Policy Issues (4). An examination and interpretation of the public policy areas such as schooling, housing and homelessness, occupational licensing, F.D.A. drug approval, credit bureaus, the U.S. Postal Service, and auto emissions. Prerequisites: Economics 15A-B or equivalent; 100A-B-C; satisfactory completion of the lower-division writing requirement.

148A-B Political Economy of National Defense I, II (4-4). **148A:** Analysis of the adoption of military solutions to international problems; military budgets, weapons policy, and procurement; distribution of benefits and costs of military systems. Emphasis given to nuclear military policy. Focuses on empirical and descriptive works on policy and practice. **148B:** Research seminar. Research paper required. Prerequisites: Economics 20A-B.

148I-J-K Political Economy of International Relations I, II, III (4-4-4).

148I-J: Migration, trade, and finance in competitive markets; bargaining and compacts; hegemony and imperialism; alliances; multinational firms; international institutions; international law; war and national boundaries; common markets; nationalism; super power conflicts. **148K:** Research seminar. Prerequisites: prior or concurrent enrollment in Economics 15A-B or equivalent; Economics 20A-B.

149 Special Topics in Economics of Public and Private Organizations (4). Prerequisites vary. May be repeated for credit as topic varies.

150-159: HUMAN RESOURCES

151A-B-C Labor Economics and Human Resources I, II, III (4-4-4) F, W, S. Analysis of wage determination and the role of labor in production. **151A:** Develops, extends, and applies basic supply/demand analysis. **151B:** Labor market discrimination. **151C:** Original research by students. Prerequisites: Mathematics 2A-B and 4; Economics 15A-B and 100A-B-C. For 151C: satisfactory completion of the lower-division writing requirement.

152A Economic Anthropology (4). Economic systems in comparative perspective: production, distribution, and consumption in market and non-market societies; agricultural development in the third world. Prerequisite: one course in general science, anthropology, economics, geography, or sociology. Same as Anthropology 125A. (VII-B)

152M Marriage and Bridewealth (4). The rules by which children are positioned within a social system and by which men claim rights over women vary widely among societies. Analyzes these rules on the basis of a formal theory of wealth allocations between and among corporate groups that challenge neoclassical models. Prerequisites: Anthropology 2A and Economics 20A-B, or consent of instructor. Same as Anthropology 126G.

152P-Q Evolution of Social Formations I, II (4-4). **152P:** Models and ethnographic descriptions of noncommodity economic relationships of the form that characterize intergroup and intragroup economic processes of many tribal societies. Includes analyses of gift exchange and resource allocation within the household. **152Q:** Devoted entirely to supervised research by class members. Prerequisites: Economics 20A-B; Economics 152A or Anthropology 125A recommended. Prerequisite for 152Q: satisfactory completion of the lower-division writing requirement. Same as Anthropology 125P-Q. (VII-B)

155A Economics of the Family (4). Students write and rewrite papers on topics that are suggested by the models and literature in the "economics of the family." Prerequisites: Economics 15A-B or equivalent; 100A-B-C; satisfactory completion of the lower-division writing requirement.

157 Economic Development (4). Considers the process of economic development across the globe and why some countries are rich and others poor. Discusses the major problems facing developing countries, such as population growth, education, capital formation, environmental protection, and international trade. Prerequisites: Economics 20A-B.

158 Economics of Education (4). Arms students with tools, concepts, and evidence that can be used to analyze complex policy questions in education, enabling students to arrive at their own reasoned judgments about how to improve education. Prerequisite: satisfactory completion of the lower-division writing requirement.

159 Special Topics in Economics in Human Resources (4). Prerequisites vary. May be repeated for credit as topic varies.

160–169: MACROECONOMICS

161A Introduction to Financial Investments (4). Basic elements of money and banking; institutional features and economics of financial markets and, in particular, of the U.S. banking system; determinants of interest rates; the Federal Reserve and its role in the money supply process; effects of money on output and inflation. Prerequisites: Economics 100A-B-C or 100A-B and concurrent enrollment in 100C.

161B International Money (4). Open economy macroeconomics and determination of exchange rates. Asset-market approach to the balance of payments. Internal and external balance in the economy. Macroeconomic policies under fixed and floating exchange rates. The international monetary system and institutions. Prerequisites: Economics 100A-B-C or 100A-B and concurrent enrollment in 100C.

161C International Trade and Commercial Policy (4). Determination of trade flows and the relative prices. Gains from trade, the terms of trade, and income distribution. Imperfect competition and international trade. The effect of tariffs, export subsidies, and import quotas. The effects of free and restricted trade on economic welfare. Prerequisites: Economics 15A-B or equivalent; 100A-B or 100A and concurrent enrollment in 100B.

161D Advanced Money and Banking (4). What happened in the Great Depression and why? Could it happen again? What is the transmission mechanism? What do economists know about the money supply process? What is the evidence on the demand for money? What are the more important current issues for monetary policy? Prerequisite: Economics 161A.

162A The Japanese Economy (4). An analysis of the structure and performance of the Japanese economy in the post-World War II period. The mechanism and policies of rapid growth. Japan's industrial structure, labor market, and financial system. United States-Japanese trade friction and policy issues. Prerequisites: Economics 15A-B or equivalent; 100A-B-C.

163 Communism in Russia and China (4). Examines the politics, economics, and history of revolutionary Marxism during the twentieth century. Begins by discussing the theoretical foundation of communism and then contrasting those theories with the actual institutions established in communist nations and with socialist, capitalist, and democratic systems. Prerequisites: Economics 20A-B.

164A The Industrial Revolution in Western Europe (4). How do economists explain the process of economic development during the past three centuries? How has the process of industrialization affected living standards? In focusing on these questions, students learn how to apply economic theory and quantitative methods to the study of historical issues. Prerequisites: Economics 100A-B-C; satisfactory completion of the lower-division writing requirement.

164B The Industrial Revolution in the United States (4). How do economists explain the process of economic development during the past three centuries? How has the process of industrialization affected living standards? In focusing on these questions, students learn how to apply economic theory and quantitative methods to the study of historical issues. Prerequisites: Economics 100A-B-C; satisfactory completion of the lower-division writing requirement.

169 Special Topics in Development Economics (4). Prerequisites vary. May be repeated for credit as topic varies.

H190A-B Economics Honors Colloquium I, II (4-4). Colloquium required for honors students in Economics, Quantitative Economics, and Business Economics. Introduces students to independent research. Helps students plan a research program. **H190A:** Prepares students for thesis writing. **H190B:** Students complete their thesis. Prerequisites: must be enrolled in the Honors Program in Economics; satisfactory completion of the lower-division writing requirement.

GRADUATE

200A-B-C Graduate Colloquium for Economics I, II, III (2-2-2) F, W, S. Weekly reports and colloquia by faculty, students, and visitors. Supplemented by class discussion of these presentations and other material on current research methodology. Prerequisite: admission to graduate program in Economics or consent of instructor. May be repeated for credit.

201A-B-C Graduate Student Prospectus Seminar (4-4-4). Graduate students present their dissertation prospectus and job market papers to other graduate students and faculty. All graduate students on the job market must enroll and present their job market papers, and all third-year graduate students are strongly encouraged to enroll. Prerequisite: graduate standing. May be repeated for credit.

203A Mathematics for Economists (4). Gives students the mathematical background required for graduate work in economics. Topics covered include multivariate calculus, differential equations, and linear algebra. Prerequisite: graduate standing or consent of instructor.

206 How to Write a Paper (2 to 4). A course on writing. Also discusses how to make an oral presentation, how to go about doing research, and how academic journals operate. Grade based on two written assignments in which student edits and revises a paper.

210–219: GRADUATE ECONOMIC THEORY

210A-B-C Microeconomic Theory I, II, III (4-4-4) W, S. Theoretical microeconomics. Emphasis on the meaning and empirical interpretation of theoretical models. Topics include theory of the firm, theory of the market, theory of the consumer, duality theory, application to econometrics, general equilibrium and welfare economics, uncertainty, game theory. Prerequisite: graduate standing or consent of instructor.

210D-E-F Macroeconomic Theory I, II, III (4-4-4) F, W, S. Advanced macroeconomic theory including alternative macroeconomic models, microeconomic foundations of macroeconomics, investment and growth theory, inflation and unemployment, rational expectations and macroeconomic policy, wealth effects, crowding out and fiscal policy, money and interest, open economy models.

219A-Z Special Topics in Economic Theory (4) F, W, S. Prerequisites vary. May be repeated for credit.

220–229: QUANTITATIVE METHODS

220A-B-C-D Statistics and Econometrics I, II, III, IV (4-4-4-4). **220A:** Covers probability mathematical statistics necessary to prepare students for econometric study and empirical work. Topics include probability theory, distributions, sampling, and classical point estimation. A likelihood perspective is emphasized. **220B:** Begins with Bayesian point estimation. Then covers interval estimation and hypothesis testing from both classical and Bayesian perspectives, followed by a general discussion of prediction. Finally, all these techniques are applied to the standard linear regression model under ideal conditions. **220C:** Begins by relaxing the ideal conditions of the standard regression model. Topics include kernel density estimation, Generalized Least Squares (GLS), instrumental variables (IV), two stage least squares (2SLS), panel data models, and simulation-based Bayesian methods, including Gibbs sampling. **220D:** Begins by reviewing estimation theory and the bootstrap. Topics include econometric time series, discrete choice and count models, sample selection, and duration models. Covers both Bayesian and classical asymptotic methods.

221A-B-C-D Statistics and Econometrics Laboratory I, II, III, IV (2-2-2-4). **221A-B-C:** Discussion of problems in statistics and econometrics and their relationship to statistical and econometric theory. Instruction in the use of computers for applied econometric work. **221D:** Before the course begins, students choose a published empirical economics article and obtain the necessary data to replicate it. Then, students replicate and extend the economic analysis and write a paper describing their work. Satisfies econometrics requirement for the Ph.D. in Economics. Corequisites: Economics 220A-B-C-D.

223A Discrete Choice Econometrics (4). Specification, estimation, and testing of discrete choice models, with emphasis on cross-section application. Qualitative choice, limited dependent variables, sample selection bias, and latent variables. Students use computer packages to apply models to real data. Prerequisites: Economics 220A-B-C-D.

224A Time Series Econometrics (4). Econometric analysis of time series data. Moving average and autoregressive series, regression analysis, Box-Jenkins techniques, computational methods, and causality conditions. Prerequisites: Economics 220A-B-C-D.

229A-Z Special Topics in Quantitative Methods (4). Prerequisites vary. May be repeated for credit as topics vary.

239: FINANCIAL ECONOMICS

239A-Z Special Topics in Financial Economics (4). Prerequisites vary. May be repeated for credit as topics vary.

240-249: MICROECONOMICS

241A-B Industrial Organization I, II (4-4). Analysis of the structure and economic performance of markets, and the impact of public policy and their efficiency and equity. Effects of information structure. **241A:** Oligopoly, cartels, mergers, vertical integration, patents, innovation, antitrust, and regulation; **241B:** price flexibility and dispersion, auctions, search and industrial structure, intrafirm organization. Prerequisites: Economics 100B and 203A.

243A Game Theory (4). A formal introduction to noncooperative game theory. Topics include properties of Nash Equilibrium and equilibrium refinements, dynamic games, repeated games, games with imperfect information, and games with incomplete information. Prerequisites: Economics 201A-B-C; graduate standing or consent of instructor.

243B Advanced Game Theory (4). Provides advanced instruction and research opportunities in game theory for students interested in using game theory in their research. Prerequisites: Economics 243A and consent of instructor.

249A-Z Special Topics in Microeconomics (4). May be repeated for credit as topics vary.

250-259: HUMAN RESOURCES

251A-B Labor Economics I, II (4-4). Analytic and empirical study of labor markets. Topics include labor supply and demand, human capital, educational sorting, life-time earnings profiles, discrimination, unemployment, unions; several econometric techniques including combined time-series and cross-sections, sample selection bias, and switching regressions are taught as needed. Prerequisites: Economics 100B and 203A.

259A-Z Special Topics in Human Resources (4). Prerequisites vary. May be repeated for credit as topics vary.

260-269: MACROECONOMICS

261A-B International Trade I, II (4-4). Covers theoretical models, empirical methods, and policy issues in international trade. Following the conventional treatment of the Ricardian model, the Heckscher-Ohlin model, and the specific factors model; new trade models which incorporate scale economies and imperfect competition are discussed. Prerequisite: Economics 210A-B.

269A-Z Special Topics in Macroeconomics (4). Prerequisites vary. May be repeated for credit as topics vary.

270-279: PUBLIC CHOICE

270A-B-C Seminar in Public Choice I, II, III (4-4-4). Public choice lies at the intersection of economics and political science. This course involves the use of tools derived from economics to understand the behavior of governments and of citizens when they deal with politics. Prerequisite: graduate standing and Social Science 111H. Same as Political Science 270A-B-C.

279A-Z Special Topics in Public Choice (4). Prerequisites vary. May be repeated for credit as topics vary.

280-289: URBAN AND TRANSPORTATION ECONOMICS

281A-B Urban Economics I, II (4-4). Theoretical and empirical analysis of the economic functioning of urban areas. Urban economic development, location of firms and households, housing markets, urban public finance. Econometric estimation of hedonic price functions for housing. Prerequisites: Economics 100B and 203A or equivalent.

282A-B Transportation Economics I, II (4-4). **282A:** Applies microeconomic concepts of demand, costs, pricing, investment, and project evaluation to analyze transportation activities. Empirical studies include travel demand using discrete models, and cost functions. **282B:** Policy analysis in the presence of road transport externalities (such as environmental spill-overs), imperfect instruments, and other economic distortions such as imperfectly priced networks and imperfect competition. Connections of transportation economics with environmental economics, public finance, spatial economics and industrial organization.

285A-B-C Colloquium for Transportation Science I, II, III (2-2-2).

Selected perspectives on transportation based on the study of human behavior. Organized by Interdisciplinary Program in Transportation Science. Research presentations by faculty, students, and visitors supplemented by class discussion. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

289A-Z Special Topics in Urban and Transportation Economics (4). Prerequisites vary. May be repeated for credit as topics vary.

290-299: SPECIAL COURSES

290 Dissertation Research (4 to 12). Prerequisite: consent of instructor. May be repeated for credit.

299 Independent Study (4). May be repeated for credit.

THE CURRICULUM IN GEOGRAPHY

The curriculum in geography covers such topics as the evolution of the landscape, arrangement of urban centers, the internal structure of cities, the arrangement of industrial and agricultural activities, the pattern of movement of people, goods and ideas, and relationships between humans and the environment.

Courses in Geography

LOWER-DIVISION

Social Science 5 Introduction to Geography. Basic introduction to geography.

5A Introduction to Human Geography (4). Human behavior in a geographical context. Spatial patterns and organization of the cultural, social, and economic activities of man as imposed on and influenced by the earth's physical setting. (III)

5B Introduction to Physical Geography (4). An introduction to the physical world we live in. Distribution and dynamics of the earth's air, water, and solid crust. Concepts and principles from climatology and geology. Selected examples from North America and beyond. (III)

5C Environment and Resources (4). Analysis of landscapes, with special attention to California and the West. Emphasis on humans as agents of environmental change. (III)

5D U.S. and World Geography (4). Provides a broad survey of general geographical principles and facts on a world scale as well as introduces students to the broad regional and resource geography of the U.S., emphasizing in particular the interactions of physical and cultural factors. (III)

Social Science 18A Evolution of Landforms (4). Introduction to geomorphology; major forces which shape the relief of the earth's surface and the forms which result from their activity. General principles demonstrated using examples from the western United States with special emphasis on California. (III)

Social Science 18C Dynamics of the Physical Landscape (4). A seminar on landscape processes and the management of natural hazards (e.g., erosion, flooding, droughts, landslides, earthquakes). Emphasis on Southern California. Students research and make oral presentations on topics determined by agreement with instructor.

Social Science 18D Models in Economic Geography (4). Economic decision making in a spatial context: the location, distribution, and dynamics of economic activities. Theories of population growth, urbanization, industrial location, interregional trade, and regional planning. (III)

UPPER-DIVISION

Course modules emphasizing geography are assigned numbers 118 and 119.

Social Science 118 Geographical Analysis

118A Mathematical Analysis of Transportation Networks (4). Models of transportation demand; optimal utilization of transportation networks; cost-benefit analysis of network design projects; the economic impact of transportation networks. Prerequisites: Economics 20A-B. Same as Economics 144T.

118C Transportation Theory (4). Advanced topics in transportation systems analysis and planning; land-use and traffic generation; traffic flow and network theory; transportation impact; transportation policy. Emphasis on theoretical approaches and mathematical models. Prerequisites: Economics 20A-B-C.

118D Urban Policy (4). The first quarter of a series of urban policy issues in view of the principles of urban politics and urban administration. Special emphasis on transportation problems.

118E Urban Theory (4). Urban theory as it pertains to American metropolitan areas. Location theory, central place theory, and theories of urban land use and social areas. Prerequisite: Social Science 118D or consent of instructor.

118F Urban Analysis (4). Students participate in design of an urban research project; involves analysis of transit systems and their relationship to urban structure of metropolitan areas. Focus is on the methodology of evaluation research as it relates to public programs and public policy analysis. Prerequisite: consent of instructor.

118G Regional Geography of California (4). Geographical analysis of selected regions of California, in particular their geomorphological, hydrological, and climatic conditions, as well as their economic and social strengths and weaknesses. Includes discussion of Orange County on environmental, social, and residential problems.

118J Maps and Landscapes (4). Focuses on (1) the principles of map preparation, with examples and exercises; and (2) the interpretation of maps, with special emphasis on the topographic maps of the U.S. Geologic Survey, again with selected examples and exercises. Recommended prerequisite: introductory course work in physical geography or earth sciences.

118L Spatial Structure of Metropolitan Areas (4). The spatial arrangement of activities in U.S. metropolitan areas. Identification of the economic, social, and technological processes which affect urban spatial structure. The processes of urbanization and suburbanization are discussed, and the policy implications of contemporary urban spatial structure are examined. Prerequisites: upper-division status and either Economics 1 or 20A-B; Social Science 5A recommended.

Social Science 119A-Z Special Topics in Geography (4) F, W, S. May be repeated for credit. Prerequisites vary.

THE UNDERGRADUATE MAJOR IN INTERNATIONAL STUDIES

5135 Social Science Plaza A; (949) 824-9229

World Wide Web: <http://www.socsci.uci.edu/istudies/>

Caesar D. Sereseres, Acting Director

Faculty Board

Michael L. Burton, *Professor of Anthropology and Social Ecology*
 Susan Bibler Coutin, *Associate Professor of Criminology, Law and Society*
 Paula Garb, *Associate Director of International Studies and Associate Adjunct Professor of Anthropology*
 Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History and of East Asian Languages and Literatures*
 Caesar D. Sereseres, *Associate Dean for Undergraduate Studies, School of Social Sciences, Acting Director of International Studies, and Associate Professor of Political Science*
 Robert Uriu, *Associate Professor of Political Science*

Core Faculty

Tom Boellstorff, Ph.D. Stanford University, *Assistant Professor of Anthropology*
 Alison Brysk, Ph.D. Stanford University, *Professor of Political Science*

Michael L. Burton, Ph.D. Stanford University, *Professor of Anthropology and Social Ecology*
 Teresa P. Caldeira, Ph.D. University of California, Berkeley, *Associate Professor of Anthropology*
 Vinayak Chaturvedi, Ph.D. University of Cambridge, *Assistant Professor of History*
 Susan Bibler Coutin, Ph.D. Stanford University, *Associate Professor of Criminology, Law and Society*
 Russell J. Dalton, Ph.D. University of Michigan, *Professor of Political Science*
 Paula Garb, Ph.D. U.S.S.R. Academy of Sciences, *Associate Director of International Studies and Associate Adjunct Professor of Anthropology*
 Michelle Garfinkel, Ph.D. Brown University, *Professor of Economics*
 Susan Greenhalgh, Ph.D. Columbia University, *Professor of Anthropology*
 Inderpal Grewal, Ph.D. University of California, Berkeley, *Professor of Women's Studies*
 Mark A. LeVine, Ph.D. New York University, *Associate Professor of History*
 Cecelia Lynch, Ph.D. Columbia University, *Director of the Center for Global Peace and Conflict Studies and Associate Professor of Political Science*
 William M. Maurer, Ph.D. Stanford University, *Department Chair and Associate Professor of Anthropology*
 Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History*
 Patrick Morgan, Ph.D. Yale University, *Professor of Political Science and Thomas T. and Elizabeth C. Tierney Chair in Peace Studies*
 Keith L. Nelson, Ph.D. University of California, Berkeley, *Professor Emeritus of History*
 Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History and of East Asian Languages and Literatures*
 Gary Richardson, Ph.D. University of California, Berkeley, *Assistant Professor of Economics*
 Kamal Sadiq, Ph.D. University of Chicago, *Assistant Professor of Political Science*
 Wayne Sandholtz, Ph.D. University of California, Berkeley, *Professor of Political Science*
 William Schonfeld, Ph.D. Princeton University, *Director of the Center for the Study of Democracy and Professor of Political Science*
 Caesar D. Sereseres, Ph.D. University of California, Riverside, *Associate Dean for Undergraduate Studies, School of Social Sciences, Acting Director of International Studies, and Associate Professor of Political Science*
 Stergios Skaperdas, Ph.D. The Johns Hopkins University, *Professor of Economics*
 David A. Smith, Ph.D. University of North Carolina, Chapel Hill, *Professor of Sociology and Social Ecology*
 David A. Snow, Ph.D. University of California, Los Angeles, *Professor of Sociology*
 Etel Solingen, Ph.D. University of California, Los Angeles, *Professor of Political Science and Chair of the Steering Committee of the UC Institute on Global Conflict and Cooperation (IGCC)*
 Dorothy J. Solinger, Ph.D. Stanford University, *Co-Director of the Center for Asian Studies, Co-Director of the Minor in Asian Studies, and Professor of Political Science*
 Steven C. Topik, Ph.D. University of Texas, *Professor of History*
 Robert Uriu, Ph.D. Columbia University, *Associate Professor of Political Science*
 Feng Wang, Ph.D. University of Michigan, *Associate Professor of Sociology*
 Charles J. Wheeler, Ph.D. Yale University, *Assistant Professor of History*

Affiliated Faculty

Nurudeen Alao, Ph.D. Northwestern University, *Lecturer in Geography*
 Marigee Bacolod, Ph.D. University of California, Los Angeles, *Assistant Professor of Economics*
 Nina Bandelj, Ph.D. Princeton University, *Assistant Professor of Sociology*
 Victoria Bernal, Ph.D. Northwestern University, *Associate Professor of Anthropology*
 Scott A. Bollens, Ph.D. University of North Carolina, *Professor of Planning, Policy, and Design*
 Carolyn P. Boyd, Ph.D. University of Washington, *Department Chair and Professor of History*
 Leo R. Chávez, Ph.D. Stanford University, *Director of Chicano/Latino Studies Program and Professor of Anthropology*
 Yong Chen, Ph.D. Cornell University, *Associate Professor of History and Asian American Studies*
 Joseph F. DiMento, Ph.D., J.D. University of Michigan, *Professor of Social Ecology and Management*

- Raúl Fernández, Ph.D. Claremont Graduate School, *Professor of Chicano/Latino Studies and Social Sciences*
- David John Frank, Ph.D. Stanford University, *Associate Professor of Sociology*
- John Graham, Ph.D. University of California, Berkeley, *Professor of Management*
- James B. Given, Ph.D. Stanford University, *Professor of History*
- Douglas M. Haynes, Ph.D. University of California, Berkeley, *Associate Professor of History*
- Lamar M. Hill, Ph.D. University of London, *Professor of History*
- Helen Ingram, Ph.D. Columbia University, *Professor of Social Ecology and Political Science, and Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation*
- Lina Kreidie, Ph.D. University of California, Irvine, *Associate Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Lecturer in Political Science*
- Karen Leonard, Ph.D. University of Wisconsin, *Co-Director of the Center for Asian Studies and Professor of Anthropology*
- Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History*
- Richard Matthew, Ph.D. Princeton University, *Director of the Center for Unconventional Security Affairs and Associate Professor of Social Ecology and Political Science*
- Michael McBride, Ph.D. Yale University, *Assistant Professor of Economics*
- Martin C. McGuire, Ph.D. Harvard University, *Professor of Economics and Management, and Clifford and Elaine Heinz Chair in the Economics and Public Policy of Peace*
- Kristen R. Monroe, Ph.D. University of Chicago, *Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Professor of Political Science*
- Riley Newman, Ph.D. University of California, Berkeley, *Professor of Physics*
- Eugene Y. Park, Ph.D. Harvard University, *Assistant Professor of History*
- Priya Ranjan, Ph.D. Columbia University, *Associate Professor of Economics*
- Yang Su, Ph.D. Stanford University, *Assistant Professor of Sociology*
- Kaushik Sunder Rajan, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Anthropology*
- Timothy Tackett, Ph.D. Stanford University, *Professor of History*
- Ngugi wa Thiong'o, *Director of the International Center for Writing and Translation and UCI Distinguished Professor of English and Comparative Literature*
- Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies and Professor of History and of East Asian Languages and Literatures*
- Susan Wierzbicki, Ph.D. University of Washington, *Assistant Professor of Sociology*
- Mei Zhan, Ph.D. Stanford University, *Assistant Professor of Anthropology*

The major in International Studies provides an interdisciplinary perspective on contemporary global issues, societies, and cultures. International Studies majors acquire twenty-first-century analytical skills and knowledge that will enable them to understand and contribute to shaping the rapidly evolving global community. The degree in International Studies prepares students for graduate study careers in a variety of fields such as international affairs and public policy, international business and finance, international organizations, and academic research and teaching.

Requirements for the major include: a three-course core sequence (Origins of Global Interdependence, Global Issues and Institutions, and Global Economy), three additional lower-division courses, four upper-division courses on a region, five upper-division courses on a theme, and foreign language competence. Faculty advising is an essential part of the major.

International Studies majors are also required to pursue some form of international experience, as explained in detail in requirement F below.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 442.

Requirements for the Major

- A. International Studies 11, 12, and 13.
- B. Three additional lower-division courses from the following list; students are encouraged to take Anthropology 30A, Political Science 41A, or Sociology 2: Anthropology 2A, 2D, 20A, 30A; Economics 20A, 20B, 20C; History 11, 21B, 21C; Linguistics 1; Political Science 41A, 42A, 43D, 51A; Social Science 12A; Social Science (Geography) 5A, 5B, or 5D (one course only to count toward major); Sociology 2, 3, 44, 75, 77; Environmental Analysis and Design E8, E20. (Students should be advised that these courses provide critical “stepping stones” to advanced study. Please consult with a counselor concerning appropriate course work for your chosen upper-division module and educational and career objectives.)
- C. Five upper-division module courses, at least three of which must be from one module. Students are encouraged to take Political Science 144A and History 101. The four modules are: Global Issues and Institutions, Global Conflict and Negotiation, Global Role of U.S. and California, and Global Society and Culture. The approved courses are:
- Global Issues and Institutions:* Anthropology 125A, 125B, 126N, 136M; Economics 148A, 148D, 152A, 161B, 161C; International Studies 111A, 112A; Political Science 141B, 141D, 143E, 144A, 147A, 147B, 148B, 151G, 154C, 154E, 155E, 156A, 157A, 172A, 173A; Sociology 173; Criminology, Law and Society C129; Environmental Analysis and Design E127, E132U, E137, E155U, E173; History 135D, 190 (approval required as topics vary); Management 190 (when title is International Business).
- Global Conflict and Negotiation:* Anthropology 136D; International Studies 121; Political Science 141D, 142G, 143B, 143C, 143F, 146A, 147A, 148B, 154G, 155E; Social Science 183B, 183C; Sociology 178, 179 (when title is Ethnicity in World Perspective); Environmental Analysis and Design E113; History 126A, 126B, 126C; Psychology and Social Behavior P175P.
- Global Role of U.S. and California:* Anthropology 125X, 161T; Economics 148A; Political Science 126C, 141E, 142D, 142E, 142F, 142G, 145A, 145B, 147B; Social Science 173I; Criminology, Law and Society C128; Environmental Analysis and Design E143U; History 158A, 158B, 158C, 166.
- Global Society and Culture:* Anthropology 121D, 121G, 121H, 121J, 125A, 125B, 125M, 129, 132A, 132B, 134E, 135A, 136A, 136G, 174A; Political Science 138A, 157A, 158A; Sociology 144, 146, 147A, 165A, 173, 178, 179 (when title is Ethnicity in World Perspective); Criminology, Law and Society C102; Environmental Analysis and Design E102, E144U, E149U; Psychology and Social Behavior P124D.
- D. Four upper-division Regional Studies courses, at least three of which must cover one geographic region. Students are encouraged to select a portion of these courses that cover the period of the nineteenth–twenty-first centuries. Students may obtain credit for one of these three courses through participation in a study abroad program within the particular region. These regions are: Europe, Middle East/Africa, Asia/Pacific Rim, and the Americas (excluding U.S.A.). Approved courses are: Anthropology 121E, 135H, 135I, 138O, 138P, 138Q, 138S, 138T, 141A, 160–169 (excluding 161T and 162B); Economics 162A; International Studies 179; Political Science 141C, 141D, 141E, 142C, 145A, 151A–151F, 152A–152F, 153A–153F, 154F,

155F, 155G, 156C; Social Science 172F, 172G, 176A; Sociology 175A, 175B, 175C; History 110–129, 130A–B, 132, 133, 161–169, 170.

The list of approved Regional Studies courses is available on the World Wide Web at <http://hypatia.ss.uci.edu/ssrc/instud.htm>.

- E. Competency in an approved modern international language other than English. Competency is established by completion of *one course beyond* the 2A level. The language requirement may be met through: (1) language courses at UCI, (2) language courses taken during study abroad, (3) a proficiency examination, or (4) courses taken at another college-level institution when the language is not offered at UCI. The following languages will automatically be approved: Arabic, Chinese (Mandarin), French, German, Italian, Japanese, Korean, Portuguese, Russian, Spanish, and Vietnamese. Other languages will be considered on a case-by-case basis by petition. (Students are strongly encouraged to go beyond these minimal requirements with additional work in the language, literature, and culture courses taught in the language.)
- F. International Studies majors are also required to pursue some form of international experience for a minimum of one quarter. Majors are encouraged to study abroad through the Education Abroad Program (EAP) or the International Opportunities Program (IOP), which are available for periods of a quarter, semester, year, or summer. When this is not possible, work overseas (through IOP) or a domestic internship with the UCDC Internship Program, the Washington D.C. Center Program, or the Social Science Internship Program (Social Science 197) with an international focus may be substituted.

HONORS PROGRAM IN INTERNATIONAL STUDIES

The Honors Program allows International Studies majors to engage in research leading to the completion of an honors thesis. The topic for the honors thesis is selected by the student, in consultation with a faculty advisor, and should reflect a theme consistent with the student's module in the International Studies major. The Honors Program is open to all junior and senior International Studies majors with an overall GPA of 3.0 and a 3.5 GPA in the major who have taken all three core courses (International Studies 11, 12, and 13) and at least two upper-division courses that count toward the International Studies major. Successful completion of a written senior thesis in the International Studies 190 course satisfies the upper-division writing breadth requirement.

During the spring quarter of the junior year or during the summer before the senior year, students formally apply to the Honors Program. Students will be notified of their selection to the Honors Program by September 1. In the fall quarter of the senior year, students enroll in International Studies H180, Honors Research Seminar. In this course, each student formulates a written research plan (i.e., prospectus) for the honors thesis. Students also select a faculty member who agrees to supervise the research, evaluate the written work, and approve the honors thesis. In the winter quarter of the senior year, students enroll in International Studies H190, Senior Thesis, with their faculty advisor. The faculty advisor supervises and evaluates data collection and analysis and reads and edits chapter drafts. In the spring quarter of the senior year, students enroll in a second quarter of Senior Thesis, with their faculty advisor. The thesis is to be completed by the student and approved by the advisor prior to the end of the quarter.

Honors students must also demonstrate a high level of language proficiency by completing two courses beyond the 2A level in language, literature, or culture taught in their chosen international language.

International Studies majors are also required to pursue some form of international experience, as explained in detail in major requirement F.

Courses in International Studies

11 Origins of Global Interdependence (4). Offers a general overview of the rise of global interdependence in political, economic, demographic, and cultural terms. Considers what drove people from relative isolation into intensified intercourse with one another, and investigates the consequences of this shift. Same as Anthropology 41A. (VII-B)

12 Global Issues and Institutions (4). Surveys recent developments in the nature of global interdependence. Examines the major political, economic, and military conflicts and recent problems of population growth, environmental decay, ethnic/national antagonism and violence, and post-Cold War politics. Same as Political Science 44A. (VII-B)

13 Global Economy (4). Acquaints students with the fundamental patterns and problems of the global economy. Emphasizes the historical roots and political implications of economic choices. Same as Economics 13. (VII-B)

16 Physics of Weapons and Their Control (4). Lecture, three hours. Introduction to physics related to issues of peace and conflict. Topics include: nuclear and non-nuclear weapons, delivery systems, missile defense systems, satellite surveillance systems, technology for homeland security, and arms control. Same as Physics 16. (II)

111A Economic Development (4). Reviews the process of economic development across the globe. Topics include main theories of economic development, influence of domestic and international policies on economic development, and the effect of economic development on institutions and the environment. (VII-B)

112A International Business (4). Introduction to conducting business in the international arena, the process of decision making in the organization, and the globalization of markets and production.

120 Global Environmental Issues (4). While many agree that environmental problems threaten humankind, there is much disagreement over the nature of these threats and how to address them. This course examines global environmental issues from various perspectives in order to provide answers to these questions. Same as Environmental Analysis and Design E132U and Political Science 143D.

121 Social Ecology of Peace (4). Examination of differing definitions of the problem of achieving peace and the special problems of seeking peace in the nuclear age. Same as Environmental Analysis and Design E113. (VII-B)

122 Nuclear Environments (4). Understanding the impact of the nuclear age on the environment and human health through the interrelated developments of nuclear power and nuclear weapons. The early years of weapon development, catastrophic environmental pollution, perils of nuclear power in the U.S. and Russia. Same as Environmental Analysis and Design E127. (VII-B)

123 International Environment Management (4). Network of intergovernmental organizations (the United Nations, in particular) and international nongovernmental organizations in the field of environmental management. Analysis of key international projects and sources of information. Lessons for the integration of international research expertise. Prerequisite: Criminology, Law and Society C7. Same as Environmental Analysis and Design E137U and Criminology, Law and Society C129.

154 Ethics and Justice in International Affairs (4). Analyzes choices regarding the use of force, resolving conflict, and promoting human rights and social justice. Special attention is given to the American experience as a principal case study of ethics and statecraft. Prerequisites: International Studies majors only; satisfactory completion of the lower-division writing requirement.

179 Regional Topics in International Studies (4). May be repeated for credit as topics vary. (VII-B)

H180 International Studies Honors Research Seminar (4). Designed to assist students prepare a thesis prospectus for the Honors Program in International Studies. The student identifies a thesis topic, reads on the subjects of writing and research methods, orally presents and defends the prospectus, and prepares a written prospectus/literature review. Prerequisite: acceptance into the International Studies Honors Program. Formerly Social Science H158A.

189 Special Topics in International Studies (4). May be repeated for credit as topics vary. (VII-B)

190 Senior Thesis (4). Prerequisite: Consent of instructor. May be taken for credit twice. Formerly Social Science H158B.

Minor in Conflict Resolution

The minor in Conflict Resolution, sponsored by the International Studies Program, is an interdisciplinary curriculum that can help students both discover and prepare themselves for professional careers. The course of study provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. Conflict plays a key role in all areas of our lives, and has played a shaping role in the history of nations. It can have destructive or constructive potential. This program explores how conflict arises, how it is represented and discussed, how it is prevented, mitigated, managed, and used for change in interpersonal relations, within and between organizations and other kinds of groups inside nations, and between nations. The minor consists of seven four-unit courses and two two-unit courses.

Course descriptions are available in the academic department sections of the *Catalogue*.

Requirements for the Minor

Three core courses: History 11 (Introduction to Peace and Conflict), Political Science 43D (Global Security and Cooperation), and Political Science 154G/Anthropology 136D (Conflict Management in Cross-Cultural Perspective).

Two relevant upper-division courses: These are examples of courses offered: Economics 148A-B (Political Economy of National Defense I, II); English and Comparative Literature CL 102 (The Literature of World War I, Imagining War and Peace), E 105 (The Literature of Modern War); Environmental Analysis and Design E100 (International Environmental Issues), E113, E122 (Social Ecology of Peace); Environmental Analysis and Design E105U/Criminology, Law and Society C128 (Environmental Law); History 190 (Multinationals and Tribes); Management 181 (Managing Organizational Behavior); Political Science 142G (U.S. Coercive Diplomacy), 143C (Arms Control and International Security); 147A (International Cooperation); Psychology and Social Behavior P175P (Violence in Society); Sociology 141 (Organizations), 178 (Sociology of Peace and War).

The International Studies Forum: Social Sciences/Social Ecology/Humanities 183A. Students attend forum lectures presented by scholars from a variety of institutions on topics related to peace, conflict, and global cooperation. The course must be taken twice and carries two units of credit, Pass/Not Pass only.

Senior Seminar in Conflict Resolution: Social Sciences/Social Ecology/Humanities 183B-C. Designed for seniors (juniors may also enroll) who are pursuing the minor in Conflict Resolution and/or the International Studies major. The courses provide a forum in which students refine skills and theory in the study of cooperation and conflict, from local to global arenas. Each course carries four units of credit. The second course (183C) confers upper-division writing credit when completed with a grade of C or better.

The International Studies Theme House Discussions

Students are encouraged to participate in the weekly discussions and other events on international peace and conflict held at the International Studies Theme House. Students enroll in the Theme House course (Social Science 184D) for two units of credit per quarter.

DEPARTMENT OF LINGUISTICS

5221 Social Science Plaza B; (949) 824-7504

Faculty

Bernard Tranel: Phonological theory, French linguistics

Affiliated Faculty

Michael Fuller: Classical Chinese grammar and literature
Gregory Hickok: Neural organization of language
Kent E. Johnson: Philosophy of language, philosophy of mind
Mary-Louise Kean: Biological foundations of language
Glenn S. Levine: Applied linguistics, pedagogy
Virginia A. Mann: Speech perception, psycholinguistics
Robert May: Semantics, syntax, philosophy of language
Robin Scarcella: Sociolinguistics, second-language acquisition
Armin Schwegler: Spanish, historical linguistics, pidgins and creoles
Mark Warschauer: Second-language acquisition, sociolinguistics
W.C. Watt: Cognitive semiotics

Language is one of the most fundamental human instincts. It is an extraordinarily intricate system that all of us master as young children without special teaching, and that gives us the ability to communicate, tell stories, and express our deepest feelings. Linguistics is the scientific study of this human language. It is concerned with understanding the nature of language and our knowledge of it, how we acquire it, and how that knowledge is put to use. It is connected to many other fields of study, including psychology, anthropology, sociology, biology, physics, mathematics, computer science, philosophy, and literature.

The Department offers an undergraduate minor and undergraduate courses.

Linguistics Minor Requirements

Requirements for the minor in Linguistics are met by taking seven linguistics courses (28 units) as specified below:

- A. Linguistics 3, 10, and 20.
- B. Four additional linguistics courses, three of which must be upper-division.

Residence Requirement: At least three upper-division courses required for the minor must be completed successfully at UCI.

Courses in Linguistics

LOWER DIVISION

1 Languages of the World (4). The world has over 5,000 languages, with an exuberant variety of sounds, words, and grammars. Introduction to a representative selection (about eight), drawn from every continent. Students are not expected to learn these languages, but rather to explore them and study their structure and complexity. (VII-B)

2 Discovering Language (4). Explores language's pervasiveness and diversity; demonstrates ways linguistics illuminates language's crucial—albeit hidden—societal role. Issues: self- and group-identification, language death, language in legal and educational settings. Illustrations: spoken and signed languages, English dialects (including Black English), American Indian languages. (VII-A)

3 Introduction to Linguistics (4). Emphasis on the notion that language is a remarkable achievement of the human mind. Current insights into the nature of language. Survey of various subfields of linguistics. Introduction to linguistic analysis. (III or V)

10 Introduction to Phonology (4). Basic concepts in phonetic description and phonological analysis. Prerequisite: Linguistics 3. (III or V)

20 Introduction to Syntax (4). Basic concepts in syntactic description and grammatical analysis. Prerequisite: Linguistics 3. (III or V)

51 Acquisition of Language (4). What children say, what they mean, and what they understand. Theories about the learning of language by one-, two-, and three-year olds. Comparison of kinds of data on which these theories are based. Same as Psychology 56L. (III)

52 Language and the Mind (4). The relationship of knowledge of grammar to mental processes and mental representations. How linguistic behavior is rule governed. Same as Psychology 76M.

68 Introduction to Language and Culture (4). Explores what the study of language can reveal about ourselves as bearers of culture. After introducing some basic concepts, examines how cultural knowledge is linguistically organized and how language might shape our perception of the world. Same as Anthropology 2D. (III)

80 Introduction to Semiotics. (4). How humans and other animals communicate with each other by means of symbols and other signs. The symbols of everyday life, of movies and literature, of religion and society. Symbolic systems and symbolic evolution. (III)

99 Special Topics in Linguistics (4). Special topics at lower-division level. May be repeated for credit when topic varies.

UPPER DIVISION

100 Grammatical Theory (4). Has both a phonology and a syntax component, and forms a bridge between lower-division course offerings and more advanced courses in phonology, syntax, and morphology. Emphasis on development of analytical skills, and evaluation of alternative proposals. Prerequisites: Linguistics 10 and 20.

101-109: COMPUTATIONAL LINGUISTICS

102 Formal Languages and Automata (4). Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turing machines, random access machines, undecidable problems, NP-completeness. Prerequisites: ICS 23 and ICS 51 with grades of C or better; Mathematics 2A-B and Statistics 67/Mathematics 67; Mathematics 6A/ICS 6A; Mathematics 6B; Mathematics 6C or 3A. Same as Computer Science 162.

109 Special Topics in Computational Linguistics (4). Prerequisites vary. May be repeated for credit as topics vary.

110-119: PHONETICS / PHONOLOGY

111 Intermediate Phonology (4). Fundamentals of phonological theory. Intensive practice in phonological analysis. Prerequisite: Linguistics 100 or equivalent.

112 Advanced Phonology (4). Overview of recent developments in phonological theory. Prerequisite: Linguistics 111.

114 Current Topics in Phonological Theory (4). Phonology seminar. Intensive study of a small number of current topics in phonological theory. Prerequisite: Linguistics 112. May be repeated for credit as topic varies.

119 Special Topics in Phonetics/Phonology (4). Prerequisites vary. May be repeated for credit as topic varies.

120-129: SYNTAX

121 Intermediate Syntax (4). Examination of syntactic phenomena and analysis, with emphasis on current issues in grammatical theory. Focus on the nature of syntactic rules, representations, and constraints as they determine empirical properties of language. Prerequisite: Linguistics 100 or equivalent.

122 Advanced Syntax (4). Intensive investigation of selected current topics in syntactic theory. Readings drawn from primary literature. Prerequisite: Linguistics 121.

124 Current Topics in Syntactic Theory (4). Research seminar in syntax. Intensive study of a small number of well-defined topics which have had significant impact on the development of syntactic theory. Prerequisite: Linguistics 122. May be repeated for credit as topic varies.

129 Special Topics in Syntax (4). Prerequisites vary. May be repeated for credit as topic varies.

130-139: MORPHOLOGY

132 Morphology and the Lexicon (4). Study of the lexical representations of words; relation of the lexicon to phonology, morphology, and syntax, with special emphasis on recent theoretical developments. Prerequisite: Linguistics 10 or 20 or consent of instructor.

139 Special Topics in Morphology (4). Prerequisites vary. May be repeated for credit as topic varies.

140-149: SEMANTICS

140 Formal Foundations of Linguistics (4). Introduction to the fundamental concepts of logic, set theory, and automata theory, and their relation to linguistics. Prerequisite: at least one of the following: Linguistics 121 or 143, Philosophy 105B, Mathematics 150, ICS 162, or consent of instructor.

141 Topics in Philosophy of Language (4). Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts. May be repeated for credit as topics vary. Same as Philosophy 145 and Logic and Philosophy of Science 145. May be repeated for credit as topics vary.

143 Semantics (4). The role of semantics in an integrated linguistic theory. Examination of a truth theory for natural language and the role of logical form as the interface of syntax and semantics. Discussion of reference, predication, quantification, and intentionality. Readings drawn from linguistic and philosophical sources. Prerequisite: at least one of the following: Linguistics 100 or 140, Philosophy 105B, Mathematics 150, ICS 162, or consent of instructor.

149 Special Topics in Semantics (4). Prerequisites vary. May be repeated for credit as topic varies.

150-159: PSYCHOLINGUISTICS

150 Psychology of Language (4). Examines modern research in psycholinguistics. Focuses on theoretical issues and empirical findings in brain-language research, speech perception, speech production, sentence processing, lexical access, language acquisition, and reading development. Same as Psychology 156A.

154 Theories of Second Language Acquisition (4). Research in the acquisition and learning of second and foreign languages. The influence of language acquisition theory on past and current teaching methodology. A comparison of first and second language acquisition. Prerequisite: Linguistics 3. Recommended: Linguistics 51.

157 Psychology of Reading (4). Surveys the major components of skilled reading and the determinants of successful reading acquisition. Examination of contemporary models of skilled reading. Focuses on models of the development of reading. Research on the causes of developmental dyslexia. Prerequisites: Psychology 7A or 9A-B-C; Linguistics 150 or Psychology 140C; satisfactory completion of the lower-division writing requirement. Same as Psychology 143R.

158 Language and the Brain (4). Analysis of current research on the biological bases of human linguistic capacity. Development, focusing on hemispheric specialization and plasticity; localization of specific linguistic functions in adults, with emphasis on study of aphasia; relation of linguistic capacity to general cognitive capacity, considering research on retardation. Prerequisite: Biological Sciences 35 or N110, or consent of instructor. Same as Biological Sciences N160 and Psychology 161.

159 Special Topics in Psycholinguistics (4). Prerequisites vary. May be repeated for credit as topic varies.

160-169: LANGUAGE STUDIES

160 Language Typology (4). Cross-linguistic survey of major linguistic phenomena, especially as they pertain to word order, phrase structure, grammatical relations, anaphora, movement processes and constraints. Discussion of the relation between language universals and linguistic typology. Prerequisite: Linguistics 121.

163B The Structure of English (4). An examination of American English phonology, morphology, and syntax. Useful for prospective teachers of English in elementary and secondary schools and for teachers of English as a second language. Prerequisite: Linguistics 3. Same as English 181.

164A Topics in Romance Languages (4). Prerequisites vary. May be repeated for credit as topic varies.

164B French Phonetics (4). Study of the sound structure of French. Introduction to elements of general phonetics, contrastive (French/English) phonetics, and French phonetics and phonology. Designed to help students improve their pronunciation. Also serves as a preparatory course for language teaching. Prerequisite: French 2C or equivalent.

165A Linguistic Structure of Chinese (4). Introduction to the phonology and major syntactic patterns of Mandarin Chinese. Prerequisite: Chinese 2C or Linguistics 10 or 20. Same as East Asian Languages and Literatures 113.

165B Linguistic Structure of Japanese (4). Detailed analysis of essential grammatical aspects of Japanese. Comparison with aspects of English grammar. Course not designed to teach Japanese *per se*, but to study the grammatical characteristics of Japanese from the perspective of theoretical linguistics. Prerequisite: Linguistics 10 or 20. Same as East Asian Languages and Literatures 123.

165C Linguistic Structure of Korean (4). Introduction to essential grammatical aspects of the Korean language. Comparisons to other languages. Prerequisite: East Asian Languages and Literatures 2C or consent of instructor. Same as East Asian Languages and Literatures 133.

166A Structures of Non-Indo-European Languages (4). Nontechnical analysis of essential grammatical aspects of selected non-Indo-European languages. Comparison and contrast with aspects of the grammars of more familiar Indo-European languages (e.g., English and French) are emphasized. Prerequisite: Linguistics 3.

166B Indian Languages of the Americas (4). Survey of the native languages of North and/or South America, focusing on the range of sound systems, morphological processes, and syntactic structures exhibited by this diverse group of languages. Also considers the linguistic affiliations of the surveyed languages. Prerequisite: Linguistics 3.

168A Sociolinguistics (4). Examines descriptions and explanations of systematic patterns of language use in society, in particular how geographical and social factors give rise to a range of variations in a given language (dialects). Includes aspects of language change, language planning, language death. Prerequisites: Linguistics 3 and satisfactory completion of the lower-division writing requirement.

169 Special Topics in Language Studies (4). Prerequisites vary. May be repeated for credit as topic varies.

170-179: HISTORICAL LINGUISTICS

170 Historical Linguistics (4). Study of language change. Methods of historical analysis of language. Classification of languages and aspects of language change by internal reconstruction and the comparative method. Prerequisite: Linguistics 3. Recommended: Linguistics 10.

172 History of English (4). External (historical and social) and internal (linguistic) changes which have affected the English language from its Germanic roots to the present day. Prerequisite: Linguistics 3. Same as English E 184.

179 Special Topics in Historical Linguistics (4). Prerequisites vary. May be repeated for credit as topic varies.

180-189: COGNITIVE SEMIOTICS

180 Introduction to Cognitive Semiotics (4). Symbols and their webs. The foundation course in cognitive semiotics, comprising an introduction both from the philosophical standpoint represented by Peirce and from the linguistic standpoint represented by Dalgarno and Saussure. Current cognitive developments are studied.

181 History of Semiotic Theory (4). The history of semiotic theory from Aristotle through the Greek and Roman Stoics and St. Augustine to Peirce and the present. The seventeenth-century obsession with the creation of a "universal and philosophical language" is treated. Prerequisite: Linguistics 180. A reading knowledge of Greek and/or Latin is very helpful.

182 Cognitive Iconics (4). The study of writing systems (alphabets, runes, Mayan and Egyptian hieroglyphics) and their evolution and modern changes introduced spontaneously through "mistakes," with a view toward exploring aspects of the human mind.

183 Semiotic Theory of Writing Systems (4). Ancient and modern writing systems, ranging from Sumerian pictographs through Egyptian and Mayan hieroglyphs to the Phoenician alphabet and its modern descendants (including our own). Distinctive traits of written language (what can be written that cannot be said?) and issues distinguishing hand-execution from eye-recognition. Prerequisite: Linguistics 10.

184 Foundations of Communication (4). The logical and semiotic foundations of communication and signification.

189 Special Topics in Cognitive Semiotics (4). Prerequisites vary. May be repeated for credit as topic varies.

190-199: SPECIAL COURSES

197 Field Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Directed Group Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies. Students may enroll for only one 199 each quarter.

DEPARTMENT OF LOGIC AND PHILOSOPHY OF SCIENCE

721 Social Science Tower; (949) 824-1520

Jeffrey A. Barrett, **Department Chair**

The Department of Logic and Philosophy of Science (LPS) brings together faculty and students interested in a wide range of topics loosely grouped in the following areas: general philosophy of science; philosophy of the particular sciences; logic, foundations and philosophy of mathematics; and philosophy of mathematics in application. LPS enjoys strong cooperative relations with UCI's Department of Philosophy; in particular, the two units jointly administer a single graduate program which offers the Ph.D. in Philosophy. LPS also has strong interconnections with several science departments, including Mathematics and Physics, as well as the School of Biological Sciences, the Donald Bren School of Information and Computer Sciences, the Departments of Cognitive Sciences and Economics, and the graduate concentration in Mathematical Behavioral Sciences.

Graduate Program

Faculty

Aldo Antonelli: Logic, philosophy of mathematics, history of analytic philosophy
 Jeffrey A. Barrett: Philosophy of science, philosophy of physics, philosophy of quantum mechanics, epistemology
 William Demopolous: History of analytics, philosophy of logic and mathematics, philosophy of science
 Kent Johnson: Philosophy of language, philosophy of mind
 Penelope Maddy: Philosophy of mathematics, philosophy of logic, naturalism, history of analytic philosophy
 David Malament: Foundations of relativity theory, philosophy of physics
 Robert May: Semantics, syntax, philosophy of language
 Brian Skyrms: Philosophy of science, decision theory, game theory, philosophy of biology, epistemology, metaphysics
 Kyle Stanford: Philosophy of science, philosophy of biology, history of modern philosophy, metaphysics
 Kai F. Wehmeier: Logic, philosophy of mathematics, history of analytic philosophy

Affiliated Faculty

Francisco Ayala: Evolutionary biology, philosophy of science, philosophy of biology
 Patricia Churchland (UCSD): Philosophy of neuroscience and psychology
 Paul Churchland (UCSD): Philosophy of science, philosophy of mind, artificial intelligence and cognitive neurobiology, epistemology, and perception
 Paul Eklof: Mathematical logic
 Matthew Foreman: Mathematical logic
 Steven Frank: Evolutionary biology
 Donald Hoffman: Human and machine vision
 Duncan Luce: Mathematical behavioral science
 D.A. Martin (UCLA): Logic, set theory, philosophy of mathematics
 James McGaugh: Neurobiology of learning and memory
 Yiannis Moschovakis (UCLA): Set theory, recursion theory
 Louis Narens: Measurement, logic, and metacognition
 Riley Newman: Experimental particle physics and gravitational physics
 Terence Parsons (UCLA): Philosophy of language, metaphysics
 Donald Saari: Mathematical economics, mathematical behavioral science, celestial mechanics
 Jonas Schultz: Experimental particle physics
 Norman Weinberger: Neural bases of attention and learning
 Martin Zeman: Logic and combinatorics

The Department of Logic and Philosophy of Science and the Department of Philosophy jointly administer a Ph.D. program in Philosophy with two independent tracks: the Philosophy track and the LPS track. Both tracks begin from a common core of requirements in standard philosophical fields (e.g., history of philosophy, logic, ethics, metaphysics/epistemology) and branch off thereafter; both tracks offer the Ph.D. degree in Philosophy. Applicants are advised to apply to the unit whose faculty, areas of specialization, and curriculum correspond best with their interests. Students are expected to reside in the same unit as their primary advisor, but faculty in both units are available for all other academic purposes (course work, independent studies, committee membership, and more). See the Department of Philosophy in the School of Humanities for a description of the Philosophy track.

The M.A. degree in Philosophy may also be awarded to Ph.D. students who complete the necessary requirements.

ADMISSIONS

Applicants for the LPS track must have a bachelor's degree, but there is no formal requirement as to the field of that degree. The most natural undergraduate majors for LPS graduate students would be philosophy, mathematics, or the sciences, but those with other degrees who are interested in the LPS fields should feel free to apply.

Complete applications must include GRE scores, transcripts, letters of recommendation, and a writing sample. The deadline for application is January 15.

Several forms of incoming fellowships are available on a competitive basis; these include a stipend, student fees, and tuition (for out-of-state students). In subsequent years, some additional fellowship funding is available, but students in good standing are most often supported with teaching assistantships.

REQUIREMENTS OF THE LPS TRACK

All required courses must be completed with a grade of B or better.

The **History of Philosophy Requirement** provides a broad perspective. Graduate courses in three out of the following four areas—Modern Rationalism, Modern Empiricism, Kant, and Twentieth Century—must be completed by the end of the seventh quarter in residence.

The **Logic Requirement** acquaints students with the fundamentals of modern logic: elementary set theory, metalogic, effective procedures and Gödel's incompleteness theorems. LPS 205A, 205B, and 205C must be completed by the end of the seventh quarter in residence.

The **Field Requirement** provides exposure to a range of philosophical disciplines. One graduate course in moral philosophy and one graduate course in metaphysics/epistemology must be completed by the end of the seventh quarter in residence. (These courses may not also be used to satisfy the History Requirement.)

The **Philosophy of Science Requirement** provides exposure to a range of philosophy of science, from general philosophy of science to the philosophies of particular sciences (e.g., physics, biology), to the philosophies of mathematics and logic. Three selected courses from LPS 240–247 must be completed by the end of the seventh quarter in residence. (These courses may be repeated as topics vary.) Courses used to satisfy the Philosophy of Science Requirement may also be used to satisfy the History or Field Requirements.

The **Tools of Research Requirement** provides some flexibility for students with various levels of interest in pursuing the philosophy of a particular science. So, for example, a student most interested in historical issues in the philosophy of mathematics might benefit most from the study of German, while a student most interested in

the philosophy of quantum mechanics should take a series of graduate courses in physics. (Students wishing to specialize further in the philosophy of a particular science might wish to pursue more demanding options; see the Mathematics and Physics emphases, below.) To satisfy this requirement, a student must pass an examination on an appropriate foreign language or receive a grade of B or better in three appropriate graduate courses in a discipline or disciplines outside philosophy by the end of the ninth quarter in residence. Though the discipline(s) here must be outside philosophy, they might be taught by Philosophy or LPS faculty. The two-hour language examination will be administered by an LPS faculty member and will require the student to translate (with the aid of a dictionary) a passage or passages from philosophical or scientific authors.

The **Portfolio Requirement** ensures that students have acquired dissertation-level skills in the writing of philosophy: e.g., the ability to isolate, understand and evaluate arguments in the philosophical literature; the ability to assimilate secondary literature; the ability to formulate and defend an original philosophical thesis. The portfolio is designed to display these skills. To satisfy this requirement, a student must submit an extended writing sample, most often consisting of several individual papers, that demonstrates the skills necessary to write a Ph.D. dissertation. (A successful portfolio typically consists of several papers totaling around 80 pages. These may be revisions of term papers. Each paper should present and defend a definite thesis and should be accessible to faculty members unfamiliar with the literature in question. The papers in the portfolio need not be of publishable quality, but they must, collectively, demonstrate the specified skills.) Portfolios will be evaluated by the entire LPS faculty. (LPS track students may request that relevant Philosophy Department faculty also be present at the evaluation meeting.) Portfolios must be submitted by the end of the fourth week of the seventh quarter.

The **Candidacy Examination** demonstrates that the student has a viable dissertation topic and an adequate grasp of related literature. To satisfy this requirement, a student must prepare and be examined on a reading list of canonical literature in the area of the dissertation and a brief (15–20 page) dissertation proposal. The reading list should in effect define the context of the proposed dissertation. The examination must be completed by the end of the tenth quarter in residence. The normal time for advancement to candidacy is 3.3 years.

Dissertation Defense. Students must pass a final oral examination focussing on the content of the dissertation administered by the Dissertation Committee. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

LPS TRACK EMPHASIS IN MATHEMATICS

In addition to the LPS track described above, there is a more demanding option open to LPS students wishing to specialize in the foundations and/or philosophy of mathematics. Faculty in the UCI and UCLA Departments of Mathematics participate in the Mathematics emphasis. Students in the emphasis take courses and receive advising from these participating Mathematics professors, as well as from the faculty of LPS and the Philosophy Department. Mathematics emphasis students must satisfy the following requirement in addition to the usual LPS track requirements:

Mathematics Requirement. A student must receive a grade of B or better in six graduate courses in mathematics. (Some of these courses may also be used to satisfy the Tools of Research Requirement.) In addition, the student's Candidacy and Dissertation Committees must include an active member from the UCI or UCLA Departments of Mathematics.

LPS TRACK EMPHASIS IN PHYSICS

In addition to the LPS track described above, there is a more demanding option open to LPS students wishing to specialize in the foundations and/or philosophy of physics. Physics emphasis students must satisfy the following requirement in addition to the usual LPS track requirements:

Physics Requirement. A student must receive a grade of B or better in three sections of LPS 241 whose topics are Philosophy of Quantum Mechanics, Geometry and Spacetime, and Probability and Determinism, as well as in three additional graduate courses in Physics or Mathematics. (Students in the Physics Emphasis may also use these courses to satisfy the Tools of Research Requirement, but not the Philosophy of Science Requirement.)

SALZBURG EXCHANGE PROGRAM

LPS and the Department of Philosophy jointly administer an Exchange Program with the University of Salzburg. The program has two parts. The Scholarly Exchange provides opportunities for faculty and graduate students in LPS and Philosophy to visit Salzburg and for faculty and graduate students from Salzburg to visit one or the other of the UCI units. The Program also sponsors joint conferences, held alternately in Irvine and in Salzburg; these are co-sponsored by Salzburg and the UCI Interdisciplinary Program in the History and Philosophy of Science.

To be eligible for the Salzburg Exchange, a graduate student must have advanced to candidacy. The selected student spends one semester in Salzburg, usually teaching one course in the general area of the thesis topic. An upper-division course may be taught in English, but lower-division courses must be taught in German. (Some previous visitors have learned serviceable German by attending a Goethe institute during the preceding summer.) Typically, a Salzburg visitor will receive a Salzburg Fellowship intended to cover travel expenses, and a stipend; those who teach while in Salzburg will also receive a salary intended to cover living expenses (including health and dental insurance).

Applications from LPS graduate students (including a curriculum vita and syllabi for courses that might be taught) should be sent to the LPS Salzburg Exchange Director by November 1.

Courses in Logic and Philosophy of Science

LOWER-DIVISION

4A Scientific Revolutions (4). Explores two central themes: (1) using philosophical analysis to investigate the nature of the social sciences, and (2) using the social sciences themselves to study to nature of science. (III)

4B Case Studies in Social Science (4). Introduces students to three case studies in three different social science areas in order to show how the social sciences are in fact practiced. (III)

29 Critical Reasoning (4). Introduction to analysis and reasoning. The concepts of argument, premise, and conclusion, validity and invalidity, consistency and inconsistency. Identifying and assessing premises and inferences. Deductive versus inductive reasoning, and introduction to the probability calculus. Evaluating definitions. Informal fallacies. Same as Philosophy 29. (V)

30 Introduction to Symbolic Logic (4). An introduction to the symbolism and methods of the logic of statements, including evaluation of arguments by truth tables, the techniques of natural deduction and semantic tableaux. Same as Philosophy 30. (V)

31 Introduction to Inductive Logic (4). Philosophical questions concerning the foundations of scientific inference, e.g., the traditional problem of induction, the Goodman paradox, the concept of cause, Mill's method of inductive reasoning, probability calculus, different interpretations of probability, and their interaction in inductive reasoning. Prerequisite: Logic and Philosophy of Science 30 or 104. Same as Philosophy 31. (V)

40 Scientific Inquiry (4). Introduces the ways of science focusing on scientific methods and practices. Concrete historical examples of successful scientific inquiry are used including proposed solutions. The foundations and use of the social sciences to study scientific inquiry are examined.

102 Introduction to the Theory of Knowledge (4). A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty. Same as Philosophy 102.

104 Introduction to Logic (4). Introduction to sentence logic, including truth tables and natural deduction; and to predicate logic, including semantics and natural deduction. Same as Philosophy 104.

105A Elementary Set Theory (4). An introduction to the basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers. Prerequisite: Logic and Philosophy of Science 104, Mathematics 6B, an upper-division course in Mathematics, or consent of instructor. Logic and Philosophy of Science 105A and Mathematics 151 may not both be taken for credit. Same as Philosophy 105A.

105B Metalogic (4). Introduction to formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Löwenheim-Skolem theorems. Prerequisite: Logic and Philosophy of Science 105A or consent of instructor. Logic and Philosophy of Science 105B and Mathematics 150 may not both be taken for credit. Same as Philosophy 105B.

105C Undecidability and Incompleteness (4). Introduction to the formal theory of effective processes, including recursive functions, Turing machines, Church's thesis, and proofs of Gödel's incompleteness theorem for arithmetic, and Church's undecidability theorem for first-order logic. Prerequisite: Logic and Philosophy of Science 105B or consent of instructor. Logic and Philosophy of Science 105C and Mathematics 152 cannot both be taken for credit. Same as Philosophy 105C.

106 Topics in Logic (4). Selected topics in mathematical or philosophical logic. Prerequisite: Logic and Philosophy of Science 105B or consent of instructor. May be repeated for credit as topics vary. Same as Philosophy 106.

107 Computability Theory (4). Aims to provide an introduction to recursive function theory, with special emphasis on the theory of the recursively enumerable sets of natural numbers and their "fine structure" under various notions of reducibility.

108 Topics in Induction, Probability, and Decision Theory (4). Selected topics in induction, probability, and decision theory. May be repeated for credit as topics vary. Same as Philosophy 108.

113 Topics in Modern Philosophy (4). Focuses on the works of one or more of the central philosophical figures of the modern period (e.g., Descartes, Leibniz, Hobbes, Locke, Hume, Kant) or the treatment of one or more central philosophical problems by a number of these figures. May be repeated for credit as topics vary. Same as Philosophy 113.

115 Topics in History of Analytic Philosophy (4). Review of one or more central theories or figures in the history of analytic philosophy. Emphasis is on the study of original sources, especially writings of Frege, Russell, Schlick, Carnap, and Quine. Topics include the nature of meaning and truth, the synthetic/analytic distinction, and scientific knowledge. May be repeated for credit as topics vary. Same as Philosophy 115.

120 Topics in Metaphysics (4). Examines central philosophical questions concerning our own fundamental nature and that of the world around us (e.g., causation and necessity, determination, free will, personal identity, the mind-body problem). May be repeated for credit as topics vary. Same as Philosophy 120.

121 Topics in the Theory of Knowledge (4). One or more topics in the theory of knowledge, e.g., the nature of rational justification, of perceptual knowledge, of *a priori* knowledge. May be repeated for credit as topics vary. Same as Philosophy 121.

140 Topics in Philosophy of Science (4). Selected topics in contemporary philosophy of science, e.g., the status of theoretical entities, the confirmation of theories, the nature of scientific explanation. May be repeated for credit as topics vary. Same as Philosophy 140.

141A Topics in Philosophy of Physics (4). Selected topics in the philosophy of physics, e.g., the interpretation of quantum mechanics, the nature of spacetime, the problem of quantum field theories. May be repeated for credit as topics vary. Same as Philosophy 141A.

141B Geometry and Spacetime (4). An examination of the foundations of the special theory of relativity, with emphasis on the geometry of Minkowski spacetime, and its relation to both Euclidean and non-Euclidean (hyperbolic) plane geometries. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Philosophy 141B.

141C Philosophy of Quantum Mechanics (4). An examination of the standard von Neumann-Dirac formulation of quantum mechanics. The quantum measurement problem is discussed along with several proposed solutions, including GRW, many-worlds, man-minds, and Bohm's theory. Same as Philosophy 141C.

141D Probability and Determinism (4). An examination of a cluster of interrelated issues concerning probability, determinism, logic, and the foundations of quantum mechanics. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Philosophy 141D.

142 Writing/Philosophy of Biology (4). Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Biological Sciences E142 and Philosophy 142.

143 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Philosophy 143 and Psychology 123P.

145 Topics in Philosophy of Language (4). Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts. May be repeated for credit as topics vary. Same as Linguistics 141 and Philosophy 145. May be repeated for credit as topics vary.

146 Topics in Philosophy of Logic (4). Selected topics in the philosophy of logic, e.g., the nature of logical truth and our knowledge of it, the status of propositions, definite descriptions, and existential presuppositions. May be repeated for credit as topics vary. Same as Philosophy 146.

147A Introduction to Philosophy of Mathematics (4). Historical background (e.g., Kant), the three great schools at the turn of the century (logicism, formalism, intuitionism), the positivists and their critics (Carnap, Quine), contemporary views and problems (e.g., Quine, Benacerraf). Same as Philosophy 147A.

147B Topics in Philosophy of Mathematics (4). Further historical or contemporary issues in the philosophy of mathematics. May be repeated for credit as topics vary. Same as Philosophy 147B.

199 Independent Study (1 to 4). Investigation of special topics. May be taken for credit for a total of 12 units.

GRADUATE

200 Topics in Logic and Philosophy of Science (4). May be repeated for credit as topics vary.

205A Set Theory (4). The basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers. Same as Philosophy 205A.

205B Metalogic (4). Formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Loewenheim-Skolem theorems. Prerequisite: Logic and Philosophy of Science 205A. Same as Philosophy 205B.

205C Undecidability and Incompleteness (4). Formal theory of effective processes, including recursive function, Turing machines, Church's thesis, and proofs of Goedel's incompleteness theorem for arithmetic, and Church's undecidability for first-order logic. Prerequisite: Logic and Philosophy of Science 205B. Same as Philosophy 205C.

206 Topics in Logic (4). May be repeated for credit as topics vary. Same as Philosophy 206.

209 Logic for Artificial Intelligence (4). After introducing the standard theory and meta-theory of classical first-order logic, the course surveys the fundamental tools, methods, and results developed in Artificial Intelligence in order to represent defeasible reasoning.

213 Topics in Modern Philosophy (4). May be repeated for credit as topics vary. Same as Philosophy 213.

215 Topics in Analytic Philosophy (4). May be repeated for credit as topics vary. Same as Philosophy 215.

220 Topics in Metaphysics (4). May be repeated for credit as topics vary. Same as Philosophy 220.

221 Topics in Epistemology (4). May be repeated for credit as topics vary. Same as Philosophy 221.

232 Topics in Political and Social Philosophy (4). Same as Philosophy 232.

240 Topics in Philosophy of Science (4). May be repeated for credit as topics vary. Same as Philosophy 240.

241 Topics in Philosophy of Physics (4). May be repeated for credit as topics vary. Same as Philosophy 241.

242 Topics in Philosophy of Biology (4). May be repeated for credit as topics vary. Same as Philosophy 242.

243 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Philosophy 243 and Psychology 231P.

244 Topics in Philosophy of Social Science (4). May be repeated for credit as topics vary. Same as Philosophy 244.

245 Topics in Philosophy of Language (4). May be repeated for credit as topics vary. Same as Linguistics 241 and Philosophy 245.

246 Topics in Philosophy of Logic (4). May be repeated for credit as topics vary. Same as Philosophy 246.

247 Topics in Philosophy of Mathematics (4). May be repeated for credit as topics vary. Same as Philosophy 247.

289 Logic and Philosophy of Science Workshop (1 to 4). A two- or three-quarter-long workshop on selected topics in logic and philosophy of science. In-progress grading, Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary. Same as Philosophy 249.

298 Independent Study (4 to 12). May be repeated for credit for a total of 12 units.

299 Dissertation Research (4 to 12). May be repeated for credit for a total of 12 units.

398 Teaching Assistant Training Program (4 to 12). May be repeated for credit for a total of 12 units.

399 University Teaching (4 to 12). May be repeated for credit for a total of 12 units.

DEPARTMENT OF POLITICAL SCIENCE

5229 Social Science Plaza B; (949) 824-5361
Mark P. Petracca, Department Chair

Undergraduate Program

The Department of Political Science offers a wide variety of courses at the introductory, lower-division, and more specialized upper-division levels. Courses in both micropolitics (individual and group politics) and macropolitics (politics at the state and international levels) are offered. The curriculum is organized into five areas: American politics and society, political theory, international relations, comparative politics, and public law. The Department also offers an Honors Program in Political Science for juniors and seniors, culminating in a senior honors thesis.

The Department is composed of a strong and diverse faculty especially interested in analyzing central questions of political science related to such topics as policy-making, political structures, participation, conflict, change and development, power and authority, and interstate relations. The faculty has particular strength in interdisciplinary approaches, in comparative analysis, and in the application of quantitative data to political science issues.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59–64.

School Requirements: See page 442.

Departmental Requirements for the Major in Political Science

School requirements must be met and must include 11 courses (44 units) as specified below:

- I. Five lower-division (one or two digit) Political Science courses selected as indicated either in option A or option B. Students are encouraged to take most of these courses during their first two years as a Political Science major at UCI.

Option A: Political Science 6A, 6B, and 6C (12 units), plus the lower-division introductory course (4 units) for the module selected under II below, plus any one additional lower-division course in Political Science (4 units).

Option B: Three lower-division courses (12 units) selected from Political Science 21A, 31A, 41A, 51A, and 61A, plus any two additional lower-division Political Science courses (8 units). One of these five courses must be the lower-division introductory course for the module selected under II below.

- II. Six upper-division courses in Political Science (24 units) chosen from among the Political Science modules numbered 120–179. Three of these courses must be from one module.

Honors Program in Political Science

The Honors Program in Political Science is open to all junior and senior Political Science majors who meet the minimum academic qualifications (3.5 GPA in Political Science courses and 3.2 GPA overall). In addition to satisfying the requirements for the major in Political Science, Honors Program participants must complete additional course work as specified below.

During the year prior to the year in which the thesis will be written, a prospective Honors Program student should identify a Department of Political Science faculty member who is willing to supervise the student's thesis. Students are ordinarily expected to take an upper-division Political Science course or a Political Science 199 Independent Study course with the advisor prior to their senior year. Students must also prepare a written proposal for their senior thesis. Proposals are approved by the faculty advisor and filed with the Department and Undergraduate Counseling offices.

During their senior year, students must enroll in the Honors Thesis Workshop (Political Science H182A, offered during the fall quarter), and three quarters of the Senior Thesis course (Political Science 190). Students write their senior thesis, which is designed and completed under their faculty advisor's supervision. Upon successful completion of their senior thesis, students graduate with Honors in Political Science and their transcripts note that they were in the Honors Program in Political Science.

Public Affairs Internship Program

The Public Affairs Internship Program, sponsored by the Department of Political Science, is designed to provide Political Science and other students with professional experience in the fields of government, nongovernmental organizations, the media, law, business, consulting, and others. The program is open to all sophomores, juniors, and seniors.

This program provides a selection of internship opportunities open to students by intern-sponsors, as available. Students also may create their own internship opportunities, consistent with Departmental guidelines. Students are required to enroll in Political Science 183 during the quarter of their internship. This course, supervised by the internship coordinator and participating members of the faculty, is offered Pass/Not Pass and cannot be used to satisfy upper-division Political Science requirements.

Information and applications are available in the Department office.

Political Science Minor Requirements

Requirements for the minor in Political Science are met by taking seven political science courses (28 units) as specified below:

- A. One course selected from Political Science 6A, 6B, or 6C.
B. Three upper-division political science courses, chosen from one Political Science module.
C. Three additional courses in political science, chosen from those numbered Political Science 6A, 6B, 6C, 20–79, or 120–179.

Graduate Program

Participating Faculty

Matthew N. Beckmann: American political institutions, the Presidency, Congress, interest groups, and survey research methodology
Alison Brysk: International relations, Latin American politics, human rights
Russell J. Dalton: West European politics, mass political behavior
James Danziger: Urban political systems, public policy analysis, and technology and politics
Louis DeSipio: American politics, ethnic politics, Latino politics and public policy
David Easton: Political systems, political structures
Martha Feldman: Organization theory, organizational change, decision making, public management, qualitative research methods
Lisa García Bedolla: Chicana-Latina studies, American politics, race and ethnicity
Bernard Grofman: Mathematical models of collective decision making, formal democratic theory, sequential decision making, and politics of small groups
Helen Ingram: Public policy, U.S.–Mexico relations, American politics
Marek Kaminski: Institutions of democracy, game theory, methodology, and statistics
Claire Jean Kim: Racial and ethnic politics, protest and social movements, contemporary political theory
Cecelia Lynch: International relations, peace politics, and international law
Richard Matthew: International politics, environmental policy
Anthony McGann: Formal modeling of political systems, comparative political economy, West European politics
David S. Meyer: Social movements, public policy, peace and war, social justice
Kristen R. Monroe: Political economy, rationality, American politics, methodology
Patrick Morgan: National security policy, American foreign policy, international politics, U.S.–European relations, Soviet politics
Jack W. Peltason: Constitutional law and civil liberties
Mark P. Petracca: American political institutions (presidency and congress), interest organizations, public policy, power and political discourse
Shawn Rosenberg: Political psychology, cognitive psychology, public opinion
Kamal Sadiq: Comparative politics, immigration in developing countries, India and South East Asia, Asian security
Wayne Sandholtz: International political economy, European community
William Schonfeld: Authority, democratic theory, and comparative politics
Caesar D. Sereseres: U.S. foreign policy, U.S.–Latin American relations, Mexican-American politics
Etel Solingen: International relations theory, international political economy, and world politics
Dorothy J. Solinger: Chinese domestic politics and political economy, comparative politics, East Asian politics, and democratization
Rein Taagepera: Mathematical models and quantitative analysis of elections, inequality, arms races, growth-decline phenomena and Baltic area studies
Katherine Tate: African American and minority politics, voting behavior, public opinion and American elections, state and urban politics
Rodolfo D. Torres: Urban politics, the State and class structures, studies in racism and inequality, poverty and social policy
Yuliya V. Tverdova: Comparative politics, methodology
Carole J. Uhlaner: Comparative political participation, formal models of political behavior
Robert Uriu: International relations, international political economy, Japanese political economy
Martin Wattenberg: American political behavior and institutions

The Department of Political Science offers a Ph.D. degree program in Political Science. The Department has attained a reputation for producing the very best innovative and interdisciplinary scholarship. Faculty are engaged in the study of such key questions as the

politics of advanced and democratizing societies, international cooperation and peace, the politics of racial and ethnic minority groups, and the origins of altruism and morality and their impact on world politics.

Graduate students can pursue concentrations in public choice and political psychology and specializations in democracy studies, international relations, and race and minority politics. The Ph.D. program offers big payoffs to graduate students, in fact, because of the extended range of inquiry an interdisciplinary program affords.

Political Science faculty members are regular participants in and help direct several research units on campus. The Center for the Study of Democracy, an Organized Research Unit at UCI, sponsors research and education aimed at improving the democratic process in the United States and expanding democracy around the world. The UCI Interdisciplinary Center for the Scientific Study of Ethics and Morality explores questions concerning the origins and causes of morality. The Center for Global Peace and Conflict Studies (CGPACS), housed in the School of Social Sciences, is a multidisciplinary program dedicated to promoting scholarly, student, and public understanding of international conflict and cooperation. The Institute for Mathematical Behavioral Sciences, also located in the School of Social Sciences, offers opportunities for participation in ongoing faculty research, notably with faculty members engaged in fields of public choice and political economy.

ADMISSIONS

The deadline for application for fall quarter admission is January 15. Students are admitted for winter or spring quarters only under exceptional circumstances. Additional information is available in the general section on admission to Social Science graduate programs. Please note especially the required examinations.

REQUIREMENTS

First-year students must take a core program of graduate seminars, focusing on major substantive areas as well as research methods. Students are required to complete one year of statistics, preferably before enrollment but no later than their first year. Competence in a foreign language is required. Students may substitute mastery of an advanced research skill in place of a foreign language. To acquire such a skill (which could involve course work in such disciplines as economics, mathematics and computer science, or statistics), students could take courses in econometrics, advanced multivariate regression, or computer science. Attendance in a colloquium series also is required for all graduate students during their first two years in residence.

Reviews and Examinations

Students ordinarily are expected to maintain a grade point average of 3.5 or better. At the completion of the first year, a review of performance in the graduate program will be conducted for each student by the Political Science faculty.

A set of three papers, normally completed by the third year of study, tests the student's competence in a set of major domains for intellectual inquiry. These domains are determined by the student and the Political Science Graduate Director. Upon successful completion of these papers and demonstration of competence in mathematics and a foreign language or an advanced research skill, a candidacy committee is appointed to oversee the qualifying examination and the formal advancement to candidacy. Students are expected to advance to candidacy by the ninth quarter of graduate study.

After the student advances to candidacy, the doctoral committee, usually composed of three members of the candidacy committee, reviews a dissertation prospectus and supervises work toward completion of the dissertation. Within six months of the oral qualifying examination (the formal advancement to candidacy), students

are expected to meet with their doctoral committee, in order to discuss with the members a dissertation prospectus.

The normal time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

Concentration in Public Choice

Public Choice is an interdisciplinary field, at the intersection of political science and economics, which draws on sophisticated quantitative tools to model the functioning of political institutions. Public Choice examines such areas as theories of voter and party choice; the theory of constitutions; the theory of committees and elections; models of regulation; problems of public goods and externalities; rent-seeking models; and issues in social choice, social welfare, and demand revelation.

This concentration is administered by an interdisciplinary committee of faculty from the Departments of Political Science and Economics. Students who elect this concentration are admitted under the normal procedures for the program in Political Science and must fulfill all the requirements for the Political Science degree, with the following modifications:

- (1) Students must complete the three-quarter core sequence in Public Choice, which is taught jointly by Political Science and Economics faculty. This sequence is usually taken in the student's second or third year.
- (2) Students must complete three additional graduate-level, four-unit courses in related fields with the consent of their graduate advisor, chosen from a set of courses designated by the interdisciplinary committee. The courses chosen are to be tailored to the individual interests and academic background of the student and usually will include at least two Economics courses (such as Econometrics, Game Theory, and Law and Economics) and one Political Science course (such as those on electoral systems, party systems, constitutions, courts).
- (3) Students are expected to write their dissertation on a topic related to Public Choice. Usually the dissertation advisor will be a Political Science member of the interdisciplinary committee.

Concentration in Political Psychology

The last two decades have seen an explosion of interest in the field of political psychology. UCI's graduate concentration is part of this development, but enjoys a rather distinctive place. The concentration offers students a broader education than is typically available at other institutions. In this vein, the program aims to provide: (1) a strong background in both political science and psychology; (2) an emphasis on theoretical and conceptual issues as well as empirical and methodological ones; and (3) a familiarity with research being done outside of the United States as well as within it. In this context, a number of research concerns central to the participating faculty are considered, including: social change and democratization, ideology, altruism, social and political identity, public policy, community building, mass media effects, voting behavior, and international integration. Believing in academic community, the concentration's sponsoring faculty offer a host of activities including colloquia, reading groups, and joint research opportunities to facilitate contact between students and faculty and among the students themselves.

Requirements. The purpose of the concentration is to provide a course of study which supplements the Ph.D. degree in Political Science. Therefore, students are required to complete all degree requirements for the Ph.D. stipulated by the Department of Political Science. As part of or in addition to these requirements, students must take five courses: Introduction to Political Psychology I and II (Political Science 285A and 285B), and three graduate psychology courses which provide a strong background in psychology (selected from an approved group which includes courses such as Personality in Development, Society and Pathology, Personality

Assessment, Proseminar in Cognitive Science, and Human Information Processing). These courses are taught in the Department of Cognitive Science in the School of Social Sciences and the Department of Psychology and Social Behavior in the School of Social Ecology.

Courses in Political Science

LOWER-DIVISION

6 Introduction to Political Science. Basic introduction to politics and society. These courses can be taken in any order.

6A Introduction to Political Science: Political Analysis (4). Presents various modes of understanding politics. Emphasis on basic approaches to political analysis, their uses in constructing theories, and their application to particular national political systems. (III, VII-B)

6B Introduction to Political Science: Macropolitics (4). Introduction to political inquiry at the level of the nation-state. Addresses the questions: how do we account for the emergence of a world system of nation-states; how does the course of political development affect the distribution of political power within nation-states; what is the evolutionary linkage between liberal democracies and the transformation of capitalism; what are the major challenges to political governance facing western democracies. (III)

6C Introduction to Political Science: Micropolitics (4). Introduction to political behavior of individuals and groups within national systems. Three major questions are addressed: How do individuals come to understand the political world? How do individuals behave within this world? How do groups and individuals engage in the political process? (III)

21A Introduction to American Government (4). Introduction to American political processes and institutions. Topics include elections, political participation, parties, interest groups, the Presidency, Congress, the bureaucracy, and the judiciary. (III)

29 Special Topics for Introductory Courses (4). May be repeated for credit as topic varies.

31A Introduction to Political Theory (4). Types of questions: What is politics? What are the theoretical and philosophical bases for different types of political arrangements? How do these perspectives get translated into reality? Among others, the works of Rousseau, Locke, Mill, and Marx are read. (III)

39 Lower-Division Special Topics in Political Theory (4). May be repeated for credit as topics vary.

41A Introduction to International Relations (4). Analysis of political relations between and among nations with emphasis on explanations of conflict and cooperation. The role of ideologies and their relation to international problems are also examined. (III, VII-B)

42A Nuclear Arms and Global Conflicts (4). Introduction to the history, technical basis, military capacity, and political conceptions and perceptions that bear on the global nuclear arms race. Topics include how weapons work and are delivered, theories of deterrence, arms race models, prospects for arms control and disarmament. (VII-B)

43D Global Security and Cooperation (4). Examination of global conflict and cooperation since World War II, and future prospects. The Cold War, nuclear arms race, regional conflicts, arms proliferation and control, deterrence theory, psychology of conflict, governmental and nongovernmental efforts to promote global peace and cooperation. (VII-B)

44A Global Issues and Institutions (4). Surveys recent developments in the nature of global interdependence. Examines the major political, economic, and military conflicts of this century and recent problems of population growth, environmental decay, ethnic/national antagonism and violence, and post-Cold War politics. Same as International Studies 12. (VII-B)

49 Lower-Division Special Topics in International Relations (4). May be repeated for credit as topics vary.

51A Introduction to Comparative Politics (4). Presents various analytical methods used to compare political systems. Emphasis on examination of theories and research with national political systems as units of analysis. Understanding how it is possible to compare political units and make meaningful statements about them. (III)

59 Lower-Division Special Topics in Comparative Politics (4). May be repeated for credit as topics vary.

61A Introduction to Minority Politics (4). Examines major theories that attempt to explain the roles of race and ethnicity in U.S. politics, while also looking at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Same as Chicano/Latino Studies 64. (III, VII-A)

69 Lower-Division Special Topics in Minority Politics (4). May be repeated for credit as topics vary.

71A Introduction to Law (4). An introduction to the study of judicial politics. Questions include: what is law?; what is a court?; who are the judges? Analysis of a wide range of judicial decisions illustrates the political importance of courts in the U.S. and elsewhere. (III)

79 Lower-Division Special Topics in Law (4). May be repeated for credit as topics vary.

UPPER-DIVISION

120-129: AMERICAN POLITICS AND GOVERNMENT

121A The American Presidency (4). Presents a comprehensive survey of the American presidency and considers the question of political power.

121B Mass Media and the Nomination Process (4). Examines changes in the presidential nomination process over the last four decades as well as the role of the media in this process. Students do a research paper comparing the media's coverage of two nomination races in different historical eras.

121C U.S. Elections and Voting Behavior (4). Examines how voters evaluate political parties, candidates, and issues in electoral campaigns to reach their decisions. Numerous controversies concerning the degree of issue voting, sophistication of candidate evaluations, and the decline of political parties are discussed.

121D Public Policy (4). Introduction to the developmental processes, determinants, and substance of U.S. national public policy. The stages of issue generation, agenda-building, policy resolution, and implementation are examined within the context of specific policy areas.

121E Public Policy Analysis (4). Examines different approaches to the analysis of public policy with differing notions of what constitutes good policy, the role of government, and how citizens participate in policy-making. Suggests a policy-design perspective which builds upon other frameworks but concentrates on goals, implementation structures, tools, and rationales. Prerequisites: Environmental Analysis and Design E8 and E109U. Same as Environmental Analysis and Design E157U.

121F Presidents Since World War II (4). Reviews the actions and character of presidents from Harry Truman through Bill Clinton. Each week a different president is examined from a variety of perspectives. Students are expected to write a substantial original research paper. Prerequisite: Political Science 21A.

122A American Metropolitan Politics (4). An analysis of the politics of urban and suburban cities. Main themes include alternative explanations of how political power is exercised and how policy decisions are made for urban governments; the structure of local political systems, including the problems of metropolitanism and federalism; the major policy problems facing the urban area, particularly from the perspective of the "underclass."

122B California Politics (4). Explores California state politics in comparison to other states in such dimensions as: nature of electoral competition, state constitutions, lobbying patterns, gubernatorial leadership, scope and innovativeness of major policies, relationship of politics and policies to differing electoral orientations and economic conditions.

122C The American Electorate (4). Provides an overview of how polls are conducted, and how they can be manipulated by question wording, sampling techniques, interviewing procedures, and context. Public attitudes toward Congress are examined, and students analyze survey data on their own as a research project.

123A Parties and Political Organizations (4). A consideration of the role that parties and other political organizations play in the American political process. Also looks at the development and significance of PACs, interest groups, and social movements as vehicles for democratic participation.

123B Representation and Redistricting (4). Deals with classical theories of representation: issues of racial and political representation in U.S. legislatures and city councils; proportional representation models and comparative election systems. Prerequisite: Political Science 21A.

123C Reforming American Politics (4). Assesses the demands and prospects for political reform in America. Where is political reform most needed? Why? What form shall it take? Focuses specifically on ethics of public decision-making, professionalization of American politics, institutional designs for democratic governance.

123D Research Methods in Political Science (4). Introduction to the methods of social science research. Examines the principles of the scientific method and then applies these methods in a class research project. Heavy emphasis on hands-on research.

124A The Politics of Protest in the U.S. (4). Examines the Civil Rights movement, the Black Power movement, and the women's movement in light of existing social movement theories. The theories are used to illuminate the three cases, and the cases are used to critique and revise the theories. (VII-A)

124B Latinos in U.S. Politics (4). Comparing the political issues facing Latino groups by examining their migration histories, voting behavior, non-electoral participation, and policy issues. Latino issues are examined on the national, state, and local levels, including formal representation, immigration, affirmative action, and language policy. Same Chicano/Latino Studies 151. (VII-A)

124C Comparative Minority Politics (4). Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements. Same as African American Studies 151, Asian American Studies 132, and Chicano/Latino Studies 147. (VII-A)

124D Race and Citizenship in America (4). The role U.S. citizenship policy has played in the social construction of race. Looks comparatively at citizenship experiences of different racial/ethnic groups to understand how the meaning of being a U.S. "citizen" has varied over time and across groups. Same as Chicano/Latino Studies 152. (VII-A)

124E African American Politics (4). Examines the politics of African Americans in order to gain a broader perspective of the American political process. Major developments in African American politics (including the civil rights movement, Black presidential bids), continuing problem of racism, responsiveness of key governing institutions. Same as African American Studies 121.

125A The United States Congress (4). Does the Congress do a good job of representing the American citizenry? Is it the most appropriate mechanism for the creation, resolution, and implementation of public policy? Prerequisite: satisfactory completion of the lower-division writing requirement.

125B Congress: The New Institutional Approach (4). Study of the U.S. Congress emphasizing how rules and institutions (filibuster, veto, the committee system, party caucuses) structure how the Congressional game is played. Combines theoretical study of procedures with the practical study of actual bills.

126A Mexican-Americans and Politics (4). Examines political development of Mexican-Americans. Topics include their "territorial" roots in the Southwest, demographics, political leadership and organization; policy issues of immigration, bilingualism, education, and economics; relations with other minority groups; the role of Mexican-Americans in U.S.-Mexico relations. Same as Chicano/Latino Studies 143. (VII-A)

126B Urban Policy Analysis (4). Problem-solving seminar examining key issues for urban political systems and the metropolitan area. Evaluation of the nature, quality, and feasibility of alternative analyses of a series of policy problems, such as housing, poverty/welfare policy, transportation, crime, education. Prerequisite: consent of instructor.

126C U.S. Immigration Policy (4). Examines selected immigration policy debates since the nineteenth century, rationale and consequences of immigration law since 1965, problems of administration, implementation and enforcement, impact of immigration policy on foreign relations, and contemporary debate regarding the future of U.S. policy. Same as Chicano/Latino Studies 163. (VII-A)

126D Urban Politics and Policy (4). Examines the economic limits of cities and welfare policy. Addresses such issues as why are the poor concentrated in the central cities? Which anti-poverty programs will work best in the cities? Which level of government is best able to combat poverty in the U.S.?

126E Education Politics and Policy (4). Examines the politics surrounding issues of public education (K-12) and the policies used to achieve certain education-related goods. Topics include political equality within policies of desegregation, funding, various types of choice, and standardized testing. Satisfactory completion of the lower-division writing requirement.

127A-B-C Economic Analysis of Government Behavior I, II, III (4-4-4). The study of government using the tools of economics. **127A:** The influence of voters' preferences on governmental policy; Arrow's impossibility theory; the Downsian theory of voting. **127B:** The effects of various taxation and expenditure policies, such as social security. **127C:** Research course in which students write a paper testing one of the theories covered in the first two quarters of the sequence. Prerequisite: Economics 100A-B or consent of instructor. Same as Economics 141A-B-C. Political Science 127B also same as Environmental Analysis and Design E158U.

128A Political Psychology (4). Examination of how psychological theory and research may be used to better understand political thought and behavior. Drawing on theories of learning, cognition, and personality, discusses the formation of political attitudes, the process of political decision-making, the nature of political leadership. Same as Psychology 176A.

128B Political Ideology (4). Examination of how people think about and understand politics, covering a range of issues from the nature of liberalism-conservatism opposition to the development of ideological thought during the college years, and using the work of anthropologists, psychologists, sociologists, political scientists. Prerequisite: satisfaction of the lower-division writing requirement.

129 Special Topics in American Politics and Society (4). May be repeated for credit as topic varies.

130-139: POLITICAL THEORY AND METHODS

130A Game Theory and Politics I (4). Introduction to game theory and a survey of its political applications. Examples of topics covered include voting in small committees, legislatures, and mass elections; interest group activities and environmental issues; institutional design, and the evolution of cooperative behavior. Prerequisite: Mathematics 1A or 1B.

130B Game Theory and Politics II (4). More advanced game theory and its political applications, beginning where Game Theory and Politics I ends. Examples of topics covered include revolutions; arms race; spatial models of party competition; political manipulation; political coalitions and their power. Prerequisite: Political Science 130A.

131A Political Thought Since Hobbes (4). Classic statements of political values from Hobbes to the present: classical liberalism, conservatism, radical democracy, liberal democracy, socialism, pluralism, Marxism, fascism, neo-conservatism. Emphasis on underlying views of human nature and history. Prerequisite: upper-division standing or consent of instructor.

131B Marx and Nietzsche (4). Juxtaposes and compares two of the most powerful and penetrating intellects of the nineteenth century. Lectures deal primarily with biographical material and historical setting. Reading and discussions emphasize systematic comparison of their respective views of human nature, history, social discontents, and the future of Western societies.

131D Nietzsche (4). The social, economic, and political philosophy of Nietzsche. Nietzsche's seminal ideas about knowledge and language and how these ideas have influenced contemporary thinking concerning these subjects. Same as Sociology 127.

132A Critical Political Theory (4). Acquaints students with current political theories, critical of conventional thinking, which attempt to join political, economic, social, historical, linguistic, and philosophical concerns to questions involving the relationships between and among individuals, groups, and institutions in the society, economy, and polity. Prerequisite: upper-division standing. Same as Sociology 126.

132B-C-D Radical Social Proposals (4-4-4). An examination of current proposals for alternative mass media systems, political systems, and economic systems. Focus is on proposals aimed at increased citizen participation and control, and at more equal distribution of wealth. Prerequisite for 132B: satisfactory completion of the lower-division writing requirement.

132E Basic Societal Issues (4). For students who have serious concern about peace, economic justice, the environment, or the future of human society generally. Attempts to provide an understanding of the fundamental issues underlying such social problems; fundamental alternatives available for attempting to cope with them. Same as Sociology 172E. Students may not receive credit for both Political Science 32A/Sociology 72 and Political Science 132F/Sociology 172E.

133D Analytic Political Research (4). Encourages students to think creatively and analytically about politics by applying mathematical techniques as a means to increase understanding. Introduces the use of both static and dynamic mathematical models on such political topics as elections, revolution, and arms races.

134A Democratic Theory and Liberalism (4). A modern approach to democratic theory including social choice and empirical democratic theory. Addresses issues such as how institutions can be democratic, how minorities can be protected, how rights can be balanced against obligations, and how democracy can promote deliberation.

134B Modern Political Theory (4). Focuses on a different aspect of modern political theory each quarter.

134C Theories of Political Structure (4). An examination of alternative theories of political structure with particular attention to those found among sociologists such as Parsons, anthropologists such as Lévi-Strauss and Nadel, psychologists such as Piaget, and Marxists such as Althusser and Poulantzas. The objective is to test the utility of these approaches for the construction of a theory of political structure. Prerequisite: upper-division standing.

134D Theories for the Study of Politics (4). A critical introduction to alternative theories used for the study of politics. Special attention will be given to interpreting political life as a system of institutions and behaviors.

134F Social and Political Theory (4). Focus is on recent major work in social and political theory. An in-depth analysis of a relatively small body of writing. Authors discussed include Jürgen Habermas, Anthony Giddens, and Richard Rorty.

134H Language and Power (4). Seminar to study a theory of how reality/meaning/knowledge is created in language as a consequence of structures of power. Prerequisite: upper-division standing and consent of instructor. Strongly recommended: 3.5 GPA and/or background in modern language analysis.

134J Sexism and Power (4). Sexism may be seen as a particular form of socially constructed power which creates and maintains gender differences as relations and practices of structured inequalities. Males and females are objects constructed in a powered language dominated and controlled by males to their positional and distributional advantage. Prerequisite: upper-division standing. Same as Sociology 168.

135A Origins of Liberalism (4). Examines the ideals, social forces, and historical events that gave rise to liberal political theory. Topics include patriarchal authority, the divine right of kings, religious toleration, slavery, colonialism, political economy, the evolution of law, and tensions between liberty and equality. Prerequisite: Political Science 6B or 6C or 31A, or consent of instructor.

136A Political Economy (4). Introduction to the interrelationships between the American economy and American politics. Follows two basic premises: (1) one can know nothing about politics if one does not understand its relationship to the economy; and (2) one can know nothing about economics if one does not understand how the economy is related to politics and how political language is used for economic purposes. Recommended: introductory courses in politics and economics.

136B History of Political Economy (4). Introduction to the major ideas in political economy. Stresses linkages between the humanities and political economic thought. A consideration of premarket and socialist politico-economic systems focuses attention on the cultural, historical, and political influences on economic systems. Politico-economic thought is viewed as part of the larger body of scientific inquiry into the natures of nature and humanity.

137A Politics and Human Nature (4). Addresses the central debate between positive social science and normative political theory: is there an intrinsic human nature? If so, what is it? What is its origin? And how much cultural variation does it display? Prerequisite: satisfactory completion of the lower-division writing requirement.

137B Types of Political Representation (4). Political representation plays an important role in democratic systems, but is elusive once examined closely. Students delve into the concept and relate different views to political life. Half of the course is spent on writing instruction. Prerequisite: satisfactory completion of the lower-division writing requirement. Recommended for upper-division students. Formerly Political Science 158B.

138A Moral Choice During the Holocaust (4). Considers moral choice by comparing some of the major theories of moral choice with empirical examinations of moral exemplars during one of the most difficult periods in recent history: the Holocaust. Prerequisite: satisfactory completion of the lower-division writing requirement.

138B Ethics and Public and Private Life: Advanced Seminar (4). Examines ethical issues in public and private life by considering traditional moral theory in light of specific moral dilemmas, such as environmental policy, genocide, abortion, euthanasia, social welfare, and aid to other countries. Prerequisite: satisfactory completion of the upper-division writing requirement or consent of instructor. Same as Environmental Analysis and Design E154U.

138C Ethics of Difference (4). Examines differences traditionally judged politically salient—race, ethnicity, religion, gender. Personal interviews with an elderly person encourage students to understand the social construction of difference and to reexamine their own attitudes by putting themselves in the place of another. Prerequisite: satisfactory completion of the lower-division writing requirement.

139 Special Topics in Political Theory and Methods (4). May be repeated for credit as topic varies.

140–149: INTERNATIONAL RELATIONS

141A Environmental Politics and Policy (4). Lecture, three hours. Provides a multifaceted foundation for the development of environmental problem-solving and policy-making skills. Examines “nature” from a range of historical and cultural perspectives. Links socio-ecological stress theories to a range of landscapes and contemporary debates. Current air, water, and land policies. Same as Environmental Analysis and Design E145U.

141B International Political Economy (4). Examination of problems in global political-economic relations through competing conceptual lenses or grand theories: mercantilism, liberalism, and marxism. Surveys North-North and North-South issues relating power and wealth. (VII-B)

141C International Political Economy of East Asia (4). Integration of theoretical perspectives in international political economy with the study of economic development in East Asia, with special emphasis on regional integration. (VII-B)

141D The European Union (4). Examination of the European Union as an ongoing political experiment. Assesses diverse explanations for the evolution of European economic and political integration. Analyzes the development of EU institutions/policies in such areas as trade, high technology, monetary relations, foreign policy. Prerequisite: upper-division standing. (VII-B)

141E U.S. Foreign Policy Toward Asia (4). U.S. policy toward the countries of East Asia: bilateral and regional security relationships, U.S. economic relations with the major Asian countries, the development of regional institutions, and human rights. (VII-B)

142B The International Relations of East Asia (4). Surveys various aspects of relations between the nations of East Asia. Topics include historical development of the region; current political and security relations, including the impact of the American military presence; other issues such as economic relations and human rights.

142C International Relations of Japan (4). An undisputed economic “superpower,” Japan is internationally more significant today than ever before. Examines the historical background, salient issues, and future scenarios of the international relations of Japan.

142D U.S. Foreign Policy I: Globalism and Cold War (4). Looks at the changing international perspectives, policy responses, and military strategies of presidential administrations from Truman to Reagan. In assessing the motives and objectives of U.S. foreign policy leaders during the “Cold War” era, the concept of “national interest” is examined.

142E U.S. Foreign Policy II: Cold War Decline and After (4). Deals with U.S. foreign policy from the post-Vietnam War era through the collapse of the Cold War and into the emergence of the post-Cold War era, roughly from 1972 to the present.

142F U.S. Foreign Policy III: National Security Decision-Making (4). Concept of “national security” from 1947–1990s is reviewed. Organizational and psychological factors that influence decision-making, the dangers of “group-think,” and the issues of accountability are analyzed. National security agenda (military, economic, environmental, and social) for the 1990s is discussed.

142G U.S. Coercive Diplomacy (4). Examines the theory of compellence and the U.S. practice of coercive diplomacy—the power to change the behavior of other governments. Specific case examples include the Cuban missile crisis, bombing of North Vietnam, the Nicaraguan Contras, Desert Shield/Desert Storm, and Libya. Prerequisite: junior or senior standing.

143B Alternative Security (4). Seminar designed to critically evaluate the major means of preventing the outbreak of a great war—deterrence—and some major alternatives to this policy. Prerequisite: Political Science 42A.

143C Arms Control and International Security (4). General introduction to the theory and practice of arms control between the nuclear superpowers. Examines the history of the arms race, the disenchantment with disarmament, and the development of arms control as an alternative or complement to military power as a means of ensuring security. Prerequisite: Political Science 42A or consent of instructor.

143D Global Environmental Issues (4). While many agree that environmental problems threaten humankind, there is much disagreement over the nature of these threats and how to address them. This course examines global environmental issues from various perspectives in order to provide answers to these questions. Same as Environmental Analysis and Design E132U and International Studies 120.

143E Globalization and Its Discontents (4). Reviews current literature on globalization and its impact on global, regional, and domestic politics. Explores how different states, nations, and cultures respond to common global predicaments and opportunities emanating from the international economy and the global institutions associated with it. (VII-B)

143F Intelligence in International Politics (4). Intelligence agencies, activities, and functions—their impact on international politics; how governments and societies seek to control intelligence agencies and activities; and how intelligence agencies work—their techniques, resources, technology, problems, successes, and failures.

144A Approaches to International Relations (4). Reviews theoretical and methodological approaches to the study of international relations using contending perspectives to analyze power and influence, capabilities, interdependence, reciprocity, international regimes, anarchy, cooperation, imperialism, and hegemony.

145A Central America and U.S. Policy (4). Examines revolution in Latin America and U.S. response of accepting, shaping, or opposing “radical” regimes. Recent conflicts in Central America compared to Mexico, Bolivia, Guatemala, Cuba, and Grenada. The theory and practice of coercive diplomacy and the case of U.S.–Nicaragua relations (1979–90) studied in detail.

145B U.S.–Mexican Relations (4). Realism and interdependence theories are applied to this asymmetric relationship. Analysis of NAFTA, relations with Canada, current issues in trade, capital flows, migration, narcotics control, and energy. Emphasis on interplay of domestic politics (California, Mexican Americans) and foreign policy. Same as Chicano/Latino Studies 164. (VII-B)

146A Ethics and International Relations (4). Introduces students to the dynamic field of ethics and international relations. A variety of traditional and emerging perspectives are examined, skeptical views are discussed in detail, and arguments are illustrated with current cases. Same as Environmental Analysis and Design E190C. (VII-B)

147A International Cooperation (4). Examines different approaches to the study of international cooperation placing special emphasis on multilateral institutional and “regimes” in areas such as trade (GATT), security (nonproliferation), and the global environment. (VII-B)

147B Interdependence in World Politics (4). Examines the effects of transnational networks and international economic interactions—e.g., migration, trade, and capital flows—on international political outcomes. Focuses on the cases of U.S.–Mexican and U.S.–Canadian relations. (VII-B)

148B United Nations (4). Designed to familiarize students with the inner workings of the most important international organization in the world—the United Nations. Its purpose, structure, and influence on different regions of the world is discussed at length. Looks at other international and regional organizations. (VII-B)

149 Special Topics in International Relations (4). May be repeated for credit as topic varies.

150–159: COMPARATIVE POLITICS

151A East Asian Politics (4). Explores the recent history and political systems of China, Japan, and Korea, comparing the three countries with each other and with occasional reference to the United States, British, and French systems. (VII-B)

151B Introduction to Chinese Politics (4). Background to the Chinese revolution, rise of the Communist party; and institutions, ideology, and structure of Communist party rule from 1949–present. (VII-B)

151C Chinese Politics: Policy, Leadership, and Change (4). Examines major policies from 1949 to the present, and considers the changing role of the Communist Party and its shifting treatment of various social groups; the era of Mao Zedong, reforms under Deng, and post-Deng politics. (VII-B)

151D Japanese Politics: State and Economy in Modern Japan (4). Introduction to the political foundations and economic achievements of modern Japan. Focus on the development and evolving roles and functions of the principal institutional actors in Japan's political economy. (VII-B)

151F Korean Politics and Society (4). Examination of contemporary political/social structures and process of Korea (South and North). Historical and cultural influences on current political systems and policies. Also included are economic development, national security, unification issues, and foreign relations. (VII-B)

151G Electoral Systems (4). A worldwide overview of electoral laws by which votes are converted into assembly seats. Systematic analysis of these laws and their effect on political process and stability. Single-, two-, and multi-party systems. Proportional representation versus plurality rule. Majoritarian and consensus patterns of government. Political Science 52B and 151G may not both be taken for credit.

152A Politics in Britain (4). The politics and processes of government in Britain; the operation of parliamentary government; the responses of the political system to the issues and problems in contemporary Britain. Racism and immigration policy; economic stagnation and entry into the Common Market; Northern Ireland; the linkages between social class and politics.

152B French Politics and Society (4). A general overview of the nature of French politics and society. Some of the basic literature on France is read, and students select a topic of particular interest to them. Students with a reading knowledge of French particularly welcome. (VII-B)

152C German Politics and Society (4). Concentrates on twentieth-century German politics and society, focusing on the contemporary political system of democratic West Germany. Study of the historical legacies of Weimar and the Nazi period, the postwar division between the two German states, and their reunification. (VII-B)

152D-E Post-Soviet Politics I, II (4-4). An overview of the present sociopolitical structure and of the major national cultures within the former Soviet Union. **152E:** Expands on the themes of 152D plus individual research on any former Soviet topic. Prerequisite for 152E: Political Science 152D or consent of instructor; satisfaction of the lower-division writing requirement. (152D: VII-B)

152F West European Politics (4). Explores four main themes: (1) thinking scientifically about politics; (2) understanding the linkages between different political structures and spheres of activity; (3) evaluating some theories about politics; (4) learning about three countries: Britain, France, and Germany. (VII-B)

152G European Politics (4). An introduction to the politics of Europe including the smaller countries and the former Warsaw Pact. Includes case study of three or four countries, as well as contemporary issues such as globalization, immigration, population decline, and European integration.

153A Latin American Politics (4). Explores the common political dynamics of Latin America, as well as the political histories and prospects of selected countries of the region. Places Latin American politics in an analytical framework derived from comparative politics. (VII-B)

153B Canadian Politics (4). An overview of contemporary Canadian government and politics. In addition to consideration of the basic structures and processes of Canadian government, topics may include regionalism, federalism, western alienation and oil, Canadian solutions to social welfare policy questions, developments in Quebec. (VII-B)

153C Research in Canadian Politics (4). Intensive consideration of several topics in Canadian politics and society, leading to the writing of a research paper by each student. Topics are oriented toward contemporary issues of public policy. Prerequisite: Political Science 153B or consent of instructor.

153D Mexican Politics (4). An overview of contemporary Mexican government and politics and their evolution in the twentieth century. Emphasis on state-society relations, the changing role of government in the economy, democratization, and the impact of opposition groups in politics and policy, including foreign policy.

153E Human Rights (4). Examines the causes and consequences of human rights violations with a focus on Latin America. What are human rights? When and where are they violated? What political mechanisms are available to deal with human rights problems? How effective are they? (VII-B)

153F Social Movements in Latin America (4). Explores leading issues in the study of social movements, through a series of Latin American cases. Provides a framework for thinking about the relationship between social forces and the political system, as well as knowledge of experiences important for studying Latin American politics. (VII-B)

154C Comparative Politics: Four Nations, Three Continents (4). Studies four countries in a comparative fashion: their respective political histories and cultural traditions, actual differences among their superficially similar party, parliamentary, and executive institutions; contemporary economic policy. The countries represent three continents and stand at varying levels of economic development. (VII-B)

154E Comparative Political Economy (4). Examines the interaction between politics and markets, both in theory and in practice, explicitly linking classic works on political economy with current policy debates. Studies how political systems and markets are organized in different national settings.

154F Peoples and Cultures of Post-Soviet Eurasia (4). Examines the cultures and political conflicts of the more than 130 indigenous ethnic groups in the European and Asian territories of the former U.S.S.R. Emphasis is on the theoretical issues of ethnicity, nationalism, and conflict management. Same as Anthropology 164P. (VII-B)

154G Conflict Management in Cross-Cultural Perspective (4). Examines theories of conflict management. Analyzes how conflict is mitigated in diverse cultures: at the interpersonal level, between groups, and on the international scale. Students discuss readings, hear from conflict management practitioners, and simulate negotiations. Same as Anthropology 136D. (VII-B)

155B Political/Social Impacts of Computing (4). Aims to increase our understanding of the major impacts of computer and telecommunications technologies on contemporary society. Emphasis on the uses and effects of these technologies on the political world, as well as other effects on society that are policy-relevant. Analytic research paper required. Prerequisite: consent of instructor.

155C Organizations (4). How bureaucracies, formal organizations, and voluntary associations work, how and why they grow, and where they are going. History and structure of organizational rationality; dynamics of organized groups; behavior in organizations. The limits of bureaucratization and attempts to overcome these limits through decentralization. Same as Sociology 141.

155E Revolution and Collective Political Violence (4). Examines the theory of collective political violence, internal war, and insurgency. Considers causes and "process" of revolutions; comparative characteristics of organized armed movements; personality of revolutionary leaders. U.S. foreign policy and military doctrine on insurgency and low-intensity conflict reviewed. Prerequisite: satisfaction of the lower-division writing requirement.

155F Political Economy of Japan (4). Surveys postwar developments in the politics and political economy of Japan. Topics include the political and institutional context of policy making; pressures for change which Japan's political economy has faced in the last decade; and Japan's foreign policies, past and present. (VII-B)

155G Advanced Topics in Japanese Politics (4). Analysis of four current issues in Japanese politics: political reform, administrative reform and economic deregulation, foreign economic relations, and Japan's defense and security policies. (VII-B)

156A Political Participation (4). The ways in which people in various political systems take part in politics, especially in activities directed toward affecting outcomes. Who is active, what they do, why they do it, and what difference it makes. (VII-B)

156B Participation and Representation (4). Examines the concepts "political participation" and "political representation" and the interconnection between these concepts. Addresses both the theoretical issues and debates raised by these concepts and considers how they are studied empirically. Prerequisite: upper-division standing or consent of instructor.

156C Citizen Politics (4). Study of the role of public opinion in the political process. Reviews some of the key research approaches and findings on which our current understanding of public opinion is based, and provides an opportunity to conduct research and to analyze public opinion surveys. Prerequisite: satisfactory completion of the lower-division writing requirement.

156D Social Movements and Collective Behavior (4). A survey of models of collective action drawn from sociology, economics, psychology, and political science, and focusing on areas such as social movements, strikes, crowd psychology, cults, fads, fashions, public opinion, and symbolic and mythical elements in collective culture. Prerequisite: Political Science 6A, Sociology 1, or Economics 1. Same as Sociology 174.

157A Nationalism (4). Nationalism, one of the most potent social and political forces of the twentieth century, is explored. Seeks to understand the sources and nature of various forms of nationalism. Prerequisite: satisfactory completion of the lower-division writing requirement. (VII-B)

158A Political Corruption (4). Political corruption is universal. Examines how standards of corruption have changed over time in the United States, and how they vary from country to country. This seminar-style course emphasizes discussion of both ethical and practical issues relating to corruption. Prerequisite: satisfactory completion of the lower-division writing requirement.

159 Special Topics in Comparative Politics (4). May be repeated for credit as topic varies.

170-179: PUBLIC LAW

171A Law and Society (4). Examination of the law and its various roles in society. The nature and meaning of law; legality and power in the American system; law as a mechanism for social change; the role of law in dispute processing, social control, compliance with judicial decisions. Prerequisites: Political Science 71A and satisfactory completion of the lower-division writing requirement.

171B Jurisprudence (4). A survey of legal philosophies. Explores jurisprudence from the ancient Greeks to the present, including natural law philosophy; legal positivism and realism; sociological jurisprudence; and liberal, radical, and conservative thought. Prerequisite: Political Science 71A.

171C Comparative Constitutional Politics (4). Examines the impact of constitutional courts on politics and policy-making in Canada, France, Germany, and the United States. Cases may focus on the constitutional politics of free speech, abortion, rights to property, and the conduct of foreign relations. Prerequisite: Political Science 71A and satisfaction of the lower-division writing requirement.

171D American Constitutional Law (4). American constitutional interpretation through extensive analysis of cases involving the separation of powers, federal-state relations, rights of property, free expression, privacy, criminal due process, political participation, and equality. Corollary topics include legal research methods, development of judicial review, legal reasoning, and the political impact of Supreme Court decisions. Prerequisite: Political Science 71A. Political Science 171D and Criminology, Law and Society C122 may not both be taken for credit.

171E Law and Social Sciences (4). The use of social science evidence in litigation is examined. Looks at the complex interaction of social facts, law, statistical models, and normative judgments, focusing on political science and sociological testimony in areas of Fourteenth Amendment equal protection jurisprudence. Prerequisite: Political Science 71A.

171F Law in the Twenty-First Century (4). Examines the complex relationship between law, the social sciences, and modern society. Lectures explore such issues as the interplay between technology and constitutional rights, the impact of science on law, and the evolving roles of attorneys and judges. Same as Social Science 172D.

172A International Law (4). Examination of the origin, changing structure, and application of international law, and the role of legal norms in regulating the behavior of states and maintaining international order. The use of force, pacific settlement of disputes among nations, human rights, international terrorism. Prerequisite: Political Science 71A. (VII-B)

173A Comparative Legal Systems (4). Comparative survey and analysis of legal systems, actors, cultures, and norms in nations of the following traditions: common law (U.S. and British Commonwealth), civil law (Western Europe and Latin America), socialist (Soviet Union and Eastern Europe), and Asian (China and Japan). Prerequisite: Political Science 71A or consent of instructor. (VII-B)

174A Civil Liberties (4). Political analysis of selected Supreme Court cases involving claims under the Bill of Rights and the Fourteenth Amendment. Topics include: race, sex, and other forms of discrimination; criminal justice; privacy; freedom of speech and related claims. Prerequisite: Political Science 71A.

174B Contemporary Constitutional Rights (4). Addresses a central aspect of politics: the interpretation and application of the United States' fundamental rules. These rules tell us something about the goals of society, and the means chosen to achieve them by allocating rights and duties, costs, and benefits among its members. Prerequisite: Political Science 71A or consent of instructor.

174C U.S. Supreme Court (4) Detailed overview and analysis of the role played by the U.S. Supreme Court in the American political system. Judicial review, appointment of justices, judicial activism and judicial restraint, process of case selection, court deliberation, and decision-making, impact of Supreme Court decisions. Prerequisite: satisfactory completion of the lower-division writing requirement.

179 Special Topics in Public Law (4). Prerequisite: Political Science 71A. May be repeated for credit as topics vary.

SPECIAL COURSES—UPPER DIVISION

H180 Honors Seminar in Political Science (4). Restricted to students enrolled in the Honors Program in Political Science. May be taken for credit three times as topics vary.

H182A Honors Thesis Workshop (4). A weekly seminar/workshop to facilitate the exchange of ideas and research strategies among students and to review their progress in writing the thesis. Prerequisite: consent of instructor. Open only to students in the Political Science Senior Thesis program.

183 Public Affairs Internship (4). Supervised internship and study in political, governmental, nonprofit, or related organizations for students participating in the Department's Public Affairs Internship Program. Enrollment dependent upon availability of intern positions. Pass/Not Pass only. Prerequisite: consent of instructor. May be taken for credit three times.

184 Government Internship (4). Internship and study in political, governmental, nonprofit, or related organizations for students participating in the UCDC Program. Pass/Not Pass only. Prerequisite: consent of instructor. May be taken for credit twice.

190 Senior Thesis (1 to 4). Prerequisite: consent of instructor. May be taken for credit for a total of three times.

197 Field Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Directed Group Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies. Students may enroll for only one 199 each quarter.

GRADUATE

210A-B-C Research Seminar in Politics and Society (1.3-1.3-1.4). Weekly reports and colloquia by faculty, students, and visitors. Students required to report on one research project over the course of three quarters. Required of first- and second-year graduate students in Political Science. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

211A Foundations of Modern Political Science (4). Provides an introduction to major works by highly influential scholars in the nineteenth and twentieth centuries, such as Marx and Engels, Mosca, Michels, Weber, Wallas, and Lasswell, that constitute the foundation of contemporary political science. Required of first-year graduate students in Political Science. Prerequisite: graduate standing or consent of instructor.

211B Micropolitics (4). Provides students with comprehensive introduction to the substance and methods of the study of political behavior. Focuses on the level of individual behavior, but the relation to macrosocial analysis is considered. Required of first-year graduate students in Political Science. Prerequisite: graduate standing or consent of instructor.

211C Macropolitics (4). Examines some of the major research issues in political science involving macro-level questions: systemic processes, political institutions, or system outputs. Required of first-year graduate students in Political Science. Prerequisite: graduate standing or consent of instructor.

219A-Z Special Topics in Politics and Society (4). Current research in politics and society. May be repeated for credit as topics vary.

221A Public Policy (4). Explores different approaches to public policy analysis, the diverse conceptions of the goals and objectives that should be served by policy, and the appropriate role of the policy analyst. Policy consequences are traced to indirect and subtle incentives and disincentives. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design U221 and Criminology, Law and Society C255.

222A Public Management (4). Introduction to inclusive management. To make effective use of public resources, public managers are inventing ways of managing that alter relationships within organizations, between organizations, between sectors, and with the public. Requires rethinking fundamentals such as leadership and motivation. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design U283.

224A Environmental Politics and Policy (4). Reviews and critiques literature on discussion topics including: the nature and effectiveness of the environmental movement and environmental policies; the role of science and technology; the use of economic incentives in policy; decentralization of decision making; and creating arenas for public involvement. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design U244.

229 Advanced Research Methods: Varied Topics (4). Topics in advanced research methods. Topics will vary. Prerequisite: graduate standing. May be repeated for credit as topics vary.

232B Electoral Systems Seminar (4). Studies electoral systems worldwide, analyzes their effect on the number of parties and duration of government cabinets, and applies the results to the present democratizing countries. Prerequisite: graduate standing or consent of instructor.

234A Research Methods in Political Science (4). An introduction to standard research techniques in political science. Issues of epistemology, research design, and approaches to empirical analysis. Prerequisites: graduate standing or consent of instructor, and upper-division or graduate-level statistics.

240A American Foreign Policy Decision Making (4). Assesses the changing international perspectives, policy instruments, and decision making processes of United States presidential administrations since World War II. Prerequisite: graduate standing or consent of instructor.

241B Seminar in International Relations Theory (4). Overview of the major theories guiding research and scholarship in international relations. Focus on major conceptual approaches (realism, neoliberalism, marxism) and levels of analysis (systemic, state, and subnational), as well as on methodological/epistemological debates engulfing the field. Prerequisite: graduate standing or consent of instructor.

252A The State in Comparative Perspective (4). Seminar examining the state from theoretical, empirical, comparative perspectives. How the state came into being; the state's role in the economy, toward society and internationally, and in policy-making in Western Europe, East Asian newly industrialized countries, the Third World. Prerequisite: graduate standing or consent of instructor.

252E Democracy and Rationality (4). A modern approach to democratic theory including social choice and empirical democratic theory. Addresses the relationship of rationality and democracy, how minorities can be protected, and how democracy can promote deliberation, considering in particular the work of Rawls and Habermas. Prerequisite: graduate standing or consent of instructor.

252F Political Culture and Democracy (4). Examines the political culture literature and its relationship to democratic development. What are the cultural prerequisites of democracy, what aspects of political culture facilitate democratic politics and governmental performance, and what forms and reforms a political culture? Prerequisite: graduate standing or consent of instructor.

253B Regime Change in East Asia (4). Regime change from authoritarianism to democracies (Japan, South Korea, Taiwan); gradual political change (China). Uses theories from comparative literature on regime transition; combines theory with historical institutions, political culture, prior regimes, elements in the transition process in the four countries. Prerequisites: graduate standing or consent of instructor.

254A Introduction to Game Theory (4). Introduction to non-cooperative games. The prisoner's dilemma, Nash equilibrium, sequential games, sub-game perfection. Applications include collective action, agenda-setter models, spatial competition of political parties, models of revolution and arms race. Prerequisite: graduate standing or consent of instructor.

260B Political Participation (4). Examines theoretical approaches to the explanation of the pattern of participation and consideration of the results of empirical studies of such activity by mass publics (mainly in Europe and North America). Addresses issues in both comparative politics and political behavior. Prerequisite: graduate standing or consent of instructor.

265A Ethics of Difference (4). Examines differences traditionally judged politically salient—race, ethnicity, religion, gender. Personal interviews with an elderly person encourage students to understand the social construction of difference and to reexamine their own attitudes by putting themselves in the place of another.

270A-B-C Seminar in Public Choice I, II, III (4-4-4). Public Choice lies at the intersection of economics and political science. This course involves the use of tools derived from economics to understand the behavior of governments and of citizens when they deal with politics. Prerequisite: graduate standing and Social Science 111H. Same as Economics 270A-B-C.

275A Advanced Quantitative Methods in Political Science I (4). Introduces advanced multivariate regression methodologies, non-linear models, and causal analyses with applications in political science. Prerequisites: one year of undergraduate statistics or quantitative analysis; graduate standing or consent of instructor.

285A Introduction to Political Psychology I (4). Reviews theoretical questions regarding the relationship between the analytical and normative and the polity. Considers the relationship between the analytical and normative concerns of psychology and political science, addressing empirical literatures including works on political socialization, ideology and public opinion, identity and nationality.

290 Dissertation Research (4 to 12). Prerequisite: consent of instructor. May be repeated for credit.

299 Independent Study (4). May be repeated for credit.

THE UNDERGRADUATE MAJOR IN SOCIAL SCIENCE

The major in Social Science provides an interdisciplinary perspective on the study of society, both at the individual and group level. Using the knowledge and methods of all social science disciplines, a student majoring in Social Science develops the skills to think clearly about social concepts and issues. Social Science majors have an opportunity to use their classroom knowledge in applied and individual learning experiences, such as internships, field studies, or research with a faculty advisor.

The core curriculum for the major exposes students to various social science methods and topics, teaching applied computer-based research and statistical analyses. Students select one of four specializations, which guides their upper-division course work. The specialization in Multicultural Studies examines the role of ethnic and cultural diversity in the economics, politics, and culture of California and the United States. The specialization in Public and Community Service provides students with internship experiences in community, public, and educational organizations. Students who choose the Research and Social Policy specialization gain a more in-depth understanding of social science research and methodology. The specialization in Social Sciences for Secondary School Education prepares students for teaching at the secondary school level. This specialization includes a State-certified subject matter program in social sciences for teaching in California secondary schools.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59-64.

School Requirements: See page 442.

Requirements for the Major

- A. An understanding of the fundamental concepts, analytical tools, and methods of social science. This requirement is met by taking Social Science 1A, 3A, 12A, and one additional introductory course in the School of Social Sciences bearing a one-digit course number. These courses should be taken during the student's first year.
- B. A decision with respect to area of focus. This requirement is met by declaring a specialization before the end of the junior year.
- C. An understanding of the advanced areas in social science. This requirement is met by satisfying course work requirements as defined for the declared specialization.

Students are reminded that the Pass/Not Pass option is not applicable to course requirements A through C above or to any additional requirements listed for specific majors. Courses used to meet requirements A through C are included in the computation of the grade point average in courses required in the major program.

NOTE: Social Science 189 (Sage Leadership Research) and 192 (Washington Seminar) may not be used to satisfy the School of Social Sciences requirement.

Specialization in Multicultural Studies

This specialization examines various American ethnic and cultural communities (African American, Asian American, Chicano/Latino, and Native American) from an interdisciplinary perspective. It provides students with the understanding necessary to address social, political, and economic issues arising from the multicultural environment found within societies in the United States and California.

Satisfaction of School requirements and 15 courses (60 units) as follows:

1. Four courses as specified in major requirement A above.
2. Two lower-division courses: one course selected from Social Science 70A, Sociology 63, or Sociology 69, and one selected from Anthropology 85A, Chicano/Latino Studies 61, 62, 63, Social Science 70B, 70C, 78A, 78B, 78C, or other lower-division courses in U.S. ethnic or gender studies.
3. Six upper-division courses as follows: two each from Asian American, African American, and Chicano/Latino Studies (see the academic counselors for a list of approved courses in Chicano/Latino Studies).
4. Three additional upper-division courses from: Anthropology 134D, 136K, 138Q, 138S, 138T; Political Science 124A, 126A, 126C; Psychology 174A, 174B, 174E, 174F; Social Science 166, 167, 168, 170B, 170D, 170E, 170H, 171A, 172B, 172C, 172D, 172E, 173F-G, 173H, 173I, 173K-L, 175A, 175B, 176A, 178A, 178B, 178C, 178D, 178E; Sociology 161, 167A, 168.

NOTE: It is recommended that the upper-division writing requirement be satisfied by taking Sociology 167A.

Students are strongly encouraged to pursue a minor in either African American Studies, Asian American Studies, Chicano/Latino Studies, or Native American Studies.

Specialization in Public and Community Service

Public and Community Service (PCS) is a program integrating academic learning with community and governmental activities. The specialization actively engages students in academic learning through civic participation. It offers students an opportunity to learn about public and community issues by working in designated

community agencies and government organizations and to apply academic theories and analytical skills to the solution of real-world problems. Students engage in local communities as they develop programs addressing community needs. The required internship experiences include a responsibility at a community or government agency for a single or series of significant projects. Through these experiences, students become familiar with various social issues affecting society.

The goal of the program is to develop a better understanding of integrating academia and service in the community. Students identify and analyze socially significant needs addressed in the community in the context of one or more social science disciplines. The program broadens students' university experiences by exposing them to "the real world" and providing opportunities to conduct research on social issues. PCS students gain a more realistic perspective of society, greater self-knowledge, and increased leadership skills. The curriculum emphasizes urban contexts and multicultural issues, as well as historical, social, economic, and global perspectives. The faculty emphasizes relationships between educational theory and practice, providing students with the skills and knowledge needed to serve as educational leaders in community settings.

The requirements are:

1. Satisfaction of School requirements. School requirement A will be met only by taking Social Science 10A-B-C and 3A for this specialization.
2. Four courses as specified in major requirement A.
3. Additional introductory course: Social Science 70C or Sociology 63.
4. Required upper-division leadership course: Social Science 181.
5. Three upper-division courses selected from the following categories (at least one from each area):
Health: Anthropology 134D; 134E; Sociology 143, 154, 164, 176; Psychology 174A, 174E, 174F.
Public Policy and Community Studies: Anthropology 121G, 121J, 125M; Political Science 121D, 121E, 122A, 124C, 125A, 126B, 126D, 132B-C-D, 132E, 155C; Psychology 121A; Social Science 187, 191, 195A-B-C; Sociology 111, 141, 144, 147A, 156, 158A-B, 167A, 172E-F.
6. One upper-division writing course: Social Science 172A or 185 or Anthropology 174A, when offered with a "W" suffix.
7. One upper-division research methods course: Social Science 170A.
8. Two quarters of off-campus internship experience linked to one of the selected fields above, and for which upper-division credit is earned. Internship guidelines are available in the School of Social Sciences Undergraduate Counseling Office. Students must enroll in Social Science 194 to receive credit for this experience.
9. Social Science 193A-B-C (Field Studies in Public and Community Service). Students should see their academic advisor for more information.

Specialization in Research and Social Policy

This specialization creates a more in-depth understanding of social science methods and research. Students with this specialization are prepared for graduate or professional programs, or the job market.

The requirements are:

1. Satisfaction of School requirements. School requirement A will be met only by taking Social Science 10A-B-C and 3A for this specialization.

2. Four courses as specified in major requirement A above. Introductory course must be chosen from the following: Sociology 3, Psychology 7, Economics 1, or Political Science 6A.
3. Additional introductory course: Social Science 70C.
4. Two additional lower-division courses selected from two different disciplines: Anthropology 2A, 30A, 30B; Economics 1 (if not used as an introductory course); International Studies 11, 12, 13; Political Science 21A, 43D, 61A, 71A; Sociology 43, 44, 63, 74, 75, 79 (when topic applies).
5. Seven upper-division courses selected from the following categories:
 One research methods course selected from the following: Social Science 100A-B-C, 101E; Psychology 113T, 114M; Political Science 171B, 171F; Sociology 114A, 119 (when topic applies).
 Three social policy courses selected from the following: Anthropology 121H, 125M, 125X, 125Z, 133A, 134A, 134D; Chicano/Latino Studies 101, 131, 140, 144, 154; International Studies 111A, 121; Political Science 121D, 122A, 123B, 124A-D, 126A-D, 128A, 132E, 138A, 138B, 141A, 143D, 171A, 171D, 171F, 174A; Psychology 174A-G; Social Science 172D, 173H, 177A; Sociology 141, 144, 154, 157A, 158B, 165A, 167A, 173, 176.
 Three qualitative research methods courses: Social Science 193A-B-C.
6. One upper-division writing course: Social Science 172A or 185 or Anthropology 174A, when offered with a "W" suffix.
7. Three additional upper-division courses as follows: Social Science 170A; one quarter research experience through Social Science 195A (Educational Policy Field Studies), and one quarter Social Science 199 (Independent Study).

Specialization in Social Sciences for Secondary School Education

This specialization provides a broad overview to the social sciences, with an emphasis on maintaining an interdisciplinary perspective. This specialization also helps to prepare students for teaching in elementary schools. Students wishing to teach social science at the intermediate and high school levels can enroll in the State-approved subject matter preparation program through this specialization. (Students *must* consult with an academic counselor to enroll in the subject matter preparation program.)

Satisfaction of School requirements and 22 courses (88 units) as follows:

1. Social Science 1A, 2A, 3A, and one upper-division course in integrative study of History, Social Sciences, and the Humanities (selected from Asian American Studies 150; Classics 175; Comparative Literature 104, same as Art History 114, Art History 125, or Humanities 110 when topic is appropriate; History 142, 144-146, 180-185; Women's Studies 139, 180-185).
2. Six courses in History (History 21A, 21B, 21C, 40A, 40B, 40C).
3. Seven Social Sciences courses (Anthropology 2A; Economics 1; Political Science 21A, 122B, 154C; and Social Science 5D, 118G).
4. One Cultural/Area Studies course (selected from Anthropology 125Y, 125Z, 135H, 138O-138T, 160-169; East Asian Languages and Literatures 110, 120, 130, 155; History 161-169, 170-171, 177-178; International Studies 179); and one World Philosophies course (selected from Philosophy 113-117; Social Science 170H, 170P).
5. Two courses in Education (Education 100 or 160 and 124).
6. One additional upper-division Social Science elective.

HONORS PROGRAM IN SOCIAL SCIENCE

The Honors Program for Social Science majors allows students to engage in research leading to the completion of an Honors thesis. The topic for the Honors thesis, reflecting a social science theme, is determined by the student in consultation with a faculty advisor. In addition to satisfying the requirements for the major in Social Science, Honors Program participants must complete additional course work as specified below.

The Honors Program is composed of three four-unit courses: Social Science H190A (Honors Research Workshop), H190B (Honors Thesis Research), and H190C (Honors Thesis). Satisfactory completion of the Honors Thesis course also satisfies the upper-division writing requirement. The Honors Program is open to all junior and senior Social Science majors with an overall GPA of 3.00 and a 3.30 GPA in at least five Social Science courses.

The schedule of courses for the Honors Program is:

1. During the spring quarter of the junior year and over the following summer before the senior year, students formally apply to the Honors Program through the School of Social Sciences Undergraduate Office, 370D Social Science Tower.
2. In the fall quarter of the senior year, students enroll in H190A. This course ends with each student having formulated a written research plan for the honors thesis. Students also select a faculty mentor who has agreed to supervise the research and evaluate the final version of their Honors thesis.
3. In the winter quarter of the senior year, students enroll in H190B with their faculty mentor, who supervises and evaluates data collection and analysis.
4. In the spring quarter of the senior year, students enroll in H190C and work with their faculty mentor to complete the final version of their Honors thesis.

Courses in Social Science

LOWER-DIVISION

The Social Science curriculum includes major methodological and statistical courses suitable for social science students generally; courses which do not fall within disciplinary boundaries; and senior thesis, field study, and independent study courses.

1A Principles in the Social Sciences (4) W. Introduction to various disciplines within the social sciences. Provides an interdisciplinary perspective on understanding human behavior and social institutions, including interpersonal, economic, political, and cultural activities. For those students desiring a broad introduction to the social sciences. (III)

H1E-F-G Honors: Critical Issues in the Social Sciences (6-6-6) F, W, S. Major themes, methods, and works in the social sciences from an interdisciplinary perspective. Each quarter focuses on a different topic. Weekly small seminars emphasizing the development of the skills of critical thinking and quantitative analysis through regular written work are integral to the course. Prerequisite: restricted to members of the Campuswide Honors Program. Same as Social Ecology H20A-B-C. (III)

3A Computer-Based Research in the Social Sciences (4) W. Focuses on the data manipulation, data visualization, and information searching techniques that are becoming increasingly popular and important as we move into the twenty-first century. Hands-on experience with mapping, graphics, and data arrays. Prerequisites: freshmen only or consent of instructor; school majors only.

8 Introduction to Social Science Statistics Computing (4) F, W, S. Utilization of analysis tools within the Statistical Package for the Social Sciences (SPSS). Methods of data management, and interpretation of computer output results covering descriptive statistics, correlation, ANOVA, regression, and factor analysis. Prerequisites: Social Science 9A-B-C or consent of instructor.

9A General Statistics and Probability I (4) F. Introduction to the variety of statistical applications in many fields, including the humanities, physical and social sciences, business, forensic and health sciences. Descriptive statistics, including percentile ranks, standardization, and normal approximation. Estimation and the measurement of error. For non-Social Sciences majors only. Students who receive credit for Social Science 9A may not receive credit for Anthropology 10A, Psychology 10A, Social Ecology 13, Social Science 10A, or Sociology 10A. (V)

9B General Statistics and Probability II (4) W. Introduction to statistical inference, sampling distributions, standard error. Hypothesis tests for proportions and means. Inferential techniques for nominal variables including chi-square. Selected applications in fields such as ecology, forensic science, and quantitative stylistics are based on student interests. For non-Social Sciences majors only. Prerequisite: Social Science 9A. Students who receive credit for Social Science 9B may not receive credit for Anthropology 10B, Psychology 10B, Social Ecology 13, Social Science 10B, or Sociology 10B. (V)

9C General Statistics and Probability III (4) S. Focus on correlation and regression. One-way and two-way factorial analysis of variance. Introduction to repeated measures designs and non-parametric statistics. Critiquing the use of statistics in newspapers and popular magazines. Locating, accessing, and evaluating statistical data. For non-Social Sciences majors only. Prerequisite: Social Science 9B. Students who receive credit for Social Science 9C may not receive credit for Anthropology 10C, Psychology 10C, Social Ecology 13, Social Science 10C, or Sociology 10C. (V)

10A Probability and Statistics in the Social Sciences I (4) F. Introduction to the variety of statistical applications in the social sciences. Descriptive statistics. Measures of central tendency and dispersion. Percentile ranks. Standardization and normal approximation. Basic probability theory focuses on application to statistical inference and binomial distribution. Laboratory required. Corequisite or prerequisite: Social Science 3A. Prerequisite: lower-division standing or consent of instructor. Students who receive credit for Social Science 10A may not receive credit for Anthropology 10A, Psychology 10A, Social Ecology 13, Social Science 9A, or Sociology 10A. (V)

10B Probability and Statistics in the Social Sciences II (4) W. Introduction to statistical inference, sampling distribution, standard error. Hypothesis tests for proportions and means. Inferential techniques for nominal variables including chi-square, study measures of strengths, significance of relationships between variables, assumptions, data requirements, and types of error in significance tests. Prerequisite: Social Science 10A. Students who receive credit for Social Science 10B may not receive credit for Anthropology 10B, Psychology 10B, Social Ecology 13, Social Science 9B, or Sociology 10B. (V)

10C Probability and Statistics in the Social Sciences III (4) S. Focus on correlation, regression, and control for effects of variables. One-way and two-way factorial analysis of variance. *A priori* and *a posteriori* comparisons. Introduction to repeated measures design and non-parametric statistics. Discuss use of statistics in newspapers and popular magazines. Prerequisite: Social Science 10B. Students who receive credit for Social Science 10C may not receive credit for Anthropology 10C, Psychology 10C, Social Ecology 13, Social Science 9C, or Sociology 10C. (V)

12A Introduction to Social Science Analysis (4). Introduction to social science research and analytical models. Theory construction and use of research methods in an interdisciplinary context. Discussion of the application of social science research to public policy. Computer laboratories develop creative thinking, graphing, and data presentation skills. Prerequisite: Social Science 10A. Formerly Social Science 2A.

16A Current Topics in Global Peace and Conflict Studies (2). Topics focus on the perspectives of academic disciplines that examine global issues, bilateral and multilateral relations, and issues related to regions or countries. Students choose seminar subjects, prepare opening remarks, and lead discussions with a faculty member or guest lecturer.

20 Model United Nations (2). Focuses on simulations of the foreign policy pursuits of selected countries in the international community. Emphasis placed on understanding the rules of debate, as well as the policy positions of the student's selected country in the United Nations. Should be taken as a one-year sequence. May be taken for credit six times. Formerly Social Science 30.

70A U.S. Ethnic and Racial Cultures (4). A survey of ethnic and racial groups in the United States, comparing their histories, evolution, and cultural individuality. Emphasis on cultural variations in the U.S. as well as the

processes and changes, historical and current, within distinct demographic populations. (III, VII-A)

70B Introduction to Expressive Forms in American Society (4). A survey of the expressive forms of minority culture groups in the United States. Literature, music, visual art, ritual, and folklore are studied, with an emphasis upon understanding their relationship to their social and cultural contexts. (III, VII-A)

70C Comparing Cultures (4). Introduces students to the scope of cross-cultural comparisons by analyzing the theories, methodologies, and facts utilized by anthropologists, sociologists, social psychologists, political scientists, and historians in comparing cultures. (III, VII-A)

70T The History of Minorities in American Films (4). An examination of the cultural content of American films as it applies to the resident minority groups in the United States. Films projecting images of Afro-Americans, Asians, Native Americans, and Latinos/Hispanics are screened. (VII-A)

78A Introduction to Asian American Studies I (4). Examines and compares the diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include: origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Same as Asian American Studies 60A and History 15C. (III, VII-A)

78B Introduction to Asian American Studies II (4). Examines the renewal of Asian immigration following World War II. Focuses on domestic and international conditions influencing the liberalization of U.S. immigration laws, and the impact of contemporary Asian immigration on the U.S. political economy and social order. Same as Asian American Studies 60B. (III, VII-A)

78C Introduction to Asian American Studies III (4). Analyzes the Asian American experience in comparative perspective, which includes comparisons of different ethnic and racial groups, and across gender and class. Possible topics include labor, economy, politics, migration, nation, popular culture, gender, family, sexuality, and multiraciality. Same as Asian American Studies 60C. (III, VII-A)

89A-Z Special Topics in Social Sciences (2 to 4). May be repeated for credit as topic varies.

UPPER-DIVISION

100A-B-C Foundations of Applied Statistics I, II, III (4-4-4). Lecture, four hours; laboratory, three hours. **100A-B:** Descriptive statistical concepts and techniques most widely used in social science research. Weekly laboratories employ computer graphics to investigate concepts. 100A: Pass/Not Pass only. **100C:** Classical statistical inference, limited to simple random sampling or simple randomization designs. Characteristics of sampling distributions; bias, standard error, mathematical models, estimation, hypothesis testing. Same as Social Ecology 166A-B-C and Statistics 100A-B-C. (V)

101E Introduction to Statistical Computing with SAS (4) W. Lecture, two hours; laboratory, two hours. Data definition, data acquisition, and data management using SAS procedures and commands. Statistical procedures available from the SAS Statistical Software Package. SAS/GRAPH procedures for producing statistical graphics. Prerequisites: completion of one year of statistics, or concurrent enrollment in Social Science 100C, or consent of instructor. Pass/Not Pass only. Same as Social Ecology 166E and Statistics 101.

166 Latino Social Movements and Organizations (4). An examination of social movement theories and organizational theories and research through an analysis of ways in which Latinos have organized to confront discrimination and secure full and fair participation in the labor market, education, politics, and other societal institutions.

167 Chicano/Chicana Labor History (4). Examines origins of Latino/Latina labor from colonial period to present. Emphasis on the issues of race, culture, class, and gender. Focus on processes and institutions including: *encomienda*, migration, unions, informal economies, Bracero program, domestic work. Same as Chicano/Latino Studies 141. (VII-A)

170A Research Methods in the Social Sciences (4). Examines how interdisciplinary social science research questions are formulated and studies several research methods including: experimental method, quasi-experimental methods, survey research, field research, evaluation research, and meta-analysis. Parametric and non-parametric statistical methods are illustrated using the SPSS program. Prerequisites: Social Sciences 1A, 3A; 10A-B-C or equivalent; 12A and upper-division standing.

170B Philosophy of Culture (4). Introduction to philosophies of culture that have been formulated by philosophers, historians, anthropologists, and sociologists. Intended to provide an understanding of the cultural concept in order to study culture acquisition and the diverse culture of the U.S. (VII-A)

170C Work, the Economy, and Culture (4). Studies the economic fabric of societies relative to cultural institutions and activities. Relationships between global economy and national and international culture. Selected writers utilized in discussing class, race, gender, labor, and cultural processes in worldwide system of production and consumption. (VII-B)

170D Politics and Culture (4). Examination of the factors affecting the formation and structure of political/labor movements among racial/ethnic groups in the United States. Relationship of domestic movements to international developments is also analyzed.

170E Society and Culture (4). An introduction to the processes underlying stratification in American society with emphasis on race/ethnic/class divisions. These processes also are examined in relationship to the works of major theorists such as Marx, Weber, and Durkheim. (VII-A)

170F History and Culture (4). An introduction to ethnohistory, focusing on the contributions of history to the interdisciplinary study of sociocultural systems. Empirical focus on the slave South, with intensive analysis of major secondary sources. (VII-A)

170G Language and Culture (4). Spoken and written language and its relation to thought and other forms of human culture: verbalization of morality, values, religion, aesthetics, and politics; problems interpreting ideological works in ancient and recent times; semantics and psychology of speech, image, gesture.

170H Religion and Culture (4). A survey of the major issues in the comparative study of religious beliefs and behavior of minority American cultures.

170P Philosophies and World Religions (4). A survey of the world's major philosophical traditions and religions and the ethical systems they have produced. The origins of these ethical systems and the fundamental principles upon which they are built. Examples: Kantian, Confucian, Judeo-Christian, and relativism. (VII-B)

171A Cultural Analysis of Literature (4). How the literature of minority American cultures can be studied as a cultural document. Focus on how culture affects the creation of literature.

171F Cultural Analysis of Visual Arts (4). Explores the relationships between visual arts and the culture and society of which they are a part. The works of nonliterate societies as well as those of the Western world are analyzed and compared. (VII-A)

172A American Culture (4). A survey of the historical development of dominant American culture and society; emphasis on a close reading of key cultural texts, with weekly text as a model of writing examining its use of language and rhetoric. Prerequisite: satisfactory completion of the lower-division writing requirement.

172B Afro-American Culture (4). A survey of the development of Afro-American culture with a focus on the United States. Topics include African and New World sources and contemporary forms of Afro-American social and cultural life. (VII-A)

172C Asian-American Culture (4). A survey of socio-political-economic dimensions of Asian-American people: their past, present, and future. (VII-A)

172D Law in the Twenty-First Century (4). Examines the complex relationship between law, the social sciences, and modern society. Lectures explore such issues as the interplay between technology and constitutional rights, the impact of science on law, and the evolving roles of attorneys and judges. Same as Political Science 171F.

172E Native American Culture (4). An introduction to the history, evolution, ecology, and culture areas of North American Indians. Describes how Native Americans once were and why they were that way. A brief introduction to contemporary Native American culture is provided. (VII-A)

172F Latin American and Latino Cultures I (4). Surveys the history, social and economic conditions, gender issues, problems of economic and social development in Latin America and their relation to U.S. Latinos. Topics include the colonial experience, economic relations with the U.S., Latin American migration to the U.S. Same as Chicano/Latino Studies 165. (VII-B)

172G Latin American Culture II (4). Specific aspects of economic and cultural transactions between the United States and Latin America. Topics include: U.S.-sponsored economic models for Latin America; integration versus regionalization in economic policy; theories of dependency and imperialism; Initiative for the Americas; NAFTA. Prerequisites: Social Science 172F and consent of instructor.

173G Film Media and the Latino Community (4). Uses film as a resource for understanding contemporary issues and problems facing the Chicano/Latino community. (Does not study cinema as a genre.) Same as Chicano/Latino Studies 114. (VII-A)

173H History of Chicano Education (4). Examines the relationship between the development of the public education system and the Chicano community in the U.S. Same as Chicano/Latino Studies 180. (VII-A)

173I Perspectives on the U.S.-Mexican Border (4). Economic aspects of the historical development of the U.S.-Mexican border. The current economic situation in the Southwest and border areas as it affects both Mexico and the Latino/Chicano population is also examined. Same as Chicano/Latino Studies 160. (VII-A)

173J Chicano/Latino Experience: History, Society, and Culture in Autobiography (4). Examines how history, society, and culture are manifested in autobiography and studies how Chicano/Latino subjects have recorded their life experience before and during the twentieth century. Same as Chicano/Latino Studies 117. (VII-A)

173K Comparative Latino Populations (4). Provides foundation for understanding of Chicano/Latino Studies as an interdisciplinary field of inquiry. Focus on the history, arts, cultures of distinct (Mexican, Cuban, Puerto Rican, Central American) Latino communities. Topics include: precolonial history and culture, conquest, mestizaje, colonialism/neocolonialism, resistance. Same as Chicano/Latino Studies 103. (VII-A)

173L Latinos in a Global Society (4). Examines interconnections between diverse Latino groups in the U.S. and the effects of globalization on their social, cultural, political realities. Topics include: immigration, demographics, socioeconomic differentiation, familial relations, political protest/resistance, law and policy, and links to "homeland" issues. Prerequisite: Social Science 173K. Same as Chicano/Latino Studies 104. (VII-A)

175A Literature and Ethnicity (4). Examines the works of several American minority authors in order to discuss the relationship of ethnicity as a social phenomenon to literature. Same as Chicano/Latino Studies 113. (VII-A)

175B Ethnic and Racial Communities (4). Examines various theoretical analyses of race and ethnicity, particularly as they apply to Asian Americans. Also explores the relationship of Asian Americans to other racialized minorities in the U.S. Same as Asian American Studies 161. (VII-A)

176A Afro-Latin American Music (4). Musical culture of Afro-Latin American peoples, emphasizing Spanish-speaking Caribbean. Topics include: background in West Africa, the persistence of traditions in the Caribbean, the commercial music of the twentieth century, the connections between musical culture, religion, and the economy. Same as Chicano/Latino Studies 115C. (VII-B)

NOTE: Courses numbered 177-179 explore Asian American Studies.

177A Globalization, Diaspora, and Racialization (4). Studies the relationship between globalization and racialization and comparatively examines the racialization of Asians in the U.S. with the experiences of other Asians in the diaspora. Attention paid to the cultural expressions of racialization as creation, representation, adaptation, and resistance. Same as Asian American Studies 101. Formerly Social Science 178A. (VII-A)

177B Asian American Women (4). Examines the representations and experiences of Asian American women from diverse perspectives. Explores the commonalities and differences among various groups of Asian American women, with particular focus on history, culture, values, and family roles. Same as Asian American Studies 162. Formerly Social Science 178B. (VII-A)

177C Vietnamese American Women (4). Focuses on sociopolitical forces that have shaped the lives of Vietnamese American women, including colonization, militarization, dislocation, and diaspora. Examines how women negotiate their participation in the labor force, and issues of identity formation and cultural representation. Same as Asian American Studies 165. (VII-A)

177D Asian American Family (4). Examines the representations and experiences of Asian American families from diverse standpoints. Analyzes the similarities and differences among family structures with particular attention to cultural values, gender roles, and domestic violence. Same as Asian American Studies 133. (VII-A)

178C The Korean American Experience (4). Explores the factors that have distinctly shaped the Korean American experience, including patterns of racial domination, the profile of immigrant flow, immigrant roles in the urban political economy, politics in Korea, and the role of the church. Same as Asian American Studies 151C. (VII-A)

178D The Vietnamese American Experience (4). Studies the resettlement of Vietnamese in the United States following their exodus from Southeast Asia. Topics discussed include the Vietnam War, the 1975 evacuation, boat and land refugees, the shaping of Vietnamese communities, and Vietnamese American literature. Same as Asian American Studies 151D. (VII-A)

178E The Japanese American Experience (4). Studies the settlement of Japanese in Hawaii and the continental United States since the late nineteenth century. Topics covered include sugar plantations, development of rural Japanese America, World War II internment, post-War community development, and persistence of Japanese American identity. Same as Asian American Studies 151E. (VII-A)

178H Southeastern Asian American Experience (4). Analyzes experiences of refugees and immigrants from Cambodia, Laos, and Vietnam. Examines political and economic factors for their exodus and how they reconstruct their identities, families, and communities. Issues include educational experiences, public policies, social services, occupational options, homeland relations. Same as Asian American Studies 151H. (VII-A)

178J Chinese American Experiences (4). Analyzes the experiences of Chinese in the United States. Immigration, Chinese exclusion, racial and gender identity. Historical overview and contemporary issues covered. Same as Asian American Studies 151J. (VII-A)

178K Filipina/Filipino American Experience (4). Explores the experience of Filipina/Filipino Americans from the era of Spanish colonization of the Philippines to present-day community formations in the United States, with special emphasis on the twentieth century. Topics include colonialism, nation, migration, gender, and culture. Same as Asian American Studies 151K. (VII-A)

179 Special Topics in Asian American Studies (4). May be repeated for credit as topics vary. (VII-A)

181 Leadership in the Twenty-First Century (4). Students learn about theoretical and practical issues related to leadership and leadership development. Readings and assignments provide opportunity to learn of contemporary leadership theory, values, ethics and power, organizational development, gender and leadership, and cultural competence.

182A Exploring Society Through Photography (4). Students explore society through presentation, interpretation, and discussion of their own photographs. A few common exercises at the beginning of the quarter are followed by individual projects. Photography as social observation and the relation of photographs in an essay are stressed. Prerequisite: basic darkroom techniques or the digital equivalent. Same as Anthropology 176A and Sociology 114A.

183A International Studies Forum (2). A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. Pass/Not Pass only. May be taken for credit four times. Same as Humanities 183A and Social Ecology 183A. Formerly Social Science 184E.

183B Senior Seminar in Conflict Resolution (4). Designed for seniors (juniors may also enroll) who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students will refine skills and theory in the study of cooperation and conflict, from local to global arenas. Same as Humanities 183B and Social Ecology 183B. (VII-B)

183C Senior Seminar in Conflict Resolution (4). Continuation of Social Science 183B. Students write a senior research paper. Prerequisite: Social Science 183B and satisfactory completion of the lower-division writing requirement. Same as Humanities 183C and Social Ecology 183C.

184A Sage Leader Research I (2). Participants in the SAGE Scholars Program learn to define leadership concepts, discover various leadership styles, and develop strong leadership and communication skills resulting in strengthened ability to contribute to and interact with UCI and the Orange County community. Prerequisite: must be selected for the SAGE Scholars Program by the director.

184B Sage Leader Research II (4). Provides a survey of contemporary topics and challenges in the fields of management and leadership. Case studies and text by leading authors are used to analyze key leadership issues in twenty-first century, with particular emphasis on current events. Prerequisites: Social Science 184A and selection for the SAGE Scholars Program.

184D International Studies: Current Topics (2). Topics focus on the perspectives of academic disciplines that examine international issues, bilateral and multilateral relations, and issues related to regions or countries. Students choose seminar subjects, prepare opening remarks, and lead discussions with a faculty member or guest lecturer. Pass/Not Pass only. May be taken for credit four times as topics vary.

185 People in Society (4). Through readings about people in distinctly different societies throughout history, students learn concepts that cross the boundaries of the social science disciplines. Such themes as democracy, elitism, power, social class, race, gender are used as basis for discussion and writing. Prerequisite: satisfactory completion of the lower-division writing requirement.

186A-B-C HABLA: Language Intervention for Disadvantaged Children (4-4-4). Trains students (fall quarter) to deliver home visits (winter and spring) that promote school readiness among two-four year-olds from low SES and educational backgrounds. Covers fundamentals of child language, literacy, cognitive development; procedures, ethics of home visitation. Work with parents and children to create better home literacy and language environment. Prerequisites: must pass an interview by instructor, be fluent in English and one other language (Spanish most typically), must have experience with preschool children and be culturally sensitive. Same as Chicano/Latino Studies 191A-B-C and Psychology 144A-B-C.

187 Twenty-First-Century Graduate Education (2). Discussion of graduate and professional education in twenty-first century United States. Examines specific strategies for admission to postbaccalaureate programs and success in graduate study culture. Introduction to processes including planning and preparation, school selection, entrance examination preparation, submission of applications, writing personal statements. Prerequisite: upper-division standing or consent of instructor. Pass/Not Pass only.

188 Global Issues and International Perspectives (2). Primarily for students planning to study abroad. Weekly guest lectures, giving global perspectives on culture, politics, economics, women's roles, environmental issues, language, and history. In discussion sections participants study the particular area to which they are going, and learn how to conduct themselves while there. Pass/Not Pass only. Same as Social Ecology 188.

189A-Z Special Topics in Social Sciences (2 to 4). May be repeated for credit as topic varies.

H190A Honors Research Workshop (4). Student develops a 10–15-page prospectus of research for the honors thesis which includes: the research question, literature review, methods of investigation, and bibliography. Student selects a faculty mentor who will supervise thesis research and writing in winter and spring. Prerequisite: acceptance into the Honors Program for Social Science majors.

H190B Honors Thesis Research (4). The student initiates and completes data collection for the honors thesis. A faculty mentor provides supervision and feedback on thesis chapters. Prerequisite: Social Science H190A.

H190C Honors Thesis (4). The student completes, with the approval of the faculty mentor, an honors thesis containing: statement of the problem, literature review, research hypotheses, methods of investigation, results, discussion, and bibliography. Prerequisites: Social Science H190B and satisfactory completion of the lower-division writing requirement.

191 Graduate-Mentored Study in the Social Sciences (4). Offers a hands-on research experience while increasing awareness of the various disciplines in the social sciences and of the requirements of graduate school. Features graduate-mentored study under the supervision of the Associate Dean. Pass/Not Pass only. Prerequisite: identification of a graduate student (who is in good standing) as a mentor.

192 The Washington Seminar (4). Interdisciplinary seminar examines and explores unique aspects (e.g., governmental, cultural, political, the arts, historical, media related) of Washington, D.C. Core course mandatory for all participants in Washington D.C. Center Program. Prerequisite: selected for Washington D.C. Center Program. Same as University Studies 194.

193A-B-C Field Studies in Public and Community Service (4-4-4). Introduction to ethnographic research, field research, and the general fundamentals to making change in the community through scholarship. Students intern at nonprofit agencies (200 hours) to attain an understanding of social problems in local communities. Students apply theory to practice. Prerequisites: satisfactory completion of the lower-division writing requirement and consent of instructor. Open only to Social Science majors specializing in Public and Community Service.

194 Internships in Public and Community Service (4). A community service activity for students to make positive contributions to underserved and marginalized communities. The goal is to provide valuable service while enhancing the student's understanding of community agencies and service programs, with a connection between theory and practice. Prerequisites: satisfactory completion of the lower-division writing requirement and consent of internship coordinator. Open only to Social Science majors specializing in Public and Community Service. Pass/Not Pass Only. May be taken for credit twice.

195 Community Tutoring Internship (2) F, W, S. Students intern in local K-12 schools tutoring children in various subjects. They work jointly with teachers, help students with homework, provide leadership and college-bound workshops, serve as academic mentors. Class discussions on social inequalities in school systems, tutoring techniques, learning styles. Prerequisites: satisfactory completion of the lower-division writing requirement and consent of instructor. Pass/Not Pass only. May be taken for credit three times.

195A-B-C Educational Policy Field Studies (4-4-4) F, W, S. Students learn to integrate academic course work with experiential learning; to examine the effects of educational policy on urban and suburban schools; to discover the relationship between community service and personal academic interests; and to develop awareness about the challenges of public education.

196 Global Connect (2 or 4) F, W, S. Identifies factors of change that influence the twenty-first century. Students serve as mentors at high schools to introduce globalization issues through workshops and lectures. Prerequisites: must submit application and have a 3.0 or higher overall GPA. May be repeated for credit three times.

197 Professional Internship (2 to 4) F, W, S. Students apply classroom knowledge through research projects in nonprofit agencies (local, state, and government) and the private sector. They pose solutions to agency-posed questions. Students gain field experience through 50 hours (for 2 units) or 100 (for 4 units). Pass/Not Pass only. Prerequisites: satisfactory completion of the lower-division writing requirement and consent of the internship coordinator or faculty sponsor. May be repeated for credit for a total of 8 units.

198 Group Independent Study (2 to 4) F, W, S. Students participate in independent study under a written contract with a supervising UCI instructor. Prerequisite: consent of instructor and department chair. May be repeated for credit for a total of 12 units.

199 Individual Study (2 to 4) F, W, S. Opportunities to do research and learn new skills outside the normal classroom environment. Students participate in planned research and study activities under a written contract with a supervising UCI instructor. Prerequisites: upper-division standing; consent of instructor and department chair. May be taken for credit for a total of 16 units. Students may enroll for only one 199 each quarter.

DEPARTMENT OF SOCIOLOGY

4215 Social Science Plaza B; (949) 824-7637
Calvin Morrill, Department Chair

Undergraduate Program

Sociology studies societies and human groups. It examines social conflict and cooperation, and the organization of families, communities, workplaces, and nations. The program at UCI covers the breadth of the discipline while giving students opportunities to conduct independent research, to do an internship in the community, to participate in an Honors Program, and to take advantage of departmental opportunities in such areas as human services, diversity, international sociology, and business, economy, and society. All students take basic courses on social institutions, theory, and methods. Students then take more specialized courses such as Race and Ethnicity, Social Psychology, Sociology of Gender, or Chinese Society. Courses are enriched by ongoing faculty research on such

topics as the work and family of immigrants to the U.S., economic change in Asia, the relation between women and men in different social classes and ethnic groups, and attitudes to sexual behavior.

In addition to developing students' ability to critically analyze and understand social patterns, the major is relevant to professional careers in high school teaching, social work, urban planning, law, business, public health, and government service. It also provides training for advanced graduate work in sociology.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 59-64.

School Requirements: See page 442.

Departmental Requirements for the Major

School requirements must be met and must include 12 courses (48 units) as specified below:

- A. Sociology 1 and either 2 or 3.
- B. One course in methods (Sociology 110) and one course in the-ory selected from Sociology 120-129.
- C. One course in research design and implementation (Sociology 180A; required for all majors). The second course in the sequence (Sociology 180B) is for students who pass the first course and wish to write a thesis.
- D. Five courses selected from the following list of core courses, no more than two of which may be lower-division: Sociology 31, 41, 43, 44, 56, 62, 63, 135, 141, 144, 145, 156, 161, 164, 173, 174, 175B.
- E. One additional upper-division Sociology course and one additional introductory course from another social science discipline.

Honors Program in Sociology

The Honors Program in Sociology is open to outstanding Sociology majors during their junior and senior year. To gain admission to the program, potential Honors students normally take Sociology courses in theory (Sociology 120), methods (Sociology 110), statistics (Sociology 10A-B-C) and at least two Sociology core courses. Students who receive an average grade of 3.5 or better in these courses are eligible for the Honors program. In addition, Honors students should have an average of 3.2 or better in all courses taken at UCI. Majors who are transfers may petition for entry into the program based on their grades from their former schools.

During their senior year, Honors Program students write a thesis, designed and carried out under faculty supervision. Projects normally entail some empirical analysis of sociological data. Students meet regularly in a two-quarter Honors seminar to design and carry out these projects, to exchange ideas, and to help analyze each other's work (Sociology H188A and H188B; satisfies Sociology major requirement C: Honors students do *not* have to take Sociology 180A). In addition, Honors students are required to attend between six to nine Sociology guest lectures and subsequent meetings to discuss relevant sociological issues. Upon successful completion of the program, students graduate with Honors in Sociology.

Sociology Minor Requirements

Requirements for the minor in Sociology are met by taking seven sociology courses (28 units) as specified below:

- A. Sociology 1 and either 2 or 3.
- B. One course in methods (Sociology 110) and one course in the-ory selected from Sociology 120-129.
- C. In addition, students must either satisfy the School mathematics and computer science requirement (School requirement A), or take three courses (12 units) or equivalent in a single acceptable foreign language.

- D. Three courses selected from the following list of core courses, no more than two of which may be lower-division: Sociology 31, 41, 43, 44, 56, 62, 63, 135, 141, 144, 145, 156, 161, 164, 173, 174, 175B.

Graduate Program

Participating Faculty

- Edwin Amenta: Political sociology, comparative/historical sociology, quantitative methodology
 Stanley Bailey: Race/ethnic/minority relations, religion, mass communications/public opinion
 Nina Bandelj: Economy and society; organizations, formal and complex; cultural sociology
 Frank Bean: International migration and U.S. migration, social demography, economic sociology, sociology of racial/ethnic groups
 Susan K. Brown: Immigration, inequality, urban sociology
 Carter Butts: Mathematical sociology, social networks
 Francesca Cancian: Gender sociology of the family, caregiving
 Katherine Faust: Social networks, research methods
 Cynthia Feliciano: Race/ethnicity, education, immigration
 David Frank: Environmental sociology, sexuality and homosexuality, education
 Linton Freeman: Network models of social structure
 Matthew L. Huffman: Social stratification, gender and racial inequality in the workplace, research methods
 Jennifer Lee: Migration and immigration, race/ethnic/minority relations, urban sociology
 David S. Meyer: Social movements, public policy, war and peace, political sociology
 Calvin Morrill: Organizations, law and society, culture, youth, qualitative field methods
 Joy Pixley: Family, stratification/mobility, aging/social gerontology
 Francesca Athene Polletta: Culture, collective identity, civil rights, globalization, social movements
 Jen'nan Read: Sex and gender, race/class/gender, religion
 Belinda Robnett: Social movements, race and ethnicity, gender
 Ruben G. Rumbaut: International migration, ethnic identity, health and mental health
 David A. Smith: Urbanization, comparative historical sociology, political sociology, world-system analysis
 David A. Snow: Collective behavior, social movements, social psychology, culture, qualitative methods
 Judy Stepan-Norris: Sociology of work, political sociology, historical and comparative sociology, American society
 Yang Su: Social movements and collective action, political sociology, China's political transition
 Judy Treas: Population studies, sociology of aging, social stratification, sociology of family
 Wang Feng: Demography, social change, economy and society

Affiliated Faculty

- Robert H. Blanks: Systems neurobiology, medical outcomes assessment, complementary integrative medicine, health, wellness, quality of life assessment
 Kenneth S. Chew: Social demography, urban sociology, family and life course studies
 Kitty Calavita: Sociology of law, criminology, social deviance, immigration, and inequality
 Gilbert Conchas: Race and social inequality, socio-cultural processes
 John Dombink: Crime and criminal justice, deviance and social control
 Martha Feldman: Organization theory and behavior, stability and change in organizations, decision making and information processing
 Gilbert Geis: Criminology/delinquency, deviant behavior/social disorganization, social control
 Michael R. Gottfredson: Criminology, theory, crime and policy
 C. Ronald Huff: Criminology and public policy
 Valerie Jenness: Links between deviance and social control, gender, social change
 John Liu: Race/ethnic/minority relations; economy and society
 Richard McCleary: Criminology/delinquency, environmental sociology, quantitative methodology
 James Meeker: Law and society, criminology/delinquency, quantitative methodology

Henry Pontell: Criminal justice, sociology of law, medical sociology
 Tonya Schuster: Social psychology, medical sociology, wellness research
 Carroll Seron: Sociology of law, sociology of professions, law and society
 Linda Trinh Võ: Asian American studies; race and ethnic relations;
 immigration theory; gender relations; social stratification and inequality;
 ethnographic research methods; and community and urban sociology

The Department of Sociology offers a Ph.D. degree program in Sociology. The focus on research in social inequality reflects departmental faculty strengths. Particular emphases include gender, race/ethnicity, labor, social movements, family, migration, population, political economy, and states and global transformation. The program provides structured training in sociological theory, statistics, and qualitative and quantitative research methods. While the core of the program is sociological, it also includes an interdisciplinary component, incorporating links to anthropology, political science, history, criminology, and urban planning. Small entering cohorts ensure personalized attention for each student and provides them with greater access to professors, allowing for close mentorship relationships. Program faculty take diverse theoretical and methodological approaches to a variety of substantive issues, are committed to empirical research addressing central sociological issues, and are open to intellectual cross-pollination from cognate disciplines.

Graduate students have the opportunity to participate in a variety of interdisciplinary research units, including the Center for the Study of Democracy, the Center for Global Peace and Conflict Studies, and informal research groups in demography and labor studies. The Sociology Department is linked to Women's Studies and various ethnic studies programs, such as Asian American Studies, Chicano/Latino Studies, and African American Studies. Research and funding opportunities are also available through UC-wide programs like Pacific Rim Studies and the Humanities Research Institute located on the UCI campus.

ADMISSION

Students in the program come from diverse educational, ethnic, and social backgrounds, including a number from different countries and various regions of the United States. The deadline for applications to receive full funding consideration for fall admission is January 15. Students are admitted for winter and spring quarter only under exceptional circumstances. Admission is based on application materials and evidence of scholarly potential, including grade point average, GRE scores, statements of purpose, and letters of recommendation.

REQUIREMENTS

Students must complete a two-quarter proseminar, a course in research design, a three-quarter statistics sequence, one seminar each in classical and contemporary theory, an advanced sociological methodology course, and nine Sociology seminars selected in consultation with the student's advisor, in order to build competency in two areas of specialization in the discipline. Course work prepares students to complete an independent research project, which is presented in oral and written form during the winter quarter of their second year. Students must pass a formal evaluation at the end of their second year involving assessment of course work and the second-year research project and evaluation of teaching or research experience. Knowledge of one foreign language is required.

All required course work must be completed prior to advancement to candidacy. Students will normally advance to candidacy during the fourth year. The advancement-to-candidacy examination is based on field examinations in two broad areas of sociology and an oral defense of a dissertation research prospectus, contextualized in the appropriate literature and including a discussion of data collection and methods of analysis. In preparation, students usually take at least the required one quarter of the Dissertation Seminar course

during the third year. After advancing to candidacy, students are expected to work in close consultation with their advisor and dissertation committee. Committee approval of a satisfactory dissertation follows a final oral defense of the document, which normally comes by the end of the sixth year. The maximum time for completion of the degree is eight years.

Feminist Studies Emphasis. A graduate emphasis in Feminist Studies also is available. Refer to the Women's Studies section of the *Catalogue* for information.

Courses in Sociology

LOWER-DIVISION

INTRODUCTORY COURSES

1 Introduction to Sociology (4). Major concepts and approaches to the study of society: social interaction, social differentiation, social control, social change, social institutions. (III)

2 International Sociology (4). Introduces international sociology by examining international social structures and processes. Attention to international migration to and from various countries around the world, and to theories and research about the determinants of international migration for both sending and receiving countries. (III, VII-B)

3 Introduction to Social Problems (4). Focuses on how institutional and organizational features of societies generate problems for people. Particular attention is directed at a set of problems related to political and economic inequality: poverty, racism, sexism, urban and population problems, the environment, the criminal justice system. (III)

METHODS

10A-B-C Probability and Statistics (4-4-4). An introduction to probability and statistics. Emphasis on a thorough understanding of the probabilistic basis of statistical inference. Emphasizes examples from sociology, anthropology, and related social science disciplines. Same as Anthropology 10A-B-C. Students who receive credit for Sociology 10A-B-C may not receive credit for Anthropology 10A-B-C, Psychology 10A-B-C, Social Ecology 13, or Social Science 9A-B-C or 10A-B-C. (V)

19 Special Topics: Methods (4). Prerequisites vary. May be repeated for credit as topic varies.

THEORY

23 Understanding Social Facts (4). Focus on perspectives toward the question of what constitutes sociological knowledge and processes through which competent investigators have built sociological arguments from data. Examination of several types of research techniques. (III)

29 Special Topics: Theory (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL PSYCHOLOGY

31 Introduction to Social Psychology (4). Studies sociological contributions to theory and research in social psychology, with focus on the social influences on personality, attitudes, beliefs, and behavior; socialization, human groups, and social interaction. Same as Psychology 78A. (III)

39 Special Topics: Social Psychology (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL STRUCTURE

41 Small Group Behavior (4). Deals with models for understanding behavior in small groups, including coalition formation, socialization, group norms and decision rules, leadership, conformity, group structure, and communication processes.

43 Urban Sociology (4). The nature, causes, and consequences of urbanization are examined along with its changing scale and complexity, demographic and ecological city growth patterns, the quality of life in urban areas, processes of decision-making in cities, and the bearing of sociological investigation on public policy concerns in contemporary urban society.

44 Populations (4). Demographic aspects of social/economic change. Considers the epidemiological transition to low mortality, the historical decline in Western family size, the baby boom, third-world family planning, changing marriage patterns, women's labor force participation, migration theories, and global aging. (VII-B)

49 Special Topics: Structures (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL INSTITUTIONS AND CULTURE

51 Asian American Family and Community (4). Briefly examines the history of different Asian American groups and provides an in-depth analysis of issues related to family composition, mate selection, changing gender roles, and intergenerational conflict.

55 Mass Media and American Society (4). Examines the social implications of the fundamental changes in the organization and structure of American mass media since World War II, including the demise of big-city newspapers, the rise of broadcast television, and the fragmentation of radio and magazine markets. Explores the potential implications of emerging technologies—cable, telecast, and direct broadcast satellite (DBS)—on American culture and institutions.

56 Society and Religion (4). A critical and personal examination of the varieties of religious and spiritual experiences human beings are undergoing in contemporary society. The role of conscious understanding and unconscious conditioning regarding religion and spirituality.

59 Special Topics: Social Institutions and Culture (4). Prerequisites vary. May be repeated for credit as topic varies.

AGE, GENDER, RACE, AND ETHNICITY

62 Marriage and Families (4). Sociological theories and research on marriage, kinship, intimacy, and divorce. Emphasis on comparing family patterns in different social classes, ethnic groups, and societies, and on relating family life to the economy and other social institutions. Topics include gender roles, child-rearing, historical change. (III)

63 Race and Ethnicity (4). Focuses on racial and ethnic relations in the United States and compares them with those found in other societies. Analyzes the conditions that favor either cooperation and integration or rivalry, tension, and conflict. Appraises strategies for reducing and resolving conflicts. (VII-A)

64A Social Psychology of Family and Close Relationships (4). Analysis of the social psychology of family life: close relationships, courtships, marriage and family interaction in American society; examination of processes of preparation for marriage, role differentiation, communication, conflict, integration and socialization within the family: the psychodynamics of family life.

65 Cultures in Collision: Indian-White Relations Since Columbus (4). An introductory survey of topics such as: indigenous religious belief and socio-political organization, stereotypic "images," intermarriage, the fur trade, Native leaders, warfare, and contemporary issues. Slides, films, and trips to local museums enhance student learning. Same as Anthropology 85A. (VII-A)

68A Ethnic and Immigrant America (4). Focusing on Asian, Latino, and Black immigrant groups, examines the second generation's experience of straddling two cultures and growing up American. Covers topics such as assimilation, bilingualism, race relations, education, bicultural conflicts, interracial marriage, and multiracial identities. Same as Chicano/Latino Studies 65. (VII-A)

69 Special Topics: Age, Gender, Race, and Ethnicity (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIETIES AND SOCIAL INEQUALITY

74 Social Inequality (4). Theory, methods, and empirical findings of social stratification studies. Topics include whether inequality is inevitable, American social classes, public beliefs about fairness, payoffs to college education and successful parents, the feminization of poverty, the prestige of occupations.

75 Social Change (4). Comparison of various theories of social change from the classical formulations of Marx and Weber through contemporary functionalist, neo-evolutionary, political economy, and world system perspectives. Emphasis is macrosociological, focusing on processes of transformation affecting societies, nation-states, or the international system as a whole.

77 Social Change in East Asia (4). Introduction to comparative sociology focusing on social change in East Asia. Particular attention to macrostructural shifts in these societies such as economic development/underdevelopment, social inequality, political stability/instability, and rapid urbanization and population growth. (VII-B)

79 Special Topics: Societies and Social Inequality (4). Prerequisites vary. May be repeated for credit as topic varies.

UPPER-DIVISION

METHODS

110 Research Methods (4). Methods of data collection and analysis used by sociologists. Experimental methods, surveys, and interviews, field research and participant observation, demographic methods, historical and comparative approaches. Prerequisite when offered for upper-division writing: satisfactory completion of the lower-division writing requirement.

111 Community Research (4). Students formulate and carry out a study on intimate relationships and interpersonal networks. Focus on family, friendship, and community and how people create a supportive network of relations in modern society. Prerequisite: consent of instructor.

112A Practicum in Sociology (4). Hands-on research course. Students work together to apply sociological skills to class projects. Application of sociological theories to practical tasks. Use of multiple data collection methodologies (e.g., surveys, interviews, observations). May be taken for credit twice as topics vary.

114A Exploring Society Through Photography (4). Students explore society through presentation, interpretation, and discussion of their own photographs. A few common exercises at the beginning of the quarter are followed by individual projects. Photography as social observation and the relation of photographs in an essay are stressed. Prerequisite: basic darkroom techniques or the digital equivalent. Same as Anthropology 176A and Social Science 182A.

115A Oral History Interviewing (4). Provides detailed instruction on the oral history method including developing oral history projects, selecting research subjects, constructing an interview schedule/guide, oral history interviewing, transcribing the tapes, analyzing and writing up the results. Prerequisite: consent of instructor.

118A Seminar in Research Applications (4). Student research groups work closely with instructor to develop and carry out research on selected sociological topic(s). Students apply the logic of sociological research to gain understanding of the social world. Prerequisite: consent of instructor.

119 Special Topics: Methods (4). Prerequisites vary. May be repeated for credit as topic varies.

THEORY

120 Sociological Theory (4). What a theory of society is and is not. Historical and contemporary models, perspectives, and schools.

122 Games as Models of Social Phenomena (4). Games as analogies of social, economic, and political situations. The interaction of contingency plans. Games (situations) with no winner and/or loser. Technical definition and discussion of conflict, threat, stability. Paradoxes involved in defining "rational decision." Prerequisite: one year of college-level mathematics.

125 Introduction to Ethnomethodology (4). Examines the contemporary school of sociology known as ethnomethodology through both readings and field experiments. Focuses on how we routinely, unremarkably, massively accomplish ordinary everyday reality moment to moment through interaction. The works of Schutz, Garfinkel, Sacks, Schegloff, Heritage.

126 Critical Political Theory (4). Acquaints students with current political theories, critical of conventional thinking, which attempt to join political, economic, social, historical, linguistic, and philosophical concerns to questions involving the relationships between and among individuals, groups, and institutions in the society, economy, and polity. Prerequisite: upper-division standing. Same as Political Science 132A.

127 Nietzsche (4). The social, economic, and political philosophy of Nietzsche. Nietzsche's seminal ideas about knowledge and language and how these ideas have influenced contemporary thinking concerning these subjects. Same as Political Science 131D.

129 Special Topics: Theory (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL PSYCHOLOGY

135 Social Psychology of Networks (4). Review of network methods used in small group and organizational research. Discussion of social psychological literature relevant to the network of study of cognitive social structure, exchange and communication, identity negotiation, and social control. Case study of network datasets exemplifies research issues. Same as Psychology 178N. Formerly Sociology 162R.

136 Religious Traditions of Asian Americans (4). Introduction to the religious traditions of Asian Americans, the transplantation of religious institutions, the establishment of sacred spaces, the socialization of children, and the role of religion in the structuring of gender relations and family.

138 Business Decisions (4). Surveys normative and descriptive models of decision-making behavior, with an emphasis on organizational and policy contexts. Topics include rational choice theory, biases and heuristics, framing effects, and overconfidence. Management fads, panics, and herd behavior are also discussed. Prerequisites: either Anthropology 10A-B-C, Sociology 10A-B-C, Social Sciences 10A-B-C, or Mathematics 2A-B, 7.

139 Special Topics: Social Psychology (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL STRUCTURE

141 Organizations (4). How bureaucracies, formal organizations, and voluntary associations work, how and why they grow, and where they are going. History and structure of organizational rationality; dynamics of organized groups; behavior in organizations. The limits of bureaucratization and attempts to overcome these limits through decentralization. Same as Political Science 155C.

142 White-Collar Crime (4) W. Examines criminal activity in business and corporate enterprise, organizations, and the professions. Theories regarding the causes and control of white-collar and corporate crime are covered as well as the numerous definitions of these terms. Same as Criminology, Law and Society 142.

143 Social Networks and Social Support (4). Examines the manner in which behaviors and attitudes of individuals are affected by their network ties to others. How are peoples' opportunities and well-being increased or decreased by their social networks? What are the processes involved? Topics vary and may include studies in mental and physical health, job seeking, separation and loss, and aging.

144 Political Sociology (4). Includes an examination of the major theoretical approaches to political sociology, and the application of these ideas to the politics of advanced capitalist societies. Also considers stability and change in power structures.

145 Occupations and Professions (4). What makes some jobs satisfying and others boring? How does technology influence the workplace? What changes are coming in the U.S. job market? Sociology and psychology of occupations. Students interview workers and study aspects of their occupations. Prerequisite: upper-division standing.

146 States and Societies (4). Examines, over an extended historical period, the forces that drove the state into being, its nature and distinctive forms, and its variable and contingent relations with that other modern creation, "society."

147A Cities and Social Change (4). Focuses on comparative urban political economy and the way cities and urban process are linked to changes in the global system. Attempts to draw on a diverse interdisciplinary literature that includes sociology, geography, and urban planning. Prerequisite: upper-division standing and completion of lower-division writing requirement.

149 Special Topics: Structures (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL INSTITUTIONS AND CULTURE

152 Sociology and Psychology of the Arts (4). Explores the relationship between artists and the "art world" through which artistic activity is defined, supported, and consumed. Empirical studies in the plastic arts, performing arts, and literature are used to examine varieties of aesthetic expressions. Prerequisite: upper-division standing; authorization required.

153 Sociology of Science (4). Empirical studies of scientific activity, the growth of scientific disciplines, communication in science, and cognitive organization are used to explore the relationship of science, scientific communities, and society. Provides an overview of the literature and the directions of new research in the field. Prerequisites: upper-division standing; satisfactory completion of the lower-division writing requirement.

154 Medical Sociology (4). Current problems in the United States health-care system and proposals for reform. Considers financial barriers to access, the problem of patient dumping, underinsurance affecting the middle class, prenatal and perinatal care, child services, preventative care and needs of the elderly, minorities, low-income people, and the undocumented. Prerequisite: upper-division standing.

155 Mass Communications (4). An examination of the origin, history, and functions of mass communications and its effect on social life.

155B Baseball and Society (4). An examination of baseball's role in American social life over the last 150 years. Issues of fraternal organizations, national development, capitalism, rationalization, race and ethnicity, gender, economic organization, labor relations, and politics are discussed. Prerequisite: satisfactory completion of the lower-division writing requirement.

156 Deviance (4). Perspectives on deviance and criminality in behavior, institution, community, and myth. The suitability of contemporary theories of deviant behavior. Same as Psychology 177D and Criminology, Law and Society C107.

157A Sociology of Education (4). Focuses on education as a social institution and as an agent of socialization. Education from cross-national perspectives, the formal organization of education, education and the family, education and social stratification, and education as a vehicle for examining and solving social problems.

158A Work and Family Issues (4). Historical trends in the relation of two social institutions. Contemporary challenges facing businesses and families in the U.S. and abroad. Changing gender relations in home and workplace. Corporate policies and family adaptations to employment. Production of household goods and services. Prerequisite: upper-division standing.

158B Work and Employment Relations (4). Sociological and economic theories of labor markets. Workers' job search methods, recruitment strategies used by employers, and their consequences. Structural changes in the labor market and the employment relationship. Models of discrimination and introduction to employment discrimination law.

158C Money, Work, and Social Life (4). Sociological perspective on issues related to money and work. Consumption practices and lifestyles, jobs and organizations, issues of money in intimate relations, marriage, and households, illegal work, discrimination, economic globalization are discussed. Prerequisite: when offered for upper-division writing, satisfactory completion of the lower-division writing requirement.

159 Special Topics: Social Institutions and Culture (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL INEQUALITY MODULE

161 Sociology of Gender (4). Explores the complex processes contributing to the social construction of gender and sexuality in the U.S. with particular attention to the intersection of gender, race, ethnicity, sexuality, and class; and evaluates how men and women are differentially constituted in the family, education, work, politics, media, and language. Prerequisite when offered for upper-division writing: satisfactory completion of the lower-division writing requirement. (VII-A)

162A Race, Class, and Gender (4). Examines race/ethnicity, class, and gender from both a macro-sociological and a micro-sociological perspective.

162B Race and Gender Inequality at Work (4). Examines a specific subset of research in social inequality: gender and racial inequality in employment contexts.

163A Sociology of Sexual Assault (4). Examines the causes and consequences of sexual assault including rape, incest, and child molestation, and efforts to eliminate sexual assault. Explores the impact of gender, media, and "rape culture." Analyzes the effects of assault on victims and paths to recovery.

164 Sociology of Age (4). Introduction to sociology of age, aging, and the aged. Problems posed by aging population. Life course transitions. How social organizations influence the life course. Work, health, family in later life. Prerequisite: upper-division standing.

165A Social Inequality: Anthropological Perspectives (4). Concrete anthropological and sociological studies from across the world, including the United States, are compared to give perspectives on social status, power, economic differences, race, ethnicity, and gender. Prerequisite: one course in Anthropology, Economics, Political Science, or Sociology. Same as Anthropology 121H. (VII-B)

166A Sociology of Childhood (4). The child's place in society historically, cross-nationally, and in the contemporary United States. Childhood socialization, social class, and ethnic variation are addressed, as well as social problems and recommendations for social policy regarding children.

167A Racial and Ethnic Relations in the United States (4). Examines central questions and issues in the field of race and ethnicity; the emergence, maintenance, and consequences of the ethnic and racial stratification system in the United States; the future of racial and ethnic relations; and relevant public policy issues. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Chicano/Latino Studies 148.

168 Sexism and Power (4). Sexism may be seen as a particular form of socially constructed power which creates and maintains gender differences as relations and practices of structured inequalities. Males and females are objects constructed in a powered language dominated and controlled by males to their positional and distributional advantage. Prerequisite: upper-division standing. Same as Political Science 134J.

169 Special Topics: Age, Gender, Race, and Ethnicity (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIETIES AND SOCIAL INEQUALITY

170A Vietnam War (4). Examines social structures and social changes in Vietnamese and U.S. societies through the study of the Vietnam War.

170B U.S. War on Terrorism (4). Analyzes the United States war on terrorism by focusing on terrorism, the U.S. wars in Afghanistan and Iraq, and changes in police powers throughout the Patriot Act, as well as the political leadership which directs the war.

170C African American Protest Movements (4). Examines the work of major African American Marxist individuals and organizations in the twentieth century. Their theories of racism, capitalism, and their developed practices are covered.

171 Environmental Sociology (4). Examines society's changing relationship to the natural world. Delineates different models of "nature" and then explores their institutional roots, the social responses they have generated, and their implications for social inequality.

172E Basic Societal Issues (4). For students who have serious concern about peace, economic justice, the environment, or the future of human society generally. Attempts to provide an understanding of the fundamental issues underlying such social problems; fundamental alternatives available for attempting to cope with them. Same as Political Science 132E. Students may not receive credit for both Sociology 72/Political Science 32A and Sociology 172E/Political Science 132F.

172F American Society (4). Seminar examines recent trends in U.S. institutions such as family, community, labor, economy, media, schools, religion, criminal justice, medicine, politics, popular culture. Special attention to race, immigration, childhood, aging. Cross-national comparisons.

173 Social Stratification (4). Sources, functions, and dynamics of the unequal distribution of wealth, prestige, knowledge, and power in American and other societies.

174 Social Movements and Collective Behavior (4). A survey of models of collective action drawn from sociology, economics, psychology, and political science. Focus on areas such as social movements, strikes, crowd psychology, cults, fads, fashions, public opinion, and symbolic and mythical elements in collective culture. Prerequisite: Economics 1, Political Science 6A, or Sociology 1. Same as Political Science 156D.

175A Korean Society and Culture (4). Introductory background to the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework. Same as Anthropology 163K and East Asian Languages and Literatures 130. (VII-B)

175B Comparative Societies: China (4). Chinese society from 1949 to present. Social change in the context of political control and ideological considerations. Focus on the power structure, political decision processes, and ideological legitimation, and interplay with the Chinese community and culture. (VII-B)

175C Japanese Society (4). Cultural, social, and psychological features of Japanese society. Early feudalism in Japan to deviance in modern-day Japan. Comparisons made with the United States with main focus on Japan and its complexities.

176 Social Policy (4). Comparison of theoretical perspectives on the role of the state in contemporary society and an examination of the gender, racial-ethnic, and class dimensions of social policy. Particular focus on social welfare, labor, health policies, and policies on sexual violence.

178 Sociology of Peace and War (4). Describes various commonly accepted but often erroneous notions of the causes and consequences of war and deterrence. Major theories concerning the sources of war in international and intranational social systems. The modes, techniques, and outcomes of efforts to restrict, regulate, and resolve international conflicts.

179 Special Topics: Societies and Social Inequality (4). Prerequisites vary. May be repeated for credit as topic varies.

RESEARCH AND HONORS

NOTE: Students are reminded that each quarter of a sequential course (i.e., Sociology 180A-B, H188A-B) must be taken in order.

180A-B Sociology Majors Seminar (4-4). Students learn sociology by doing it. A modest-sized research project is planned and implemented by each student. Prerequisite: Sociology 110. Limited to Sociology majors only.

182 Sociology Issues Seminar (2). Drawing on experts from campus and community, explores various sociological questions, findings, approaches through lectures and discussion. Students select seminar topics, prepare opening remarks, lead discussion with faculty member, guest lecturer. May be taken for credit four times as topics vary.

185A Sociology Internship (4). Designed for Sociology majors who have a working knowledge of sociological methods and theory. Students secure a field placement with the help of the instructor and mutually agreed upon sponsor. The sponsor provides a field experience for the student.

H188A-B Honors Research and Thesis (4-4). Focuses on the design and implementation of individual research projects undertaken by senior Sociology majors. Writing projects consist of a proposal and paper on some empirical research. Prerequisites: consent of instructor and honors status.

189 Special Topics: Honors Sequence (4). Prerequisites vary. May be repeated for credit as topic varies.

197 Field Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Directed Group Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

GRADUATE

202A Proseminar I in Sociology (1). Introduces first-year graduate students in Sociology to the current research interests of Sociology faculty, as well as to other aspects of graduate life at UCI and to the profession of sociology more generally. Prerequisites: graduate standing, consent of instructor.

202B Proseminar II in Sociology (4). Focus is on second-year research projects, design, development, data gathering, analysis, and preparing both oral and written presentations of the results. Students learn new analytic and writing skills, gain experience with the research process, and become socialized about professional standards, customs, and institutions. Prerequisites: graduate standing, consent of instructor.

210A Classical Social Theory (4). Examines the development of classical sociological theory through the writings of Karl Marx, Emile Durkheim, Max Weber, Georg Simmel, and George Herbert Mead. Prerequisites: graduate standing; consent of instructor. Same as Social Science 253N.

210B Contemporary Social Theory (4). Familiarizes students with twentieth-century developments in social thought that have influenced sociological research, suggesting "what is living and what is dead" in the "classics" and offering an overview of the main outlines of recent sociological theorizing. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253R.

219 Special Topics: Theory (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

220A Research Design (4). Data collection, organization, and analysis in ethnographic or quasi-experimental settings, including interviewing, participant observations, behavior observations, and questionnaires. Research design issues include sampling, longitudinal research, and comparative research. Emphasis on the integration of qualitative and quantitative data. Prerequisite: graduate standing or consent of instructor. Sociology 220A and Sociology 265 may not both be taken for credit.

221A-B-C Graduate Statistics I, II, III (4-4-4). Statistics with emphasis on applications in sociology and anthropology. Examines exploratory uses of statistical tools in these fields as well as univariate, bivariate, and multivariate applications in the context of the general linear model. Prerequisites: graduate standing, consent of instructor.

222A Comparative and Historical Methods (4). Topics include the logic of comparative and historical analysis techniques and the examination of exemplar works in representative problem areas. Prerequisites: graduate standing, consent of instructor. Same as Social Science 256M.

225A Analysis of Relational Data (4). A practicum in social networks data analysis focusing on the special problems raised by data sets that embody relations. Log-linear and quadratic assignment procedures are stressed along with multidimensional scaling and other representational models. Prerequisites: graduate standing, consent of instructor. Same as Anthropology 222A and Social Science 201G, 241C, and 256A.

226A Methods of Demographic Analysis (4) S. Introduces basic demographic methods used in social science and public health research. Topics include sources and limitations of demographic data; components of population growth; measures of nuptiality, fertility, mortality, and population mobility projection methods; and demographic models. Prerequisite: graduate standing or consent of instructor.

227A-B Seminar in Ethnographic and Qualitative Field Methods (4-4). Comprehensive and critical discussion of the traditions of qualitative fieldwork; detailed examination of the collection, coding, analysis, and presentation of ethnographic/qualitative field data; and close mentoring of student projects culminating in an original research paper. In-Progress grading. Prerequisite: graduate standing.

228A-B-C Dissertation Seminar (4-4-4) F, W, S. Research design, problem conceptualization, and advanced data analysis in the area of social relations. Emphasis on methods of analysis in ethnography, cross-cultural research, and quasi-experimental research. Prerequisites: graduate standing, consent of instructor. Same as Social Science 250X-Y-Z.

229 Special Topics: Methods (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

230A Race and Ethnicity (4). An examination of central questions and issues in the field of race and ethnicity through a critical analysis and discussion of the principal theoretical perspectives and paradigms that have framed much of the scholarship in the area. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253V.

231A Theory and Methods in Asian American Studies (4). Examines major theoretical and methodological issues in Asian American Studies. Topics include the social construction of race and identity, the intersection with class and gender, and the relationship between quantitative and qualitative approaches in research methodologies. Prerequisite: graduate standing.

232A Gender, Family, and Community (4). Analyzes theory and research on family and community relations from the perspective of gender. Feminist theories of family power relations, caring in family and community settings, women and men as caregivers in the family and workplace, grass-roots organizing for family and community issues. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253H.

234 Ethnic America (4). Examines critically the meaning and measurement of ethnicity, race, and nation in sociological theory and research. Theories of ethnicity are explored, along with empirical studies of the construction of ethnic and pan-ethnic identities in historical and contemporary contexts. Prerequisite: graduate standing.

239 Special Topics: Social Inequality (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

240A Social Movements (4). A survey of the field of Social Movements, oriented around critical themes in the major theoretical traditions and contemporary exemplars. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253J.

241A Political Sociology (4). Begins with an examination of the three major orientations to the State (Pluralist, Elitist, and Class). Next considers current topics in political sociology including the Welfare State, the New Deal, political behavior, social movements, participation, and democracy. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253I.

249 Special Topics: Political Sociology and Social Movements (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

252A Global Urbanization (4). Examines the spread of cities worldwide in the twentieth century. What are the political and economic causes of this process? What are the social-cultural, political, economic effects? How is contemporary urbanization linked to global restructuring of other kinds? Prerequisites: graduate standing, consent of instructor. Same as Social Science 254J and Planning, Policy, and Design U273.

259 Special Topics: Global Studies and Comparative Development (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

261A Age, Generations, and the Life Course (4). Age is a central organizing principle of individual lives, social institutions, and human populations. Considers how age is socially defined and how developmental transitions between ages (i.e., growing up and growing older) are accomplished. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253E.

262A Populations (4). Introduces the interrelationships between population and social organization. Considers measurement and explanation of historical and contemporary trends in birth rates, death rates, migration, and marriage and divorce. Case material is drawn primarily from the U.S. and other industrialized nations. Prerequisite: graduate standing or consent of instructor. Same as Social Sciences 253F.

264 Immigrant America (4). The study of the causes and consequences of international migration has become one of the most vital fields of sociological theory and research. Examines principal theoretical perspectives and empirical research on contemporary immigration flows and the processes of incorporation. Prerequisite: graduate standing.

265 Demographic and Social Analysis (DASA) (4). Data collection, organization, and analysis in population studies and demography. Research design issues include sampling, longitudinal research, and comparative research. Prerequisites: graduate standing, consent of instructor, and enrollment in DASA program. Sociology 265 and Sociology 220A may not both be taken for credit.

269 Special Topics: Social Demography (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

270 Organization Theory (4). Examination of theoretical approaches for analyzing the origins, operations, and consequences of complex organizations. Prerequisites: graduate standing, consent of instructor.

272A Work and Industrial Relations (4). Explores the nature, causes, and results of workplace conflict in American Society. Considers topics such as "American Exceptionalism," sex segregation in the workplace, strikes and the role of unions in American society. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253U.

275A Survey Research Methods I: Designing Surveys (4). Trains students to design and administer studies involving interviewing or self-administered questionnaires. Focuses on developing survey projects and designing instruments. Prerequisite: graduate standing.

275B Survey Research Methods II: Conducting Surveys (4). Trains students to design and administer studies involving interviewing or self-administered questionnaires. Focuses on the principles and practices of collecting survey data. Prerequisites: Sociology 275A and graduate standing.

279 Special Topics: Social Organizations and Institutions (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

280 Analysis of Social Network Data (4). Overview and application of methods for analyzing social network data. Topics include: data structures, visualization, graph theory, centrality, subgroups, positions, blockmodels, local properties, and statistical models. Social network analysis software is used to analyze a range of examples. Prerequisite: graduate standing.

281 Introduction to Social Network Analysis (4). Designed to provide a broad overview of social network analysis. At the same time, students have an opportunity to delve deeply into applications of the network approach in their individual areas of interest. Prerequisite: graduate standing.

289 Special Topics (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

290 Dissertation Research (1 to 12). Prerequisites: graduate standing, consent of instructor. May be repeated for credit.

299 Independent Study (4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit.

GRADUATE PROGRAM IN SOCIAL SCIENCE

In addition to the departmental graduate programs, the School offers the M.A. degree in Social Science with a concentration in Demographic and Social Analysis and the Ph.D. degree in Social Science with a concentration in Mathematical Behavioral Sciences. Each program is administered by a different group of faculty.

Graduate Concentration in Demographic and Social Analysis

Participating Faculty

Hoda Anton-Culver: Epidemiology and preventive medicine
 M. Victoria Basolo: Urban politics, regionalism, public choice, interorganizational relationships
 Frank Bean: Migration and immigration, immigrants' welfare and demographic behavior
 Marlon G. Boarnet: Urban economics, urban planning, urban economic development
 Susan K. Brown: Immigrants' settlement patterns and social networks; the effect of affirmative-action law on college enrollment in Washington State; demographic change in U.S. suburbs over the last three decades
 Michael Burton: Economic anthropology, ecological anthropology, gender
 Kitty C. Calavita: Sociology of law, criminology, social deviance, immigration, and inequality
 Leo R. Chavez: International migration, Latin American immigrants, medical anthropology
 Kenneth S. Chew: Social and historical demography
 Philip Cohen: Social demography, inequality, race, and work
 C. David Dooley: Community psychology, epidemiology, economic change
 Katherine Faust: Social networks, research methods
 Susan Greenhalgh: Political economy, feminism/gender, politics of reproduction, critical demography
 Bernard N. Grofman: Mathematical models of collective decision making, formal democracy theory, politics of small groups
 Matt L. Huffman: Organizations, work, gender inequality
 Mireille Jacobson: Health economics, drug policy, labor economics
 Jennifer Lee: Migration and immigration, race/ethnic/minority relations, urban sociology
 John M. Liu: Race/ethnic/minority relations; economy and society
 Richard Matthew: International relations, environmental policy, ethics
 Richard McCleary: Criminal justice, research methodology, statistics
 Robert Newcomb: Social statistics, methodology
 Gary Richardson: Economic history, immigration in historical perspective
 Rubén G. Rumbaut: International migration, the "1.5" Generation, comparative race and ethnic relations, structural inequality; identity, health, and mental health
 David A. Smith: Urban sociology, comparative sociology, political sociology
 William C. Thompson: Psychology and law, criminal justice, human judgment and decision making
 George Tita: Criminology, community context of violence, urban youth gangs, homicide studies
 Judith Treas: Population studies, sociology of aging, sociology of family
 Wang Feng: Demography, social change, economy and society
 Douglas L. White: Cross-cultural research, mathematical anthropology, social networks

The M.A. in Social Science with a concentration in Demographic and Social Analysis offers specialized training in the research skills to address practical problems confronting society, business, government, and the nonprofit sector. The concentration emphasizes the Pacific Rim and issues defining Southern California's population, such as immigration, changing household and family structure, racial and economic inequalities, and the impact of local and regional population growth. Informed by the interdisciplinary field of demography, the program draws on faculty and courses in the Schools of Social Sciences and Social Ecology.

ADMISSION

Students who wish to complete the program in one year are generally admitted to the program in the fall quarter. Students must hold

a B.A. or B.S., normally in a social science or related field, and should have had at least four units of undergraduate statistics or equivalent mathematics courses. Students must meet the general admission requirements for graduate studies, which include official transcripts of all college course work, Graduate Record Examination scores for tests taken within the past five years, and three letters of recommendation. Applicants whose first language is not English must also take the Test of English as a Foreign Language (TOEFL) and achieve a score of 550 or higher on the paper-based test or 213 or higher on the computer-based test.

REQUIREMENTS

The M.A. requires 36 units of study and an oral exit examination. All students must complete 20 units of required courses which include one course in research design, one in demographic methods, one in populations, and two in statistics. In addition, students must complete 16 units of elective courses in population issues or research methods. No more than four units may be internship, independent study, directed readings, or thesis courses (to prepare for the oral examination). One or two electives may be upper-division undergraduate courses, with the remainder being graduate courses. All courses must be completed with a grade of B or better.

The M.A. in Social Science with a concentration in Demographic and Social Analysis may also be awarded to Ph.D. students who complete the necessary requirements.

Graduate Concentration in Mathematical Behavioral Sciences

Participating Faculty

Aldo Antonelli: Non-standard set theories, logical foundations of game theory and applications to distributed artificial intelligence
 Pierre F. Baldi: Bioinformatics/computational biology; probabilistic modeling/machine learning
 Jeffrey Barrett: Philosophy of science, philosophy of physics
 William Batchelder: Mathematical models, measurement, and cognitive processes
 John P. Boyd: Mathematical anthropology and systems theory
 Myron Braustein: Visual perception and computer applications
 Scott D. Brown: Mathematical models of reaction time and practice
 David Brownstone: Econometrics and industrial organization
 Michael Burton: Economic anthropology; gender, family, and households; cognitive anthropology; Africa, Oceania
 Charles F. Chubb: Visual perception, psychophysics
 Carol Cicerone: Visual perception and the physiological bases of visual perception, with emphasis on human color vision and retinal mechanisms of sensitivity regulation
 Linda Cohen: Political economy, social choice, government regulation and government policy toward research and development
 Rui J. P. de Figueiredo: Mathematical foundations of neural networks, contextual feedback models for automated image understanding
 Barbara Doshier: Memory, information processing, perception
 Michael D'Zmura: Vision research, virtual reality
 Jean-Claude Falmagne: Mathematical psychology
 Katherine Faust: Social networks, research methods
 Linton C. Freeman: Network models of social structure
 Michelle Garfinkel: Macroeconomic and monetary theory
 Amihai Glazer: Public choice, especially concerning commitment problems
 Bernard N. Grofman: Mathematical models of collective decision making, formal democratic theory, sequential decision making, politics of small groups
 Donald Hoffman: Artificial intelligence approaches to human and machine vision, recovery of three-dimensional structure from image motion, visual recognition of objects by their shape
 Tarow Indow: Mathematical models in visual space, color space, and human memory
 Geoffrey Iverson: Cognitive science and mathematical models
 L. Robin Keller: Decision analysis, risk analysis, problem structuring, management science
 Natalia L. Komarova: Mathematical modeling of biology and language; nonlinear waves

Igor Kopylov: Microeconomic theory, decision theory and game theory
 R. Duncan Luce: Mathematical behavioral science
 Penelope Maddy: Philosophy of mathematics, philosophy of logic
 Michael McBride: Microeconomics, game theory, and political economy
 Louis Narens: Measurement, logic, and metacognition
 Robert Newcomb: Statistical and research methods for the social sciences
 Dale Poirier: Econometrics, both theoretical and empirical, specializing in Bayesian econometrics
 A. Kimball Romney: Experimental and psychological anthropology
 Donald G. Saari: Mathematics and application of dynamical systems to social sciences
 Stergios Skaperdas: Economic theory, political economy
 Brian Skyrms: Philosophy of science, metaphysics
 Kenneth A. Small: Urban economics, transportation economics, discrete-choice econometrics, energy
 Padhraic Smyth: Statistical pattern recognition, probabilistic learning, information theory
 George Sperling: Vision, perception, information processing
 Hal Stern: Bayesian methods, model diagnostics, statistical computing
 Mark Steyvers: Computational models of memory, reasoning, and perceptions
 Carole J. Uhlaner: Comparative political participation, formal models of political behavior
 Christian Werner: Mathematical geography
 Douglas White: Social networks, longitudinal social demography
 Charles E. Wright: Skill acquisition and generalization, human motor behavior, visual attention, Virtual Reality Laboratory
 John I. Yellott: Mathematical psychology and vision perception
 Hong-Kai Zhao: Applied mathematics in physics, engineering, imaging science, and computer vision

The concentration in Mathematical Behavioral Sciences offers a program of interdisciplinary and mathematical approaches to the study of human behavior, providing high levels of training in current mathematical modeling and in mathematics and software use and programming. The program is administered by an interdisciplinary group of faculty. Within the concentration, two optional emphases are available: Social Networks; and Games, Decisions, and Dynamical Systems. Specific requirements are detailed below.

ADMISSION

Admission to the concentration in Mathematical Behavioral Sciences requires evidence of appreciable mathematical skill and knowledge. As an absolute minimum, a candidate should have taken one full year of calculus, including calculus of several variables, and one course in linear algebra, and should also provide evidence of additional mathematical depth. This depth can be manifested in a number of different ways including, but not restricted to, an undergraduate degree in mathematics or physical science, a high score on the mathematics portion of the GRE, or a strong undergraduate minor in mathematics. In addition, students should have some exposure to a behavioral science field. Especially useful is some experience with behavioral science modeling.

Those students interested in either the emphasis in Social Networks or the emphasis in Games, Decisions, and Dynamical Systems should make this clear in their application. A student is free at any time after admission to move into or out of either emphasis, but will be subject to the requirements in effect at the time of original admission to the concentration in Mathematical Behavioral Sciences.

GENERAL REQUIREMENTS

Four major classes of requirements must be fulfilled. Since a number of options are available, the student will, in consultation with an advisor, develop a plan of study.

Quantitative/Mathematical. To be completed by the end of the third year: (1) one course each in analysis beyond calculus, abstract algebra beyond linear algebra, and logic; and (2) two quarters of mathematical statistics, with calculus as a prerequisite and covering the fundamentals of probability and random variables.

A list of courses eligible for satisfying the Quantitative/Mathematical requirement is available online at <http://www.imbs.uci.edu/NEWphdprogram.html>.

Language/Computer. All students must be sufficiently familiar with various computer programs and languages to be able to conduct serious research in their field of interest and must submit either proposed courses or some demonstration of competency as part of their plan of study. In addition, students must either (1) attain proficiency in reading social science technical publications in one foreign language with a substantial relevant technical literature or (2) demonstrate proficiency in computer programming considerably beyond that of the standard computer requirement. Because of the continually changing nature of computer languages and software, the conditions for fulfilling this additional computer expertise requirement is left to the judgment of the faculty subcommittee on computers of the Ph.D. program.

Substantive Minor. Students are expected to develop considerable expertise in some substantive field and in the application of models to it. This requires the completion of three courses at the upper-division or graduate level that do not necessarily entail extensive modeling, and three courses or seminars in which the primary thrust is mathematical modeling.

Research Papers and Colloquia. At the end of the second year, a 10–20-page paper reporting original research or a penetrating analysis of some subtopic of Mathematical Behavioral Science (or either Social Networks, or Games, Decisions, and Dynamical Systems with a formal or mathematical component) is expected. An oral presentation will be given to faculty and graduate students. Two faculty members are assigned to read and evaluate the paper and talk.

Students are required to take for credit four quarters of the Mathematical Behavioral Sciences Colloquium, Social Science 211A-B-C, during their first three years. Although not a formal requirement, students are expected to attend the Colloquium on a regular basis whenever in residence.

Time to Degree. Students must advance to candidacy in their fourth year. The normal time for completion of the Ph.D. is six years. The maximum time permitted is seven years.

Emphasis in Social Networks

The requirements for the emphasis in Social Networks are the same as the general requirements noted above, with the following exceptions:

Students may choose to complete the first part of the Quantitative/Mathematical requirement with one course each in discrete mathematics, graph theory, and logic.

Social Networks students are required to attend about 75 percent of the Mathematical Behavioral Sciences Colloquia, including all that are designated as Social Networks colloquia, and also must attend occasional colloquia, usually of local faculty and graduate students, which are separate from the general Mathematical Behavioral Sciences Colloquia.

Emphasis in Games, Decisions, and Dynamical Systems

The requirements for the emphasis in Games, Decisions, and Dynamical Systems are the same as the general requirements noted above, with the following exceptions:

Students must complete eight graduate courses emphasizing game theory, decision theory, or dynamical systems. Examples of such courses are: Economics 243A (Game Theory); Economics 270A-B-C (Seminar in Public Choice I, II, III); Social Science 241B (Network Theories of Social Structure); Anthropology 289A (Networks and Social Evolution); Anthropology 289B (Cognition, Technology, and Genes); and Anthropology 289C (Dynamical Processes). These courses will count toward the Substantive Minor requirement.

Students are required to attend about 75 percent of the Mathematical Behavioral Sciences Colloquia, including all that are designated as Games, Decisions, and Dynamical Systems colloquia, and must also must attend occasional colloquia, usually of local faculty and graduate students, which are separate from the general Mathematical Behavioral Sciences Colloquia.

Master of Arts Degree

The M.A. degree is awarded to UCI Ph.D. students who complete necessary requirements or to students currently enrolled in a Ph.D. program (or equivalent) at another institution who are directly admitted for graduate study leading only to the master's degree at UCI. Such applicants must provide evidence that their Ph.D. program agrees to this one-year arrangement. Requirements include the submission of a petition to the Graduate Committee along with a proposed plan of study consisting of 36 units of relevant Mathematical Behavioral Science courses, normally including the core requirement in mathematical statistics, and the satisfactory completion of a comprehensive examination.

Graduate Courses in Social Science

SOCIAL SCIENCES

201A Descriptive Multivariate Statistics I (4). Mathematical tools to organize and illuminate the multivariate methods. Multiple regression analysis, multi-dimensional scaling, and cluster analysis. Statistical computing via MDS(x), DMDP, and SPSS. Students must enroll in the laboratory section which meets on Wednesdays. Prerequisite: Social Science 100A-B-C or equivalent. Satisfactory/Unsatisfactory grading only. Same as Informatics 207 and Social Ecology 290A.

201B Descriptive Multivariate Statistics II (4). Presentation of the principle methods of multivariate statistics including criteria for appropriate use and the interpretation of resulting measurements. Computer exercises are used to demonstrate concepts. Prerequisites: Social Science 201A.

201C Sampling Techniques and Estimation Methods (4). A review of confidence interval estimates derived from simple random samples is followed by a representation of techniques for improving the precision of such estimates under the constraints of feasibility, cost, and time. Methods for dealing with bias and nonsampling errors are also considered. Outside speakers. Prerequisites: Social Science 100A-B-C or equivalent. Same as Social Ecology 290C and Management 290Z. Satisfactory/Unsatisfactory only.

201D Introduction to Biostatistics (2). An introduction to the principles and methods of biostatistics with application to the health sciences. Statistical concepts, terminology, and techniques employed in health science research to analyze data and report such analysis. Articles from health science research literature are used for illustration. Prerequisite: graduate standing or consent of instructor.

201G Analysis of Relational Data (4). A practicum in social networks data analysis focusing on the special problems raised by data sets that embody relations. Log-linear and quadratic assignment procedures are stressed along with multidimensional scaling and other representational models. Prerequisites: graduate standing; consent of instructor. Same as Anthropology 222A, Social Science 241C and 256A, and Sociology 225A.

209A-Z Special Topics in Mathematical Social Science (4). Current research in Mathematical Social Science. Topics vary.

211A-B-C Mathematical Behavioral Sciences Colloquium (2-2-2). Weekly reports and colloquia by faculty, students, and visitors. Satisfactory/Unsatisfactory only. May be repeated for credit.

SOCIAL NETWORKS

240A-B-C Seminar in Social Networks (1.3-1.3-1.4). A seminar drawing on visiting scholars and local faculty designed to keep students abreast of current developments in Social Networks research.

241B Network Theories of Social Structure (4). Explores communicative, social, political, economic, and other flows of behavior using foundational network concepts and measures such as centrality, group, role, pattern, and system. Defines social structure, processes that generate structures, and behavioral consequences of structural rather than individual dispositional properties. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 222B.

241C Analysis of Relational Data (4). A practicum in social networks data analysis focusing on the special problems raised by data sets that embody relations. Log-linear and quadratic assignment procedures are stressed along with multidimensional scaling and other representational models. Prerequisites: graduate standing; consent of instructor. Same as Anthropology 222A, Social Science 201G and 256A, and Sociology 225A.

249A Special Topics in Social Networks (4) F, W, S. Current research in Social Networks. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

SOCIOLOGY AND SOCIAL RELATIONS PROSEMINARS AND COLLOQUIA

250R-S-T Current Research in Social Relations (1.3-1.3-1.4) F, W, S. Research seminar in which a number of Social Relations faculty members present and discuss their current research. Prerequisite: graduate standing or consent of instructor.

250X-Y-Z Social Relations Dissertation Seminar I, II, III (4-4-4) F, W, S. Research design, problem conceptualization, and advanced data analysis in the area of social relations. Emphasis on methods of analysis in ethnography, cross-cultural research, and quasi-experimental research. Prerequisites: graduate standing, consent of instructor. Same as Sociology 228A-B-C.

COGNITIVE ANTHROPOLOGY AND THE STUDY OF CULTURE

251A Anthropology and History (4). An examination of the complex, long-standing relationship between anthropology and history. Themes include: history, culture, and colonialism; history and the power to represent; nostalgia and the uses of the past in struggles over "national history." Prerequisite: graduate standing or consent of instructor. Same as Anthropology 230A.

252G Structuralism and Post-Structuralism (4). Traces recent theoretical discussions and arguments over the philosophical and historical "subject" from structuralist decenterings toward the characteristically "post-structuralist" contemporary concern with the historical and political constitution of subjectivities and subject positions. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 247A.

FAMILY AND GENDER

253A Family and Life History (4). Interdisciplinary and comparative work in family and life history. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 221A.

253E Age, Generations, and the Life Course (4). Age is a central organizing principle of individual lives, social institutions, and human populations. Considers how age is socially defined and how developmental transitions between ages (i.e., growing up and growing older) are accomplished. Prerequisites: graduate standing, consent of instructor. Same as Sociology 261A.

253F Populations (4). Introduces the interrelationships between population and social organization. Considers measurement and explanation of historical and contemporary trends in birth rates, death rates, migration, and marriage and divorce. Case material is drawn primarily from the U.S. and other industrialized nations. Prerequisites: graduate standing, consent of instructor. Same as Sociology 262A.

SOCIAL STRUCTURE, SOCIAL ORGANIZATIONS, AND SOCIAL NETWORKS

253H Gender, Family, and Community (4). Analyzes theory and research on family and community relations from the perspective of gender. Feminist theories of family power relations, caring in family and community settings, women and men as caregivers in the family and workplace, grass-roots organizing for family and community issues. Prerequisites: graduate standing, consent of instructor. Same as Sociology 232A.

253I Political Sociology (4). Begins with an examination of the three major orientations to the State (Pluralist, Elitist, and Class). Next considers current topics in political sociology including the Welfare State, the New Deal, political behavior, social movements, participation, and democracy. Prerequisites: graduate standing, consent of instructor. Same as Sociology 241A.

253J Social Movements (4). A survey of the field of Social Movements, oriented around critical themes in the major theoretical traditions and contemporary exemplars. Prerequisites: graduate standing, consent of instructor. Same as Sociology 240A.

253N Classical Social Theory (4). Examines the development of classical sociological theory through the writings of Karl Marx, Emile Durkheim, Max Weber, Georg Simmel, and George Herbert Mead. Prerequisites: graduate standing; consent of instructor. Same as Sociology 210A.

253Q Nations, States, and Gender (4). Explores the ways in which nations, nationalism, states, and citizenship are gendered relations and processes. Questions include: How do women construct themselves as political subjects, and how are constructions of citizenship and discourses of rights gendered? Same as Anthropology 246C.

253R Contemporary Social Theory (4). Familiarizes students with twentieth-century developments in social thought that have influenced sociological research, suggesting "what is living and what is dead" in the "classics" and offering an overview of the main outlines of recent sociological theorizing. Prerequisites: graduate standing, consent of instructor. Same as Sociology 210B.

253U Work and Industrial Relations (4). Explores the nature, causes, and results of workplace conflict in American society. Considers topics such as "American Exceptionalism," sex segregation in the workplace, strikes and the role of unions in American society. Prerequisites: graduate standing, consent of instructor. Same as Sociology 272A.

253V Race and Ethnicity (4). An examination of central questions and issues in the field of race and ethnicity through a critical analysis and discussion of the principal theoretical perspectives and paradigms that have framed much of the scholarship in the area. Prerequisites: graduate standing, consent of instructor. Same as Sociology 230A.

THIRD WORLD DEVELOPMENT AND SOCIAL CHANGE

254A Transnational Migration (4). The immigrant experience will be examined in order to explore how specific theoretical issues are examined empirically. These issues include ethnic enclave formation, gendered differences in migration and settlement, class differences, the migration of indigenous groups, identity formation, and issues of representation. Same as Anthropology 235A.

254E Economic Anthropology (4). Classic and contemporary theory in economic anthropology. Case studies from Latin America (primarily Mexico and the Andes), Africa, and the Pacific. Substantive topics include non-market exchange, markets and marketplaces, households, gender, management of common property (fisheries, pastoral lands, forests), labor, development, and change. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 240A.

254F The Politics of Ethnography (4). Explores the way that ethnographies are linked to wider contexts within which they are produced. Through examination of recent critiques of ethnographic writing, and a series of cases, shows how ethnography is bound up with the politics of representation. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 242A.

254H Seminar in Political Anthropology (4). Explores anthropological approaches to politics. Covers a range of issues and topics including: theories of culture, power, and hegemony; approaches to colonial and post-colonial relations of global inequality; and ethnographic approaches to the modern state. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 245A.

254J Global Urbanization (4). Examines the spread of cities worldwide in the twentieth century. What are the political and economic causes of this process? What are the social-cultural, political, economic effects? How is contemporary urbanization linked to global restructuring of other kinds? Prerequisites: graduate standing, consent of instructor. Same as Planning, Policy, and Design U273 and Sociology 252A.

254K Gender and Globalization (4). Teases out gender implications of transformations in global culture and political economy. By examining processes such as globalization of production and investment, spread of religious fundamentalisms, and extension of mass media throughout the world, maps out terrain for future ethnographic and theoretical work. Same as Anthropology 234B.

254L Approaches to Globalization (4). Historical and contemporary approaches to the world economy, emphasizing anthropological questions of culture, power, identity, inequality. Examines "neo-imperialism," "late capitalism," accumulation, global markets, urban space, the state, business and policy globalization discourse, "local" responses to and instantiations of the "global." Prerequisite: graduate standing or consent of instructor. Same as Anthropology 248A.

254M Law, Colonialism, and Nationalism (4). Origins and spread of law in colonial and nationalist contexts: law's role in constituting and policing difference. Recent theoretical approaches; property in things and people; human and indigenous rights; "customary" law; legal foundations of nationalism; resistance to/through law; globalization. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 246B.

METHODS AND STATISTICS

255A Research Design (4). Data collection, organization, and analysis in ethnographic or quasi-experimental settings, including interviewing, participant observations, behavior observation, and questionnaires. Research design issues include sampling, longitudinal research, and comparative research. Emphasis on the integration of qualitative and quantitative data. Prerequisite: graduate standing or consent of instructor. Social Science 255A and Sociology 265 may not both be taken for credit.

255C Grant and Proposal Writing (4). Focuses on production, critique, and revision of student research proposals. A practical seminar designed to improve student proposals, help students through the application processes, and increase students' chances of obtaining support for their research. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 225A.

255M-N-P Graduate Statistics I, II, III (4-4-4). Statistics with emphasis on applications in sociology and anthropology. Examines exploratory uses of statistical tools in these fields as well as univariate, bivariate, and multivariate applications in the context of the general linear model. Prerequisites: graduate standing, consent of instructor. Same as Anthropology 210A-B-C.

OTHER METHODOLOGY AND STATISTICS

256A Analysis of Relational Data (4). A practicum in social networks data analysis focusing on the special problems raised by data sets that embody relations. Log-linear and quadratic assignment procedures are stressed along with multidimensional scaling and other representational models. Prerequisites: graduate standing; consent of instructor. Same as Anthropology 222A, Social Science 201G and 241C, and Sociology 225A.

256M Comparative and Historical Sociological Methods (4). Topics include the logic of comparative and historical analysis techniques and the examination of exemplar works in representative problem areas. Prerequisites: graduate standing, consent of instructor. Same as Sociology 222A.

SPECIAL TOPICS IN SOCIAL RELATIONS

259A Special Topics in Social Relations (1 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

MULTICULTURAL / INTERNATIONAL

272A Origin and Evolution of Marxist Social Thought (4). Focuses on the genesis and evolution of Marxist social thought. The "systemic" method of Marx and Engels to questions of economic production and reproduction is compared and contrasted with modern world-system grand visions, feminist-theoretic approaches, and postmodern critiques. Prerequisites: undergraduate course in political theory or equivalent; graduate standing or consent of instructor.

274E-F U.S. Latino Cultures I, II (4-4). The history and cultural background of contemporary Americans of Latin American descent. Introduction to major works in history, social sciences, and the arts that are essential for understanding this aspect of the U.S. socio-historical development. Prerequisite: graduate standing or consent of instructor. Same as Chicano/Latino Studies 220E-F.

289 Special Topics in Social Science (4) F, W, S. Current research in Social Science. Topics vary. May be repeated for credit.

SPECIAL COURSES IN SOCIAL SCIENCE

290 Dissertation Research (4 to 12) F, W, S. May be repeated for credit. Prerequisite: consent of instructor.

291 Directed Reading Examination Preparation (4) F, W, S

298 Self-Directed Study (1 to 12) Summer. May not be applied toward residency requirements or toward total units required for a degree. May be repeated for credit. Prerequisite: graduate standing.

299 Independent Study (4) F, W, S. May be repeated for credit.

399 University Teaching (4-4-4) F, W, S. Limited to Teaching Assistants.

COLLEGE OF HEALTH SCIENCES

Thomas C. Cesario, M.D., **Dean**

Irvine Hall

World Wide Web: <http://www.cohs.uci.edu/>

Faculty

Amir Abolhoda, M.D., University of California, Irvine, *Assistant Clinical Professor of Surgery*

Behnoosh Afghani, M.D. University of Southern California, *Associate Clinical Professor of Pediatrics*

Phyllis F. Agran, M.D. University of California, Irvine, M.P.H. Harvard University, *Professor Emeritus of Pediatrics (Gastroenterology)*

Anshu Agrawal, Ph.D. Lucknow University (India), *Assistant Clinical Professor of Medicine (Immunology)*

Thomas Ahlering, M.D. Saint Louis University, *Professor of Urology*

Chowdhury Ahsan, M.B.B.S. Dhaka Medical College (Bangladesh), *Assistant Clinical Professor of Medicine (Cardiology)*

Gregory Albers, M.D. University of California, Los Angeles, *Assistant Clinical Professor of Medicine (Gastroenterology)*

Muthana Al-Ghazi, Ph.D. University of Manitoba (Winnipeg, Canada), *Clinical Professor of Radiation Oncology*

Michael Alkire, M.D. University of California, Los Angeles, *Assistant Professor of Anesthesiology in Residence*

Nancy Allbritton, Ph.D. Massachusetts Institute of Technology, M.D. The Johns Hopkins University School of Medicine, *Professor of Physiology and Biophysics, Biological Sciences, Biomedical Engineering, Chemistry, and Chemical Engineering and Materials Science*

Byron J. Allen, M.D. University of California, Los Angeles, *Clinical Professor of Medicine (Cardiology)*

Gustavo Alva, M.D. Autonomous University de Guadalajara, *Associate Clinical Professor of Psychiatry*

Alpesh Amin, M.D. Northwestern University, *Executive Director, Hospitalist Program, Vice Chair for Clinical Affairs, Department of Medicine, and Associate Clinical Professor of Medicine (Hospitalist Program and Internal Medicine)*

Arash Anavim, M.D. Tehran University (Iran), *Assistant Clinical Professor of Radiological Sciences*

Bogi Andersen, M.D. University of Iceland, *Associate Professor of Medicine (Endocrinology) and Biological Chemistry*

Aileen J. Anderson, Ph.D. University of California, Irvine, *Director of the Christopher Reeve Foundation Spinal Cord Injury Core Facility and Assistant Professor of Physical Medicine and Rehabilitation and of Anatomy and Neurobiology*

Cynthia T. Anderson, M.D. University of Tennessee, *Associate Director of Graduate Education for Anesthesiology and Clinical Professor of Anesthesiology*

Joseph H. Anderson, D.D.S. University of Iowa, *Associate Clinical Professor of Otolaryngology*

Kim D. Anderson, Ph.D. University of New Mexico, *Assistant Adjunct Professor of Neurological Surgery*

Brian S. Andrews, M.B., B.S. University of Sydney (Australia), *Chief of Rheumatology and Clinical Immunology and Professor of Medicine (Rheumatology)*

Hoda Anton-Culver, Ph.D. St. Andrews University (Scotland), *Director of the Center for Cancer Genetics Research and Prevention, Chief of Epidemiology, and Professor of Medicine (Epidemiology and Preventive Medicine) and Social Ecology*

Maya Antony, M.D. Ogun State University (Nigeria), *Associate Clinical Professor of Medicine (Internal Medicine, Primary Care, and Geriatrics)*

Ruslan D. Aphasizhev, Ph.D. Russian Academy of Sciences, *Assistant Professor of Microbiology and Molecular Genetics*

Stuart M. Arfin, Ph.D. Albert Einstein College of Medicine, *Professor Emeritus of Biological Chemistry*

Steven A. Armentrout, M.D. University of Chicago, *Professor Emeritus of Medicine (Hematology)*

William B. Armstrong, M.D. University of Washington, *Associate Professor of Clinical Otolaryngology*

Edward R. Arquilla, M.D., Ph.D. Case Western Reserve University School of Medicine, *Professor Emeritus of Pathology*

Rajkumari V. Asrani, M.B., B.S. Madras Medical College (India), *Clinical Professor of Anesthesiology*

Andrea Avery, M.D. University of North Carolina, *Associate Clinical Professor of Medicine (Internal Medicine and Primary Care)*

Habib Azad, M.D. University of South Florida, *Associate Clinical Professor of Medicine (Nephrology)*

George Baerveldt, M.D. University of Pretoria (South Africa), *Department Chair and Professor of Clinical Ophthalmology, and Irving H. Leopold Chair in Ophthalmology*

Choong Baick, M.D. Loma Linda University, *Clinical Professor of Surgery (Oncology)*

Dean Bradford Baker, M.D. University of California, San Diego; M.P.H. University of California, Berkeley, *Director of the UCI Center for Occupational and Environmental Health and Professor of Clinical Medicine, Community and Environmental Medicine, and Social Ecology*

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and Professor of Computer Science, Biomedical Engineering, and Developmental and Cell Biology, and Biological Chemistry*

Kenneth M. Baldwin, Ph.D. University of Iowa, *Professor of Physiology and Biophysics and of Biological Sciences*

Fayez Bany-Mohammed, M.B.B.S. University of Jordan, *Associate Clinical Professor of Pediatrics (Neonatology)*

Tallie Z. Baram, M.D. University of Miami, Ph.D. Weizmann Institute of Science (Israel), *Professor of Pediatrics, Neurology, and Anatomy and Neurobiology, and Danette (Dee Dee) Shepard Chair in Neurological Studies*

Alan George Barbour, M.D. Tufts University School of Medicine, *Professor of Microbiology and Molecular Genetics and of Medicine (Infectious Diseases)*

Steven J. Barker, M.D. University of Miami, Ph.D. California Institute of Technology, *Professor Emeritus of Anesthesiology*

Ronald J. Barr, M.D. Johns Hopkins Medical School, *Professor of Dermatology and Pathology*

James A. Bartley, M.D. University of Kansas, Ph.D. University of Iowa, *Associate Clinical Professor of Pediatrics (Human Genetics and Birth Defects)*

Cyril H. Barton, M.D. University of Colorado Medical School, *Associate Professor of Medicine (Nephrology-Renal)*

Andrius Baskys, M.D. Vilnius University (Lithuania), Ph.D. Moscow University (Russia), *Associate Professor of Psychiatry and Human Behavior in Residence*

Stanley Bassin, Ed.D. University of California, Berkeley, *Clinical Professor of Medicine (Cardiology)*

Elizabeth Behringer, M.D. Boston University, *Clinical Professor of Anesthesiology*

David Bello, M.D. Central University of Venezuela, *Assistant Clinical Professor of Medicine (Cardiology)*

James D. Belluzzi, Ph.D. University of Chicago, *Adjunct Professor of Pharmacology*

Lbachir BenMohamed, Ph.D. Pasteur Institute (France), *Assistant Professor of Ophthalmology in Residence*

Rimal B. Bera, M.D. University of California, Irvine, *Clinical Professor of Psychiatry*

J. Edward Berk, M.D. Jefferson Medical College, D.Sc. University of Pennsylvania, *School of Medicine Distinguished Professor Emeritus of Medicine (Gastroenterology)*

Michael L. Berman, M.D. George Washington School of Medicine, *Professor of Obstetrics and Gynecology (Oncology)*

Michael W. Berns, Ph.D. Cornell University, *Professor of Surgery, Developmental and Cell Biology, and Biomedical Engineering, and Arnold and Mabel Beckman Chair in Laser Biomedicine*

Tareq Bey, M.D. Albert-Ludwigs University (Germany), *Associate Clinical Professor of Emergency Medicine*

Deepak K. Bhalla, Ph.D. Howard University, *Professor Emeritus of Community and Environmental Medicine in Residence*

Nitin Bhatia, M.D. Baylor College of Medicine, *Assistant Clinical Professor of Orthopaedic Surgery*

- Xiaoning Bi, M.D. Binzhou Medical College (People's Republic of China); Ph.D. University of Southern California, *Assistant Professor of Psychiatry and Human Behavior in Residence*
- Robert H. Blanks, Ph.D. University of California, Los Angeles, *Professor Emeritus of Anatomy and Neurobiology*
- Andre Blaylock, M.D. Loma Linda University, *Clinical Professor of Family Medicine*
- Maureen E. Bocian, M.D. University of Illinois, *Professor of Clinical Pediatrics and of Obstetrics and Gynecology*
- John R. Boker, Ph.D. Pennsylvania State University, *Clinical Professor of Family Medicine*
- Stephen C. Bondy, Ph.D. University of Birmingham (England), *Professor of Community and Environmental Medicine, Pharmacology, and Medicine*
- Swaraj Bose, M.B.B.S. All India Institute of Medical Sciences, *Assistant Professor of Clinical Ophthalmology*
- Warren L. Bostick, M.D. University of California, San Francisco, *Professor Emeritus of Pathology*
- Pamela Botzbach, M.D. Tufts University, *Associate Clinical Professor of Anesthesiology*
- Rainer K. Brachmann, M.D. Ludwig-Maximilians University, *Assistant Professor of Medicine (Hematology/Oncology) and Biological Chemistry*
- Ralph Bradshaw, Ph.D. Duke University, *Professor of Physiology and Biophysics and of Anatomy and Neurobiology*
- Peter Breen, M.D. University of Manitoba, *Department Chair and Associate Professor of Anesthesiology*
- Matthew Brenner, M.D. University of California, San Diego, *Chief of Pulmonary Diseases and Critical Care and Professor of Medicine (Pulmonary/Critical Care)*
- Wendy R. Brewster, M.D. University of California, Los Angeles, *Assistant Professor of Obstetrics and Gynecology (Oncology) and of Medicine (Epidemiology)*
- Donald J. Brown, P.D. University of Colorado, *Assistant Professor of Ophthalmology in Residence*
- Monte S. Buchsbaum, M.D. University of California, San Francisco, *Professor Emeritus of Psychiatry and Human Behavior*
- William E. Bunney, Jr., M.D. University of Pennsylvania, *Department Co-Chair of Psychiatry and Human Behavior, UCI Distinguished Professor of Psychiatry and Human Behavior and of Pharmacology, and Della Martin Chair in Psychiatry*
- Robert Burger, M.D. New York University, *Associate Professor of Clinical Obstetrics and Gynecology (Oncology)*
- Kerry P. Burnight, Ph.D. University of Southern California, *Assistant Clinical Professor of Family Medicine (Family Medicine and Geriatrics)*
- Michael J. Burns, M.D. University of California, Irvine, *Clinical Professor of Emergency Medicine and Medicine (General Internal)*
- John A. Butler, M.D. Loyola Stritch School of Medicine, *Department Vice-Chair of Surgery, Chief of Oncologic Surgery, and Associate Professor of Surgery*
- William J. L. Cable, M.D. Otago University (New Zealand), *Clinical Professor of Neurology*
- Michael D. Cahalan, Ph.D. University of Washington, *Department Chair and Professor of Physiology and Biophysics and Professor of Biological Sciences*
- Vincent J. Caiozzo, Ph.D. University of California, Irvine, *Professor of Orthopaedic Surgery and of Physiology and Biophysics in Residence*
- Stanley Calderwood, M.D. University of Toronto (Canada), *Associate Clinical Professor (Hematology/Oncology)*
- Justin D. Call, M.D. University of Utah College of Medicine, *Professor Emeritus of Psychiatry and Human Behavior*
- Anne L. Calof, Ph.D. University of California, San Francisco, *Professor of Anatomy and Neurobiology and of Developmental and Cell Biology*
- José A. Camacho, M.D. Universidad Central del Caribe (Puerto Rico), *Assistant Professor of Pediatrics (Human Genetics and Birth Defects)*
- Arezo Campbell, Ph.D. University of California, Irvine, *Assistant Adjunct Professor of Medicine (Community and Environmental)*
- Philip M. Carpenter, M.D. Southwestern Medical School, *Associate Professor of Clinical Pathology*
- Paolo Casali, M.D. University of Milan, *Director of the Center for Immunology and Donald Bren Professor of Molecular Biology and Biochemistry and of Medicine*
- Ronald Cellona, M.D. Cebu Institute of Medicine (Phillipines), *Assistant Clinical Professor of Anesthesiology*
- Thomas C. Cesario, M.D. University of Wisconsin Medical School, *Dean of the College of Health Sciences and the School of Medicine and Professor of Medicine (Infectious Disease)*
- Jianyuan Chai, Ph.D. City University of New York, *Assistant Adjunct Professor of Medicine (Gastroenterology)*
- Barry F. Chaitin, M.D. New York University, *Department Co-Chair and Clinical Professor of Psychiatry and Human Behavior*
- Jefferson Y. Chan, M.D., Ph.D. University of California, San Francisco, *Associate Professor of Pathology and Laboratory Medicine and of Biological Sciences*
- Maria Chandler, M.D. University of California, Irvine, *Associate Clinical Professor of Pediatrics and Management*
- Michelle Chandler, M.D. University of Southern California, *Chief of Pediatric Radiology and Assistant Clinical Professor of Radiological Sciences*
- P. Anthony Chandraratna, M.B.B.S. University of Ceylon, *Professor of Medicine (Cardiology) in Residence*
- K. George Chandy, Ph.D. University of Birmingham (England), M.B.B.S. Christian Medical College, University of Madras (India), *Professor of Physiology and Biophysics, Microbiology and Molecular Genetics, Medicine (General Internal), and Pathology and Laboratory Medicine*
- Jae Chang, M.D. Seoul National University, *Clinical Professor of Medicine (Hematology/Oncology)*
- Kenneth J. Chang, M.D. Brown University, *Professor of Clinical Medicine (Gastroenterology) and Radiological Sciences*
- Wayne Chang, M.D. University of California, Irvine, *Assistant Clinical Professor of Medicine (Environmental Medicine)*
- Lawrence Chao, M.D. University of Southern California, *Associate Clinical Professor of Ophthalmology*
- Phang-Lang Chen, Ph.D. University of California, San Diego, *Associate Professor of Biological Chemistry*
- Aleksandra Chicz-Demet, Ph.D. Illinois Institute of Technology, *Associate Adjunct Professor of Psychiatry*
- Robert R. Chilcote, M.D. University of Rochester, *Professor Emeritus of Pediatrics in Residence*
- Zang-Hee Cho, Ph.D. Uppsala University (Sweden), *Professor of Radiological Sciences, Psychiatry and Human Behavior, and Biomedical Engineering*
- Bernard Choi, Ph.D. University of Texas at Austin, *Assistant Professor of Surgery in Residence*
- Byung H. (Ben) Choi, M.D. Severance Union Medical College, Ph.D. Yonsei University (Korea), *Professor Emeritus of Pathology*
- Ho Joon Choi, M.D. Seoul National University (Korea), *Director of Obstetrical Anesthesiology Services and Clinical Professor of Anesthesiology and of Obstetrics and Gynecology*
- Yung-In Choi, M.D. Yonsei University (Korea), *Associate Clinical Professor of Medicine (Endocrinology)*
- Luis Chui, M.D. University of San Marcos (Peru), *Clinical Professor of Neurology*
- Marianne Cinat, M.D. University of Michigan Medical School, *Director of the UCI Burn Center and Acute and Resuscitative Care and Associate Professor of Clinical Surgery*
- Olivier Civelli, Ph.D. Swiss Institute of Technology, *Professor of Pharmacology and of Developmental and Cell Biology, and Eric L. and Lila D. Nelson Chair in Neuropharmacology*
- Ralph V. Clayman, M.D. University of California, San Diego, *Department Chair and Professor of Urology*
- Melitta Cobham-Browne, M.D. Panama University, *Associate Clinical Professor of Pediatrics (Primary Care)*
- Allen J. Cohen, M.D. University of Miami School of Medicine, Ph.D. Massachusetts Institute of Technology, *Chief of Diagnostic Imaging and Hospital Services and Clinical Professor of Radiological Sciences*
- Michael Cohen, Ph.D. Bowling Green State University, *Adjunct Professor of Psychiatry and Human Behavior and of Pharmacology*
- Felicia G. Cohn, Ph.D. University of Virginia, *Associate Adjunct Professor of Medicine (Medical Ethics)*
- Gary W. Cole, M.D. University of California, Los Angeles, *Adjunct Professor of Dermatology*
- Martin Colman, M.B., Ch.B., M.M.Ed. (Rad. T.), D.M.R.T. University of Witwatersrand (South Africa), *Professor Emeritus of Radiation Oncology*
- Henri G. Colt, M.D. University of Nice, School of Medicine, *Professor of Clinical Medicine (Critical Care)*
- John E. Connolly, M.D. Harvard Medical School, *Professor of Surgery (Vascular)*
- Daniel Cooper, M.D. University of California, San Francisco, *Program Director of the General Clinic Research Center, Chief of Pediatric Pulmonology, and Professor of Pediatrics, Neonatology, and Perinatal Medicine*

- Maria A. Corrada-Bravo, Ph.D. Johns Hopkins School of Medicine, *Assistant Adjunct Professor of Neurology*
- Carl W. Cotman, Ph.D. Indiana University, *Director of the Institute for Brain Aging and Dementia and Professor of Neurology, Neurobiology and Behavior, and Biomedical Engineering*
- Steven Cramer, M.D. University of Southern California, *Associate Professor of Neurology and of Anatomy and Neurobiology*
- David Cribbs, Ph.D. West Virginia University, *Associate Adjunct Professor of Neurology*
- Francis M. Crinella, Ph.D. Louisiana State University, *Clinical Professor of Pediatrics (Child Development) and of Physical Medicine and Rehabilitation*
- Roger L. Crumley, M.D. University of Iowa, *Department Chair and Professor of Otolaryngology (Head and Neck Surgery)*
- Floyd L. Culler, M.D. University of Tennessee, *Chief of Pediatric Endocrinology and Adjunct Professor of Pediatrics (Endocrinology)*
- Kirsten Culler, M.D. New York Medical College, *Assistant Clinical Professor of Pediatrics (Primary Care)*
- Catherine Cummins-Vigneron, M.D. University of Sydney School of Medicine, *Assistant Clinical Professor of Family Medicine*
- Dennis D. Cunningham, Ph.D. University of Chicago, *Senior Associate Dean for Academic Affairs, School of Medicine, and Professor of Microbiology and Molecular Genetics*
- Ralph W. Cygan, M.D. State University of New York Downstate Medical Center, *Clinical Professor of Medicine (General Internal Medicine and Primary Care)*
- Dvora Cyriak, M.D. Yale University, *Clinical Professor of Radiological Sciences*
- Xing Dai, Ph.D. University of Chicago, *Assistant Professor of Biological Chemistry and Biological Sciences*
- Amish Dangodara, M.D. University of Miami, *Associate Clinical Professor of Medicine (Hospitalist Program and Internal Medicine)*
- Earle A. Davis, Ph.D. University of Illinois, *Senior Lecturer with Security of Employment Emeritus, Anatomy and Neurobiology*
- Elysia P. Davis, Ph.D. University of Minnesota, *Assistant Professor of Psychiatry and Human Behavior in Residence*
- Israel De Alba, M.D., M.P.H. Universidad de Guadalajara (Mexico), *Assistant Professor of Medicine (Internal Medicine and Primary Care)*
- Lyle C. Dearden, Ph.D. University of Utah, *Professor Emeritus of Anatomy and Neurobiology*
- Luis M. de la Maza, M.D. Facultad de Medicina (Spain); Ph.D. University of Minnesota, *Director of Medical Microbiology and Professor of Pathology and Laboratory Medicine*
- Ralph Delfino, M.D. University of Chicago; Ph.D. McGill University (Canada), *Associate Professor of Medicine (Epidemiology), Pediatrics, and Social Ecology in Residence*
- Edward M. DeMet, Ph.D. Illinois Institute of Technology, *Adjunct Professor of Psychiatry and Human Behavior in Residence*
- Michael Demetriou, M.D., Ph.D. University of Toronto, *Assistant Professor of Neurology and of Microbiology and Molecular Genetics*
- Carolyn F. Dennehey, M.D. University of California, Irvine, *Associate Clinical Professor of Medicine (Rheumatology and Clinical Immunology)*
- Catherine Diamond, M.D. Albany Medical Center, *Assistant Professor of Clinical Medicine (Infectious Diseases)*
- Philip J. DiSaia, M.D. Tufts University School of Medicine, *Chief of Gynecologic Oncology, Professor of Obstetrics and Gynecology and of Radiation Oncology, and Dorothy J. Marsh Chair in Reproductive Biology*
- Matthew Dolich, M.D. State University of New York at Stony Brook, *Associate Clinical Professor of Surgery*
- Joseph H. Donnelly, M.D. Georgetown University, *Clinical Professor of Pediatrics (Neurology)*
- Peter J. Donovan, Ph.D. University College, London, *Professor of Developmental and Cell Biology and of Biological Chemistry*
- Emily Dow, M.D. University of Cincinnati, *Associate Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Timothy Downing, M.D. University of Nevada, *Associate Clinical Professor of Anesthesiology*
- Michael V. Drake, M.D. University of California, San Francisco, *Chancellor and Professor of Ophthalmology*
- Sue Piper Duckles, Ph.D. University of California, San Francisco, *Associate Dean for Faculty Development and Department Chair (Interim) and Professor of Pharmacology*
- Barry Duel, M.D. Harvard Medical School, *Associate Clinical Professor of Urology*
- Kenneth W. Dumars, M.D. University of Colorado, School of Medicine, *Professor Emeritus of Pediatrics*
- Derek Dunn-Rankin, Ph.D. University of California, Berkeley, *Professor of Mechanical and Aerospace Engineering and of Community and Environmental Medicine*
- Anthony Durkin, Ph.D. University of Texas, *Assistant Professor of Surgery in Residence*
- Senait Dyson, M.D. Morehouse School of Medicine, *Assistant Clinical Professor of Dermatology*
- Emily A. Ebert, M.D. University of Arizona, M.P.H. University of Texas, *Clinical Professor of Family Medicine*
- Robert Edwards, M.D., Ph.D. Baylor College of Medicine, *Assistant Professor of Pathology and Laboratory Medicine in Residence*
- Frederick J. Ehler, Ph.D. University of California, Irvine, *Professor of Pharmacology*
- Alan N. Elias, M.B., B.S. University of Calcutta (India), *Professor of Medicine (Endocrinology)*
- Jane Emerson, M.D. University of Virginia, Ph.D. Brown University, *Clinical Professor of Pathology and Laboratory Medicine, Pediatric Neurology, and Radiological Sciences*
- Sherif Galal Emil, M.D. McGill University (Canada), *Assistant Clinical Professor of Surgery*
- Vickie Ennis, Ph.D. University of California, San Diego, *Associate Adjunct Professor of Surgery*
- Jonathon E. Ericson, Ph.D. University of California, Los Angeles, *Professor of Social Ecology and of Community and Environmental Medicine*
- Gregory Evans, M.D. University of Southern California, *Chief of Plastic Surgery and Professor of Surgery (Plastic) and Biomedical Engineering*
- James T. Evans, M.D. University of California, San Diego, *Associate Clinical Professor of Family Medicine*
- Marc-Eivind Evensen, M.D. University of California, Irvine, *Assistant Clinical Professor of Physical Medicine and Rehabilitation*
- Ana Faitlowicz, M.D. Sao Paulo Medical School, *Assistant Clinical Professor of Medicine (Hematology/Oncology)*
- James H. Fallon, Ph.D. University of Illinois, *Professor of Anatomy and Neurobiology and of Biological Sciences*
- M. Joseph Fedoruk, M.D. University of Alberta (Canada), *Clinical Professor of Medicine (Occupational and Environmental)*
- Stephen Feig, M.D. New York University School of Medicine, *Chief of Mammography and Professor of Clinical Radiological Sciences*
- Elsa Fernandez, M.D. University of Buenos Aires, *Clinical Professor of Pediatrics (Primary Care)*
- Gail Fernandez, M.D. Creighton University, *Director of Child Psychiatry Fellowship and Associate Clinical Professor of Psychiatry and Human Behavior*
- Pauline Filipek, M.D. Georgetown University, *Associate Professor of Pediatrics and Neurology in Residence*
- Mark Fisher, M.D. University of Cincinnati, *Department Chair and Professor of Neurology and Professor of Anatomy and Neurobiology and of Political Science*
- Sheila T. Fitzgibbons, M.P.A. California State University, Long Beach, *Associate Clinical Professor of Medicine (Infectious Disease)*
- Camille Fitzpatrick, M.S.N. California State University, Long Beach, *Associate Clinical Professor of Family Medicine (Family Medicine, Primary Care, and Geriatrics)*
- Michael Fitzpatrick, M.D. Jefferson Medical College, *Associate Clinical Professor of Orthopaedic Surgery*
- Pamela Flodman, M.S. University of California, Irvine, *Assistant Clinical Professor of Pediatrics (Human Genetics and Birth Defects)*
- Cecilia A. Florio, M.D., M.P.H. University of California, San Francisco, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Eldon L. Foltz, M.D. University of Michigan, Medical School, *Professor Emeritus of Neurological Surgery*
- Donald N. Forthal, M.D. University of California, Irvine, *Division Chief of Infectious Disease and Associate Professor of Medicine (Infectious Disease)*
- Clarence Foster III, M.D. The Johns Hopkins University, *Associate Clinical Professor of Surgery*
- John C. Fox, M.D. Tufts University School of Medicine, *Assistant Clinical Professor of Emergency Medicine*
- John A. Freeman, M.D. Stanford University, *Clinical Professor of Obstetrics and Gynecology*

- Kathryn Steinhaus French, M.S. University of Colorado, *Clinical Professor of Pediatrics (Human Genetics and Birth Defects) and of Obstetrics and Gynecology*
- Richard M. Friedenberg, M.D. State University of New York, *Professor Emeritus of Radiological Sciences*
- John Fruehauf, M.D. Rush University, *Associate Professor of Clinical Medicine (Hematology/Oncology)*
- Roy M. Fujitani, M.D. University of Hawaii, *Chief of Vascular Surgery and Associate Professor of Surgery (Vascular)*
- David W. Furnas, M.D. University of California, San Francisco, *Professor Emeritus of Surgery (Plastic)*
- Pietro R. Galassetti, M.D. University of Rome, Ph.D. Vanderbilt University, *Assistant Professor of Pediatrics in Residence*
- Christine M. Gall, Ph.D. University of California, Irvine, *Professor of Anatomy and Neurobiology and of Neurobiology and Behavior*
- Kathleen Gallagher, M.D. University of California, Irvine, *Associate Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Rosa Galvez, M.D. University of Illinois, *Associate Clinical Professor of Medicine (Internal Medicine and Primary Care)*
- J. Jay Gargus, M.D., Ph.D. Yale University, *Professor of Physiology and Biophysics and of Pediatrics*
- Thomas J. Garite, M.D. University of California, Irvine, *Professor Emeritus of Obstetrics and Gynecology*
- Chad P. Garner, Ph.D. Oxford University, *Assistant Professor of Medicine (Epidemiology) and Social Ecology in Residence*
- Ronald N. Gaster, M.D. University of California, Los Angeles, *Adjunct Professor of Ophthalmology*
- Alan B. Gazzaniga, M.D. Harvard Medical School, *Professor Emeritus of Surgery (Thoracic)*
- Kelvin W. Gee, Ph.D. University of California, Davis, *Professor of Pharmacology*
- Lisa M. Gibbs, M.D. Stanford University, *Assistant Clinical Professor of Family Medicine (Family Medicine, Primary Care, and Geriatrics)*
- Kimberly Marie Gimenez, M.D. University of California, Irvine, *Associate Clinical Professor of Anesthesiology*
- Roland A. Giolli, Ph.D. University of California, Berkeley, *Department Vice Chair and Professor of Anatomy and Neurobiology*
- Gordon G. Globus, M.D. Tufts University School of Medicine, *Professor Emeritus of Psychiatry and Human Behavior*
- Laura M. Glynn, Ph.D. University of California, San Diego, *Assistant Professor of Psychiatry in Residence*
- Alan L. Goldin, M.D., Ph.D. University of Michigan, *Professor of Microbiology and Molecular Genetics, Physiology and Biophysics, Biological Sciences, and Anatomy and Neurobiology*
- Sastry Gollapudi, Ph.D. Dalhousie University (Nova Scotia, Canada), *Associate Adjunct Professor of Medicine (Basic and Clinical Immunology)*
- Sidney H. Golub, Ph.D. Temple University, *Professor Emeritus of Microbiology and Molecular Genetics*
- Peixian Gong, M.D. China Medical University, *Associate Director of Neuroanesthesia Services, Coordinator of Bariatric Anesthesia, and Assistant Clinical Professor of Anesthesiology*
- Julie A. Gorchynski, M.D. Loma Linda Medical School, *Associate Clinical Professor of Emergency Medicine*
- Ian L. Gordon, M.D., Ph.D. University of Southern California, *Associate Clinical Professor of Surgery*
- Louis A. Gottschalk, M.D. Washington University School of Medicine, *Professor Emeritus of Psychiatry and Human Behavior*
- Thomas Grayden, M.D. University of Minnesota, *Director of Outpatient Services and Clinical Professor of Psychiatry and Human Behavior*
- Stuart Green, M.D. New York Medical College, *Clinical Professor of Orthopaedic Surgery*
- Sheldon Greenfield, M.D. University of Cincinnati, *Executive Director of the Irvine Research Unit in Health Policy and Research, Department Chair of Community and Environmental Medicine, and Donald Bren Professor of Medicine (General Internal Medicine and Primary Care)*
- Fred S. Greensite, M.D. University of California, San Diego, *Chief of MRI/Neuroradiology and Professor of Radiological Sciences*
- Mai Gu, M.D. Beijing University (China); Ph.D. University of Manitoba (Canada), *Associate Professor of Clinical Pathology*
- Gultekin Gulsen, Ph.D. Bogazici University (Turkey), *Assistant Professor of Radiological Sciences in Residence*
- Geeta K. Gupta, M.D. Harvard University, *Associate Clinical Professor of Medicine (Infectious Diseases)*
- Ranjan Gupta, M.D. Albany Medical College, *Associate Professor of Orthopaedic Surgery*
- Sudhir Gupta, M.B., B.S., Ph.D. King George's Medical College, Lucknow University (India), *Chief of Basic and Clinical Immunology and Professor of Medicine (Basic and Clinical Immunology), and of Microbiology and Molecular Genetics*
- William Gustin, M.D. University of California, Irvine, *Assistant Clinical Professor of Medicine (General Internal Medicine and Hospitalist Program)*
- George A. Gutman, Ph.D. Stanford University, *Professor of Microbiology and Molecular Genetics, Physiology and Biophysics, and Biological Sciences*
- Grant Gwinup, M.D. University of Colorado, School of Medicine, *Professor Emeritus of Medicine (Endocrinology)*
- Marjan Haghi, M.D. Chicago Medical School, *Assistant Clinical Professor of Pediatrics (Endocrinology)*
- Richard J. Haier, Ph.D. The Johns Hopkins University, *Professor of Pediatrics and Social Ecology in Residence*
- Harry T. Haigler, Ph.D. Vanderbilt University, *Professor of Physiology and Biophysics and of Biological Sciences*
- James E. Hall, Ph.D. University of California, Riverside, *Professor of Physiology and Biophysics and of Biological Sciences*
- Allen Hanft, M.D. McGill University, *Associate Clinical Professor of Psychiatry and Human Behavior*
- Anna Harris, M.D. Loma Linda University, *Associate Clinical Professor of Anesthesiology and Co-Director of Department Performance Improvement/Quality Assurance*
- Anton N. Hasso, M.D. Loma Linda University, *Chief of Neuroradiology and Professor of Radiological Sciences*
- Morris Hasson, M.D. University of Illinois, *Associate Clinical Professor of Medicine (General Internal Medicine and Primary Care)*
- G. Wesley Hatfield, Ph.D. Purdue University, *Professor of Microbiology and Molecular Genetics, Biological Sciences, and Biochemical Engineering*
- Elizabeth Head, Ph.D. University of Toronto, *Assistant Professor of Neurology in Residence*
- Daiga Helmeiste, Ph.D. University of Toronto, *Associate Adjunct Professor of Psychiatry and Human Behavior*
- Walter L. Henry, M.D. Stanford University School of Medicine, *Professor Emeritus of Medicine (Cardiology)*
- Agnes Henschen-Edman, M.D., Ph.D. Karolinska Institute (Stockholm), *Professor of Molecular Biology and Biochemistry and of Pathology and Laboratory Medicine*
- June M. Herman, M.D. University of North Dakota, *Assistant Clinical Professor of Radiological Sciences*
- Neal Hermanowicz, M.D. Temple University, *Clinical Professor of Neurology*
- Klemens J. Hertel, Ph.D. University of Colorado, *Assistant Professor of Microbiology and Molecular Genetics*
- Elsie Hidalgo, M.D. University of California, Los Angeles, *Associate Clinical Professor of Pediatrics (Primary Care)*
- Diane M. Highum, M.D. Harvard Medical School, *Assistant Clinical Professor of Psychiatry and Human Behavior*
- Maryann Hill, Ph.D. University of California, Los Angeles, *Associate Adjunct Professor of Neurology*
- Richard A. Hill, M.D. Northwestern University, *Associate Professor of Ophthalmology*
- Esther Ho, M.D. University of California, Los Angeles, *Assistant Clinical Professor of Family Medicine (Hospitalist Program and Family Medicine)*
- Bang Hoang, M.D. University of California, Los Angeles, *Assistant Professor of Orthopaedic Surgery*
- John C. Hoefs, M.D. George Washington University, *Associate Professor of Medicine (Gastroenterology)*
- M. Mark Hoffer, M.D. University of Chicago School of Medicine, *Professor Emeritus of Orthopedic Surgery*
- Randall Holcombe, M.D. University of Medicine and Dentistry, New Jersey, *Chief of Hematology/Oncology and Associate Professor of Medicine (Hematology/Oncology)*
- Christine Hollister, M.D. Dartmouth College, *Associate Clinical Professor of Anesthesiology and Co-Director of Department Performance Improvement/Quality Assurance*
- Chang-Zern (John) Hong, M.D. National Taiwan University, *Clinical Professor of Physical Medicine and Rehabilitation*
- Regina Hovey, M.D. University of California, San Francisco, *Associate Clinical Professor of Urology*
- David Hsiang, M.D. Jefferson Medical College, *Assistant Clinical Professor of Surgery (Oncology)*
- Ke-Qin Hu, M.D. Tongji Medical University (China), *Associate Professor of Clinical Medicine (Gastroenterology)*

- Lan Huang, Ph.D. University of Florida, *Assistant Professor of Physiology and Biophysics, Developmental and Cell Biology, and Biological Chemistry*
- Taosheng Huang, M.D. Fujian Medical College (China), Ph.D. Mt. Sinai Medical School, *Assistant Professor of Pediatrics (Human Genetics and Birth Defects) and of Developmental and Cell Biology*
- F. Allan Hubbell, M.D., M.S.P.H. Baylor University College of Medicine, *Department Chair of Medicine and Professor of Medicine (General Internal Medicine and Primary Care) and Social Ecology*
- Marcel Hungs, M.D. University of Aachen Medical School, *Assistant Professor of Clinical Neurology*
- Lynn E. Hunt, M.D. University of California, Los Angeles, *Chief of Pediatric Primary Care and Clinical Professor of Pediatrics (Primary Care)*
- Kenneth H. Ibsen, Ph.D. University of California, Los Angeles, *Professor Emeritus of Biological Chemistry*
- David Imagawa, M.D., Ph.D. The Johns Hopkins University, *Professor of Clinical Surgery*
- Leslie Israel, D.O. University of Health Sciences, Missouri, *Associate Clinical Professor of Medicine (Occupational and Environmental Medicine)*
- Kevin Ivey, M.B.B.S. University of Queensland (Australia), *Professor of Medicine in Residence (Gastroenterology)*
- Mahtab Jafari, Pharm.D. University of California, San Francisco, *Assistant Professor of Pharmaceutical Sciences*
- Mehrdad Jalili, M.D. University of Isfahan (Iran), *Chief of Pediatric Critical Care and Clinical Professor of Pediatrics*
- M. Mazen Jamal, M.D. Damascus University, M.P.H. University of New Mexico, *Associate Clinical Professor of Medicine (Gastroenterology)*
- Anthony A. James, Ph.D., University of California, Irvine, *Department Vice Chair and Professor of Molecular Biology and Biochemistry and Professor of Microbiology and Molecular Genetics*
- Larry Jamner, Ph.D. State University of New York at Stony Brook, *Professor of Social Ecology and Pharmacology*
- Jeff Janes, M.D. University of Texas, *Associate Clinical Professor of Radiological Sciences*
- Edward W. Jeffes, III, M.D. University of California, Los Angeles, Ph.D. University of California, Irvine, *Clinical Professor of Dermatology*
- Dennis C. Jerome, M.D. Wayne State University, *Clinical Professor of Medicine (Basic/Clinical Immunology)*
- James V. Jester, Ph.D. University of Southern California, *Professor of Ophthalmology and Biomedical Engineering in Residence*
- Jianfu Jiang, M.D. Shanghai Medical University, *Associate Clinical Professor of Medicine (Cardiology)*
- Yi Jin, M.D. Shanghai University (China), *Associate Adjunct Professor of Psychiatry and Human Behavior*
- Jennifer Johnson, M.D. University of Muenster (Germany), *Professor Emeritus of Pediatrics in Residence*
- Joie P. Jones, Ph.D. Brown University, *Professor of Radiological Sciences*
- Michael K. Jones, Ph.D. University of California, Santa Barbara, *Assistant Professor of Medicine (Gastroenterology) in Residence*
- James Joyner, M.D. University of Colorado, *Assistant Clinical Professor of Medicine (Hospitalist Program and Infectious Disease)*
- Lisa M. Judge, M.D. University of Michigan Medical School, *Director of Outpatient Surgical Services (UCI Medical Center) and Assistant Clinical Professor of Anesthesiology*
- Tibor Juhasz, Ph.D. JATE University of Szeged (Hungary), *Professor of Ophthalmology, Biomedical Engineering, and Surgery*
- Frances Jurnak, Ph.D. University of California, Berkeley, *Professor of Physiology and Biophysics and of Biological Sciences*
- Peter Kaiser, Ph.D. University of Innsbruck (Austria), *Assistant Professor of Biological Chemistry*
- Grace Kao, M.D. Taiwan University, *Associate Clinical Professor of Neurology*
- Robert Kaplan, M.D. Harvard University, *Associate Clinical Professor of Medicine (Infectious Diseases)*
- Sherrie Kaplan, Ph.D. University of California, Los Angeles, *Associate Dean, School of Medicine, Executive Co-Director of the Irvine Research Unit in Health Policy and Research, and Associate Professor of Medicine*
- Moti L. Kashyap, M.B., B.S. King Edward VII College (Singapore), *Professor of Medicine and Geriatrics in Residence (Internal Medicine)*
- Norma Kassarijan, M.D. Northwestern University, *Assistant Clinical Professor of Dermatology*
- David Katz, M.D. Western Reserve University, *Professor Emeritus of Radiological Sciences*
- Claudia Kawas, M.D. University of Louisville, *Professor of Neurology and of Neurobiology and Behavior, and Nichols Clinical Neuroscience Chair*
- Amin Kazzi, M.D. University of California, Los Angeles, *Associate Professor of Clinical Emergency Medicine*
- Richard H. Keates, M.D. Jefferson Medical Center, *Professor Emeritus of Ophthalmology*
- Kirk A. Keegan, Jr., M.D. University of Maryland, *Director of Medical Education, Associate Dean of Graduate Medical Education, and Clinical Professor of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Hans S. Keirstead, Ph.D. University of British Columbia (Canada), *Associate Professor of Anatomy and Neurobiology*
- Kristen Kelly, M.D. University of California, Los Angeles, *Associate Clinical Professor of Dermatology*
- Bryan Kemp, Ph.D. University of Southern California, *Clinical Professor of Medicine (Internal Medicine and Geriatrics) and Social Ecology*
- M. Cristina Kenney, M.D., Ph.D. University of California, Los Angeles, *Professor of Ophthalmology*
- Joyce H. Keyak, Ph.D. University of California, San Francisco, *Associate Professor of Orthopaedic Surgery, Mechanical and Aerospace Engineering, and Biomedical Engineering in Residence*
- Amir Khorashadi, M.D. University of Chicago, *Assistant Clinical Professor of Radiological Sciences*
- Nafiz Kiciman, M.D. Hacettepe University (Turkey), *Associate Clinical Professor of Pediatrics (Cardiology and Neonatology)*
- P. Douglas Kiester, M.D. Indiana University, Ph.D. University of Utah, *Clinical Professor of Orthopaedic Surgery*
- Yutaka Kikkawa, M.D. University of Tokyo (Japan), *Professor Emeritus of Pathology*
- Herbert P. Killackey, Ph.D. Duke University, *Vice Provost for Academic Personnel and Professor of Neurobiology and Behavior and of Anatomy and Neurobiology*
- Chong-Sang Kim, M.D. University of Utah, *Clinical Professor of Neurology*
- Howard Kim, M.D. Northwestern University, *Assistant Clinical Professor of Neurology*
- Jonathan Kim, M.D. University of Iowa, *Assistant Professor of Clinical Ophthalmology*
- Moon Kim, M.D. Yonsei University (Seoul, Korea), *Director of Reproductive Endocrinology and Infertility and Clinical Professor Emeritus of Obstetrics and Gynecology (Reproductive Endocrinology and Infertility)*
- Ronald C. Kim, M.D. Jefferson Medical College, *Clinical Professor of Pathology and Neurology*
- Leonard M. Kitzes, Ph.D. University of California, Irvine, *Interim Department Chair and Professor of Anatomy and Neurobiology and Professor of Otolaryngology*
- Michael T. Kleinman, Ph.D. New York University, *Adjunct Professor of Community and Environmental Medicine and of Social Ecology*
- Mary Knudtson, D.N.Sc. University of Tennessee at Memphis, *Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Mark Kobayashi, M.D. Tulane University, *Associate Clinical Professor of Plastic Surgery*
- Kristi L. Koenig, M.D. Mount Sinai School of Medicine, *Professor of Clinical Emergency Medicine*
- Elliott Kornhauser, M.D. University of Toronto, *Assistant Clinical Professor of Medicine (Occupational and Environmental)*
- Varoujan Kostanian, M.D. Yerevan State Medical Institute (Armenia), Ph.D. Burdenko Neurosurgical Institute (Russia), *Chief of Neurointerventional Radiology and Associate Clinical Professor of Radiological Sciences*
- Ronald Kotkin, Ph.D. University of Southern California, *Clinical Professor of Pediatrics (Child Development)*
- Diana N. Krause, Ph.D. University of California, Los Angeles, *Adjunct Professor of Pharmacology*
- John Krolewski, M.D., Ph.D. New York University, *Associate Professor of Pathology and Laboratory Medicine*
- Stephen M. Kubaska, M.D. George Washington University, *Assistant Clinical Professor of Surgery (Vascular)*
- Julie Kuniyoshi, M.D. University of Hawaii, *Associate Clinical Professor of Medicine (Internal Medicine and Primary Care)*
- Jeffrey V. Kuo, M.D. Jefferson Medical College, *Associate Clinical Professor of Radiation Oncology*
- Baruch D. Kuppermann, M.D. University of Miami, Ph.D. California Institute of Technology, *Associate Professor of Ophthalmology and Biomedical Engineering*
- Ronald M. Kurtz, M.D. University of California, San Diego, *Associate Clinical Professor of Ophthalmology*

- John A. Kusske, M.D. University of California, San Francisco, *Vice Chair and Professor Emeritus of Neurological Surgery*
- Kenneth T. Kwon, M.D. Columbia University, *Associate Clinical Professor of Emergency Medicine*
- Arthur D. Lander, M.D., Ph.D. University of California, San Francisco, *Department Chair and Professor of Developmental and Cell Biology and Professor of Pharmacology*
- Felicia Lane, M.D. Georgetown University, *Assistant Clinical Professor of Obstetrics and Gynecology (Urogynecology)*
- John S. Lane III, M.D. University of California, Los Angeles, *Associate Clinical Professor of Surgery*
- Mark I. Langdorf, M.D. University of California, San Diego, *Department Chair of Emergency Medicine and Professor of Clinical Emergency Medicine*
- Janos K. Lanyi, Ph.D. Harvard University, *Professor of Physiology and Biophysics and of Biological Sciences*
- Kathryn M. Larsen, M.D. University of Washington, *Department Chair and Clinical Professor of Family Medicine (Family Medicine and Primary Care), and Gerald B. Sinykin, M.D. Chair in Family Medicine*
- Chinh D. Le, M.D. University of Medicine and Pharmacy of Hochiminh City, *Assistant Clinical Professor of Medicine (Internal Medicine, Primary Care, and Geriatrics)*
- Huan D. Le, M.D. University of California, Los Angeles, *Clinical Professor of Medicine (General Internal Medicine and Primary Care)*
- Khanh-Van Le-Bucklin, M.D. University of California, San Francisco, *Pediatric Residency Director and Assistant Clinical Professor of Pediatrics (Hospitalist Program)*
- Eva Y.-H. P. Lee, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor of Developmental and Cell Biology and of Biological Chemistry*
- John G. Lee, M.D. University of Miami, *Associate Professor of Clinical Medicine (Gastroenterology)*
- Thay Q. Lee, Ph.D. Gothenburg University (Sweden), *Professor of Orthopaedic Surgery and Biomedical Engineering in Residence*
- Wen-Hwa Lee, Ph.D. University of California, Berkeley, *Department Chair of Biological Chemistry and Donald Bren Professor of Biomedicine and Biological Chemistry*
- Yee-Lean Lee, Ph.D. University of California, Irvine, M.P.H. Yale University, *Associate Clinical Professor of Medicine (Infectious Diseases)*
- Michael Lekawa, M.D. Jefferson Medical College, *Chief of Trauma and Critical Care and Associate Clinical Professor of Surgery*
- Patricia Lenahan, M.S.W., L.C.S.W. University of Chicago, *Associate Clinical Professor of Family Medicine*
- Marc A. Lerner, M.D. Mount Sinai School of Medicine, *Clinical Professor of Pediatrics (Behavioral Pediatrics, Neonatology, General Pediatrics, and Primary Care)*
- Frances M. Leslie, Ph.D. Aberdeen University (Scotland), *Professor of Pharmacology and of Anatomy and Neurobiology*
- Ellis Levin, M.D. Jefferson Medical College, *Vice Chair for Academic Affairs, Department of Medicine, Chief of Endocrinology, and Professor of Medicine (Endocrinology), Pharmacology, and Biological Chemistry in Residence*
- Clarke R. Lew, M.D. University of California, Irvine, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Shu-Yuan Liao, M.D. Taiwan University, *Clinical Professor of Medicine (Epidemiology) and Pathology*
- Solomon Liao, M.D. University of California, Irvine, *Associate Clinical Professor of Medicine (Hospitalist Program, Internal Medicine, Primary Care, Palliative Care, and Geriatrics)*
- Desiree A. Lie, M.D. Oxford University, *Clinical Professor of Family Medicine*
- Jay M. Lieberman, M.D. New York University, *Chief of Infectious Disease and Professor of Clinical Pediatrics*
- Richard Light, M.D. Johns Hopkins University, *Professor Emeritus of Medicine (Pulmonary) in Residence*
- Henry C. Lim, Ph.D. Northwestern University, *Professor of Chemical Engineering and Materials Science and of Microbiology and Molecular Genetics*
- Fritz Lin, M.D. Medical College of Virginia, *Professor of Clinical Pathology*
- Jack Lin, M.D. Rush Medical College, *Assistant Clinical Professor of Neurology*
- Shin Lin, Ph.D. University of California, Los Angeles, *Professor of Developmental and Cell Biology, Physiology and Biophysics, and Biomedical Engineering*
- Vernon W. Lin, M.D., Ph.D. University of California, Davis, *Associate Professor of Physical Medicine and Rehabilitation in Residence*
- Kenneth Linden, M.D. University of California, Irvine, Ph.D. University of California, Davis, *Associate Clinical Professor of Dermatology*
- Mark E. Linskey, M.D. Columbia University College of Physicians and Surgeons, *Chair and Associate Professor of Neurological Surgery*
- Steven Lipkin, M.D., Ph.D. University of California, San Diego, *Assistant Professor of Medicine (Hematology/Oncology) and Biological Chemistry*
- Linda Lippa, M.D. Columbia University, *Clinical Professor of Ophthalmology*
- Haoping Liu, Ph.D. Cornell University, *Associate Professor of Biological Chemistry*
- Paul Lizotte, D.O. Kirksville College of Osteopathic Medicine, *Associate Clinical Professor of Radiological Sciences*
- Hector Llenderozos, M.D., M.P.H. University of Illinois at Chicago, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- John Longhurst, M.D., Ph.D. University of California, Davis, *Director of the Susan Samueli Center for Integrative Medicine; Professor of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering; Lawrence K. Dodge Endowed Chair in Integrative Biology; and Susan Samueli Chair in Integrative Medicine*
- Kenneth J. Longmuir, Ph.D. University of Oregon, *Associate Professor of Physiology and Biophysics and of Biological Sciences*
- Shahram Lotfipour, M.D. University of Iowa, *Assistant Clinical Professor of Emergency Medicine*
- Ira T. Lott, M.D. The Ohio State University, *Associate Dean of Clinical Neurosciences, School of Medicine, Chief of Child Neurology, and Professor of Pediatrics and Neurology*
- Ulricke Luderer, M.D., Ph.D. Northwestern University; M.P.H. University of Washington, *Assistant Professor of Medicine (Occupational and Environmental), Developmental and Cell Biology, and Community and Environmental Medicine*
- Hartmut Luecke, Ph.D. Rice University, *Professor of Molecular Biology and Biochemistry and of Physiology and Biophysics*
- Z. David Luo, M.D. Guangzhou Medical College (China), Ph.D. University of New York, *Assistant Professor of Anesthesiology and Pharmacology*
- Gary S. Lynch, Ph.D. Princeton University, *Professor of Psychiatry and Human Behavior and of Cognitive Sciences*
- Lawrence Machtinger, M.D. State University of New York, *Assistant Clinical Professor of Dermatology*
- Gerald Maguire, M.D. St. Louis University, *Director of Residency Training and Associate Professor of Clinical Psychiatry and Human Behavior*
- C. Kees Mahutte, M.D. McMaster University (Canada), Ph.D. University of Waterloo (Canada), *Professor of Medicine (Pulmonary) in Residence*
- Fred M. Malkin, M.D. University of Miami, *Assistant Clinical Professor of Pediatrics (Primary Care)*
- Alberto Manetta, M.D. University of Buenos Aires, *Senior Associate Dean, School of Medicine, and Professor of Obstetrics and Gynecology (Oncology)*
- Joan Marshall, M.D. University of California, San Diego, *Director of Women's Imaging and Associate Clinical Professor of Radiological Sciences*
- Donald C. Martin, M.D. University of British Columbia (Canada), *Professor Emeritus of Surgery (Urology)*
- G. Robert Mason, M.D. University of Chicago, Ph.D. Stanford University, *Professor Emeritus of Surgery*
- Jerry L. McCullough, Ph.D. Yale University, *Professor of Dermatology*
- Elsbeth M. McDougall, M.D. University of Calgary, *Professor of Clinical Urology*
- Archana McEligot, Ph.D. University of San Diego, *Assistant Adjunct Professor of Medicine (Epidemiology)*
- Frederick L. McGuire, Ph.D. New York University, *Professor Emeritus of Psychiatry and Human Behavior*
- Christine McLaren, Ph.D. Case Western Reserve, *Professor of Medicine (Epidemiology)*
- Gordon McLaren, M.D. Stanford University, *Associate Adjunct Professor of Medicine (Hematology/Oncology)*
- Calvin S. McLaughlin, Ph.D. Massachusetts Institute of Technology, *Professor of Biological Chemistry and of Community and Environmental Medicine*
- Alexander McPherson, Ph.D. Purdue University, *Professor of Molecular Biology and Biochemistry and of Physiology and Biophysics*
- Rita Mehta, M.D., M.G.M. Medical College (India), *Assistant Clinical Professor of Medicine (Hematology/Oncology)*
- Daniel B. Menzel, Ph.D. University of California, Berkeley, *Professor Emeritus of Community and Environmental Medicine*

- Dan Mercola, M.D. Southampton University (England); Ph.D. University of California, Los Angeles, *Professor of Pathology and Laboratory Medicine*
- Hooshang Meshkinpour, M.D. Tehran University, School of Medicine (Iran), *Professor Emeritus of Medicine (Gastroenterology)*
- Quyen-Ngo Metzger, M.D. University of Chicago, *Assistant Professor of Medicine in Residence (Internal Medicine and Primary Care)*
- Frank L. Meyskens, Jr., M.D. University of California, San Francisco, *Senior Associate Dean for Health Sciences, Director of the Chao Family Clinical Cancer Research Center, Professor of Medicine (Hematology/Oncology) and Biological Chemistry, and Daniel G. Aldrich, Jr. Endowed Chair*
- Don R. Miller, M.D. University of Kansas Medical School, *Professor Emeritus of Surgery (Thoracic)*
- Jeremiah Miller, M.D. Loyola School of Medicine (Stritch), *Clinical Professor of Urology*
- Jeffrey Milliken, M.D. University of Michigan, *Chief of Thoracic Surgery and Clinical Professor of Cardiothoracic Surgery*
- Steven D. Mills, M.D. New York Medical College, *Assistant Clinical Professor of Surgery*
- Eric N. C. Milne, M.B., Ch.B., F.R.C.R. University of Edinburgh (Scotland), *Professor Emeritus of Radiological Sciences*
- Norah Milne, M.B., Ch.B. University of Edinburgh (Scotland), *Clinical Professor of Radiological Sciences (Nuclear Medicine)*
- Houchang D. Modanlou, M.D. University of Rome (Italy), *Chief of Neonatology and Adjunct Professor of Pediatrics (Neonatology)*
- Harvey Mohrenweiser, Ph.D. University of Michigan, *Adjunct Professor of Medicine (Epidemiology)*
- Sabee Molloy, Ph.D. University of Wisconsin, *Professor of Radiological Sciences, Electrical Engineering and Computer Science, and Biomedical Engineering*
- Bradley Monk, M.D. University of Arizona, *Associate Professor of Obstetrics and Gynecology (Oncology)*
- Emmett Montis, D.O. Western University of Health Sciences, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Edwin S. Monuki, M.D., Ph.D. University of California, San Diego, *Assistant Professor of Pathology and Laboratory Medicine and of Developmental and Cell Biology*
- Michael Moore, M.D. University of California, Irvine, *Assistant Clinical Professor of Anesthesiology*
- Edgar M. Moran, M.D. University of Bucharest (Romania), *Professor Emeritus of Medicine (Hematology) in Residence*
- Beverly C. Morgan, M.D. Duke University, *Chief of Pediatric Cardiology and Professor of Pediatrics (Cardiology)*
- Timothy R. Morgan, M.D. Emory University, *Associate Professor of Medicine (Gastroenterology) in Residence*
- David K. Morohashi, M.D. University of Washington, *Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Jeffrey W. Morris, M.D. University of California, Irvine, Ph.D. University of California, Los Angeles, *Clinical Professor of Pathology*
- Debra Morrison, M.D. Northwestern University, *Interim Director of Pediatric Anesthesia Services, Director of Preoperative Clinic, and Associate Clinical Professor of Anesthesiology*
- Elizabeth Morrison, M.D. Brown University, *Associate Professor of Clinical Family Medicine and Social Ecology*
- Sameh Mosaed, M.D. New York Medical College, *Assistant Clinical Professor of Ophthalmology*
- H. David Mosier, M.D. The Johns Hopkins University School of Medicine, *Professor Emeritus of Pediatrics (Endocrinology)*
- Laura Mosqueda, M.D. University of Southern California, *Director of the Program in Geriatrics, Professor of Clinical Family Medicine (Family Medicine, Primary Care, and Geriatrics), and Ronald W. Reagan Endowed Chair in Geriatrics*
- Mohammed Movahed, M.D. Hannover Medical School (Germany), *Assistant Clinical Professor of Medicine (Cardiology)*
- Robert K. Moyzis, Ph.D. The Johns Hopkins University, *Professor of Biological Chemistry and Pediatrics*
- Tahseen Mozaffar, M.B.B.S. Aga Kahn University (Pakistan), *Assistant Professor of Clinical Neurology*
- Lufti T. Muftuler, Ph.D. Middle East Technical University (Turkey), *Assistant Professor of Radiological Sciences in Residence*
- Dana Mukamel, Ph.D. University of Rochester, *Professor of Medicine*
- Jogeshwar Mukherjee, Ph.D. Jodhpur University (India), *Associate Professor of Psychiatry in Residence*
- J. Dennis Mull, M.D. Medical College of Virginia, *Professor Emeritus of Family Medicine*
- Maury Mulligan, M.D. Mt. Sinai University, New York, *Professor Emeritus of Medicine (Infectious Disease) in Residence*
- Ruth Mulnard, DNSc. University of California, San Diego, *Associate Clinical Professor of Neurology*
- Penny Murata, M.D. Medical College of Pennsylvania, *Associate Clinical Professor of Pediatrics (Primary Care)*
- Yuji Murata, M.D. Osaka University (Japan), *Professor Emeritus of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Cynthia T. Murphy, M.D. University of South Dakota, *Associate Clinical Professor of Physical Medicine and Rehabilitation*
- Bavani Nadeswaran, M.D. University of West Indies, *Associate Clinical Professor of Internal Medicine (General Internal Medicine and Primary Care)*
- Houshmand Naim, M.D. Mount Sinai School of Medicine, *Assistant Clinical Professor of Surgery*
- Wadie I. Najm, M.D. Brussels University, *Clinical Professor of Family Medicine (Family Medicine, Geriatrics, and Primary Care)*
- Orhan Nalciglu, Ph.D. University of Oregon, *Professor of Radiological Sciences, Electrical Engineering and Computer Science, and Physics*
- Dwight M. Nance, Ph.D. Oklahoma State University, *Adjunct Professor of Physical Medicine and Rehabilitation*
- Jagat Narula, M.D. University of Rajasthan (India), Ph.D. All India Institute of Medical Sciences (India), *Associate Dean, School of Medicine, Chief of Cardiology, and Professor of Medicine (Cardiology)*
- Navneet Narula, M.D. Lady Harding Medical School (India), *Associate Clinical Professor of Pathology*
- Edward Nelson, M.D. Oregon Health Sciences University, *Assistant Professor of Medicine (Hematology/Oncology) and of Molecular Biology and Biochemistry*
- J. Stuart Nelson, M.D. University of Southern California, Ph.D. University of California, Irvine, *Professor of Surgery, and of Biomedical Engineering*
- Thomas L. Nelson, M.D. University of California, San Francisco, *Professor Emeritus of Pediatrics*
- Anthony B. Nesburn, M.D. Harvard Medical School, *Adjunct Professor of Ophthalmology*
- Susan L. Neuhausen, Ph.D. University of Minnesota, *Professor of Medicine (Epidemiology) and Social Ecology*
- Richard S. Newman, M.D. University of California, Irvine, *Associate Clinical Professor of Pathology*
- Hien Thao Nghiem, M.D. University of California, Irvine, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Charles (Tuan-Tu) Nguyen, M.D. University of California, Irvine, *Assistant Clinical Professor of Psychiatry*
- Connie Nguyen, M.D. University of California, Los Angeles, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Huan-Vu Nguyen, M.D. University of California, San Diego, *Associate Clinical Professor of Medicine (Internal Medicine/Primary Care)*
- Lan Thi-Xuan Nguyen, M.D. University of California, San Diego, *Associate Clinical Professor of Medicine (Internal Medicine/Primary Care)*
- Ninh T. Nguyen, M.D. University of Texas, *Chief of Gastrointestinal Surgery and Associate Professor of Clinical Surgery*
- Quoc A. Nguyen, M.D. Yale University, *Associate Clinical Professor of Otolaryngology*
- Thanh Nguyen, M.D. University of Iowa, *Associate Clinical Professor of Radiological Sciences*
- Thong (Tom) Nguyen, M.D. University of Iowa, *Associate Clinical Professor of Radiological Sciences*
- Karen Noblett, M.D. University of California, Irvine, *Associate Clinical Professor of Obstetrics and Gynecology (Urogynecology)*
- Masayasu Nomura, Ph.D. University of Tokyo (Japan), *Professor of Biological Chemistry, Microbiology and Molecular Genetics, and Biological Sciences, and Grace Beekhuis Bell Chair in Biological Chemistry*
- Hans-Peter Nothacker, Ph.D. University of Hamburg (Germany), *Assistant Adjunct Professor of Pharmacology*
- Eliezer Nussbaum, M.D. Sackler Medical School, Tel Aviv University (Israel), *Adjunct Professor of Pediatrics*
- Chiedozie Nwagwu, M.D. The Mount Sinai School of Medicine, *Assistant Clinical Professor of Neurological Surgery*
- James D. O'Brien, M.D. New York Medical College, *Associate Clinical Professor of Medicine (Internal Medicine/Primary Care)*
- Dennis O'Connor, M.D. University of Southern California, *Medical Student Course Director and Clinical Professor of Anesthesiology*
- Diane O'Dowd, Ph.D. University of California, San Diego, *Professor of Developmental and Cell Biology and of Anatomy and Neurobiology*

- Marc Ofstein, M.D. Georgetown University; M.P.H. University of California, Los Angeles, *Clinical Professor of Medicine (Internal Medicine and Geriatrics)*
- Leticia Oliveros, M.D. University of Iowa, *Associate Clinical Professor of Pediatrics (Primary Care)*
- Betty H. Olson, Ph.D. University of California, Berkeley, *Professor of Social Ecology and of Community and Environmental Medicine*
- Harold G. Olson, M.D. University of California, Irvine, *Associate Professor of Medicine (Cardiology) in Residence*
- Jennifer Oman, M.D. University of California, Los Angeles, *Associate Clinical Professor of Emergency Medicine*
- Tiong Ong, M.D. Cambridge University, *Assistant Professor of Medicine (Hematology/Oncology) in Residence*
- David Ornstein, M.D. Washington University, *Assistant Professor of Urology*
- Kathryn E. Osann, Ph.D. University of California, Berkeley, *Associate Adjunct Professor of Medicine and of Community and Environmental Medicine*
- Donald R. Ostergard, M.D. University of California, San Francisco, *Clinical Professor Emeritus of Obstetrics and Gynecology (Urogynecology)*
- Sai-Hong Ou, M.D., Ph.D. University of Texas, *Assistant Clinical Professor of Medicine (Hematology/Oncology)*
- Andre Ouellette, Ph.D. Indiana University, *Professor of Pathology and Laboratory Medicine and of Microbiology and Molecular Genetics*
- Madeleine V. Pahl, M.D. University of California, Irvine, *Associate Professor of Medicine (Nephrology/Renal)*
- Guy D. Palement, M.D. Université de Montreal, *Professor of Clinical Orthopaedic Surgery*
- Marilyn J. Pais, M.D. Medical College of Pennsylvania, *Senior Lecturer with Security of Employment Emerita, Radiological Sciences*
- Sophocles N. Panagon, M.D. University of California, Irvine, *Chief of General Internal Medicine, Vice President of Primary Care Services, and Clinical Professor of Medicine (Internal Medicine and Primary Care)*
- Laura S. Pare, M.D. University of Chicago, Pritzker Medical School, *Associate Clinical Professor of Neurological Surgery*
- Justin (Sung) Park, M.D. Yonsei University (Korea), *Assistant Clinical Professor of Neurology*
- Victor Passy, M.D. University of California, Irvine, *Senior Lecturer with Security of Employment Emeritus, Otolaryngology*
- David Peel, Ph.D. University of St. Andrews (Scotland), *Assistant Adjunct Professor of Medicine (Epidemiology)*
- Daniel Pelot, M.D. Howard University School of Medicine, *Senior Lecturer with Security of Employment Emeritus, Medicine (Gastroenterology)*
- Ellena Peterson, Ph.D. Georgetown University, *Associate Dean of Admissions and Outreach, School of Medicine, Associate Director of Medical Microbiology, and Professor of Pathology and Laboratory Medicine*
- Robert F. Phalen, Ph.D. University of Rochester, *Professor of Community and Environmental Medicine*
- Linh Thi Pham, M.D. Medical College of Wisconsin, *Assistant Clinical Professor of Pediatrics (Primary Care)*
- Gary Phipps, M.D. Ohio State, *Clinical Professor of Orthopaedic Surgery*
- Daniele Piomelli, Ph.D. Columbia University, *Professor of Pharmacology and Biological Chemistry, and Louise Turner Arnold Chair in the Neurosciences*
- Hubert C. Pirkle, M.D. Indiana University, *Professor Emeritus of Pathology*
- Jonathan Pirnazar, M.D. University of Illinois, *Assistant Clinical Professor of Ophthalmology*
- Avery Tyler Pittluck, M.D. University of California, Los Angeles, *Associate Clinical Professor of Neurology*
- Robert W. Porter, M.D., Ph.D. Northwestern University Medical School, *Professor Emeritus of Surgery (Neurological) in Residence*
- Manuel Porto, M.D. Rutgers College of Medicine, *Department Chair of Obstetrics and Gynecology, Professor of Clinical Obstetrics and Gynecology (Maternal-Fetal Medicine), and The Edward J. Quilligan Chair in Maternal-Fetal Medicine*
- Steven G. Potkin, M.D. Washington University, *Director of the Brain Imaging Center, Professor of Psychiatry and Human Behavior, and Robert R. Sprague Chair in Brain Imaging*
- Thomas L. Poulos, Ph.D. University of California, San Diego, *Director of the Irvine Research Unit in Macromolecular Structure and UCI Chancellor's Professor of Molecular Biology and Biochemistry, Physiology and Biophysics, and Chemistry*
- Pamela E. Prete, M.D. Hahnemann Medical College, *Professor of Medicine (Rheumatology) in Residence*
- Henry W. Pribram, M.B.B.S. Cambridge University (England), *Professor Emeritus of Radiological Sciences*
- Michael D. Prislín, M.D. Georgetown University, *Associate Dean, School of Medicine, and Professor of Clinical Family Medicine (Family Medicine and Primary Care) and Social Ecology*
- Vincent Procaccio, M.D., Ph.D. University of Grenoble, *Assistant Professor of Pediatrics (Human Genetics and Birth Defects)*
- Ralph E. Purdy, Ph.D. University of California, Los Angeles, *Professor of Pharmacology*
- Yufen Qin, M.D. Harbin Medical University (China), Ph.D. Max-Planck Institute (Germany), *Assistant Professor of Neurology in Residence*
- Lisa Quane, M.D. University of Illinois, *Assistant Clinical Professor of Radiological Sciences*
- Edward Quilligan, M.D. Ohio State University, *Professor Emeritus of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- W. Leslie Quinlivan, M.B.B.S. University of London (England), *Professor Emeritus of Obstetrics and Gynecology (Reproductive Endocrinology and Infertility)*
- Deepak Rajpoot, M.B.B.S. MGM Medical College (India), *Chief of Adolescent Nephrology and Clinical Professor of Pediatrics (Nephrology)*
- Nilam S. Ramsinghani, M.B.B.S. Grant Medical College, *Department Chair and Clinical Professor of Radiation Oncology*
- Ibrahim Ramzy, M.D. Cairo University (Egypt), *Professor of Clinical Pathology and of Obstetrics and Gynecology*
- Jody M. Rawles, M.D. Albany Medical College, Union University, *Assistant Clinical Professor of Psychiatry*
- Marianita Raymundo, M.D. University of California, Irvine, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Virgil Raymundo, M.D. University of California, Irvine, *Associate Clinical Professor of Medicine (General Internal Medicine and Primary Care)*
- Louis Recher, M.D. University of Basel, *Professor Emeritus of Pathology in Residence*
- Varalakshmi Reddy, M.B.B.S. Osmania Medical College, *Associate Clinical Professor of Pediatrics (Primary Care)*
- J. Leslie Redpath, Ph.D. University of Newcastle (England), *Professor of Radiation Oncology and of Community and Environmental Medicine*
- Andrew Reikes, M.D. University of California, San Diego, *Associate Clinical Professor of Medicine (Internal Medicine, Endocrinology, and Primary Care)*
- Bernard Reimer, M.D. University of Minnesota, *Assistant Clinical Professor of Orthopaedic Surgery*
- Rainer K. Reinscheid, Ph.D. University of Munster (Germany), *Assistant Professor of Pharmaceutical Sciences and Pharmacology*
- Christopher Reist, M.D. University of Virginia Medical School, *Associate Professor of Psychiatry and Human Behavior in Residence*
- Charles E. Ribak, Ph.D. Boston University, *Professor of Anatomy and Neurobiology and of Biological Sciences*
- Monica Rivera, M.D. Charles Drew University, *Division Director of Ultrasound and Assistant Clinical Professor of Radiological Sciences*
- Jorge Rivero, M.D. Universidad Peruana Cayetano Heredia (Peru), *Associate Clinical Professor of Family Medicine (Family Medicine, Geriatrics, and Primary Care)*
- Dante Roa, Ph.D. Florida State University, *Assistant Clinical Professor of Radiation Oncology*
- Richard T. Robertson, Ph.D. University of California, Irvine, *Professor of Anatomy and Neurobiology and of Biological Sciences*
- W. Edward Robinson, Jr., M.D., Ph.D. Vanderbilt University, *Associate Professor of Pathology and Laboratory Medicine and of Microbiology and Molecular Genetics in Residence*
- Daniel Robitshek, M.D. Oral Roberts University School of Medicine, *Associate Clinical Professor of Medicine (Hospitalist Program and Internal Medicine)*
- Werner Roeck, Dipl. Eng. State School of Engineering, Hagen (Germany), *Clinical Professor of Radiological Sciences*
- Leland Ronningen, M.D. University of the Health Sciences Uniformed Services, *Associate Clinical Professor of Urology*
- Irwin A. Rose, Ph.D. University of Chicago, *UCI Distinguished Professor of Physiology and Biophysics in Residence*
- Abraham Rosenbaum, M.D. The Technion Institute (Israel), *Assistant Professor of Clinical Anesthesiology*
- Steven Ross, M.D. University of Southern California, *Clinical Professor of Orthopaedic Surgery*
- James Roum, M.D., Ph.D. University of California, Irvine, *Associate Clinical Professor of Medicine (Hospitalist Program and Pulmonary/Critical Care Medicine)*

- Lloyd Rucker, M.D. University of Kentucky, *Associate Dean, School of Medicine; Vice Chair for Education, Department of Medicine; Director, Internal Medicine Residency Program; and Clinical Professor of Medicine (General Internal Medicine and Primary Care)*
- Scott Rudkin, M.D. University of California, Irvine, *Assistant Clinical Professor of Emergency Medicine*
- Roxanne Ruzicka, M.S. Medical College of Virginia, *Assistant Clinical Professor of Pediatrics (Human Genetics and Birth Defects)*
- Terra Safer, M.D. University of California, Los Angeles, *Assistant Clinical Professor of Medicine and Pediatrics (General Internal Medicine and Primary Care)*
- Hamid M. Said, Ph.D. University of Aston (England), *Professor of Medicine (Gastroenterology, Nephrology), Physiology and Biophysics, and Pediatrics*
- Carla M. St. Laurent, M.D. University of California, San Diego, *Assistant Clinical Professor of Anesthesiology*
- Curt A. Sandman, Ph.D. Louisiana State University, *Professor of Psychiatry and Human Behavior in Residence*
- Suzanne B. Sandmeyer, Ph.D. University of Washington, *Professor of Biological Chemistry, Microbiology and Molecular Genetics, and Biological Sciences*
- José Y. Anguiano Sandoval, M.D. University of California, Los Angeles, *Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Rozanne M. Sandri-Goldin, Ph.D. The Johns Hopkins University, *Professor of Microbiology and Molecular Genetics and of Biological Sciences*
- Farhood Saremi, M.D. Tehran University, *Chief of Cardiothoracic Radiology and Associate Clinical Professor of Radiological Sciences*
- I. James Sarfeh, M.D. Albany Medical College, *Professor Emeritus of Surgery (General)*
- Scott Sasse, M.D. University of Wisconsin, *Assistant Professor of Medicine (Pulmonary/Critical Care) in Residence*
- Jon Sassin, M.D. St. Louis University, *Professor Emeritus of Neurology*
- Catherine S. Sassoon, M.D. Gadjah Mada University School of Medicine (Indonesia), *Professor of Medicine (Pulmonary) in Residence*
- Steven L. Schandler, Ph.D. University of Southern California, *Adjunct Professor of Psychiatry and Human Behavior*
- Peter L. Schnall, M.D. Stanford University, M.P.H. Columbia University, *Clinical Professor of Medicine (Occupational/Preventative)*
- Steven S. Schreiber, M.D. Albany Medical College, *Professor of Neurology and of Anatomy and Neurobiology in Residence*
- Carl Schultz, M.D. University of California, Irvine, *Professor of Clinical Emergency Medicine*
- Christina Schwindt, M.D. St. Louis University, *Assistant Clinical Professor of Pediatrics (Allergy/Immunology)*
- Sonia Sehgal, M.D. St. George's University (West Indies), *Assistant Clinical Professor of Medicine (Medicine, Geriatrics, and Primary Care)*
- Varun Sehgal, Ph.D. University of Florida, *Assistant Clinical Professor of Radiation Oncology*
- Michael E. Selsted, M.D., Ph.D. University of California, Los Angeles, *Department Chair and Professor of Pathology and Laboratory Medicine, Professor of Microbiology and Molecular Genetics and of Pharmacology, and Warren L. Bostick Chair in Pathology*
- Bert L. Semler, Ph.D. University of California, San Diego, *Department Chair and Professor of Microbiology and Molecular Genetics and Professor of Biological Sciences*
- Leonard Sender, M.B.B.S. University of Witwatersrand, *Director of Clinical Oncology Services, Deputy Clinical Director of the Chao Family Comprehensive Cancer Center, Chief of Pediatric Hematology/Oncology, and Clinical Professor of Medicine (Hematology/Oncology)*
- Stefano Sensi, M.D. University D'Annunzio (Italy), *Associate Adjunct Professor of Neurology*
- Bienvenida Serrano-Cruz, M.D. University of Santa Tomas, *Associate Clinical Professor of Radiological Sciences*
- Nitin Shah, M.B.B.S. University of Baroda Medical College (India), *Director of Neuroanesthesia Services and Clinical Professor of Anesthesiology*
- Allan C. Shanberg, M.D. University of Chicago Medical School, *Clinical Professor of Urology*
- Ronald C. Shank, Ph.D. Massachusetts Institute of Technology, *Professor of Community and Environmental Medicine and Director of the Environmental Toxicology Graduate Program*
- Deane H. Shapiro, Jr., Ph.D. Stanford University, *Professor Emeritus of Psychiatry and Human Behavior in Residence*
- Johanna F. Shapiro, Ph.D. Stanford University, *Director of the Program in Medical Humanities and Arts and Professor of Family Medicine and Social Ecology*
- Yao-Yang Shieh, Ph.D. Purdue University, *Clinical Professor of Radiological Sciences*
- Maria E. Shier, M.D. Albany Medical College, *Medical Student Clinical Course Director and Associate Clinical Professor of Anesthesiology*
- Hal S. Shimazu, M.D. University of California, Davis, *Clinical Professor of Family Medicine*
- Khalil K. Shirazi, M.D. University of Meshed (Iran), *Associate Clinical Professor of Radiological Sciences*
- Jack Shohet, M.D. University of Cincinnati, *Associate Clinical Professor of Otolaryngology*
- Cynthia H. Sholly, M.D. University of Utah, *Clinical Professor of Pediatrics (Primary Care)*
- Jack Sills, M.D. Northwestern University, *Clinical Professor of Pediatric Neonatology*
- Roxane Cohen Silver, Ph.D. Northwestern University, *Professor of Social Ecology and Medicine*
- Anne Simoneau, M.D. Baylor College, *Associate Clinical Professor of Urology*
- Jennifer Simpson, M.D. University of Michigan, *Assistant Clinical Professor of Ophthalmology*
- Christopher Sims, M.D. The Johns Hopkins University, *Associate Adjunct Professor of Physiology and Biophysics*
- Harry Skinner, M.D. University of South Carolina, Ph.D. University of California, Berkeley, *Department Chair and Professor of Orthopaedic Surgery and Professor of Mechanical and Aerospace Engineering and of Biomedical Engineering*
- Lewis M. Slater, M.D. University of Vermont Medical School, *Professor of Medicine (Hematology/Oncology) and Pathology*
- Martin A. Smith, Ph.D. University of Newcastle Upon Tyne (England), *Professor of Anatomy and Neurobiology*
- Moyra Smith, M.D. University of Pretoria (South Africa), Ph.D. University College (London), *Professor Emerita of Pediatrics (Human Genetics and Birth Defects)*
- Charles Sohaskey, Ph.D. University of Texas, *Assistant Adjunct Professor of Microbiology and Molecular Genetics*
- Kenneth N. Sokolski, M.D. University of California, Irvine, *Associate Adjunct Professor of Psychiatry and Human Behavior*
- Marylou Solbrig, M.D. Albert Einstein College of Medicine, *Associate Adjunct Professor of Neurology and Pharmacology*
- M. Jonathon Solnik, M.D. University of Texas, *Assistant Clinical Professor of Obstetrics and Gynecology*
- Ivan Soltesz, Ph.D. L. Eötvös University (Hungary), *Professor of Anatomy and Neurobiology, Physiology and Biophysics, and Neurobiology and Behavior*
- Charles Sondhaus, Ph.D. University of California, Berkeley, *Professor Emeritus of Radiological Sciences*
- Dara Sorkin, Ph.D. University of California, Irvine, *Assistant Adjunct Professor of Medicine (General Internal Medicine)*
- Martha Sosa-Johnson, M.D. University of California, San Diego, *Associate Clinical Professor of Medicine (Internal Medicine and Primary Care)*
- Gerald S. Spear, M.D. The Johns Hopkins University, *Professor Emeritus of Pathology*
- M. Anne Spence, Ph.D. University of Hawaii, *Professor Emerita of Pediatrics (Human Genetics and Birth Defects)*
- Donald R. Sperling, M.D. Yale School of Medicine, *Professor Emeritus of Pediatrics*
- Lawrence D. Sporty, M.D. State University of New York, Downstate, *Senior Lecturer with Security of Employment, Psychiatry and Human Behavior and Neurology*
- Michael J. Stamos, M.D. Case Western Reserve University, *Acting Chair of the Department of Surgery, Chief of Colon and Rectal Surgery, and Professor of Clinical Surgery*
- Eric J. Stanbridge, Ph.D. Stanford University, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Biological Sciences*
- Arnold Starr, M.D. New York University School of Medicine, *Research Professor of Neurology and of Neurobiology and Behavior*
- Robert E. Steele, Ph.D. Yale University, *Associate Professor of Biological Chemistry and Biological Sciences*
- Joan S. Steffan, Ph.D. University of California, San Diego, *Assistant Professor of Psychiatry and Human Behavior in Residence*
- Larry Stein, Ph.D. University of Iowa, *Chief Scientific Officer for Corporate Affairs and Initiatives and Professor of Pharmacology*
- Robin Steinberg-Epstein, M.D. University of California, Irvine, *Associate Clinical Professor of Pediatrics and Developmental Pediatrics (Primary Care)*

- Roger F. Steinert, M.D. Harvard Medical School, *Clinical Professor of Ophthalmology*
- Edward A. Stenmer, M.D. University of Chicago, *Clinical Professor of Surgery (Thoracic)*
- Oswald Steward, Ph.D. University of California, Irvine, *Professor of Anatomy and Neurobiology, Neurobiology and Behavior, and Neurosurgery, and Reeve-Irvine Chair in Spinal Cord Injury Research*
- Samuel Stratton, M.D. University of New Mexico, *Clinical Professor of Emergency Medicine*
- Eugene S. Strout, M.D. University of Minnesota, *Associate Clinical Professor of Dermatology*
- Min-Ying (Lydia) Su, Ph.D. University of California, Irvine, *Assistant Professor of Radiological Sciences and Physics in Residence*
- Jeffrey Suchard, M.D. University of California, Los Angeles, *Associate Professor of Clinical Emergency Medicine*
- Michael Sundine, M.D. St. Louis University School of Medicine, *Associate Clinical Professor of Surgery (Plastic)*
- James M. Swanson, Ph.D. The Ohio State University, *Chief of the Child Development Center and Professor of Pediatrics and Cognitive Sciences*
- John E. Swett, Ph.D. University of California, Los Angeles, *Professor Emeritus of Anatomy and Neurobiology*
- Paul S. Sypherd, Ph.D. Yale University, *Professor Emeritus of Microbiology and Molecular Genetics*
- Sandor Szabo, M.D. University of Belgrade Medical School (Yugoslavia); Ph.D. University of Montreal (Canada); M.P.H. Harvard University School of Public Health; *Chief of Diagnostic and Molecular Medicine Health Care Group and Professor of Pathology and Laboratory Medicine and of Pharmacology in Residence*
- Ji Sze, Ph.D. Purdue University, *Assistant Professor of Anatomy and Neurobiology*
- Ming Tan, M.D. The Johns Hopkins University, *Associate Professor of Microbiology and Molecular Genetics, Medicine, and Biological Sciences*
- Siu Wa Tang, M.B., B.S. University of Hong Kong, Ph.D. University of Toronto (Canada), *Professor Emeritus of Psychiatry and Human Behavior*
- Andrzej S. Tarnawski, M.D. University Medical School (Poland), *Chief of Gastroenterology and Professor of Medicine (Gastroenterology)*
- Jamshid Tehranzadeh, M.D. Pahlavi University Medical School (Iran), *Chief of Musculoskeletal Radiology and Professor of Radiological Sciences and Orthopaedic Surgery*
- Gaby Thai, M.D. Tufts University, *Associate Clinical Professor of Neurology*
- Trung Thai, M.D. University of Illinois, *Associate Clinical Professor of Psychiatry and Human Behavior*
- Janis W. Thereault, M.D. University of Nebraska, *Clinical Professor of Anesthesiology*
- Leslie M. Thompson, Ph.D. University of California, Irvine, *Associate Professor of Psychiatry and Human Behavior and of Biological Chemistry*
- Lauri D. Thrupp, M.D. University of Washington School of Medicine, *Professor Emeritus of Medicine (Infectious Diseases)*
- James A. Till, Ph.D. University of Iowa, *Clinical Professor of Otolaryngology*
- Jeremiah G. Tilles, M.D. Harvard Medical School, *Associate Dean of Academic Personnel, School of Medicine, and Professor of Medicine (Infectious Diseases) and of Microbiology and Molecular Genetics*
- Jerome S. Tobis, M.D. Chicago Medical School, *Professor Emeritus of Physical Medicine and Rehabilitation*
- Simin Torabzadeh, M.D. Universidad Central del Este (Dominican Republic), *Associate Clinical Professor of Medicine (Internal Medicine, Primary Care, and Geriatrics)*
- Paul E. Touchette, Ed.D. Harvard University, *Adjunct Professor of Pediatrics (Neurology) and of Psychiatry and Human Behavior*
- Anne E. Tournay, M.B.B.S. University College (London), *Associate Clinical Professor of Pediatrics (Neurology)*
- Hieu Nguyen Tram, M.D. Chicago Medical School, *Associate Clinical Professor of Medicine (Internal Medicine and Primary Care)*
- Bich-Van Tran, M.D. University of Texas, Houston Medical School, *Assistant Clinical Professor of Obstetrics and Gynecology*
- Huy T. Tran, D. O. College of Osteopathic Medicine, Pomona, *Associate Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Le Thuy Tran, M.D. University of California, Irvine, *Assistant Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Bruce Tromberg, Ph.D. University of Tennessee, *Director of the Beckman Laser Institute and Professor of Surgery, Physiology and Biophysics, and Biomedical Engineering*
- Fong Tsai, M.D. Taipei Medical College, *Department Chair of Radiological Sciences, Professor of Clinical Radiological Sciences, and Hasso Brothers Endowed Chair in Radiological Sciences*
- Martin C. Tynan, M.B.B.C.H. Trinity College (Ireland), *Clinical Professor of Orthopaedic Surgery*
- Cherry Uy, M.D. Far Eastern University (Philippines), *Associate Clinical Professor of Pediatrics (Neonatology/Perinatal Medicine)*
- Frederico E. Vaca, M.D. Creighton University, *Associate Professor of Clinical Emergency Medicine and Social Ecology*
- Duane J. Vajgrt, M.D. University of California, San Francisco, *Chief of ER Radiology and Associate Clinical Professor of Radiological Sciences*
- Shermeen Vakharia, M.B.B.S. Aga Khan University Medical College (Pakistan), *Director of Cardiac Anesthesiology Services and Associate Clinical Professor of Anesthesiology*
- Stanley van den Noort, M.D. Harvard Medical School, *Professor Emeritus of Neurology*
- Mani Vannan, M.D. Madras Medical College (India), *Professor of Clinical Medicine (Cardiology) and Director, Echocardiography Laboratories*
- Nosratola D. Vaziri, M.D. Tehran University Medical School (Iran), *Chief of Nephrology and Professor of Medicine (Renal Diseases) and of Physiology and Biophysics*
- Charles P. Vega, M.D. University of Wisconsin, *Associate Clinical Professor of Family Medicine (Family Medicine and Primary Care)*
- Larry E. Vickery, Ph.D. University of California, Santa Barbara, *Professor of Physiology and Biophysics and of Biological Sciences*
- Roopa Viraraghavan, M.D. University of Alberta (Canada), M.P.H. George Washington University, *Assistant Clinical Professor of Pediatrics (Primary Care, Hospitalist Program, and Pediatrics Infectious Diseases)*
- Paul Vrana, Ph.D. Columbia University, *Assistant Professor of Biological Chemistry*
- Pathik Wadwha, Ph.D. University of California, Irvine, *Assistant Professor of Psychiatry and Human Behavior and of Social Ecology*
- Feizal Waffarn, M.B.B.S. Madras Medical College (India), *Department Chair and Associate Professor of Clinical Pediatrics (Neonatology)*
- Howard B. Waitzkin, M.D., Ph.D. Harvard University, *Professor Emeritus of Medicine (Internal Medicine/Primary Care)*
- Akio Wakabayashi, M.D. University of Tokyo Medical School (Japan), *Professor Emeritus of Surgery (Thoracic)*
- Ann P. Walker, M.A. University of California, Irvine, *Adjunct Professor of Pediatrics*
- Douglas C. Wallace, Ph.D. Yale University, *Donald Bren Professor of Ecology and Evolutionary Biology and of Biological Chemistry*
- Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland (Australia), *Professor of Psychiatry and Human Behavior*
- Michael D. Wang, M.D. Boston University, *Assistant Clinical Professor of Medicine (Hospitalist Program, Internal Medicine, Primary Care, and Geriatrics)*
- Nai-San Wang, Ph.D. McGill University, *Professor in Residence Emeritus of Pathology*
- Ping H. Wang, M.D. Kaoshing University, *UCI Medical Center Section Chief, Division of Endocrinology, Diabetes, and Metabolism; and Associate Professor of Medicine (Endocrinology) and of Physiology and Biophysics*
- Marian Waterman, Ph.D. University of California, San Diego, *Associate Professor of Microbiology and Molecular Genetics and of Biological Sciences*
- Steven L. Wechsler, Ph.D. University of North Carolina, *Professor of Ophthalmology*
- Gerald D. Weinstein, M.D. University of Pennsylvania School of Medicine, *Professor Emeritus of Dermatology*
- John H. Weiss, M.D., Ph.D. Stanford University, *Professor of Neurology*
- Lari Wenzel, Ph.D. Arizona State University, *Associate Adjunct Professor of Medicine (Epidemiology)*
- Gerald Whipple, M.D. University of California, San Francisco, *Professor Emeritus of Medicine*
- Stephen H. White, Ph.D. University of Washington, *Professor of Physiology and Biophysics and of Biological Sciences*
- Gregory Whitman, M.D. University of Connecticut, *Assistant Professor of Clinical Neurology*
- James L. Whittenberger, M.D. University of Chicago, *Professor Emeritus of Community and Environmental Medicine in Residence*
- Clifford B. Widmark, M.D. University of California, Los Angeles, *Associate Clinical Professor of Psychiatry*
- Sharon Wigal, Ph.D. State University of New York, *Associate Clinical Professor of Pediatrics*
- Tim Wigal, Ph.D. University of Texas, Austin, *Associate Adjunct Professor of Pediatrics*
- Aileen Wigglesworth, Ph.D. University of Kentucky, *Assistant Clinical Professor of Family Medicine (Family Medicine and Geriatrics)*

Petra Wilder-Smith, Ph.D. Bern University (Switzerland); D.D.S. Guys Hospital (England), *Associate Professor of Surgery in Residence*

James H. Williams, Jr., M.D. Harvard University, *Adjunct Professor of Medicine (Hospitalist Program, Pulmonary, and Critical Care Medicine)*

Russell A. Williams, M.B.B.S. University of Sydney, *Assistant Dean of Graduate Medical Education, and Director of Surgery Medical Student Education, and Professor of Surgery*

Archie F. Wilson, M.D. University of California, San Francisco, Ph.D. University of California, Los Angeles, *Professor Emeritus of Medicine (Pulmonary)*

Samuel Eric Wilson, M.D. Wayne State University, *Associate Dean of Affiliated Institutions and Professor of Surgery*

Deborah Wing, M.D. Tulane University School of Medicine, *Director of Maternal-Fetal Medicine and Associate Professor of Clinical Obstetrics and Gynecology (Maternal-Fetal Medicine)*

Michael Winkler, M.D. University of Chicago, Pritzker School of Medicine, *Chief of Interventional Radiology and Assistant Clinical Professor of Radiological Sciences*

Garrett A. Wirth, M.D. Albany Medical College, *Assistant Clinical Professor of Surgery (Plastic)*

Anne B. Wong, M.D. University of Pennsylvania, *Clinical Director of Anesthesiology Services (UCI Medical Center) and Clinical Professor of Anesthesiology*

Brian Wong, M.D. The Johns Hopkins University, *Associate Professor of Otolaryngology and Biomedical Engineering in Residence*

David H. Wong, M.D. University of California, Irvine, Pharm.D. University of Southern California, *Clinical Professor of Anesthesiology*

Edward K. Wong, Jr., M.D. University of Southern California, *Associate Professor of Ophthalmology*

Nathan D. Wong, Ph.D. Yale University, *Adjunct Professor of Medicine (Cardiology)*

Joseph Chong-Sang Wu, M.D. University of California, Irvine, *Associate Professor of Psychiatry and Human Behavior in Residence*

Mark Wu, M.D. University of Wisconsin, *Assistant Professor of Clinical Pathology*

Sing-Yung Wu, M.D. The Johns Hopkins University, Ph.D. University of Washington, *Professor of Radiological Sciences in Residence*

Frederic Wyle, M.D. University of Pennsylvania, *Professor Emeritus of Medicine (Infectious Diseases) in Residence*

Guiyun Yan, Ph.D. University of Vermont, *Associate Professor of Public Health*

Leman Yel, M.D. Hacettepe University (Turkey), *Assistant Professor of Clinical Medicine (Basic/Clinical Immunology)*

Kyoko Yokomori, Ph.D. University of Southern California; Ph.D. of Agriculture (Veterinary Medicine) University of Tokyo, *Associate Professor of Biological Chemistry*

Robert R. Young, M.D. Harvard University, *Professor Emeritus of Neurology in Residence*

Ronald F. Young, M.D. State University of New York, *Professor Emeritus of Neurological Surgery*

Jen Yu, M.D. National Taiwan University (Taiwan), Ph.D. University of Pennsylvania, *Department Chair and Professor of Physical Medicine and Rehabilitation*

Wergui Yu, M.D. Jiangxi Medical College (China), *Assistant Professor of Clinical Neurology*

Tara Yuan, M.D. University of California, Irvine, *Assistant Clinical Professor of Psychiatry and Human Behavior*

Christopher Zachary, F.R.C.P. Royal College of Physicians, London, *Department Chair and Clinical Professor of Dermatology*

Michael V. Zaragoza, M.D. Case Western Reserve University, *Assistant Clinical Professor of Pediatrics*

Fan-Gang (Frank) Zeng, Ph.D. Syracuse University, *Director of the Hearing and Speech Laboratory and Professor of Otolaryngology and Biomedical Engineering*

Arthur D. Zepeda, M.D. University of California, Los Angeles, *Director of Pain Management Services, Director of the Pain Fellowship Program, and Assistant Clinical Professor of Anesthesiology*

Xiaohui Zhao, M.D. Nanjing Medical University (China), *Assistant Clinical Professor of Pathology*

Qun-Yong Zhou, Ph.D. Oregon Health Sciences University, *Associate Professor of Pharmacology*

Angyrios Ziogas, Ph.D. University of Southern California, *Associate Adjunct Professor of Medicine (Epidemiology) and Social Ecology*

OVERVIEW OF THE COLLEGE OF HEALTH SCIENCES

The UCI College of Health Sciences, established in 2004, includes the newly recognized Program in Nursing Science, Program in Public Health, and Program in Pharmaceutical Sciences, as well as the long-established School of Medicine. In addition to the information presented below, online information is available at <http://www.cohs.uci.edu/>.

Program in Nursing Science

The Program in Nursing Science, established in 2005, plans to develop undergraduate and graduate programs that will provide academic and professional education in the discipline of nursing. Nursing is interdisciplinary and collaborative in its art and its science. The body of knowledge that comprises nursing science includes application of principles from the biological, social, behavioral, and biomedical sciences. The programs will prepare graduates for basic clinical and advanced practice roles as well as for educational, administrative, and research positions across the health care delivery system and for faculty positions in academic institutions. Nursing Science research is formulated within an expanded view of health that includes health promotion, restoration, and rehabilitation. This program will promote outstanding research within the Nursing Science subspecialties as well as related areas of interest of faculty. Proposals for undergraduate and graduate programs are currently under development. Interested students should contact the Program in Nursing Science for up-to-date information; e-mail: jsdejohn@uci.edu.

Program in Pharmaceutical Sciences

The Program in Pharmaceutical Sciences, established in 2003, plans to develop a curriculum focusing on the strengths required to prepare students for professional positions in the pharmaceutical production, control, and development sectors of the pharmaceutical and biotechnology industry or for graduate studies in pharmaceuticals, medicinal chemistry, pharmacology, analytical chemistry, medicine, and pharmacy. Collaborative interdisciplinary research will be supported by joint faculty appointments shared with other UCI departments. Information about the undergraduate program follows. A proposal for a graduate program is currently under development. Interested students should contact the Program in Pharmaceutical Sciences for up-to-date information; e-mail: jsdejohn@uci.edu.

Undergraduate Major in Pharmaceutical Sciences

The B.S. degree program in Pharmaceutical Sciences trains students in a multidisciplinary approach so that they can contribute to the advancement of new pharmaceutical technologies such as accelerated chemical synthesis, molecular-based assays using cloned enzymes and cloned metabolizing enzymes, combinatorial chemistry, in vitro biopharmaceutical techniques, and gene therapies. Pharmaceutical scientists are rapidly changing the field of drug discovery and development. The graduates of this program may seek employment in public and private sectors or choose to pursue graduate degrees such as a Ph.D., M.D., or Pharm.D.

NOTE: The School of Biological Sciences Student Affairs Office (949-824-5318) is coordinating the undergraduate affairs activities for the Program in Pharmaceutical Sciences. For detailed information about degree requirements, see the School of Biological Sciences section of the *Catalogue*.

Program in Public Health

The Program in Public Health, established in 2003, plans to develop core strengths in essential areas of the field, including health services and clinical policy research, biostatistics and quantitative/qualitative methods, clinical sciences, epidemiology,

behavior/interdisciplinary sciences, and environmental sciences. Collaborative interdisciplinary research will be supported by joint faculty appointments shared with other UCI departments. Information about the undergraduate program follows. A proposal for a graduate program is currently under development. Interested students should contact the Program in Public Health for up-to-date information; e-mail: jsdejohn@uci.edu.

Undergraduate Majors in Public Health

The B.S. in Public Health Sciences and the B.A. in Public Health Policy degree programs train students in multidisciplinary approaches to public health practice and research. The degrees explore both quantitative and qualitative aspects of public health at all levels of analysis. Graduates will advance, through selective employment or further education, to become the new generation of public health professionals prepared to face the emerging challenges to human health from a population perspective.

Students who are interested in pursuing a premedical program should note that additional courses will be needed beyond the requirements of the public health degrees to fulfill requirements for medical school.

Students admitted to the public health program are expected to formally declare either the B.S. or B.A. degree as early as possible, but no later than the end of the sophomore year of study. Changing from one degree program to the other is possible, but will require completion of the required lower- and upper-division courses specified for each program. It is also possible for a student to enroll in both the B.S. and B.A. degree programs (double major), provided the student completes all the requirements for each degree.

NOTE: The School of Social Ecology Student Services Office (949-824-6861; <http://www.seweb.uci.edu/students/undergrad/>) is coordinating the undergraduate affairs activities for the Program in Public Health. For detailed information about degree requirements, see the School of Social Ecology section of the *Catalogue*.

SCHOOL OF MEDICINE

Thomas C. Cesario, M.D., **Dean**

Irvine Hall

Admissions and Outreach: (949) 824-5388

World Wide Web: <http://www.com.uci.edu/>

Overview

The UCI School of Medicine became part of the University of California in 1965. Prior to this time it was known as the California College of Medicine which traces its roots to a private institution founded in 1896.

Mission Statement

The UCI School of Medicine is dedicated to advancing the knowledge and practice of medicine for the benefit of society. This mission is achieved through programs of excellence in:

Education: The School of Medicine is committed to provide educational programs of the highest quality to medical students, M.D./Ph.D. and M.D./M.B.A. students, residents, fellows, allied health, graduate academic students, practicing physicians and other health care professionals. Educational programs are offered along the continuum of medical education with programs in undergraduate, graduate, and continuing medical education. These programs emphasize the most current knowledge in the health sciences and reflect the changing practice of medicine. Further, the School of Medicine's educational programs are designed to stimulate lifelong self-learning and critical inquiry and to exemplify those human values necessary to fulfill the professional commitments of a career in the health sciences.

Research: Excellence in research is an essential feature of the School of Medicine. Therefore, the School is committed to develop and maintain research programs in the health sciences which seek to advance basic scientific knowledge and the prevention, diagnosis, and treatment of human illness.

Clinical Care: Recognizing its responsibility to meet the educational needs of students and the diverse needs of the patient community, the School of Medicine is committed to programs of clinical excellence across the spectrum of patient care disciplines.

Service to the Public: As a publicly assisted institution, the School of Medicine is committed to serve the community as a vital resource of expertise and knowledge. The School further serves the public through the training of health professionals whose backgrounds reflect California's ethnic and cultural diversity and whose professional careers address California's health care needs.

Health Sciences Complex

The Health Sciences Complex is a 121-acre site that houses UCI's medical school facilities. Twenty-nine acres have been developed to provide space for teaching, research, and patient care as well as offices for departmental administration.

The School's basic science instructional programs are located in modern, well-equipped, medical sciences buildings. These units provide space for first- and second-year classes, lecture halls (including the Dr. S. Jerome and Judith D. Tamkin Student Lecture Hall), offices and laboratories for various basic and clinical departments, and a student center. Other buildings house the School's administration, laboratories, and student center.

In addition, the 40,000-square-foot Plumwood House is devoted to basic research in the fields of neurological disorders, diagnostic systems and reagents, and industrial bioreactors. In this facility, faculty from the Department of Biological Chemistry share laboratory space with corporate researchers.

Outpatient services are available on campus through the Louis A. and Helen C. Gottschalk Medical Plaza and the Beckman Laser Institute. The Plaza capitalizes upon the broad range of diagnostic and therapeutic programs of the School as well as the extensive clinical expertise of the faculty. The facility offers primary care and specialty services including: obstetrics and gynecology, pediatrics, dermatology, ophthalmology, cardiology, orthopaedics, gastroenterology, and neurology. Special programs in diabetes, multiple sclerosis, Alzheimer's disease, and inflammatory bowel diseases also are available. The Plaza also houses the Lon V. Smith Eye Clinic, which offers the latest in diagnostic health care for eye diseases, including computerized refraction analysis, glaucoma diagnosis, and ultrasound analysis of eye disorders. In addition, the Plaza is home to the Susan Samueli Center for Integrative Medicine Clinic, where acupuncture and traditional herbal medicine complements traditional Western health care procedures.

Housing one of the world's leading programs in medical laser technology, the UCI Beckman Laser Institute offers state-of-the-art treatment for cancer and dermatological conditions. The Institute specializes in the development and application of laser and other optical technologies for the diagnosis and treatment of disease.

BIOMEDICAL RESEARCH CENTER

UCI's Biomedical Research Center (BRC) is a landmark public-private collaboration between UCI and businesses involved in biomedical, biotechnological, and health care services. The Center will enable UCI researchers and participating companies to work alongside one another, combining basic science, clinical study, and product development to find new approaches to the diagnosis and treatment of disease. The William J. Gillespie Neuroscience Research Facility, the first of several BRC buildings, is the home of a core group of prominent scientists investigating the causes and

cures for neurological disorders, including Alzheimer's disease, Parkinson's disease, schizophrenia, and spinal cord injury. The second building is the Robert R. Sprague Family Foundation Hall, where scientists work to reveal the role of genetics in cancer treatment and prevention. The third building, the Dottie and George Hewitt Research Hall, is home to a state-of-the-art General Clinical Research Center and internationally recognized investigators studying infectious diseases, molecular medicine, immunology, and complementary and alternative medicine.

CHAO FAMILY COMPREHENSIVE CANCER CENTER

The Chao Family Comprehensive Cancer Center is the only National Cancer Institute-designated facility in Orange County and one of only 39 such centers in the country. Overall, more than 100 faculty members at the Cancer Center are involved in several major research programs, encompassing everything from basic research that looks at how cancer cells grow to bone marrow transplantation. Located at UCI Medical Center in Orange, the 56,000-square-foot facility provides an ideal setting for the practice of all the basic and clinical subspecialties involved in adult and pediatric oncology, including the application of the latest techniques for diagnosis and management of patients with cancer.

J. EDWARD BERK HALL MEDICAL EDUCATION CENTER

The School of Medicine opened a Student Training Center in J. Edward Berk Hall. Offering state-of-the-art training, the center was developed to teach and assess the clinical skills of medical students, residents, M.D.s, and other health care professionals in an environment that simulates an actual clinical setting. Participants are monitored and videotaped to evaluate their clinical performance related to obtaining a medical history, conducting an appropriate physical examination, and developing treatment management plans. All clinical practice examinations (CPX) and other clinical assessments are also done here.

The Student Training Center is a 2,850-square-foot high-tech facility which incorporates the latest and best innovations in interactive medical instructional technology, as well as eight clinical examination rooms with video cameras, a video monitor control station, a clinical skills laboratory, faculty development conference areas, a computer learning laboratory, interactive learning technology including "HARVEY" and UMedic, a student lounge, and a separate waiting area for actual and standardized patients.

UCI MEDICAL CENTER

UCI Medical Center, located in the City of Orange, is a 453-licensed-bed, comprehensive medical care center. It is the principal clinical facility of the School of Medicine operated by the University. The medical faculty of the School of Medicine, together with the medical resident-physician staff, provide the professional care. Services are provided in medicine, surgery, obstetrics and gynecology, pediatrics, psychiatry, family medicine, dermatology, pathology, radiology, physical medicine and rehabilitation, ophthalmology, neurology, anesthesiology, orthopedics, geriatrics, oncology, neurosurgery, otolaryngology, and radiation oncology.

UCI Medical Center also has cardiac, pediatric, neonatal, respiratory, burn medical-surgery, and neurosciences intensive care units and more than 90 specialty outpatient clinics. It is the designated countywide Level I trauma center. UCI Medical Center is building a new university hospital, planned for completion in early 2009. The seven-story hospital will have 191 beds, 13 operating rooms, and an interventional procedure room. Additionally, private patient rooms will allow family members to stay overnight. For more information about the new hospital, visit <http://www.ucihealth.com/newhospital>.

UCI FAMILY HEALTH CENTER-SANTA ANA

The UCI Family Health Center-Santa Ana is a state-of-the-art primary care facility, conveniently located near the Santa Ana Civic Center. The Center has two missions—health care delivery and medical education.

As a community clinic, the Family Health Center's multilingual physicians and staff are committed to providing quality healthcare to patients, including the medically underserved. It provides primary care services to people of all ages including family medicine, preventive care for children and adults, and specialty care in pediatrics and obstetrics and gynecology.

As an integral part of the UCI School of Medicine, the Family Health Center provides educational and training opportunities for medical and nurse practitioner students, including the UCI Family Medicine and Obstetrics and Gynecology residency training programs.

UCI FAMILY HEALTH CENTER-ANAHEIM

The UCI Family Health Center-Anaheim provides care for more than 20,000 outpatient visits annually and training programs for resident physicians in primary care, general internal medicine, and general and adolescent pediatrics. There are additional programs in gynecology, dermatology, general surgery, podiatry, neurology, ophthalmology, optometry, orthopedics, psychiatry, and multispecialty faculty practice. The Center provides training for medical students in their primary care, general pediatric, adolescent medicine, and geriatric medicine rotations and electives.

AFFILIATED HOSPITALS AND CLINICS

Additional major teaching and research programs of the School of Medicine are conducted at the Long Beach Veterans Affairs Medical Center (LBVAMC) and at Memorial Medical Center, Long Beach. Other academic programs are conducted in affiliation with San Bernardino County Medical Center, Fairview Developmental Center (Costa Mesa), Kaiser Foundation Hospital (Anaheim, Bellflower, and Riverside), Children's Hospital of Los Angeles, Metropolitan State Hospital (Norwalk), The City of Hope Medical Center (Duarte), Rancho Los Amigos Hospital (Downey), Western Medical Center (Tustin/Santa Ana), the Kern Medical Center (Bakersfield), Clínica Sierra Vista (Lamont), Presbyterian (Newport Beach), Fountain Valley Hospital and Medical Center, Children's Hospital of Orange County, and the Orange County Health Care Agency/Public Health Clinic.

School of Medicine Alumni Relations

The UCI School of Medicine is an outgrowth of what began in 1896 as the Pacific College of Osteopathy (PSO). Some years later it became the College of Osteopathic Physicians and Surgeons, which then evolved into the California College of Medicine in 1962 and subsequently joined the UC system in 1965. The Office of Alumni Relations provides programs and services for nearly 4,000 alumni of the School as well as for students. From financial support to Honor's Night awards, mentorship to reunions, the Office of Alumni Relations seeks to provide a cornerstone from which students and alumni can benefit from their relationships to one another and in so doing, strengthen the School of Medicine.

THE M.D. PROGRAM

Admissions

All inquiries regarding the UCI School of Medicine's admission programs and procedures should be directed to:

University of California, Irvine
School of Medicine
Office of Admissions and Outreach
100 Berk Hall
Irvine, CA 92697-4089

Telephone: (949) 824-5388 or (800) UCI-5388

World Wide Web: <http://www.ucihs.uci.edu/admissions>

The UCI School of Medicine is a member of the American Medical College Application Service (AMCAS). All students who seek entrance to the UCI School of Medicine must complete the AMCAS application. AMCAS application information is available at <http://www.aamc.org/students/amcas/start.htm>. Applications must be submitted between June 1 and November 1 of the year preceding anticipated admission.

SELECTION FACTORS

The UCI School of Medicine seeks to admit students who are highly qualified to be trained in the practice of medicine and whose backgrounds, talents, and experiences contribute to a diverse student body. The Admissions Committee carefully reviews all applicants whose academic record and MCAT scores indicate that they will be able to handle the rigorous medical school curriculum. Careful consideration is given to applicants from disadvantaged backgrounds (i.e., disadvantaged through social, cultural, and/or economic conditions). In addition to scholastic achievement, attributes deemed desirable in prospective students include leadership ability and participation in extracurricular activities, such as clinical and/or medically related research experience, as well as community service.

Information provided by the AMCAS application is used for preliminary screening. Based on decisions reached by the Admissions Committee, applicants may be sent a secondary application. Applicants receiving a secondary application are requested to submit additional materials which include a minimum of three letters of recommendation, supplemental information forms, and a nonrefundable application fee of \$60. Upon further review by the Admissions Committee, approximately 500 of those applicants receiving a secondary application will be interviewed. Regional interviews are not available. Preference is given to California residents and applicants who are either United States citizens or permanent residents. The UCI School of Medicine does not accept transfer students.

The UCI School of Medicine participates in the Western Interstate Commission for Higher Education (WICHE) Professional Student Exchange Program for applicants from certain western states without medical schools.

REQUIREMENTS FOR ADMISSION

Students can be considered for admission to the School of Medicine if they meet the following requirements:

1. A minimum of three years (90 semester units) of undergraduate course work is required, including a minimum of one full-time year at an accredited U.S. college or university. A baccalaureate degree is strongly recommended but not required. Candidates for admission may submit community college credit only to the extent granted on transfer to a four-year college or university. For purposes of evaluation, letter or numerical grades are preferred for course work, particularly for the required subjects listed below. Final enrollment into the first-year class at the

School of Medicine is contingent upon evidence of satisfactory completion of all requirements with a grade of C or higher and of all courses listed as in progress at the time of application. Failure to meet the requirements or falsification of information are grounds for rejection or dismissal.

2. Completion of the following college course requirements prior to matriculation:

Subject	Comments	Semester Units
Biology	Courses must include a minimum of one semester or two quarters of upper-division biology, excluding botany.	12
General Chemistry		8
Organic Chemistry		8
Physics		8
Biochemistry	One semester or two quarters. On the quarter system, a quarter of biochemistry must be taken in combination with either an additional quarter of biochemistry, molecular biology, or genetics.	4
Calculus:	One semester or one quarter of calculus is required.	4

Applicants are strongly encouraged to have completed their basic science requirements at the time of application. No specific major is required, however, demonstrated ability in the sciences is of great importance. In addition, applicants are advised to take advantage of the intellectual maturation afforded by a well-rounded liberal arts education. English, the humanities, and the social and behavioral sciences are considered particularly important. The following courses are also recommended but not required: molecular biology, cell biology, genetics, vertebrate embryology, psychology, and Spanish.

3. The Medical College Admission Test (MCAT) is required. An officially certified test score must be received by the Admissions and Outreach Office before the candidate's application can be considered. Applicants applying to the fall 2006 entering class must have taken the MCAT no earlier than April 2003 and no later than August 2005. MCAT information is available on the World Wide Web: <http://www.aamc.org/students/mcat/start.htm>.

OUTREACH

Outreach efforts coordinated by this office are designed to meet the challenges of California's changing demographics and to contribute to the School of Medicine's goal of achieving a broad spectrum of diversity in the student population, and ultimately, in the medical profession. A goal of this office is to build a pipeline of potential candidates for medical school and recruit students from socio-economically disadvantaged groups who have a desire to serve in the medically underserved communities in California. To reach this goal, programs are developed and implemented for students in high school, community colleges, and four-year undergraduate institutions. Examples include a Postbaccalaureate Re-applicant Program, a Premedical Postbaccalaureate Enhancement Program, Premedical Conferences, Summer Outreach Programs, a PreEntry Program, and CampMed, which is targeted at high school students interested in a health sciences career. In addition, there is support for student-initiated projects and outreach efforts emanating from medical student organizations. Outreach staff conduct academic advising, develop liaisons with general campus student services and academic departments, and facilitate workshops.

Medical Student Advisor System

The School's formal advisor system includes basic science advisors, clinical science advisors, and career specialty advisors.

Basic Science Advisors

Leslie M. Thompson, Ph.D., Chair (949) 824-6756

There are 12 basic science advisors. Six advisors are assigned on an every other year rotational basis to each incoming class and follow that class through their basic science years. The basic science advisors meet on a monthly basis to review students' academic progress, and to initiate interventional programs for students in academic difficulty and at academic risk. They also serve as a source of support and guidance for first- and second-year medical students.

Clinical Science Advisors

Lloyd Rucker, M.D., Chair (949) 824-4609
Associate Dean Curricular Affairs

The Clinical Science Advisors (CSA) combine teacher, advisor, and mentor into a single individual. By starting in the teaching role, the CSAs develop mentoring relationships with students that carry over into their role as advisor. When fully involved, each CSA will work with groups of eight-ten students from the second-, third-, and fourth-year classes, roughly 27 students in total. Students and CSAs first meet during the second year when the CSA serves as the facilitator for the problem-based learning small groups of the Patient-Doctor course. Toward the end of the second year, CSAs begin to provide scheduling and career advice for their students. In the third year, the faculty meet with students in groups and individual sessions to provide further career advice, to monitor progress in the third year, and to advise students about fourth year schedules. In the fourth year, advisors monitor the students' schedule for progress and review any requested changes.

Peer Review and Peer Counseling Program

Michael Prislín, M.D., Chair (949) 824-5932
Associate Dean Student Affairs

The School of Medicine has an informal peer review process, aimed at early detection and assistance for medical students who are experiencing difficulty such as professional conduct problems, suspected impairment, violation of the honor code, or violation of any University policy, regulation, or rule. The Peer Review Committee is comprised of two representatives from each class, the student body co-presidents, and two advisory faculty members. The committee operates within guidelines set jointly by the School of Medicine administration and the student body. Cases involving serious professional misconduct are referred to the Dean's Office. The Peer Review Committee conducts hearings and may impose sanctions or provide assistance to the student.

Medical Scholars Program

Geraldine Codd (949) 824-3415
Academic Skills Coordinator

The Medical Scholars Program (MSP), a student-driven effort, is an innovative, collegial study support program which was implemented in the fall of 1993. This program benefits all students in the School of Medicine and provides a special sense of community for first-year students. A great deal of the informal knowledge concerning medical school is communicated through the components of MSP. Small groups of first-year students are led by second-year co-leaders who develop clinically relevant case-based problems for discussion covering material learned in first-year basic science courses. Fourth-year students serve as co-leaders for similar groups of second-year students. First-year discussion groups meet every other week, and groups for second-year students meet once per month. First- and second-year students also receive MSP study packets, which contain test questions and answers from the previous year, and are distributed prior to each examination.

Another component of MSP is designed to meet the needs of students as they face the challenges and transitions of their third year. During their various clerkships, third-year students are assisted in four basic areas by fourth-year students: oral examinations, presentation of cases, written examinations, and clinical skills. These fourth-year students not only share their knowledge of the subjects, but also share information about appropriate study material, and what to emphasize in studying for their various test experiences. Both third- and fourth-year students benefit from participating in this program.

Medical Scientist Training Program (M.D./Ph.D.)

Alan Goldin, M.D., Ph.D., Chair (949) 824-5264

Exceptionally well-qualified students interested in careers in academic medicine and with demonstrated research accomplishments may be considered for admission to the Medical Scientist Training Program (MSTP). Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and a Ph.D. degree from any of the graduate programs at UCI. The program requires a minimum of seven years for completion, and students holding either degree are not eligible for MSTP. Additional information is available from the MSTP Coordinator's Office, (949) 824-5264; e-mail: mstp@uci.edu; World Wide Web: <http://www.mstp.uci.edu/>.

Applicants must submit a supplementary application (available from the School of Medicine Office of Admissions) to the Medical Scientist Training Program when they are submitting their secondary application information to the School of Medicine. Students accepted into the program have the option of pursuing graduate study in any of the graduate programs at UCI. Although a specific graduate department need not be chosen at the time of admission, students are expected to have selected a field for their graduate studies. Financial support in the form of a fellowship, which includes a stipend as well as tuition and fees, is provided. Applicants not accepted into MSTP may be considered separately for admission to the School of Medicine.

M.D./M.B.A. Degree Program

Maria Chandler, M.D./M.B.A. Faculty Advisor (949) 824-7133

The M.D./M.B.A. program requires five or six years for completion. It is aimed at individuals who are exceptional in ability and motivation and who seek a career as physicians with major responsibility for administration and management in health care organizations and institutions. Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and an M.B.A. degree from The Paul Merage School of Business.

Students must be currently enrolled in the M.D. program in order to apply to the combined M.D./M.B.A. program. During their second or third year of medical school, interested students submit an application to The Paul Merage School of Business Admissions Committee, after review by the School of Medicine. Final acceptance to the program is granted by The Paul Merage School of Business, and M.B.A. course work begins following completion of the student's third year of medical school. Students should be aware that enrollment in the M.D. program does not guarantee acceptance into the M.B.A. program.

The MCAT, along with the completion of three years of medical school training in good standing and passage of USMLE Step 1, currently serve as a waiver for the GMAT entrance examination usually required for application to the M.B.A. program. The total number of units required to graduate from each program separately are satisfied in the M.D./M.B.A. program.

Program in Medical Education for the Latino Community (PRIME-LC)

Alberto Manetta, M.D., Director

(949) 824-7136

A carefully selected group of students from diverse backgrounds and with superior academic credentials, proven commitment to service, and solid conversational Spanish will be considered for acceptance to the Program in Medical Education for the Latino Community (PRIME-LC) at the UCI School of Medicine. PRIME-LC responds to the increasing demand for physician-leaders who are culturally and linguistically competent to address the health care delivery, research, and policy needs of underserved Latino communities in California. The program spans all three components of medical training: undergraduate (medical school), graduate (residency program), and continuing medical education (post-residency). PRIME-LC residency experiences are designed to enhance the medical school training. Although students are free to enter any residency of their choice, program graduates are encouraged to enter primary care areas such as Family Medicine, Pediatrics, Internal Medicine, and Obstetrics and Gynecology, or Emergency Medicine or Psychiatry. A placement office will help PRIME-LC-trained physicians find employment including leadership roles in health care, academia, and advocacy.

The PRIME-LC supplemental application is part of the UCI School of Medicine secondary application and must be completed to be considered for acceptance. Applicants selected for faculty and student interviews are required to undertake a third interview in Spanish to evaluate conversational skills and commitment to service. All interested applicants, including those who are not currently California residents, are encouraged to complete the PRIME-LC application. Financial support is available in the form of scholarships, loans, and loan repayment programs. Applicants not accepted into PRIME-LC may be considered separately for admission to the regular School of Medicine M.D. program. For more information about PRIME-LC, call (949) 824-7136; e-mail: primeLC@uci.edu; World Wide Web: <http://www.ucihs.uci.edu/PRIME-LC>.

The M.D. Curriculum

The UCI medical curriculum continues to meet the changing needs of medical education within all four years of instruction. Indeed, the School of Medicine faculty views curriculum development as a continual process and feels that medical education and teaching innovations must be encouraged and supported. The curriculum is designed to encourage medical students to become participants in their education process, to be active rather than passive learners, to become lifelong learners, and to use cooperative and team-learning principles.

UCI is dedicated to the nurturing of humanistic, caring physicians with top-notch clinical expertise and skills. The School strives for this through a curriculum that is not only anchored in the science of medicine but also provides meaningful experiences in the humanistic dimensions of medicine. In this context, the faculty endeavors to provide students with experiences in areas such as communications and empathy, ethics and professionalism; diversity awareness; and cultural sensitivity and medical humanities. The faculty also feels that the curriculum should strive to integrate basic and clinical sciences by bringing substantial clinical material into the early phases of medical education.

The School has achieved vertical integration of the curriculum with the development of a series of "Patient-Doctor" courses. The Patient-Doctor courses are longitudinal multidisciplinary experiences broadly designed to prepare students for their future careers in medicine through the application of experiential and self-directed learning principles. First- and second-year students begin to prepare for their clerkships through clinical exposures featuring standardized patients and clinical tag-along experiences. These

courses also utilize small group learning sessions to reinforce core concepts of patient-physician interactions and introductory clinical reasoning skill development. During the Advanced Patient-Doctor course (years three and four) students explore many of the crucial issues first presented during the introductory Patient-Doctor course. During this segment greater emphasis is placed on advanced skill acquisition and more mature professional role development.

To satisfy the requirement for the M.D. degree, each medical student must successfully complete the full curriculum. Students must also pass both Step 1 and Step 2 of the United States Medical Licensing Examination (USMLE) and successfully pass a Clinical Practice Examination (CPX) prior to graduation.

An ongoing academic monitoring program is coordinated by the Office of Student Affairs, which identifies students early who might be experiencing academic difficulty and provides them with resources to successfully complete their course work. Faculty advisors are assigned to students during their first and second years. Students have advisory sessions with M.D. faculty prior to the scheduling of their third- and fourth-year course work. A Learning Resources Program is available to provide tutorial assistance and study skills training. USMLE reviews are also provided.

CURRICULAR POLICIES

The curricular policies of the School of Medicine are the responsibility of the faculty committees on Curriculum and Educational Policy and on Promotions and Honors. A listing of these policies, as well as information regarding registration, rules and regulations, grading procedures, and requirements for academic advancement, are contained in the *School of Medicine Handbook*, which is available on the World Wide Web at <http://www.ucihs.uci.edu/medstudents/studentaffairs/>.

First and Second Years:

Basic Science and Preclinical Course Work

First Year

Anatomy and Embryology
Medical Biochemistry
Histology
Neuroscience
Physiology/Pathophysiology
Medical Genetics
Patient-Doctor
Patient, Doctor, and Society
Molecular and Cell Biology
Immunology
Behavioral Science

Second Year

Epidemiology and Biostatistics
Clinical Pathology
Topics in Medicine
General and Systemic Pathology
Medical Pharmacology
Medical Microbiology
Patient-Doctor

Third- and Fourth-Year Requirements¹

Inpatient Medicine
Ambulatory Medicine
Surgery
Obstetrics and Gynecology
Pediatrics
Psychiatry
Family Medicine
Senior Subinternship²
Neuroscience
Neurological Surgery

Radiology
Intensive Care Unit
Emergency Medicine
Substance Abuse
Advanced Patient-Doctor
Electives

¹ The sequence of third and fourth years varies.

² Prerequisite: Inpatient and Ambulatory Medicine.

Curricular Description

FIRST-YEAR CURRICULUM

Anatomy and Embryology

The structure of the human body is taught in Anatomy and Embryology. Emphasis is placed on normal structure as it relates to function, with consideration of abnormal structures that may be revealed in a clinical setting. Anatomy is taught through a regional approach, with an emphasis on laboratory dissections and demonstrations, augmented by lectures, radiographic films, discussions, and clinical correlate material. The course includes a detailed consideration of the embryologic aspects of human development. (*Medicine 500A-B*)

Medical Biochemistry

Medical Biochemistry for first-year medical and graduate students. Presents the biochemistry relevant to human health and disease that forms part of the foundation of modern medical practice. This course provides students with a fundamental understanding of the principles of biochemistry and metabolism and their relationship to medicine. It covers basic enzymology and the structure and function of proteins. The metabolism of carbohydrates, lipids, amino acids, purines, and pyrimidines is presented in the context of modern medicine. (*Medicine 522*)

Histology

Histology is designed to provide students with knowledge of the cellular and subcellular bases of medicine. Emphasis is placed on normal structure as a basis for function, with consideration of abnormalities of structures in clinical cases. Lectures, laboratory exercises, and independent study address how cells are formed, how cells are combined to form tissues, and how tissues are combined to form organs. (*Medicine 503A-B*)

Immunology

Immunology covers the cellular and molecular basis of immune responsiveness and the roles of the immune system in both health and disease. The material is presented in lectures and clinical correlates, as well as in a set of printed core notes. Also included are a number of Patient-Oriented Problem Solving (POPS) sessions in which participation is required. (*Medicine 544*)

Neuroscience

The objective of this course is to provide students with the fundamental concepts, vocabulary, and learning strategies to attain a level of proficiency in basic integrative neurosciences so that they will develop an understanding in the clinical neurosciences throughout their careers as physicians. The course is integrative in the sense that the underlying knowledge of molecular, cellular, physiological, developmental, and neuroanatomical organization of the nervous system is brought together in each lecture block with clinical themes and examples in lectures, and which is further reinforced by clinical correlates given by clinicians. The course emphasizes knowledge of the nervous system using lessons from clinical neuroanatomy, systems neurosciences, and regional and developmental neuroanatomy. The course uses the Blumenfeld text, Haines atlas, wet lab handouts, and the Neurosyllabus CD, which are all geared toward mastering this multiple strategy to the study of the human nervous system. (*Medicine 502A*)

Medical Genetics

Medical Genetics reviews the basic principles of human genetics related to disease. Assessment of patterns of genetic risk, screening for genetics diseases, and cytogenetics and biochemical diagnosis are presented. Utilization of the human gene map and DNA sequence information for molecular genetic diagnosis are discussed. Students are introduced to the use of genetic databases and bioinformatics. Approaches to treatment of genetic diseases are

presented. Legal, ethical, and social aspects of diagnosis and management of genetic disease are discussed. (*Medicine 511*)

Patient, Doctor, and Society

The Patient, Doctor, and Society (PDS) course is a multidisciplinary required course for first-year medical students. The PDS course is designed to introduce students to content themes that are important for a student's professional development as a physician and health care provider. It provides students with a foundation in interviewing techniques (in preparation for the more advanced Patient-Doctor courses) as well as with the basic knowledge, skills, and attitudes necessary to obtain competence in clinical medicine. The course serves as the primary introduction to the clinical experiences of years one, two, and beyond. (*Medicine 545*)

Patient-Doctor

This course begins in the first year and continues to the end of the second year. Students participate in six organ/system-based interview and physical diagnosis modules in small groups with two faculty facilitators. The educational objectives of the modules center on communication skills, physical diagnosis skills, decision-making, and professionalism. The student's first-year education is rounded out with participation in other real patient-based activities in clinical settings.

The second-year students continue to develop their patient interviewing and physical examination skills in a more independent environment and within a clinical setting. Students spend one half-day per week participating in Clinical Service Experiences, which are designed to provide students with real patient experience and exposure to the different fields of medicine. Students continue with an in-depth study of the content theme areas they were exposed to during the first year by participating in monthly problem-based learning sessions directed by their faculty mentor. Midway through their second year, students have their clinical skills tested through a Skills Appraisal Examination, which is a practical examination. (*Medicine 519A-F*)

Physiology/Pathophysiology

This course consists of lectures and clinical correlates covering the classical concepts of vertebrate physiology, with emphasis on the function of normal tissues in humans. Specific topics related to neurophysiology, cardiovascular, respiratory, renal, gastrointestinal, endocrine, exercise, and sexual physiology are presented. Prerequisite: Biochemistry. (*Medicine 543A-B*)

Molecular and Cell Biology

The molecular and cellular mechanisms responsible for cell division, DNA, RNA, and protein biosynthesis are emphasized. The pathways for molecular signaling and the development of multicellular organisms are described including abnormal developmental states such as cancer. The future of molecular medicine, including recombinant DNA technology, will be a major focus of the course. This course will provide students with an understanding of the fundamental principles of molecular and cell biology, along with an understanding of the application of morphological and molecular relationships to problems of the human body. (*Medicine 523*)

Behavioral Science

This course provides students with an introduction to the biological and environmental bases of normal and abnormal human behavior. Students are introduced to the DSM IV and clinical diagnosis as well as treatment of major psychiatric disorders. Students are taught through didactics, problem-based learning sessions, and standardized patient interviews. (*Medicine 505A*)

SECOND-YEAR CURRICULUM

Clinical Pathology

This course consists of lectures and laboratories covering the areas of hematology, blood bank, clinical chemistry, and microbiology. It provides students with a foundation for understanding the pathogenesis of a variety of disease states, as well as a foundation for the proper use of the laboratory for diagnosis and optimum patient management. Prerequisite: first-year curriculum. (*Medicine 509A-B*)

Epidemiology and Biostatistics

This course provides medical students with an exposure to the necessary tools for critically evaluating the medical literature in relationship to study design and analysis. It provides overall training in study design, methods, and analysis of medical and epidemiologic data and focuses on four major content areas in epidemiology: infectious disease epidemiology; cancer epidemiology; occupational and environmental epidemiology; and genetic epidemiology. (*Medicine 548*)

Topics in Medicine

A case approach is used to integrate basic science concepts, pathology, pharmacology, and physical diagnosis as they pertain to an introduction to clinical medicine. The objective of the course is to ease the transition from basic science to the clinical clerkships by lecture-based case presentations and discussions. The course is a major link between pre-clinical and clinical studies. The student should learn to analyze the pathophysiology of symptom presentation, understand the rationale of treatment, and consider differential diagnoses. An organ system approach is utilized in integration with basic Clinical Pathology and Clinical Pharmacology. Concurrent enrollment in the Clinical Pathology course or its previous completion is required. Prerequisite: first-year curriculum. (*Medicine 515A-B-C*)

General and Systemic Pathology

This course deals with basic causes, mechanisms, and consequences of disease processes and with some applications of these considerations to clinical medicine. After an introduction to general types of disease processes, these processes are studied further as they affect specific organs and organ systems. Prerequisite: first-year curriculum. (*Medicine 508A-B-C*)

Medical Microbiology

This course deals with the biochemical and genetic properties of infectious agents, activities of toxins, chemotherapy, and the biochemistry and genetics of antibiotic resistance. A considerable portion of the course deals with the humoral and cellular basis of immunity and the genetic control of the immune response. The course also includes an in-depth study of the biology of parasites and the structure and activity of viruses. Prerequisite: first-year curriculum. (*Medicine 507A-B*)

Medical Pharmacology

This course covers the various classes of drugs that are used in medicine, particularly those used in specific or symptomatic treatment of disease states. Drugs of abuse are also covered. Emphasis is on the mechanisms of action of drugs at the organ and system level and on their use in medicine. The course includes lectures that illustrate pharmacologic principles, supplemented by small group problem-solving sessions. Prerequisites: Biochemistry and Physiology. (*Medicine 517A-B-C*)

THIRD- AND FOURTH-YEAR CURRICULUM

Obstetrics and Gynecology Clerkship

During this eight-week clerkship, students are taught an introduction to reproductive physiology and clinical obstetrics and gynecology. Practical experience is obtained throughout the rotations of labor and delivery, gynecology, and the outpatient clinic. In addition, students have an elective choice between gynecologic oncology, high-risk obstetrics, and gynecologic surgery. Required third-year rotation. (*Medicine 524*)

General Surgery Clerkship

The General Surgery clerkship provides students, as members of the surgical team, with an opportunity to study surgical patients in outpatient and hospital settings. Students acquire surgical knowledge, as well as develop skills in taking surgical histories and conducting physical examinations. Emphasis is placed on the clinical evaluation, pathogenesis, diagnosis, and treatment of surgical diseases. Students spend six weeks on general surgery (three weeks each at UCI and LBVA Medical Centers) and one week on one of the subspecialties (urology, ENT, orthopaedics, or plastic surgery). (*Medicine 526*)

Inpatient and Ambulatory Medicine Clerkship

The clerkship occurs in a highly structured clinical environment in both in-patient and ambulatory settings. Students gradually assume responsibility for the care of patients, thereby enhancing their clinical, diagnostic, and procedural skills. Clinical vignettes and bedside teaching serve to round out the experience. Required third-year rotation. (*Medicine 527A, 527B*)

Pediatrics Clerkship

The pediatrics clerkship serves as an introduction to general pediatrics. Students rotate on the pediatric inpatient service, pediatric ambulatory settings, and the newborn nursery. Exposure to subspecialty clinics is also included. During the clerkship, students refine their knowledge and skills in obtaining accurate historical data, performing physical examinations with pediatric patients, and developing appropriate diagnosis and management plans. (*Medicine 528*)

Psychiatry Clerkship

This six-week clinical clerkship provides an opportunity for hands-on experience in the process of recognizing, diagnosing, and treating mental illness using the latest neuropharmacological advances in brain research as well as more traditional psychotherapeutic approaches. Each student participates fully in patient care, clinical teaching, and conferences. There are several choices of clinical settings for the rotation, including adult in-patient psychiatry, child/adolescent inpatient psychiatry, consultation psychiatry/emergency psychiatry, geriatrics, and a variety of ambulatory experiences. The sites include the UCI and LBVA Medical Centers where different patient populations are available. A required lecture series is presented on Wednesday afternoons at the UCI Medical Center. (*Medicine 529*)

Family Medicine Clerkship

This clerkship matches students with a family physician for a four-week block. Students are assigned to a UCI clinic for four weeks where the principles of family medicine and primary care practice are taught. Emphasis is placed upon exposing students to the 25 most common health care problems seen in Family Medicine. Students are exposed to the principles of community health and epidemiology, as practically applied in an ambulatory care setting. They develop an awareness of the current health care delivery environment, including issues such as health care costs and the lifestyle of a family physician. Prerequisites: successful completion of the first- and second-year curriculum. (*Medicine 597*)

Substance Abuse

This two-week course provides an opportunity to directly observe and learn the principles of substance abuse treatment. Students also attend therapeutic groups, 12-step meetings, and family intervention sessions, as well as didactic sessions and small group discussions. Sites include the Betty Ford Center, Hoag Hospital, and the LBVA Medical Center. A reading list is provided to students at all sites. (*Medicine 675A*)

Intensive Care Unit

This is a four-week rotation offered at UCI, LBVA, and Long Beach Miller's Children Hospital. ICU is offered in medicine, surgery, anesthesiology, and pediatrics. Students function as subinterns, becoming integral members of the ICU team, and serve as primary caregivers under supervision. (*Medicine 605B, 630K, 633M, 660S, or 685U*)

Neuroscience Clerkship

UCI students are required to take the neuroscience clerkship during either their third or fourth year. Extramural students may take the course as an elective during their final-year curriculum. The clinical neurosciences clerkship emphasizes the development of student skills in neurological examination as well as the medical and surgical management of patients with brain, nerve, and muscle disease. (*Medicine 532*)

Radiology Clerkship

The core clerkship consists of daily clinical film conferences, didactic lectures, and ACR file learning laboratory. Radiology teaching file and slide and book materials are available teaching instruments in radiology. Radiology conferences interrelate general medicine, surgery, and radiology. Emphasis is given to correlate clinical findings and use of imaging modalities for problem-solving and diagnosis and treatment, including an understanding of the risk/cost/benefit ratio involved in daily clinical practice. (*Medicine 533*)

Senior Subinternship

Students spend four weeks as subinterns during which time they carry the full ward responsibility of an intern on one-half the number of patients usually carried by an intern. The subinternship is designed to improve clinical competence and to prepare the students for the challenges and demands of the internship. Students may choose between subinternships in medicine, surgery, or pediatrics. (*Medicine 536, 537, 538, or 539*)

Emergency Medicine

The objectives of the Emergency Medicine clerkship are to introduce students to principles of acute care medicine while caring for acutely ill and injured patients. Students have the opportunity to evaluate patients, expand their directed history and physical making skills, create a broad differential diagnosis, and formulate effective testing and treatment strategies. Active participation in patient care and procedural skills are emphasized and encouraged. The course consists of experiences in direct patient care, assigned readings from emergency medicine references, weekly conferences, and an end-of-rotation final examination. (*Medicine 630D*)

Advanced Patient-Doctor

The Advanced Patient-Doctor course is a two-week required course that all fourth-year students take during the month of March. The students prepare presentations for their peers and faculty that integrate basic science and clinical science. The course also prepares the students for residency and provides them with an opportunity to obtain ACLS certification. (*Medicine 535*)

Neurological Surgery Clerkship

UCI students are required to take a neuroscience clerkship during either their third or fourth year. Extramural students may take the

course as an elective during their final year of curriculum. The neurological surgery clerkship emphasizes the development of skills in neurological examination, functional neuroanatomy, practical interpretation of neuroimaging, and the identification of emergent neurological conditions, as well as the medical and surgical management of cranial, spinal, and peripheral nerve disease. (*Medicine 685A*)

ELECTIVES

Depending upon their particular interests, needs, and goals, students may take a variety of elective courses consisting of at least 30 contact-hours per week during the third and fourth years. Electives must be approved by the clinical faculty advisor and the department chair. Students may take up to 20 weeks of their fourth-year course work (core/electives) at institutions other than UCI.

A listing of elective courses and descriptions can be found on the World Wide Web at <http://www.com.uci.edu/meded/Elective/index.htm>.

All questions regarding the curriculum, electives, or matters of records should be directed to:

University of California, Irvine
School of Medicine
Office of Educational Affairs
252 Berk Hall
Irvine, CA 92697-4089

General information/records: (949) 824-6138; scheduling: (714) 456-0241; curriculum: (949) 824-4609.

Office of Educational Affairs

Alberto Manetta, M.D., Senior Associate Dean (949) 824-5798

The Senior Associate Dean for Educational Affairs, in cooperation with the Academic Senate faculty, has responsibility for administrative oversight of the educational program leading to the M.D. degree, the postgraduate residency programs, and continuing medical education programs provided for practicing physicians and allied health personnel. The Senior Associate Dean also has administrative oversight responsibility for the Office of Admissions and Outreach. The Office of Curricular Affairs provides services for the M.D. program which include curriculum development, implementation, management, and evaluation. The Office of Student Affairs provides student support services which include academic advisement, learning skills counseling, psychological counseling, career counseling, and student records, and coordinates additional services offered through general University offices which include housing, student health, and disabled student services.

Student Affairs

Michael Prislín, M.D., Associate Dean	(949) 824-8358
Barbara Lutz, Registrar, Director	(949) 824-5283
Marianne Ross, Ph.D., Counseling Psychologist	(949) 824-4621
Geraldine Codd, Academic Skills Coordinator	(949) 824-3415
Marie Nubia-Feliciano, Student Affairs Officer	(949) 824-5932

The mission of the Office of Student Affairs is to create an environment within the School of Medicine community that fosters student attainment of the School of Medicine educational objectives. This is accomplished through assuring that student participation in the educational program occurs in a manner consistent with School of Medicine policies and regulations, and through the provision of support services that facilitate optimal student participation in the educational program. To accomplish the educational assurance mission, the Office of Student Affairs disseminates information regarding academic policies and regulations, provides administrative and executive support for the faculty committee on Promotions and Honors, and facilitates the institutional recognition of student achievement through the conduct of various School of Medicine

events. To accomplish the educational support mission, the Office of Student Affairs provides academic, personal, psychological, career, and financial counseling; academic skills assessment and learning resources support, student wellness programs, student facilities support, initiatives to enhance the learning environment, and support for a variety of student organizations and informal activities.

Financial Aid

James Miles, Director (949) 824-6476

The UCI School of Medicine Financial Aid Office provides financial assistance and financial counseling services to entering and continuing medical students. The office secures, manages, and provides funds in the form of scholarships, grants, and loans to assist in meeting students' educational expenses.

The office coordinates financial aid application materials; tracks documents needed to complete an application; reviews and evaluates information provided by applicants; awards financial aid programs; and conducts research to determine basic educational expense budgets. It also provides students with information on policies and procedures, cost of attendance, and eligibility criteria.

In providing counseling services, the office advises students, reviews their individual circumstances, and provides financial assistance within financial aid program guidelines. It presents financial aid workshops for prospective and enrolled students to enhance their knowledge about financial aid programs and the application process, provides debt management counseling, and conducts entrance and exit interviews.

Curricular Affairs

Lloyd Rucker, M.D., Associate Dean, Curricular Affairs (714) 456-7539

This office provides support related to curricular issues for the School of Medicine, departments, faculty, and students; initiates curriculum review and innovation to meet the challenges of contemporary medical education; establishes and reviews the objectives of the School of Medicine and ensures individual courses are teaching to meet the objectives; serves as facilitators of new programs and curriculum and supports working committees during curriculum development; facilitates and monitors curriculum content theme integration; and maintains records on course materials and grading policies. This office is responsible for curriculum documentation for review by the Curriculum and Educational Policies committee; the collection of course evaluations by students; maintaining accurate information on core and elective curriculum; and assessing the success of the current programs.

Medical Academic Computing Center

Claudiu Dan, Director (949) 824-1215

The Medical Academic Computing Center (MACC) was established for the instructional use of computing and to further educational objectives by providing medical instructional software that is integrated into the curriculum for numerous courses, including Histology, Pathology, Medical Genetics, Neurosciences, and Anatomy. The Center, which has extended evening and weekend hours, provides students access to Internet resources and productivity applications. Students benefit by utilizing anatomical visualization software, self-administered practice examinations, as well as by having access to e-mail and many online medical information resources. Students complete much of their course write-ups in the Center, where they have access to word processing programs and printers. MACC offers scantron grading services in addition to managing and supporting the computer systems in the Student Training Center.

Continuing Medical Education

Gerald A. Maguire, M.D., Associate Dean (949) 824-6039
Bonnie Carroll, Director (949) 824-9163
Elena Gilliam, Regularly Scheduled Conference Manager (949) 824-4220
Annette Mahnke, CME Coordinator (949) 824-6039

The Office of Continuing Medical Education provides educational activities to physicians and other health care professionals that reinforce basic medical knowledge; impart updated information on clinical practice and health care delivery; introduce new ideas, skills, and technology; and disseminate pertinent research findings in order to improve the quality of the health care that is delivered by the participants.

Graduate Medical Education

Kirk A. Keegan, Jr., M.D. (714) 456-3526
Nancy Koehring, Director, (714) 456-3526
Postgraduate Medical Education and Community Programs

The UCI School of Medicine Graduate Medical Education Training Programs attract medical students from prestigious medical schools nationwide. UCI offers 42 ACGME-approved residency and fellowship training programs. There are approximately 600 residents and fellows in these training programs. UCI Medical Center, the Veteran's Affairs Medical Center, Long Beach and Long Beach Memorial Medical Center are the integrated training sites for the residency programs. Other affiliations such as Kaiser Anaheim, Kaiser Riverside, Western Medical Center, City of Hope, Children's Hospital Los Angeles, and Rancho Los Amigos offer additional residents training in specialized fields.

POSTGRADUATE EDUCATIONAL PROGRAMS

Residency Programs

The School of Medicine and its affiliated hospitals offer approximately 615 residency positions in almost all areas of medicine. Training levels range from first-year residencies through seventh-year-level subspecialty fellowships. Inquiries about specific programs should be directed to the Program Director as listed in the *Directory of Residency Training Programs*, published each year by the American Medical Association, or to the chair of the appropriate School of Medicine department.

All residency programs meet the formal standards of the Accreditation Council for Graduate Medical Education and the appropriate specialty boards. UCI adheres to the Health Professions Educational Assistance Act of 1976, P.L. 94-484, Section 709, regarding shared-schedule residency training positions.

Residents in all programs rotate to the UCI Medical Center at some time. Residents in anesthesiology, dermatology, diagnostic radiology, medicine, neurology, ophthalmology, pathology, surgery, physical medicine and rehabilitation, radiation oncology, family medicine subspecialties of medicine, orthopaedics, otolaryngology, urology, and psychiatry also rotate to the Long Beach Veterans Affairs Medical Center (LBVAMC). Residents in medicine, medicine subspecialties, anesthesiology, radiation oncology, psychiatry, obstetrics and gynecology, ophthalmology, pathology, pediatrics, physical medicine and rehabilitation, and surgery also rotate to the Memorial Hospital Medical Center (MHMC), Long Beach. Residents may also spend periods of time at other affiliated hospitals and clinics.

ANESTHESIOLOGY

The Anesthesiology Residency Program offers training for residents at the postgraduate PG-2 to PG-4 levels. The residents spend three years in intensive clinical anesthesia training at LBVAMC and UCI Medical Center, with a one-month rotation at Children's

Hospital of Los Angeles, a month of cardiac anesthesia and a month of obstetric anesthesia at Cedars-Sinai Medical Center (Los Angeles), and a month of neuro anesthesia at UCLA. Training is offered in general anesthesia, regional anesthesia, cardiac anesthesia, pediatric anesthesia, trauma anesthesia, neurosurgical anesthesia, anesthesia for all other surgical subspecialties, dental anesthesia, obstetric anesthesia, intensive care, respiratory therapy, and treatment of pain syndromes and outpatient anesthesia. Residents in their fourth postgraduate year may elect to take three to six months of subspecialty training in obstetrical anesthesia, critical care medicine, pediatric anesthesia, pain management, cardiac anesthesia, or research.

DERMATOLOGY

The Department of Dermatology offers a three-year accredited residency which has nine residents: three first-year, three second-year, and three third-year. It is a combined program between UCI Medical Center and Long Beach Veterans Administration Medical Center and is directed by Gary Cole, M.D., Chief of Dermatology Services at LBVAMC. First-year residents are stationed at LBVAMC; second-year residents spend four months in the Dermatopathology Laboratory at UCI Medical Center, four months on the ward there, and four months in research. Third-year residents rotate the Chief Resident position at UCI Medical Center and LBVAMC. They spend four months in a private practice environment at UCI, Kaiser, and Med Partners HMO programs. Additional participation includes the UCI Student Health Service, private practice offices of faculty, and the Beckman Laser Clinic.

EMERGENCY MEDICINE

The Emergency Medicine residency was established in 1988 and has full accreditation by the Residency Review Committee. The program has 18 residents, six for each of three post-graduate years. The UCI Medical Center Emergency Department is a high-acuity, Level I Trauma Center, treating over 47,000 patients annually. Fifteen board-certified emergency medicine faculty provide 24-hour patient care and supervision of residents and medical students. The Department of Emergency Medicine is active in public affairs, community service, and research in the areas of prehospital care, instructional methods, health policy, critical care technology, and infectious disease, among others.

FAMILY MEDICINE

The mission of the Family Medicine Residency Program is to train family physicians to succeed in a contemporary practice environment and to deliver high-quality medical care to a culturally and socioeconomically diverse patient population. This fully accredited program boasts 30 residents and offers training in a variety of settings. The residents' continuity clinic is located in the largest community clinic in Orange County, and many of the inpatient rotations are completed in a community hospital, Western Medical Center, where Family Medicine residents are the only residents in the hospital. At the same time, rotations at UCI Medical Center are invaluable in terms of teaching and interactions with other specialties. A distinguished faculty of over 30 physicians works closely with the residents, enhancing the training atmosphere.

GERIATRICS

The Geriatrics Fellowship is a comprehensive, one-year training program that has been accredited since 1991, providing eligibility for a Certificate of Added Qualifications (CAQ) in Geriatrics. Fellows receive training at UCI Medical Center as well as affiliated sites, including the Veterans Administration Medical Center (VAMC), and alternative community care environments for seniors. Fellows have longitudinal experiences in high-quality skilled nursing facilities, assisted living facilities, a comprehensive, multidisciplinary assessment program, and primary care practices. Clinical training in

geropsychiatry is provided in a 17-bed geropsychiatry unit located at UCI Medical Center, as well as in an outpatient setting.

INTERNAL MEDICINE

The Internal Medicine Residency Program has two tracks: the traditional categorical track, which is a broad-based primary care-oriented training program, and a one-year preliminary track. Within the traditional program there is a special research pathway which encompasses two or three years of internal medicine and two years of research. Residents spend their time at the UCI Medical Center and LBVAMC. They may also rotate to Memorial Medical Center, a private hospital in Long Beach. The traditional program presents a comprehensive, three-year curriculum in general medicine. Teaching is done primarily by full-time faculty within the Department of Medicine.

Subspecialty fellowships are offered in basic and clinical immunology, cardiology, endocrinology and metabolic diseases, gastroenterology, hematology/oncology, infectious diseases, nephrology, pulmonary/critical care diseases, and rheumatology.

NEUROLOGY

The Neurology Residency Program emphasizes the education and training of neurologists to meet the clinical needs of their patients by using both traditional methods and new techniques, some of which have been developed at the UCI Medical Center. Training takes the form of graded responsibility for inpatient care, regular outpatient clinical responsibilities, and rotations in associated neurological specialties. The Department strongly believes that an understanding of basic research methods is essential for the training of clinicians who will deal with the diversity of clinical problems in modern neurology. Thus, during the three-year training program, residents have the opportunity to participate in a variety of ongoing basic and clinical research projects within the Department.

OBSTETRICS AND GYNECOLOGY

This four-year program provides a solid foundation of reproductive pathophysiology in the obstetric, gynecologic, endocrinologic, and oncologic aspects of women's health care. Based on this foundation, training continues with progressive resident responsibility for operative and medical management and surgical techniques. While predominantly clinical in scope, the program is strongly flavored by academic and research exposure. Training is provided in general obstetrics and gynecology with rotations in the subspecialties of perinatology, oncology, and endocrinology. There are six resident positions available each year in this four-year training program.

OCCUPATIONAL MEDICINE

This residency program is offered by the Division of Occupational Medicine, Department of Medicine. It is intended for physicians who are seeking certification by the Board of Preventive Medicine. A prerequisite to participation is a minimum of one year of post-graduate clinical training in a primary care discipline. The objective of the Program is the training of physicians in the fields of occupational medicine and industrial medical care. The resident is provided an academic foundation in occupational medicine, industrial hygiene, environmental toxicology, and epidemiology, in addition to practical experience in preventive medicine as it is applied to employed persons. This two-year program includes didactic training and clinical and field experience in occupational health and safety. Upon completion of training, the resident is qualified to enter the specialty practice of occupational medicine in an industrial setting, in private practice, in a government agency, or in an academic institution.

OPHTHALMOLOGY

The three-year Ophthalmology Residency Program provides extensive clinical experience in conjunction with yearly basic research projects. The Department focuses on the total care of the patient, and training in a broad spectrum of disease and/or injury is coupled with an increasing level of responsibility in patient management. Surgical experience is provided in the full range of ophthalmic subspecialties, and residents also receive instruction and practical application in the newest laser surgical techniques as well as the use of state-of-the-art diagnostic equipment.

ORTHOPAEDIC SURGERY

The Department of Orthopaedic Surgery Residency Program is a four-year training program which follows an internship year in the Department of Surgery. The program is designed to provide exposure and experience in all areas of orthopaedics including trauma, reconstructive and joint replacement surgeries, pediatric orthopaedics, spine surgery, sports medicine, foot surgery, and rehabilitation. It is structured for maximum resident participation and minimizes private hospital rotations. The program's teaching hospitals include UCI Medical Center, LBVAMC, Children's Hospital of Orange County, Rancho Los Amigos Hospital in Downey, and Kaiser Permanente Medical Center in Anaheim. There are four resident positions available each year.

OTOLARYNGOLOGY—HEAD AND NECK SURGERY

The Department of Otolaryngology—Head and Neck Surgery offers a four-year residency program providing extensive clinical experience in conjunction with an academic approach to resident research projects. One year of general surgery training is required. The four-year program provides a breadth of training in otological surgery, head and neck surgery, facial plastic surgery, and nasal and paranasal sinus surgery. Residents receive an extensive clinical experience at UCI Medical Center, Children's Hospital of Orange County, and Kaiser Foundation Hospital—Anaheim.

This training is targeted to be of the caliber necessary for young surgeons to embark upon an academic career. This training is excellent for those going into private practice as well.

PATHOLOGY

The Department of Pathology and Laboratory Medicine offers a residency training program covering all areas of anatomic and clinical pathology. The program is affiliated with Memorial Medical Center, Long Beach and LBVAMC. The training for the combined anatomic and clinical pathology program consists of four years of training in both anatomic and clinical pathology. The first three years consist of a core program providing exposure to each of the subspecialty areas of clinical pathology as well as surgical pathology, autopsy pathology, and cytopathology. Ample opportunities for research and teaching exist for individuals planning on an academic career. Excellent preparation is also provided for individuals planning on a career in forensic pathology or private practice in a community hospital.

PEDIATRICS

The Pediatric Residency Program emphasizes the interrelationship of patient care, didactic teaching, and research in the training of the pediatric resident physician. The focus of the Department is on the total care of the child from birth through young adulthood. A strong clinical and educational foundation is provided through experiences in a broad spectrum of disease and/or injury as well as training in biosocial pediatrics, preventive health care, and community resources.

The program offers variety and depth due to the diversity of the Department's two major teaching hospitals—the UCI Medical Center and the Miller Children's Hospital (located at Memorial Hospital Medical Center, Long Beach). The faculty at these institutions provide a comprehensive teaching program in general pediatrics and cover the full range of pediatric subspecialties. The care of children seen through the two hospitals represents a cross-section of racial, cultural, and socioeconomic groups from a local population of more than 2.5 million. Thus, pediatric residents are exposed to a wide range of problems presented in settings ranging from intensive care to supervised office-based practice.

PHYSICAL MEDICINE AND REHABILITATION

The Department of Physical Medicine and Rehabilitation offers a three-year residency for applicants who have completed a one year internship. The focus is on the diagnosis and comprehensive treatment and care of patients with neuromusculoskeletal or cardiopulmonary disabilities, from newborns to the elderly. Residents are also involved in research and medical student teaching.

PSYCHIATRY

The Psychiatry Residency Program is a four-year program that fosters individuality, academic excellence, and broad patient experience. The core curriculum includes basic seminars, adult inpatient and outpatient psychiatry, child psychiatry, medicine, neurology, emergency psychiatry, consultation and liaison psychiatry, forensic psychiatry, psychopharmacology, and substance abuse. Residents spend time at the UCI Medical Center, private facilities, LBVAMC, and Long Beach Memorial Medical Center, all of which provide a broad base and mix of experience in psychopathology. A wide variety of elective courses and experiences are available in this flexible, eclectic program. All residents are expected to complete a research project of high quality prior to completion of the program.

PULMONARY AND CRITICAL CARE MEDICINE

The Pulmonary and Critical Care Medicine Fellowship program is designed to train clinicians so that they are best able to serve patients and health care providers in their communities. In addition, this program is designed to provide selected individuals with specific research career opportunities in academic pulmonary and critical care medicine in the areas of expertise of the division. The specific educational objectives of this program are: (1) to provide a solid educational experience in general pulmonary and critical care medicine (PCCM) that will prepare physicians to reliably and competently serve their communities; (2) to provide medical students, residents, and ancillary health care providers with tools necessary for a fundamental understanding of the diagnosis, prevention, and treatment of pulmonary and critical care illnesses. A major component of this objective is met through the participation of PCCM fellows in educational endeavors such as lectures, in-services, and proactive communication; and (3) to develop processes that enhance the education and understanding of simple and complex pulmonary and critical care issues by the general public in the context of cultural diversity. The hospitals offer a wide variety of opportunities to interact with patients from diverse cultural and economic backgrounds. The cultural diversity of the medical staff and patients enhances the educational process, opening the minds of PCCM fellows to cultural differences and service-oriented practices.

RADIOLOGICAL SCIENCES (DIAGNOSTIC RADIOLOGY)

The Department of Radiological Sciences has 22 residents training for certification in diagnostic radiology. The program is based at the UCI Medical Center and integrated with LBVAMC, and MHMC. Residents rotate through all three institutions.

The objectives of the program are (1) to provide individuals with a solid background in all modalities of imaging, (2) to provide an atmosphere conducive to research and to encourage opportunities for residents to participate in research work with physicians and scientists, and (3) to provide elective periods in which residents can work in given areas of the Department to increase their expertise or work on research projects during their residency training.

The residency program includes specialized training in interventional radiology, ultrasonography, nuclear medicine, computerized tomography, magnetic resonance imaging, and spectroscopy, as well as opportunities to participate in major research programs conducted in the Department. All residents are encouraged to complete at least one major paper during the program.

Candidates are accepted only at the postgraduate-2 level for a four-year program. Fellowships are available for an additional year in specialized areas following the successful completion of the residency. The newest technologies in the field of radiological sciences are available at UCI Medical Center and the School's affiliated institutions.

RADIATION ONCOLOGY

The Residency Training Program in Radiation Oncology is designed to prepare suitably qualified applicants for academic and clinical practice careers in radiation oncology. Candidates enter a four-year program which includes clinical experience, didactic lectures, and integrated research experience. Unique opportunities exist for training in the use of interstitial and intracavitary treatment using radionuclides and specially designed applicators. An elective rotation may be taken in related branches of medicine (e.g., medical oncology, surgical pathology, gynecologic oncology) or at other radiation oncology departments. The Program includes rotations at three participating hospitals: UCI Medical Center, LBVAMC, and MHMC.

SURGERY

The philosophy underlying all aspects of surgical training is that surgery is best learned, taught, and practiced as applied clinical physiology. Operative techniques and applied anatomy receive appropriate attention. Major portions of clinical experience, teaching, conferences, research, and patient care are oriented toward understanding and correcting disordered human biology. The surgical specialty involves more years of training than other medical disciplines due to the breadth of diseases and complexity of pathophysiology involved in surgery. The Department offers residencies in general surgery, plastic surgery, and urology.

UROLOGY

The Department of Urology Residency Program is a four-year training program which follows a one-year internship in the Department of Surgery. The residency program provides training in all aspects of urologic disease. The residents receive extensive training in open and endoscopic procedures, laparoscopy and other minimally invasive techniques, urologic pathology, uro-radiology, and management of non-operative urologic conditions. The program's training hospitals include UCI Medical Center, VA Long Beach Health System, Kaiser Permanente Anaheim, and Long Beach Memorial. Following the formal residency training, residents are required to join the faculty as clinical instructors for one year. The Urology Department encourages and supports both clinical and basic science research.

GRADUATE ACADEMIC PROGRAMS

The School of Medicine's basic medical science departments of Anatomy and Neurobiology, Biological Chemistry, Microbiology and Molecular Genetics, Pathology, and Physiology and Biophysics participate jointly with the School of Biological Sciences in offering graduate instruction leading to the M.S. and Ph.D. degrees in Biological Sciences. The Department of Community and Environmental Medicine and the Department of Pharmacology offer M.S. and Ph.D. programs. In addition, the Department of Pediatrics offers an M.S. degree in Genetic Counseling.

Application materials may be obtained by contacting the individual graduate programs or the:

University of California, Irvine

 Leonard Kitzes, **Interim Department Chair**

Faculty

Aileen J. Anderson: Mechanisms of neurodegeneration and inflammation after central nervous system injury
 Tallie Z. Baram: Developmental neurobiology of excitation and excitotoxicity; CNS mechanisms of stress response
 Robert H. Blanks (*Emeritus*): Vestibular physiology and anatomy
 Ralph A. Bradshaw: Growth factor action; signal transduction; protein processing
 Anne L. Calof: Developmental neurobiology; molecular mechanisms of neurogenesis and programmed cell death
 James H. Fallon: Human and molecular brain imaging, growth factors and adult stem cells in injured brain
 Christine M. Gall: Regulation of neuronal gene expression; neurotropic factors
 Roland A. Giolli, *Department Vice Chair*: Experimental neuroanatomy; visual system
 Hans S. Keirstead: Axon and myelin regeneration following spinal cord injury
 Herbert P. Killackey: Developmental neuroanatomy; somatosensory system
 Leonard M. Kitzes: Auditory system physiology and development
 Frances M. Leslie: Effects of drugs of abuse on central nervous system development
 Diane K. O'Dowd: Regulation of neuronal excitability; development of functional synaptic connections
 Charles E. Ribak: Changes in the neural circuitry in the epileptic brain
 Richard T. Robertson: Developmental neurobiology; forebrain development
 Steven S. Schreiber: Mechanisms of neural reorganization in CNS after injury and therapeutic applications
 Martin A. Smith: Cellular and molecular mechanisms of synapse formation
 Ivan Soltesz: Plasticity of hippocampal microcircuits
 Oswald Steward: Mechanisms of recovery from CSN injury
 John E. Swett (*Emeritus*): Peripheral nervous system, spinal cord, pain mechanisms
 Ji Sze: Molecular neurobiology; gene expression in *C. Elegans*
 John H. Weiss: Mechanisms of neural degeneration
 Fan-Gang Zeng: Auditory prostheses

Research programs in the Department of Anatomy and Neurobiology focus on the neurosciences. Faculty interests range across the broad field of neuroscience research, including cellular and molecular neurobiology, mechanisms of development, experimental neuroanatomy, structure and function of sensory and motor systems, and response to injury and regeneration. The Department maintains facilities for electron microscopy, laser confocal microscopy, and computer-based imaging and informatics. Students performing graduate work in the Department are encouraged to become

proficient in multiple areas of neuroscience using interdisciplinary techniques.

The Department offers graduate training in neuroscience under the auspices of the School of Biological Sciences in the Neurobiology track of the combined program in Molecular Biology, Genetics, and Biochemistry (MBGB). The program offers the Ph.D. degree in Biological Sciences. In concert with several other departments, a combined neuroscience core curriculum has been developed which includes course offerings in systems neurobiology, neurophysiology, and cellular, molecular, and developmental neurobiology. These courses may be taken as complete or partial fulfillment of the elective requirements of the Ph.D. program.

The Department also participates in the Interdepartmental Neuroscience Program. Students who select a focus in Neuroscience and a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year. Students are required to attend departmental seminars and participate in the Department's Journal Club. The dissertation research topic is chosen by the student in consultation with the research advisor. The majority of the third and fourth years are devoted to research. By the end of the third year, students take their advancement-to-candidacy examination by presenting and defending a proposal for specific dissertation research. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Course descriptions may be found in the School of Biological Sciences section.

Biological Chemistry

Building D, Room 240, Medical Sciences I; (949) 824-9367
Wen-Hwa Lee, **Department Chair**

Faculty

Bogi Andersen: Transcriptional regulation in Epithelial tissues
Pierre Baldi: Computation biology, bioinformatics, probabilistic modeling, machine learning
Rainer K. Brachmann: Cancer genetics, chromatin and transcriptional regulation, tumor suppressor gene p53
Phang-Lang Chen: Signal transduction in response to DNA damage and tumor genesis
Xing Dai: Transcriptional control of cellular differentiation in mice
Peter Donovan: The mechanisms by which pluripotent stem cells are formed in the embryo and the uses of such stem cells for transplantation therapy of human disease
Peter Kaiser: Cell cycle regulation by ubiquitin
Eva Y.-H. P. Lee: Breast cancer and DNA damage checkpoint control
Wen-Hwa Lee: Molecular cancer genetics, mainly the mechanism of tumor suppressor gene functions, cancer progression and novel therapy
Ellis R. Levin: The plasma membrane estrogen receptor (ER) and its effects on the biology of estrogen action
Steven Lipkin: Cancer genetics and genomics
Haoping Liu: Signal transduction, cell cycle regulation, hypha development in yeast
Calvin S. McLaughlin: Functional genomic analysis
Frank Meyskens: Carcinogenesis and molecular biology of melanoma and chemoprevention of human cancer
Robert K. Moyzis: Human genomics and complex neurogenetic disorders
Masayasu Nomura: RNA polymerase I; nucleolus and ribosome synthesis; nuclear structure and function
Daniele Piomelli: Biochemistry and pharmacology of the endogenous cannabinoids and other lipid signaling systems
Suzanne B. Sandmeyer: Retrovirus-like elements in yeast
Robert E. Steele: Evolution of multicellular animals and their genomes
Leslie M. Thompson: Molecular/biochemical analysis of skeletal dysplasias and Huntington's disease
Paul Vrana: Genetics, control and evolution of genomic imprinting, growth control and placental development
Douglas C. Wallace: Molecular and mitochondrial medicine and genetics
Kyoko Yokomori: Chromosome structure organization and its role in genome function and stability

Faculty research interests in the Department of Biological Chemistry are in the structure and function of chromosomes, signal transduction and its role in cell growth control, regulation of gene expression (transcription, protein synthesis, and protein localization), and the molecular basis of development. Genome sequencing projects are making it possible for faculty to exploit information learned about gene function in model organisms for understanding human disease processes. Students are exposed to technical expertise in all facets of current research in molecular biochemistry from protein chemistry to genetic engineering and gene mapping. Currently, researchers in the Department are using new DNA array technology and bioinformatics to understand global changes in gene expression in response to the environment.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Molecular Biology, Genetics, and Biochemistry (MBGB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin thesis research in the second year. Students are required to attend and participate in the departmental research seminars. In addition, students are required to complete three advanced-level graduate courses subsequent to entering the Department's Ph.D. concentration. In the third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending a proposal for specific dissertation research. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Course descriptions may be found in the School of Biological Sciences section.

Environmental Toxicology

10 Faculty Research Facility; (949) 824-8642
Sheldon Greenfield, **Department Chair**

Faculty

Dean B. Baker: Environmental medicine and clinical toxicology; epidemiology; clinical effects of heavy metals, pesticides, and hazardous waste
Stephen C. Bondy: Neurotoxicology; biochemical changes in membranes resulting from toxic exposures
Arezo Campbell: Role of environmental and endogenous toxins in promoting innate immune responses in the brain; delineation of the signaling pathways involved and the role of environmental agents in the pathogenesis of neurodegenerative disorders
Jefferson Y. Chan: Chemical pathology of tissue injury with focus on the oxidative stress response in cells exposed to toxic xenobiotics
Derek Dunn-Rankin: Laser and optical diagnostics in practical systems, optical particle sizing; droplet formation and vaporization in high-pressure environments
Jonathon E. Ericson: Distribution of social ecology (environmental health science; archaeological chemistry), sources and extent of environmental lead exposure leading to prevention and diagnosis of childhood lead poisoning
Sheldon Greenfield: Childhood injury prevention and control, cancer prevention and control; health care delivery and organization; cost effectiveness and health priorities; post-traumatic stress; medical education
Chenyang (Sunny) Jiang: Application of molecular techniques to detect human pathogenic bacteria and viruses in aquatic environments; coastal water quality microbiology
Sherrie H. Kaplan: Evaluating quality of care for chronic disease; increasing patient participation in treatment decisions; health status and quality of life assessment; changing physician and patient behavior and doctor-patient communication
Michael T. Kleinman: Uptake and distribution of inhaled toxic materials in the respiratory tract; effects of air pollutants on cardiopulmonary function
Charles E. Lambert: Toxicology of chemicals in the workplace; industry and regulatory toxicology; risk assessment, risk management, and risk communication
Ulricke Luderer: Reproductive and developmental toxicology
Calvin S. McLaughlin: Biochemical toxicology and regulation of protein synthesis; mechanisms of action of mycotoxins including trichothecenes

Betty H. Olson: Environmental microbiology and water chemistry; public policy issues in environmental toxicology

Kathryn E. Osann: Cancer epidemiology; biostatistics

Robert F. Phalen: Biophysics, aerosol science, and inhalation toxicology; toxicity of mixtures of particles and gases, lung defenses, and particle deposition in airways.

J. Leslie Redpath: Studies on the chemical and physical modification of radiation damage aimed at basic research in carcinogenesis

Ronald C. Shank: Graduate Program Director; Biochemical mechanisms in toxic tissue injury with emphasis on chemical carcinogenesis; application of tools of molecular biology to study cytotoxicity

The Department of Community and Environmental Medicine provides graduate training in environmental toxicology and offers the M.S. and Ph.D. degrees in Environmental Toxicology. The program in Environmental Toxicology provides students with the knowledge and skills necessary and appropriate to teach and/or conduct basic and applied research programs in inhalation/pulmonary toxicology, environmental carcinogenesis, biochemical neurotoxicology, chemical pathology, phototoxicity, toxicology of natural products, and toxicokinetics. The program is expanding into several areas of public health research.

Toxicology involves scientific study of the entry, distribution, bio-transformation, and mechanism of action of chemical agents harmful to the body. The program interprets environmental toxicology as the study of the effects and mechanisms of action of hazardous chemicals in food, air, water, and soil, in the home, workplace, and community, and considers experimentally and theoretically such diverse research problems as: (1) new scientific approaches to toxicological evaluation of environmental chemicals such as air and water pollutants, food additives, industrial wastes, and agricultural adjuvants; (2) mechanisms of action in chemical carcinogenesis and mutagenesis; (3) the molecular pathology of tissue injury in acute toxicity; and (4) scientific principles involved in extrapolating from laboratory animal data to expected effects on human health in environmental exposures.

Students entering the program have varied backgrounds, including chemistry, biology, and physiology. The curriculum is based on a foundation of basic and health sciences with applications of scientific principles to environmental problems. Formal course work is enriched by a strong commitment to student-professor interaction throughout the program. An important and integral part of the learning process is an early and intensive involvement of the student in ongoing original research projects in environmental toxicology, especially inhalation/pulmonary toxicology, chemical carcinogenesis, biochemical toxicology, chemical pathology, and neurotoxicology.

In addition to meeting the general admission requirements set by the Office of Graduate Studies, applicants must be admitted by an Admissions Committee composed of faculty members from the Department of Community and Environmental Medicine. Candidates are selected on the basis of a balanced evaluation of the following criteria: (1) prior scholastic performance, including a consideration of grade point average, course load, nature of courses taken, and college attended; (2) recommendations by professors and others; (3) scores on the Graduate Record Examination; the Subject Test in either Biology or Chemistry is strongly recommended; (4) an interview by the Admissions Committee, when feasible; and (5) experience in undergraduate research. The applicant must have received a bachelor's degree in a biological or physical science, in a premedical curriculum, or have an acceptable equivalent. Applicants with a bachelor's degree in engineering may qualify for admission into the program if they have had sufficient training in biology and chemistry.

Undergraduate preparation of applicants should include six quarter units in general biology, zoology, bacteriology, or anatomy; 12 quarter units in mathematics, including calculus through vector analysis and differential equations; 12 quarter units of chemistry,

including four quarter units of organic chemistry; 12 quarter units of physics, including optics; and four quarter units in molecular biology or biochemistry. Outstanding applicants who lack one or two of these prerequisites may be given an opportunity to take the required course(s) either before admission or during the first year in the graduate program; in such circumstances, none of these undergraduate courses may be used to satisfy the program elective or core course requirements. Upper-division or graduate science courses may be considered as substitutes for the above prerequisites by the Admissions Committee.

The graduate core curriculum for the Ph.D. degree includes Environmental Toxicology 201, 206A-B, 207, 298A-B-C, and 16 units from an approved elective pool. This pool consists of Environmental Toxicology 202, 204, 208, 212, 220, 230; Physiology 206A-B; Anatomy 203A-B; Molecular Biology and Biochemistry 203, 204; and Developmental and Cell Biology 231B. Ph.D. students must also fulfill comprehensive examination, qualifying examination, teaching, and research dissertation requirements. The normal time for advancement to candidacy is three years. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Requirements for the M.S. degree may be satisfied in one of two ways: Under Plan I, students complete the core program (Environmental Toxicology 201, 206A-B, 207, 298A-B, 299A-B-C, and eight units from the approved elective pool) with an average grade of B or better, and, under the direction of a faculty advisor, prepare a thesis that is acceptable to the thesis committee. Under Plan II, students complete the core program (Environmental Toxicology 201, 206A-B, 207, 290A-B-C, 298A-B-C, and eight units from the approved elective pool) with an average grade of B or better, prepare a scholarly paper based on individual study in an area of toxicology under the supervision of a faculty member, and satisfactorily pass the written comprehensive examination.

Opportunities for individual training and independent research experience exist in inhalation and pulmonary toxicology, atmospheric chemistry and aerosol science, chemical carcinogenesis, neurochemistry, biochemical toxicology, toxicology of naturally occurring compounds, chemical pathology, environmental microbiology, and environmental chemistry.

Research grants and contracts are available to support qualified students as research assistants.

GRADUATE COURSES IN ENVIRONMENTAL TOXICOLOGY

201 Principles of Toxicology (4) F. Problem solving to demonstrate principles of toxicology; quantitative dose-response relationship; toxicant-target (receptor) interaction emphasizing interspecies differences in Ah receptor and dioxins; complete *in vivo* metabolism of xenobiotics by mammalian systems; integration of organ responses to toxic agents.

202 Environmental Toxicology (4) W. Analysis of real problems involving toxic chemicals and the human food, air, and water supplies, occupational exposures, and life styles. Formal problems will be considered by small groups of students and discussed by the class. Prerequisite: Environmental Toxicology 201.

203 Immunotoxicology I (4) S. Introduction to the basic concepts of immunotoxicology and the role of environmental toxins in mediating suppression or stimulation of the immune response.

204 Neurotoxicology (4) W, even years. The effects of various harmful chemicals upon nervous system function. Emphasis given to the molecular events underlying neurological damage and to the relation of such processes to basic mechanisms of neurobiology.

206A-B Target Organ Toxicity (6-6) F, W. Analysis of responses occurring in twelve organ systems of humans exposed to environmental chemicals at toxic levels; distinctive cellular and tissue structure and physiological function; toxicological responses discussed in terms of phenomena, mechanisms of action, and methods of study. (Kleinman, Said)

207 Experimental Design and Interpretation of Toxicology Studies (2) F. Introduction to methods of structuring toxicology experiments and analyzing data including experimental design, data distributions, sample sizes, hypothesis testing, linear regression, analysis of variance, multiple comparison testing, and non-parametric tests.

208 Experimental Molecular Toxicology (4) S. Experimental techniques in mutagenesis research including detection of DNA damage and repair in DNA fragments and genes, in microbial and mammalian systems, and in transgenic mice. Methods for screening and sequence analysis of mutations generated by genotoxins.

209A Introduction to Clinical Epidemiology I (4). An introduction to the principles and practice of clinical epidemiology and the epidemiologic or population-based approach to health and disease. Examines the role of clinical epidemiology in clinical practice and clinical public policy, the changing patterns of community health problems. Prerequisites: Environmental Toxicology 208A-B or ICS 250 or consent of instructor.

209B Introduction to Clinical Epidemiology II (4). Explicate methods and analytic techniques for approaching clinical epidemiologic problems. Discussion topics include chronic disease, genetic, reproductive, nutritional, and environmental epidemiology. Decision analysis to evaluate health services and ethical and professional issues are reviewed. Prerequisites: Environmental Toxicology 209A and 208A-B or ICS 250 or consent of instructor.

212 Inhalation Toxicology (4) S, odd years. The principles and practice of laboratory inhalation toxicology. Topics include aerosols, gases, respiratory tract structure and function, lung defenses, aerosol deposition exposure techniques, characterization of exposure atmospheres, experimental designs, animal models, and regulations and guidelines.

220 Industrial Toxicology (4) F. Analysis of responsibilities toxicologists have in industry, including product safety, generating material safety data sheets, animal testing, ecotoxicological testing, risk/hazard communication, and assisting industrial hygienists and occupational physicians; emphasis on interdisciplinary nature of industrial toxicology and communication skills. Prerequisite: Environmental Toxicology 206A-B.

221 Toxicology in Pharmaceutical and Medical Devices (3). Examines the role of toxicology in evaluating the safety of medical devices and pharmaceuticals within the various regulatory schemes in the U.S. and E.U. Emphasis placed on preclinical toxicity testing programs. Prerequisite: Environmental Toxicology 201, 206A-B, or consent of instructor.

233 Design and Analysis of Clinical Trials (4). History, organization and planning, rationale for methods (design sampling, analysis, bias, error), limits, ethics, and practical issues involved in the conduct of clinical trials. Discussion of impact of clinical trials on the practice of medicine, national policy, and public opinion. Prerequisites: Environmental Toxicology 208A-B and ICS 250 or consent of instructor.

242 Quality of Care, Outcomes Research, Provider-Patient Communication (4). Principles and practice of quality of care research, outcomes research, and provider-patient communication research. Current methods for development of quality of care measures, assessment of performance of various levels of the health care system, and cost vs. quality of care. Prerequisites: Environmental Toxicology 208A-B or ICS 250 or consent of instructor.

250 Introduction to Health Services (4). Introduction to the U.S. health care system with focus on its major components, the interaction of the elements, and history of the system. Role of government in health care, health insurance, along with national context and history of health services.

251 Introduction to Health Care Financing and Health Economics (4). Basic concepts and tools of economic analysis applied to health care markets. Emphasizes the basic principles of demand for medical care and health insurance examining the financing of health care and the impact on costs and quality of care.

290 Independent Study in Environmental Toxicology (4) F, W, S. With consent from a faculty member who will supervise the program, a student may receive credit for individual study in some area of toxicology, culminating in the completion of a scholarly paper on the subject. May be repeated for credit as the topics vary.

297 Advanced Topics in Occupational Toxicology (2) F, W, S. Discussions with clinical and research faculty in environmental toxicology and occupational medicine on current toxicology problems in the workplace and critical review of current publications in the field. Journal club/seminar format.

298A-B-C Environmental Toxicology Seminar (2) F, W, S. Presentation and discussion of current research problems and issues by students, postdoctoral fellows, faculty, and guests, covering the broad research and policy areas of environmental toxicology. Open to Environmental Toxicology graduate students only.

299 Research Problems (1 to 12) F, W, S. Research work for the M.S. thesis or Ph.D. dissertation.

Genetic Counseling

City Tower, Suite 800, UCI Medical Center; (714) 456-5789

Ann P. Walker, **Graduate Program Director**

Faculty

James Bartley: Genetic metabolic diseases

Maureen Bocian: Heterogeneity and variability in genetic diseases; characterization of new syndromes; neurofibromatosis; skeletal dysplasias

José A. Camacho: Genetic metabolic diseases

Pamela Flodman: Genetic epidemiology; human genome informatics; genetic counseling and risk perception

Kathryn Steinhaus French: Prenatal genetic diagnosis

John Jay Gargus: Genetic metabolic diseases; molecular genetics of cell membrane disorders

Taosheng Huang: Genetics of cardiovascular malformations; Holt-Oram syndrome

Steven Lipkin: Molecular genetics of colon cancer; clinical cancer genetics

Robert Moyzis: Chromosome structure and gene expression; human telomere and centromere organization and function

Vincent Proccaccio: Mitochondrial and molecular medicine

Roxanne Ruzicka: Prenatal genetic diagnosis; risk assessment and counseling for hereditary cancers

Moyra Smith: Gene linkage and mapping in neurogenetic disorders including autism; mutation analysis and genotype-phenotype correlation in tuberous sclerosis

M. Anne Spence: Genetic epidemiology, quantitative genetics; linkage and mapping

Ann P. Walker: Genetic counseling in hereditary cancer and late-onset diseases; genetics education; genetics services delivery; ethical, cultural, and public policy issues in genetics

Douglas Wallace: Mitochondrial genetics, evolutionary biology and metabolic disease

Michael V. Zaragoza: Genetics of cardiomyopathies in humans and mice

The Division of Human Genetics in the School of Medicine's Department of Pediatrics offers a Master of Science degree program in Genetic Counseling. Most graduates of the program join academic or hospital-based genetics teams providing clinical services, teaching, and research. Others work for local, state, or federal genetics programs, for commercial genetics laboratories, on genetic research studies, or in education. The graduate program is fully accredited by the American Board of Genetic Counseling.

Division faculty and staff are engaged in teaching, research, and patient service. Clinical activities center on diagnostic evaluation, management, and genetic counseling for genetic disorders, birth defects, and developmentally disabling conditions. Faculty research interests include: gene mapping and linkage analysis using molecular and quantitative methods; characterization and management of malformation and chromosomal syndromes; counseling for late-onset genetic conditions—including familial cancers and neurogenetic disorders; factors causing chromosome abnormalities and congenital malformations; cancer genetics and cytogenetics; psychosocial and cultural issues associated with genetic conditions, birth defects, prenatal diagnosis, and genetic tests; genetic screening and genetic services delivery; and ethical and public policy issues in genetics.

During the six to eight academic quarters of the program, students complete a sequence of core courses covering medical, quantitative, biochemical, molecular, and cancer genetics; teratology, embryology, and development; cytogenetics; counseling theory; research methods; ethical issues; and community resources. All courses are taught by Division faculty specifically for students in

the program. Experiential professional training occurs concurrently with formal course work in a variety of clinics at the UCI Medical Center and satellite facilities, in the prenatal diagnosis program, in the cytogenetics and molecular genetics laboratories, and in various community agencies. Students participate in these and other divisional and departmental professional and educational activities such as lectures, seminars, journal club, Pediatrics and Obstetrics and Oncology Grand Rounds, cytogenetics conferences, and various research, counseling, and patient management conferences throughout the program. While not required, some students choose to arrange optional clinical rotations at other academic, private, or commercial genetics units.

Degree requirements include a minimum of 75 quarter units, completion of a research thesis that should be publishable, and demonstration of appropriate professional skills in genetic counseling. The program director serves as faculty advisor to students. Teaching and supervision of professional experiential training are shared by all Division faculty and staff, who frequently review student progress. In the second year, development of professional skills can be individualized according to the trainee's needs and interests. Successful completion of the program fulfills the curricular and clinical training requirements for eligibility to sit for examination by the American Board of Genetic Counseling.

Recommended undergraduate preparation includes course work in the biological and behavioral sciences—particularly in genetics, biochemistry, molecular biology, psychology, and human development. Course work in statistics is desirable. Fluency in Spanish or a Southeast Asian language confers a considerable advantage. Extracurricular or employment experiences that provide evidence of the student's maturity, interpersonal skills, and promise as a genetic counselor figure prominently in the admissions decision. References should speak to these qualities as well as to the academic qualifications of the applicant. The GRE General Test and Writing Assessment are required. Subject Test scores in any area will also be considered if they are available. Since there is no GRE code for the Department of Pediatrics, applicants should use the UCI institution code: R4859.

Applications are accepted for the fall quarter only and must be complete by February 1. Because of keen competition for places in the program, a two-stage admissions process is employed. Following initial review of applications by the faculty admissions committee, approximately one-fifth of applicants are invited for interviews, which are usually conducted during March and April. If invited, it is greatly to the candidate's advantage to have an on-site interview, although in difficult circumstances it may be possible to arrange an out-of-town interview with a program graduate or a traveling faculty member. Any candidate planning to be in the Southern California area in March or April is encouraged to inquire in advance regarding the likelihood of an interview. Final selection from the interviewed candidates occurs in late April or early May. Five or six students are usually admitted each year.

GRADUATE COURSES IN PEDIATRICS GENETICS

200A Introduction to Medical Genetics and Cytogenetics (4) F. Lecture, three hours. Covers current concepts regarding mitosis, meiosis, the cell cycle, and chromosome ultrastructure and function. Clinical disorders caused by chromosomal aneuploidy, duplication, and deletion, and principles of Mendelian, chromosomal, and multifactorial and nontraditional inheritance are presented and illustrated.

200B Genetic Screening, Prenatal Development, and Human Teratology (4) W. Lecture, three hours. Principles and techniques of prenatal, neonatal, and carrier screening. Infertility, pregnancy, and delivery. Normal and abnormal prenatal growth and development. Reproductive and fetal effects of drugs, radiation, infections, and other environmental factors. Prerequisite: Pediatrics Genetics 200A.

200C Human Genetic Disorders (4) S. Lecture, three hours. Inheritance, diagnosis, natural history, management, and counseling considerations for commonly encountered genetic diseases, birth defects, and dysmorphic syndromes. Prerequisites: Pediatrics Genetics 200A and 200B.

200D Disorders Due to Inborn Errors of Metabolism (4) F (even years). Lecture, three hours. Aspects of biochemistry and metabolism are reviewed with special emphasis on genetic abnormalities which lead to inborn errors of metabolism. Diagnostic procedures, heterozygote detection, treatment, counseling issues, and prenatal diagnosis are reviewed. Prerequisite: Pediatrics Genetics 200A or consent of instructor.

200E Molecular Genetics (4) S. Lecture, three hours. The derivation of different types of DNA probes and DNA libraries, restriction endonuclease polymorphisms, assignment of genes to chromosomes, and genetic linkage. Particular emphasis is placed on the use of recombinant DNA technologies and genetic linkage analysis for diagnosis of human genetic disease. Prerequisite: Pediatrics Genetics 200A, 200D, or consent of instructor.

200F Quantitative Genetics (2) S. Lecture, one and a half hours. Quantitative aspects of human genetics, including population studies, segregation analysis, linkage, mapping, and genetic risk determination. Corequisite or prerequisite: Pediatrics Genetics 200A.

200G Hereditary Cancer Counseling (4) W (odd years). Lecture, three hours. Issues in genetic counseling for cancer. Cancer biology; genetic mechanisms and environmental influences in carcinogenesis; tumor pathology; cancer gene mapping; epidemiology. Features natural history, diagnosis, prevention, surveillance, and management of hereditary cancers. Psychosocial, ethical, legal aspects of cancer risk assessment. Prerequisites: Pediatrics Genetics 200A, 200B.

200H Genetic Counseling Research Design (4) S. Seminar, three hours. Quantitative and qualitative methods for genetic counseling research. Reference management; statistic: sample size, power, and data analysis; reliability and validity; surveys, questionnaires, interviews, and focus groups; quality of life and genetic epidemiology research; designing a research protocol; IRB issues; grant writing.

200L Cytogenetics Laboratory (4) F. Laboratory, 10 hours/week. A practicum introducing methods of specimen collection, short-term lymphocyte and bone marrow culture, long-term fibroblast and amniocyte culture, harvesting and slide preparation, chromosome staining, microphotography, and darkroom techniques. Microscopic chromosome analysis, photographic karyotyping, and the appropriate use of cytogenetic nomenclature are emphasized. Open only to Genetic Counseling students.

201A Introduction to Genetic Counseling (4) F. Through directed readings, observing patient evaluations, role-playing, and conducting intake interviews, students are introduced to the process of diagnosis, management, and counseling for genetic disease. Psychosocial issues, interviewing techniques, pedigree construction, clinical photography, and various other skills are addressed. Open only to Genetic Counseling students.

201B Clinical Rotation I (4) W. Tutorial and fieldwork. Provides extensive supervised experience in history taking, interviewing, and psychosocial assessment in the clinical genetics setting. Students independently perform telephone, office, and home-visit intake interviews, participate in counseling, and present cases at patient management conferences. Open only to Genetic Counseling students.

201C Clinical Rotation II (4) S. Tutorial and fieldwork. Provides further supervised experience in genetic counseling, case management, clinic administration and organization, and the use of community resources. Emphasis is on sharpening counseling skills and on developing a professional identity and code of ethics. Open only to Genetic Counseling students.

201D Prenatal Diagnosis Counseling (4) F. Tutorial and fieldwork. A practicum with extensive supervised experience in prenatal diagnosis counseling which provides the student with the opportunity to conduct genetic counseling sessions semi-independently and to further develop clinical skills. Open only to Genetic Counseling students. Prerequisites: Pediatrics Genetics 200A, 200B, and 200C.

202A Counseling in Human Genetics: Theory and Methods (3) S. Lecture and discussion, two hours. Theoretical approaches, counseling models and methods, and bio-psychosocial assessment strategies are examined in the context of genetic counseling. Contract-setting, working alliance, the use of self and evaluation methods. Beginning counseling and peer supervision skills are practiced in class. Open only to Genetic Counseling students.

202B Community Resources (2) F. Seminar and activity, two hours. Lectures, guest speakers, and community visits acquaint the genetic counselor with public and private health care and funding agencies, parent support and advocacy groups, and other resources available to assist individuals and families confronted with genetic disorders, developmental disabilities, and birth defects. Open only to Genetic Counseling students.

202C Ethical Issues in Human Genetics (2) S (odd years). Lecture and discussion, two hours. Explores major social, legal, and ethical issues in genetic counseling including those arising in genetic screening, prenatal diagnosis, informed consent, privacy and confidentiality, rights of the disabled, new genetic and reproductive technologies, treatment, and access to services. Prerequisite: consent of instructor.

203A Counseling in Human Genetics: Putting Thought to Practice (4) F. Seminar, three hours. Builds upon the skills learned in previous courses emphasizing advanced counseling methods such as listening, empathy, and collaboration. The counselor's own self-awareness, ethical behaviors, and limits are explored. Individual, team, and group exercises are performed. Prerequisite: Pediatrics Genetics 202A. Open only to Genetic Counseling students.

204A, B, C Professional Skills Development (4, 4, 4) F, W, S. Hones and augments existing competencies in genetic counseling through ongoing clinical experiences. Students develop skills in use of computers for genetics applications, provision of community and professional education, and clinic administration. Further experience in genetics laboratories or specialty clinics may be elected by students. Open only to Genetic Counseling students.

295 Master's Thesis Research and Writing (4 to 8) F, W, S. Tutorial. Under the supervision of one or more faculty members, the student designs and conducts a research project or completes a case report. A problem in the cytogenetics, biochemical, clinical, psychosocial, or behavioral areas of medical genetics may be investigated. Prerequisite: consent of instructor.

Microbiology and Molecular Genetics

Building B, Room 240, Medical Sciences I; (949) 824-5261
Bert L. Semler, **Department Chair**

Faculty

Hoda Anton-Culver: Epidemiology studies
Ruslan D. Aphasizhev: Molecular parasitology and biochemistry of RNA editing
Alan G. Barbour: Microbial pathogenesis and ecology of infectious diseases
K. George Chandy: Potassium channels; structure, function and therapeutics
Dennis D. Cunningham: Proteases and protease nexins: regulation of neural cells
Michael Demetriou: The molecular biology and glycobiology of T cell dysfunction in organ-specific autoimmunity
Alan L. Goldin: Molecular analysis of ion channels and their roles in human diseases
Sidney H. Golub: Immunology of human cancer; science policy and ethics
George A. Gutman: Potassium channel and immunoglobulin super-family genes
G. Wesley Hatfield: Computational biology, effects of DNA topology on gene expression
Klemens J. Hertel: Regulation of gene expression by alternative splicing
Anthony A. James: Genetic manipulation of insect vectors; control of transmission of dengue and malaria
Janos K. Lanyi: Structure and function in bacterial Rhodopsins
Masayasu Nomura: RNA polymerase I; nucleous and ribosome synthesis; nuclear structure and function
Andre Ouellette: Mechanisms of innate immunity in the mammalian intestinal epithelium
W. Edward Robinson: Molecular pathogenesis of lentivirus infection and drug discovery against HIV
Suzanne Sandmeyer: Retrovirus-like elements in yeast
Rozanne M. Sandri-Goldin: Regulatory functions of a post-transcriptionally acting herpes virus protein
Michael E. Selsted: Innate immunity mediated by phagocytic leukocytes and mucosal epithelium
Bert L. Semler: Replication and translation of picornavirus RNAs; RNA-protein and protein-protein interactions
Eric J. Stanbridge: Tumor suppressor genes and oncogenes in human cancer
Ming Tan: Bacterial pathogenesis; gene regulation in Chlamydia
Marian L. Waterman: WNT signaling in cancer and lymphocytes

The Department of Microbiology and Molecular Genetics provides advanced training to individuals interested in the regulation of gene expression and the structural and functional properties of proteins encoded by these genes. The research in the Department covers a wide range of topics with special emphasis on: bacterial gene expression and pathogenesis; viral gene expression and host interactions; trypanosome molecular biology; vector-borne malaria and dengue fever transmission; nuclear-cytoplasmic transport and intracellular signaling; eukaryotic gene expression; mRNA splicing, editing, and processing; cancer genetics and tumor suppressors; ion channel expression and function; genomics and bioinformatics.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Molecular Biology, Genetics, and Biochemistry (MBGB), which is described in a previous section. Students admitted into the MBGB program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

Participation in the Department's seminar series and completion of at least one advanced topics course per year for three years are expected of all students. In their third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending an original proposal for specific dissertation research. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Course descriptions may be found in the School of Biological Sciences section.

Experimental Pathology

Building D, Room D440, Medical Sciences I; (949) 824-6574
Michael E. Selsted, **Department Chair**

Faculty

Rainer K. Brachmann: Cancer genetics; chromatin and transcriptional regulation; tumor suppressor gene p53
Jefferson Y. Chan: Regulation of genes associated with oxidative stress
K. George Chandy: Molecular biology and structure of ion channels; novel therapeutic agents
Luis M. de la Maza: Chlamydia trachomatis vaccines and sexually transmitted diseases
Robert A. Edwards: Mucosal immunology, inflammatory bowel disease, G-proteins, prostaglandins, and chemokines
Agnes Henschen-Edman: Protein structure, function, post-translational modification; fibrinogen
Taosheng Huang: Molecular basis of genetic diseases in human
Anthony A. James: Malaria parasite development; genetic manipulation of insect vectors
John J. Krolewski: Signal transduction pathways regulating the growth and death of normal and neoplastic cells
J. Lawrence Marsh: Regulation of growth factor signaling in patterning, regeneration and oncogenesis
Daniel E. Mercola: Translational cancer biology
Edwin S. Monuki: Cerebral cortex development and disease
Andre Ouellette: Mechanisms and regulation of innate immunity in mammalian epithelia
Ellena M. Peterson: Chlamydia vaccine development
W. Edward Robinson: Pathogenesis of retrovirus infections; molecular mechanisms of integration
Michael E. Selsted: Molecular effectors of mammalian innate immunity
Sandor Szabo: Pathogenesis of gastrointestinal ulceration, duodenal ulcer
Andrea J. Tenner: Innate immunity; the roles of complement and phagocytes in health and disease
Ping Wang: Molecular hormone actions in the normal and diseased heart

The Department of Pathology and Laboratory Medicine offers a Ph.D. in Biological Sciences with a concentration in Experimental Pathology. The graduate program emphasizes experimental approaches to better understand the molecular and cellular mechanisms of disease. Students work in laboratories studying topics ranging from infectious processes such as cryptosporidiosis and the

acquired immune deficiency syndrome to innate immunity, including studies on granulocytes and antimicrobial peptides. The principal areas of research investigated by faculty in the Experimental Pathology concentration range from developmental neurobiology to cancer, including prostate cancer.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Molecular Biology, Genetics, and Biochemistry (MBGB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

Experimental pathology makes extensive use of both animal models of human disease and studies on human tissues from human subjects. Therefore, the curriculum is heavily weighted on experimental models, including animal models, of human disease. The didactic teaching components of the track are supplemented by a twice-monthly Pathology research conference, in which postdoctoral fellows and graduate students present "research in progress" seminars. This seminar series allows trainees the opportunity to gain invaluable experience in presenting their research to other scientists and provides a mentoring process through which students gain insights from diverse scientific viewpoints.

Students must advance to candidacy during their third year. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Course descriptions may be found in the School of Biological Sciences section.

Pharmacology and Toxicology

360 Medical Surge II; (949) 824-7651

Sue P. Duckles, **Department Chair (Interim)**

Frances M. Leslie, **Graduate Program Director/Advisor**

Faculty

- James D. Belluzzi: Brain substrates and pharmacology of reward; characterization and development modulation of nicotine and cocaine reinforcement; abuse potential of tobacco smoke constituents
- Olivier Civelli: Molecular biology of G protein-coupled receptors; search for novel neurotransmitters and neuropeptides; pharmacological and behavioral characterizations of the novel neurotransmitters and neuropeptides
- Sue Piper Duckles: Pharmacology and physiology of vascular smooth muscle; regulation of cerebral circulation, impact of gender and gonadal steroids on vascular function
- Frederick J. Ehler: Muscarinic receptor coupling mechanisms; functional role of muscarinic receptor subtypes; pharmacological methods of analysis
- Kelvin W. Gee: Pharmacology of allosteric modulators of the GABA_A receptor, selective modulation of GABA_A receptor subtypes
- Diana N. Krause: Cerebrovascular regulation and pharmacology; vascular effects of gonadal hormones; melatonin receptors
- Frances M. Leslie: Effects of drugs of abuse on the developing brain
- Z. David Luo: Molecular mechanisms of pain and transduction
- Hans-Peter Nothacker: Physiology, pharmacology and signal transduction of novel G protein-coupled receptors; discovery of novel ligand-receptor systems ("orphan" GPCRs)
- Daniele Piomelli: Biochemistry and pharmacology of the endogenous cannabinoid and other lipid signaling systems
- Ralph E. Purdy: Vascular neurotransmitter receptors, second messengers and signal transduction; cardiovascular effects of microgravity
- Rainer K. Reinscheid: Isolation of natural ligands for so-called "orphan" G protein-coupled receptors and their physiological functions; neurobiology of anxiety and stress behavior
- Larry Stein: Neurochemistry of reward, punishment, and long-term memory
- Qun-Yong Zhou: Neurobiology of prokineticins and prokineticin receptors

The Department of Pharmacology offers the M.S. and Ph.D. degrees in Pharmacology and Toxicology. The Department is engaged in a broad scope of research activity, and faculty research interests include the mechanisms of action and effects of drugs on

the nervous system and on behavior, on skeletal muscle, heart and blood vessels, and on basic processes in these tissues.

Prerequisites for admission include a background in the physical and biological sciences which includes courses in mathematics, physics, chemistry, and biochemistry, including laboratory experience. The Graduate Record Examination and Subject Test in Biology or Chemistry are required. Primary emphasis in the Department is placed on the Ph.D. degree program.

The graduate core program includes Pharmacology 241A-B, 252, 254, 255, 256, 257, Biochemistry 210A, and Physiology 206A-B, quarterly participation in Pharmacology 298, and any additional elective courses assigned by faculty advisors. The major additional requirement for the Ph.D. is the satisfactory completion and oral defense of a dissertation based on original research carried out under the guidance of a faculty member. All candidates for the Ph.D. degree are required to engage in research activities throughout the course of their academic programs. This requirement applies to all students whether or not they are compensated for such services. An appointment as a research assistant is awarded on the basis of scholarship and not as compensation for services rendered. Before advancing to candidacy each student must pass a written qualifying examination to determine the student's competence in pharmacology or pharmacology and toxicology. The full-time student is expected to pass the written qualifying examination by the eighth quarter and the oral qualifying examination for the Ph.D. by the eleventh quarter. The normal time for advancement to candidacy is three years. All requirements for the Ph.D. degree should be completed within five years, and the maximum time permitted is seven years. For more information, contact the Graduate Advisor, Department of Pharmacology.

The Department also participates in the Interdepartmental Neuroscience Program, described in the School of Biological Sciences section of the *Catalogue*. Students who select a focus in Neuroscience and a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

GRADUATE COURSES IN PHARMACOLOGY AND TOXICOLOGY

210 Chemical Neuroanatomy (4). Lecture, two hours; seminar, two hours. Organization of the nervous system, especially with respect to chemical identity of elements, for students of pharmacology. Major cell types, methods of study, ultrastructure, synaptic organization of functionally defined systems, localization of chemically defined cells and receptors, and brain development.

241A-B Medical Pharmacology and Therapeutics (6-6) F, W. Lecture and seminar, eight hours. Principles of pharmacology and in-depth study of drug action. Pharmacokinetics and pharmacodynamics: absorption, distribution and metabolism, general principles of action and receptor concepts. Discussion of major drug classes: molecular mechanism of action, physiological consequences of administration, and clinical use. Prerequisites: Physiology and Biophysics 206A-B and Molecular Biology and Biochemistry 210A.

252 Neurotransmitter and Drug Receptors (6) W. Lecture, three hours; seminar, three hours. Ligand gated ion channels, G protein linked receptors, receptor tyrosine kinases, ligand regulated transcription factors, their signaling mechanisms, trafficking and physiological responses. Analysis of receptor properties by pharmacological methods, radioligand binding, and molecular biology.

254 Methods in Pharmacology (4) F. Lecture, four hours; laboratory, eight hours. Receptor analysis: bioassay measuring contraction, calcium mobilization, second messenger responses; operant conditioning: whole animal, single neuron; radioligand binding; quantitative autoradiography; immunocytochemistry; in situ hybridization for analysis of mRNA; Western and Northern analysis; transgenic mouse knock in and knock out techniques. Prerequisite: consent of instructor.

255 Chemical Transmission (4) S. Lecture, two hours; seminar, two hours. Mechanisms underlying chemical signaling processes in the brain and periphery. Molecular biology, signal transduction, transmitter synthesis and inactivation, pharmacology of integrative function and behavior. Prerequisite: consent of instructor.

256 Experimental Design for Pharmacologists (1) F, W, S. Lecture, one hour; discussion, one hour; laboratory, one hour. Population and sample statistics, hypothesis testing, analysis of variance, nonparametric statistics, experimental design, power, and the use of statistical computer software. Prerequisite: Pharmacology 252 or consent of instructor.

257 Ethics in Research (1) F, W, S. Lecture, one hour; discussion, one hour. Ethical conduct in research including data handling, authorship, conflict of interest, animal rights, handling of misconduct. Prerequisite: Pharmacology 299 or consent of instructor. May be taken for credit two times.

271A, B Molecular Physiology and Disease (4, 4). F of even years, 271A; F of odd years, 271B. Introduces students to concepts of molecular physiology and pharmacology related directly to human diseases. Prerequisite: consent of instructor. Same as Physiology 271A, B and Pathology 271A, B.

298 Seminar (2) F, W, S. Presentation and discussion of current problems and methods in teaching and research in pharmacology, toxicology, and therapeutics.

299 Research (1 to 12) F, W, S

Physiology and Biophysics

Building D, Room D340, Medical Sciences I; (949) 824-5863
Michael D. Cahalan, **Department Chair**

Faculty

Nancy L. Allbritton: Signal transduction by second messengers and protein kinases

Kenneth M. Baldwin: Developmental, hormonal, and exercise factors regulating striated muscle gene expression

Ralph A. Bradshaw: Structure and function of polypeptide growth factors and their receptors; mechanisms of protein turnover

Michael D. Cahalan: Ion channels and Ca^{2+} signaling in the immune system

Vincent J. Caiozzo: Cellular and molecular mechanisms regulating the mechanical properties of skeletal muscle

K. George Chandy: Molecular biology of ion channels and their role in immune cells

J. Jay Gargus: Molecular analysis of membrane signaling proteins

Alan L. Goldin: Molecular biology of neural channels and receptors

George A. Gutman: Molecular and evolutionary studies of immunoglobulin and ion channel genes

Harry T. Haigler: Structure, function, and topography of annexin calcium binding proteins on membranes

James E. Hall: *Biophysics of membrane channels, gap junctions and water channels*

Lan Huang: Developing and employing mass spectrometry-based proteomic approaches for study of signal transduction networks, identification of protein complexes and characterization of their post-translational modifications

Frances A. Jurnak: Macromolecular crystallography; biochemical and structural studies of a model G protein; EF-Tu; structure/function of plant virulence factors

Janos K. Lanyi: *Transport, structure, and energy coupling in bacteriorhodopsin and halorhodopsin*

Shin Lin: Cellular and molecular biophysics of proteins involved in membrane-associated cytoskeletal functions and signal transduction

John A. Longhurst: Integrative biology and sensory signaling systems important in cardiovascular regulation; central neural regulation of autonomic outflow inactivation of cardiac afferents and the influence of electroacupuncture

Kenneth J. Longmuir: Intracellular metabolism, sorting, and transport of lipid in mammalian cells; *membrane fusion*

Hartmut Luecke: Protein crystallography; structure and function of membrane-associated proteins

Alexander McPherson: X-ray diffraction analyses of enzymes, viruses; antibodies and protein-nucleic acid complexes; crystallization methods; microgravity crystallization

Thomas L. Poulos: Protein crystallography; protein engineering; heme enzyme structure and function

Irwin A. Rose: Studies on the mechanism of two enzymes: fumarase and glyoxalase III

Hamid M. Said: Cellular and molecular mechanisms and regulation of intestinal and renal vitamin transporters

Christopher Sims: Development and application of innovative technologies for biomedical research and clinical applications

Ivan Soltesz: Plasticity and modulation of inhibitory synaptic neurotransmission

Bruce J. Tromberg: Optical spectroscopy of tissues and cells

Nosratola D. Vaziri: Vascular biology and role of nitric oxide and reactive oxygen species in regulation of blood pressure; molecular basis of lipid disorders

Larry E. Vickery: Molecular chaperones and protein folding; protein engineering

Ping H. Wang: Molecular actions of insulin-like growth factor I (IGF) in cardiac muscle; complications of diabetes

Stephen H. White: Protein folding in membranes; peptide-bilayer interactions; membrane structure

The Department of Physiology and Biophysics offers research opportunities in the molecular biophysics of membranes and proteins, ion channels and signal transduction, endocrinology, molecular and cell biology, developmental neurobiology, and exercise physiology.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Molecular Biology, Genetics, and Biochemistry (MBGB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

The faculty conducts quarterly reviews of all continuing students to ensure that they are maintaining satisfactory progress within their particular academic program. Students participate in a literature review course designed to strengthen research techniques and presentation skills, and attend the weekly Department colloquium. Students advance to candidacy during the third year; each student presents a seminar on a topic assigned by the formal candidacy committee. Following the seminar, the committee examines the student's qualifications for the successful conduct of doctoral dissertation research. Each student must submit a written dissertation on an original research project and successfully defend this dissertation in an oral examination. Interdisciplinary dissertation research involving more than one faculty member is encouraged. The normal time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Several faculty in the Department are also members of the graduate program in Protein Engineering, which is described in the School of Biological Sciences section.

Course descriptions may be found in the School of Biological Sciences section.

APPENDIX

University Officers

THE REGENTS OF THE UNIVERSITY OF CALIFORNIA

Regents Ex Officio

Governor of California and President of The Regents: Arnold Schwarzenegger
Lieutenant Governor of California: Cruz Bustamante
Speaker of the Assembly: Fabian Núñez
State Superintendent of Public Instruction: Jack O'Connell
President of the Alumni Associations of the University of California:
Jefferson C. M. Coombs
Vice President of the Alumni Associations of the University of California:
Stephen L. Schreiner
President of the University: Robert C. Dynes

Appointed Regents¹

Richard C. Blum (2014)
Russell Gould (2017)
Judith L. Hopkinson (2009)
Eddie Island (2017)
Odessa P. Johnson (2012)
Joanne Corday Kozberg (2010)
Sherry L. Lansing (2010)
Monica C. Lozano (2013)
George M. Marcus (2012)
John J. Moores (2009)
Gerald L. Parsky (2008)
Norman J. Pattiz (2014)
Peter Preuss (2008)
Frederick Ruiz (2016)
Leslie Tang Schilling (2013)
Paul Wachter (2016)
Maria Ledesma (July 1, 2006–June 30, 2007)

Regents-Designate²

to be announced
to be announced

¹ Regents, except ex-officio Regents and the student Regent, are appointed by the Governor to 12-year terms commencing on March 1. Ex-officio Regents serve by virtue of their elected or appointed positions; the student Regent is appointed by the Regents to a one-year term commencing on July 1.

² One-year terms expiring June 30.

Faculty Representatives to The Regents

Michael Brown
John B. Oakley

Principal Officers of The Regents

General Counsel and Vice President–Legal Affairs: James E. Holst
Interim Treasurer of The Regents and Interim Vice President–Investment:
Marie N. Berggren
Secretary of The Regents: Leigh Trivette

OFFICE OF THE PRESIDENT

President of the University: Robert C. Dynes
Acting Provost and Senior Vice President–Academic Affairs: Rory Hume
Senior Vice President–Business and Finance: Joseph P. Mullinix
Senior Vice President–University Affairs: Bruce B. Darling
Vice Provost–Academic Initiatives: Julius Zelmanowitz
Vice Provost–Research: Lawrence Coleman
Vice President–Agriculture and Natural Resources: W. R. Gomes
Vice President–Budget: Lawrence C. Hershman
Vice President–Clinical Services Development: William H. Gurtner
Vice President–Student Affairs: Winston C. Doby
Vice President–Financial Management: Anne C. Broome
Vice President–Academic and Health Affairs, Executive Vice Provost:
Rory Hume
Vice President–Laboratory Management: S. Robert Foley

CHANCELLORS

Chancellor at Berkeley: Robert J. Birgeneau
Chancellor at Davis: Larry N. Vanderhoef
Chancellor at Irvine: Michael V. Drake
Chancellor at Los Angeles: Albert Carnesale
Chancellor at Merced: Carol Tomlinson-Keasey
Chancellor at Riverside: France A. Córdova
Chancellor at San Diego: Marye Anne Fox
Chancellor at San Francisco: J. Michael Bishop
Chancellor at Santa Barbara: Henry T. Y. Yang
Chancellor at Santa Cruz: Denice D. Denton

UCI OFFICERS

Chancellor: Michael V. Drake
Executive Vice Chancellor and Provost: Michael R. Gottfredson
Vice Chancellor, Administrative and Business Services: Wendell C. Brase
Vice Chancellor, Planning and Budget: Roy E. Dormaier
Vice Chancellor, Research: William H. Parker
Vice Chancellor, Student Affairs: Manuel N. Gómez
Vice Chancellor, University Advancement: Thomas J. Mitchell
Interim Chief Executive Officer, Medical Center: Maureen Zehntner

UCI DEANS AND CHAIRS OF INDEPENDENT ACADEMIC UNITS

Dean, Claire Trevor School of the Arts: Nohema Fernández
Dean, School of Biological Sciences: Susan V. Bryant
Dean, The Henry Samueli School of Engineering: Nicolaos G. Alexopoulos
Dean, School of Humanities: Karen R. Lawrence
Dean, Donald Bren School of Information and Computer Sciences: Debra J. Richardson
Dean, The Paul Merage School of Business: Andrew J. Policano
Dean, School of Physical Sciences: Ronald J. Stern
Dean, School of Social Ecology: C. Ronald Huff
Dean, School of Social Sciences: Barbara A. Doshier
Dean, College of Health Sciences, and Dean, School of Medicine: Thomas C. Cesario
Dean, Continuing Education: Gary W. Matkin
Dean, Graduate Studies: William H. Parker
Dean, Division of Undergraduate Education: Sharon V. Salinger
Chair, Department of Education: Deborah Lowe Vandell

UCI ADMINISTRATORS

Assistant Chancellor: Barbara Davidson
Assistant Vice Chancellor, Communications: Susan Menning
Director, Intercollegiate Athletics and Campus Recreation: Robert S. Chichester
Vice Provost, Academic Personnel: Herbert P. Killackey
Assistant Vice Chancellor, Academic Personnel: Patricia L. Price
Vice Provost, Academic Planning: Michael P. Clark
Assistant Executive Vice Chancellor: Michael R. Arias
Assistant Executive Vice Chancellor, Director of the Office of Equal Opportunity and Diversity, and Title IX/ Sexual Harassment Officer:
Kirsten Quanbeck
University Librarian: Gerald J. Munoff
University Ombudsman: Kathleen Canul
Associate Vice Chancellor, Administrative and Business Services: *open*
Associate Vice Chancellor and Campus Architect: Rebekah Gladson
Assistant Vice Chancellor, Administrative Computing Services: Mark S. Askren
Assistant Vice Chancellor/Controller, Accounting and Fiscal Services:
Richard A. Andrews
Assistant Vice Chancellor, Facilities Management: Paige Macias
Assistant Vice Chancellor, Human Resources: Gail Brooks
Associate Vice Chancellor, Budget: Sandra K. Campbell
Associate Dean, Graduate Studies: *open*
Assistant Vice Chancellor, Administration and Research Program Services:
Mark W. Warner
Assistant Vice Chancellor, Research Administration: Christina K. Hansen

Assistant Vice Chancellor, Technology Alliances: David G. Schetter
 Associate Vice Chancellor, Student Affairs: Daniel J. Dooros
 Assistant Vice Chancellor, Counseling and Health Services: Thomas A. Parham
 Assistant Vice Chancellor, Enrollment Services: Juan Francisco Lara
 Assistant Vice Chancellor, Student Housing: William J. Zeller
 Dean of Students: Sally K. Peterson
 Interim Associate Vice Chancellor, Development: Richard Lynch
 Assistant Vice Chancellor, Alumni Relations, and Executive Director, UCI Alumni Association: Jorge Ancona
 Assistant Vice Chancellor, Community and State Government Relations: Elizabeth A. Toomey
 Interim Assistant Vice Chancellor, Resource Planning and Administration of University Advancement: Lynn Rahn

For a complete list of UCI administrators, please refer to the *University of California Telephone Directory* or the *UCI Campus and Medical Center Directory*.

University Professors

One of the highest honors that can be bestowed on UC faculty, the title "University Professor" is reserved for scholars of international distinction who are recognized and respected as teachers of exceptional ability. The purpose of the University Professorship is to recognize the special talents of outstanding scholars and teachers.

Francisco J. Ayala, UCI
 J. Michael Bishop, UCSF
 E. Margaret Burbidge, *Emerita*, UCSD
 Shu Chien, UCSD
 Alexandre J. Chorin, UCB
 Marvin L. Cohen, UCB
 Michael Cole, UCSD
 Robert B. Edgerton, UCLA
 Emory Elliott, UCR
 Sandra M. Faber, UCSC
 Arturo Gómez-Pompa, UCR
 M. Frederick Hawthorne, UCLA
 Richard M. Karp, UCB
 Yuan T. Lee, *Emeritus*, UCB
 Frank H. Shu, *Emeritus*, UCB
 S. Jonathan Singer, *Emeritus*, UCSD
 Neil J. Smelser, *Emeritus*, UCB
 Gabor A. Somorjai, UCB
 Charles H. Townes, *Emeritus*, UCB
 Ming T. Tsuang, UCSD
 John R. Whinnery, *Emeritus*, UCB
 Hayden V. White, *Emeritus*, UCSC

UCI Faculty Distinctions

UCI NOBEL LAUREATES

Nobel Prize in Chemistry, 2004

Irwin Rose, *UCI Distinguished Professor of Physiology and Biophysics in Residence*

Nobel Prize in Chemistry, 1995

F. Sherwood Rowland, *Research Professor Emeritus of Chemistry and Earth System Science, and Bren Chair*

Nobel Prize in Physics, 1995

Frederick Reines, *UCI Distinguished Professor Emeritus of Physics* (d. 1998)

UCI ENDOWED CHAIRS

Daniel G. Aldrich, Jr. Endowed Chair

Frank L. Meyskens, Jr., *Senior Associate Dean for Health Sciences, Director of the Chao Family Clinical Cancer Research Center, and Professor of Medicine (Hematology/Oncology) and Biological Chemistry*

Louise Turner Arnold Chair in the Neurosciences

Daniele Piomelli, *Professor of Pharmacology and Biological Chemistry*

Arnold and Mabel Beckman Chair in Laser Biomedicine

Michael W. Berns, *Professor of Surgery, Developmental and Cell Biology, and Biomedical Engineering*

Grace Beekhuis Bell Chair in Biological Chemistry

Masayasu Nomura, *Professor of Biological Chemistry, Microbiology and Molecular Genetics, and Biological Sciences*

Warren L. Bostick Chair in Pathology

Michael E. Selsted, *Department Chair and Professor of Pathology and Professor of Microbiology and Molecular Genetics and of Pharmacology*

Donald Bren Professors, The Donald L. Bren Endowment

Francisco J. Ayala, *University Professor of Biological Sciences*

Thomas J. Carew, *Department Chair and Professor of Neurobiology and Behavior*

Paolo Casali, *Director of the Center for Immunology and Professor of Molecular Biology and Biochemistry and of Medicine*

Michael T. Clegg, *Professor of Biological Sciences and of Ecology and Evolutionary Biology*

Sheldon Greenfield, *Executive Director of the Irvine Research Unit in Health Policy and Research, Department Chair of Community and Environmental Medicine, and Professor of Medicine (General Internal Medicine and Primary Care)*

Wilson Ho, *Professor of Physics and Chemistry*

Ramesh C. Jain, *Professor of Information and Computer Sciences*

Wen-Hwa Lee, *Department Chair of Biological Chemistry and Professor of Biomedicine and Biological Chemistry*

F. Sherwood Rowland, *Research Professor Emeritus of Chemistry and Earth System Science*

Douglas C. Wallace, *Professor of Ecology and Evolutionary Biology and of Biological Chemistry*

Conexant-Broadcom Endowed Chair in the Center for Pervasive Communications and Computing

Ender Ayanoglu, *Professor of Electrical Engineering and Computer Science*

Edward A. Dickson Emerti Professors

Harold W. Moore, *Professor Emeritus of Chemistry*

Spencer C. Olin, *Professor Emeritus of History*

Lawrence K. Dodge Endowed Chair in Integrative Biology

John Longhurst, *Director of the Susan Samueli Center for Integrative Medicine and Professor of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering*

Walter B. Gerken Chair in Enterprise and Society

Richard B. McKenzie, *Professor of Management and Economics*

Robert Gumbiner Chair in Health Care Management

Paul J. Feldstein, *Professor of Management, Economics, and Social Ecology*

Hasso Brothers Endowed Chair in Radiological Sciences

Fong Tsai, *Department Chair of Radiological Sciences and Professor of Clinical Radiological Sciences*

Clifford and Elaine Heinz Chair in the Economics and Public Policy of Peace

Martin C. McGuire, *Professor of Economics*

Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management

Martha Feldman, *Professor of Social Ecology, Management, Sociology, and Political Science*

Fred Kavli Chair in Earth System Science

Michael Prather, *Professor of Earth System Science*

Irving H. Leopold Chair in Ophthalmology

George Baerveldt, *Department Chair and Professor of Clinical Ophthalmology*

William J. Link Chair in Biomedical Engineering

Steven C. George, *Department Chair and Professor of Biomedical Engineering and Professor of Chemical Engineering and Materials Science*

Dorothy J. Marsh Chair in Reproductive Biology

Philip J. DiSaia, *Chief of Gynecologic Oncology and Professor of Obstetrics and Gynecology and of Radiation Oncology*

Della Martin Chair in Psychiatry

William E. Bunney, Jr., *Department Co-Chair of Psychiatry and Human Behavior and UCI Distinguished Professor of Psychiatry and Human Behavior and of Pharmacology*

National Science Foundation "ADVANCE" Term Chairs

Ellen R. M. Druffel, *Professor of Earth System Science*
Chuu-Lian Terng, *Professor of Mathematics*

Eric L. and Lila D. Nelson Chair in Neuropharmacology

Olivier Civelli, *Professor of Pharmacology and of Developmental and Cell Biology*

Nichols Clinical Neuroscience Chair

Claudia Kawas, *Professor of Neurology and of Neurobiology and Behavior*

The Edward J. Quilligan Chair in Maternal-Fetal Medicine

Manuel Porto, *Department Chair of Obstetrics and Gynecology and Professor of Clinical Obstetrics and Gynecology (Maternal-Fetal Medicine)*

The Robert and Marjorie Rawlins Chair in Music

David Brodbeck, *Department Chair and Professor of Music*

Ronald W. Reagan Endowed Chair in Geriatrics

Laura Mosqueda, *Director of the Program in Geriatrics and Professor of Clinical Family Medicine (Family Medicine, Primary Care, and Geriatrics)*

Reeve-Irvine Chair in Spinal Cord Injury Research

Oswald Steward, *Professor of Anatomy and Neurobiology, Neurobiology and Behavior, and Neurosurgery*

The Henry Samuelli Endowed Chair

William A. Sirignano, *Professor of Mechanical and Aerospace Engineering*

The Henry Samuelli "Turing" Chair in Computer Systems Design

Daniel D. Gajski, *Director of the Center for Embedded Computer Systems and Professor of Electrical Engineering and Computer Science and of Computer Science*

The Henry Samuelli "von Karman" Chair of Aerospace Engineering

Satya N. Atluri, *Director of the Center for Aerospace Research and Education, Interim Director of the Center for Systems Engineering in Biotechnology, Director of the Center for Computational Modeling in Engineering, and Professor of Mechanical and Aerospace Engineering*

Susan Samuelli Chair in Integrative Medicine

John Longhurst, *Director of the Susan Samuelli Center for Integrative Medicine and Professor of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering*

Danette (Dee Dee) Shepard Chair in Neurological Studies

Tallie Z. Baram, *Professor of Pediatrics, Neurology, and Anatomy and Neurobiology*

Gerald B. Sinykin, M.D. Chair in Family Medicine

Kathryn M. Larsen, *Department Chair and Clinical Professor of Family Medicine (Family Medicine and Primary Care)*

Ted and Janice Smith Family Foundation Endowed Chair in Information and Computer Science

Debra J. Richardson, *Dean of the Donald Bren School of Information and Computer Sciences and Professor of Informatics*

Robert R. Sprague Chair in Brain Imaging

Steven G. Potkin, *Director of the Brain Imaging Center and Professor of Psychiatry and Human Behavior*

Taco Bell Chair in Information Technology Management

Kenneth L. Kraemer, *Director of the Center for Research on Information Technology and Organizations and Professor of Management and Informatics*

Teller Family Chair in Jewish History

Daniel Schroeter, *Professor of History*

Edward and Vivian Thorp Chair in Mathematics

Karl C. Rubin, *Professor of Mathematics*

Thomas T. and Elizabeth C. Tierney Chair in Peace Studies

Patrick Morgan, *Professor of Political Science*

Claire Trevor Dean's Endowed Chair, Claire Trevor School of the Arts

Nohema Fernández, *Dean of the Claire Trevor School of the Arts and Professor of Music*

Claire Trevor Professors in the Arts

Robert Cohen, *Department Chair and Professor of Drama*

Donald McKayle, *Graduate Choreography Advisor, Artistic Director of UCI Dance, and Professor of Dance*

Bill Rauch, *Professor of Drama*

UC Presidential Chair

Peter M. Rentzepis, *Professor of Chemistry and of Electrical Engineering and Computer Science*

Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation

Helen Ingram, *Professor of Social Ecology and Political Science*

UCI CHANCELLOR'S FELLOWS

Frank LaFerla, *UCI Chancellor's Fellow and Professor of Neurobiology and Behavior*

Qing Nie, *UCI Chancellor's Fellow and Professor of Mathematics*

Bryan Reynolds, *UCI Chancellor's Fellow, Professor of Drama, and Head of Doctoral Studies in Drama*

Heidi Tinsman, *UCI Chancellor's Fellow and Associate Professor of History*

Linda Trinh Võ, *UCI Chancellor's Fellow and Associate Professor of Asian American Studies*

UCI CHANCELLOR'S PROFESSORS

Kei Akagi, *UCI Chancellor's Professor of Music*

Imran S. Currim, *UCI Chancellor's Professor of Management*

Philippe Jorion, *UCI Chancellor's Professor of Management and Economics*

Eva Y.-H. P. Lee, *UCI Chancellor's Professor of Developmental and Cell Biology and of Biological Chemistry*

Peter Li, *UCI Chancellor's Professor of Mathematics*

Penelope Maddy, *UCI Chancellor's Professor of Logic and Philosophy of Science and of Mathematics*

Marc J. Madou, *UCI Chancellor's Professor of Mechanical and Aerospace Engineering, Biomedical Engineering, and Chemical Engineering and Materials Science*

Steven Mailloux, *UCI Chancellor's Professor of Rhetoric*

George E. Marcus, *UCI Chancellor's Professor of Anthropology*

Shaul Mukamel, *UCI Chancellor's Professor of Chemistry*

Kenneth L. Pomeranz, *UCI Chancellor's Professor of History and of East Asian Languages and Literatures*

Thomas L. Poulos, *Director of the Irvine Research Unit in Macromolecular Structure and UCI Chancellor's Professor of Molecular Biology and Biochemistry, Physiology and Biophysics, and Chemistry*

Gabriele Schwab, *UCI Chancellor's Professor of Comparative Literature*

Brook Thomas, *UCI Chancellor's Professor of English*

UCI DISTINGUISHED PROFESSORS

John C. Avise, *UCI Distinguished Professor of Ecology and Evolutionary Biology*

William E. Bunney, Jr., *Department Co-Chair of Psychiatry and Human Behavior, UCI Distinguished Professor of Psychiatry and Human Behavior and of Pharmacology, and Della Martin Chair in Psychiatry*

David Easton, *UCI Distinguished Research Professor of Political Science*

Daniel D. Joseph, *UCI Distinguished Adjunct Professor of Mechanical and Aerospace Engineering*

Elizabeth F. Loftus, *UCI Distinguished Professor of Psychology and Social Behavior, Criminology, Law and Society, and Cognitive Sciences*

R. Duncan Luce, *UCI Distinguished Professor Emeritus of Cognitive Sciences and Economics*

David B. Malament, *UCI Distinguished Professor of Logic and Philosophy of Science*

Ricardo Miledi, *UCI Distinguished Professor of Neurobiology and Behavior*

J. Hillis Miller, *UCI Distinguished Research Professor of English and Comparative Literature*

Ngugi wa Thiong'o, *Director of the International Center for Writing and Translation and UCI Distinguished Professor of English and Comparative Literature*

Henry Nicholas III, *UCI Distinguished Adjunct Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*
 Larry E. Overman, *UCI Distinguished Professor of Chemistry*
 Yvonne Rainer, *UCI Distinguished Professor of Studio Art*
 Irwin Rose, *UCI Distinguished Professor of Physiology and Biophysics in Residence*
 Donald G. Saari, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics*
 Henry Samuelli, *UCI Distinguished Adjunct Professor of Electrical Engineering and Computer Science*
 Masanobu Shinozuka, *Department Chair and UCI Distinguished Professor of Civil and Environmental Engineering*
 Brian Skyrms, *UCI Distinguished Professor of Logic and Philosophy of Science and of Economics, and Director of the Minor in the History and Philosophy of Science*
 Soroosh Sorooshian, *UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science*
 George Sperling, *UCI Distinguished Professor of Cognitive Sciences and of Neurobiology and Behavior*
 Eric J. Stanbridge, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Biological Sciences*

SCHOOL OF MEDICINE DISTINGUISHED PROFESSOR

J. Edward Berk, *Distinguished Professor Emeritus of Medicine (Gastroenterology)*

UCI FACULTY MEMBERSHIP IN MAJOR U.S. LEARNED SOCIETIES

American Academy of Arts and Sciences: 33
 American Association for the Advancement of Science: 84
 American Philosophical Society: 6
 American Physical Society: 31
 American Psychological Association: 20
 National Academy of Engineering: 7
 National Academy of Sciences: 20
 National Academy of Sciences–Institute of Medicine: 4

UCI ACADEMIC SENATE DISTINGUISHED FACULTY

Distinguished Faculty Award for Research

2005–06: Bernard N. Grofman, *Departments of Political Science and Economics*, “Does Redistricting Matter? A Look at the U.S. House, 1962–2002”
 2005–06: Wilson Ho, *Departments of Physics and Astronomy and of Chemistry*, “The Virtues of Being Single: A Molecular View”
 2004–05: Donald G. Saari, *Departments of Economics and Mathematics*, “The Evolving Role of Mathematics in the Social and Behavioral Sciences”
 2003–04: Zang-Hee Cho, *Departments of Radiological Sciences, Psychiatry and Human Behavior, and Biomedical Engineering*, “Positron Tomograph—The Brain Machine”
 2002–03: Penelope Maddy, *Department of Logic and Philosophy of Science and of Mathematics*, “Second Philosophy”
 Larry E. Overman, *Department of Chemistry*, “Making Molecules”
 2001–02: Brian Skyrms, *Department of Logic and Philosophy of Science*, “The Stag Hunt”
 2000–2001: Masayasu Nomura, *Department of Biological Chemistry and of Microbiology and Molecular Genetics, and Grace Beekhuis Bell Chair in Biological Chemistry*, “Toward Understanding the Synthesis of Ribosomes, the Cellular Machinery for Making Proteins”
 1999–2000: George Sperling, *Department of Cognitive Sciences and of Neurobiology and Behavior*, “Modeling Human Motion Perception”
 1998–99: Walter M. Fitch, *Department of Ecology and Evolutionary Biology*, “Getting the Flu Before It Gets You”
 1998: Donald McKayle, *Department of Dance*, “The Symbolic Language of Dance”

1998: Peter M. Rentzepis, *Department of Chemistry*, “The Making of a Molecular Computer”
 1997: David Easton, *Department of Politics and Society*
 1996: John J. Wasmuth, *Departments of Biological Chemistry, Pediatrics, and Psychiatry and Human Behavior*
 1995: Chen S. Tsai, *Department of Electrical and Computer Engineering*, “The Versatile Photon: Express Messenger of the Information Superhighway”
 1994: R. Duncan Luce, *School of Social Sciences*, “Mathematical Psychology: an Oxymoron or Not?”
 1993: Eric Stanbridge, *Department of Microbiology and Molecular Genetics*, “Cancer and Our Genes: the Seeds of Our Own Destruction”
 1992: J. Hillis Miller, *Department of English and Comparative Literature*, “Thinking Like Other People”
 1991: A. Kimball Romney, *Department of Anthropology*, “Cultural Consensus and Social Intelligence”
 1990: Lyman W. Porter, *Graduate School of Management*, “Organizations and Their Employees: How Sound Are the Marriage Contracts”
 1989: Norman Rostoker, *Department of Physics*, “Research on Future Energy Sources”
 1988: Robert W. Taft, *Department of Chemistry*, “Attempts to Understand and Treat the Loves and Hates of Organic Molecules”
 1987: Carl W. Cotman, *Department of Psychobiology*, “The Self-Repairing Brain: Implications for Alzheimer’s Disease”
 1986: Donald Heiney, *Department of English and Comparative Literature*, “Fiction: The Double Domain of the Nineteenth-Century Crisis”
 1985: James L. McGaugh, *Department of Psychobiology*, “Making Memories”
 1984: John Johnston, *Department of Economics*, “Economists and Their Crises”
 1983: Murray Krieger, *Department of English and Comparative Literature*, “Words About Words About Words: The What and Why of Literary Theory”
 1982: Kivie Moldave, *Department of Biological Chemistry*, “The Fault, Dear Brutus, Lies Not in the Stars but in Our Genes”
 1981: Gilbert L. Geis, *School of Social Ecology*, “The Crime Intervenor: Samaritan or Superman?”
 1980: Jaime E. Rodríguez, *Department of History*, “Down from Colonialism: Mexico’s Nineteenth-Century Crisis”
 1980: Seymour Menton, *Department of Spanish and Portuguese*, “Many years later, as he faced the firing squad, Colonel Aureliano Buendia was to remember that distant afternoon when his father took him to discover ice.” (Gabriel Garcia Marquez, *One Hundred Year of Solitude*)
 1979: Frederick Reines, *Department of Physics*, “The Neutrino: From Poltergeist to Particle”
 1978: Arthur J. Marder, *Department of History*, “Bravery Is Not Enough: The Rise and Fall of the Imperial Japanese Navy, 1941–45”
 1977: F. Sherwood Rowland, *Department of Chemistry*, “Chemistry and the Environment”
 1976: H. Colin Slim, *Department of Music*, “The Prodigal Son at the Whores: Music, Art, and Drama”

Distinguished Mid-Career Faculty Award for Research

2005–06: Frank LaFerla, *Department of Neurobiology and Behavior*, “Fading Memories/Saving Memories: The Study and Treatment of Alzheimer’s Disease in Genetically Modified Mice”
 2004–05: Svetlana Jitomirskaya, *Department of Mathematics*, “Behind the Hofstadter’s Butterfly: The Competition Between Order and Chaos”
 2003–04: Nancy L. Allbritton, *Departments of Physiology and Biophysics, Biomedical Engineering, and School of Biological Sciences*, “Mapping the Circuitry of Cells”

Distinguished Assistant Professor Award for Research

- 2005–06: Hans S. Keirstead, *Department of Anatomy and Neurobiology*, “Developing Strategies for the Treatment of Spinal Cord Injury”
 2004–05: Jonathan Lee Feng, *Department of Physics and Astronomy*, “The Dark Universe”
 2003–04: Qun-Yong Zhou, *Department of Pharmacology*, “A Gut Feeling for Time”
 2002–03: Leslie M. Thompson, *Department of Psychiatry and Human Behavior and of Biological Chemistry*, “Huntington’s Disease: Approaches for Therapies”
 2001–02: Michael B. Dennin, *Department of Physics and Astronomy*, “Foams and Patterns: The Physics of Shaving Cream and Stripes”
 2000–2001: Richard A. Leo, *Department of Criminology, Law and Society*
 1999–2000: Wang Feng, *Department of Sociology*
 1998–99: Panagiota Daskalopoulos, *Department of Mathematics*
 1998–99: William M. Maurer, *Department of Anthropology*
 1997–98: Judith Stepan-Norris, *Department of Sociology*
 1997–98: Keith A. Woerpel, *Department of Chemistry*
 1996–97: Liisa H. Malkki, *Department of Anthropology*
 1996–97: Susan E. Trumbore, *Department of Earth System Science*
 1995–96: Ann Blair, *Department of History*
 1995–96: Kei-Yeung (Sunny) Siu, *Department of Electrical and Computer Engineering*
 1994–95: Alec Stone, *Department of Political Science*

Distinguished Faculty Award for Teaching

- 2005–06: Diane K. O’Dowd, *Departments of Developmental and Cell Biology and of Anatomy and Neurobiology*, “Introductory Biology at UCI: Enhancing the Freshman Experience”
 2003–04: Roy M. Fujitani, *Department of Surgery*, “Matters of the Heart”
 2002–03: Mark P. Petracca, *Department of Political Science*, “Politics, Pedagogy, and Passion: Persistent Paradoxes”
 2001–02: Roxane Cohen Silver, *Department of Psychology and Social Behavior*, “Thinking Critically About Coping with Life’s Traumas”
 2000–2001: Gabriele Schwab, *Department of English and Comparative Literature and Director of the Critical Theory Institute*, “Imaginary Ethnographies: The Boundaries of the Human”
 1999–2000: Ermanno Bencivenga, *Department of Philosophy*, “Teaching: A Cost/Benefit Analysis”
 1998–99: Alberto Manetta, *Senior Associate Dean of the College of Medicine and Professor of Obstetrics and Gynecology*, “Medical Education for the Twenty-First Century”
 1998: William R. Schonfeld, *Dean of the School of Social Sciences*, “The Ivory Tower: Relic from the Past or Ambition for the Future”
 1997: Medhat A. Haroun, *Department of Civil and Environmental Engineering*, “Earthquakes and California: Are We At Risk and What Are We Doing About It?”
 1996: Lynn Mally, *Department of History*, “Seeing Through History: Visual Evidence in Teaching”
 1995: Imran S. Currim, *Graduate School of Management*, “Consumer Choice”
 1994: Michael P. Johnson, *Department of History*, “The Politics of Teaching”
 1994: Philip J. DiSaia, *Department of Obstetrics and Gynecology*, “The Aging Woman”
 1993: Gary W. Evans, *School of Social Ecology*, “The Improvement of Teaching in the University Environment”
 1992: James H. Mulligan, *Department of Electrical and Computer Engineering*, “The Quest for Excellence in Educating Engineering Professionals”
 1991: Thomas A. Standish, *Department of Information and Computer Science*, “A Grand Challenge Problem for Education: Empowering Graduating Seniors to Write Well”
 1990: Robert T. McIver Jr., *Department of Chemistry*, “Those Marvelous Machines: The Role of Scientific Instruments”
 1989: John C. Rowe, *Department of English and Comparative Literature*, “Crisis and Criticism in the Humanities”
 1988: James N. Danziger, *Department of Politics and Society*, “Knowing Noes and Wise Whys”

Distinguished Assistant Professor Award for Teaching

- 2005–06: Adam P. Summers, *Department of Ecology and Evolutionary Biology*, “Adventures in Fish Biomechanics”
 2004–05: David P. Kirkby, *Department of Physics and Astronomy*, “The Musical Universe”
 2004–05: George E. Tita, *Department of Criminology, Law and Society*, “The Advantages of Having ‘Spaced Out’ Friends: The Socio-Spatial Dimensions of a High-Crime Place”
 2003–04: Justin L. Tobias, *Department of Economics*, “Encouraging Students to Regress”
 2002–03: Sharon Block, *Department of History*, “Thinking About Rape in Early America”
 2001–02: Bryan Reynolds, *Department of Drama*, “Performing Transversally: Reimagining Shakespeare and the Critical Future”
 2000–2001: William M. Maurer, *Department of Anthropology*
 1999–2000: Steven C. George, *Department of Chemical and Biochemical Engineering and Materials Science*
 1999–2000: Claire Jean Kim, *Interdisciplinary Program in Asian American Studies and Department of Political Science*
 1998–99: Kristen M. Day, *Department of Urban and Regional Planning*
 1998–99: Keith A. Woerpel, *Department of Chemistry*
 1997–98: Stanley B. Grant, *Department of Civil and Environmental Engineering*
 1996–97: Rhona Berenstein, *Program in Film Studies*
 1995–96: Etel Solingen, *Department of Politics and Society*
 1994–95: Julia Reinhard Lupton, *Department of English and Comparative Literature*

Daniel G. Aldrich Jr. Distinguished University Service Award

- 2005–06: Roger D. McWilliams, *Department of Physics and Astronomy*
 2004–05: Sue Piper Duckles, *Department of Pharmacology*
 2003–04: R. Duncan Luce, *Departments of Cognitive Sciences and Economics*
 2002–03: Janice Gudde Plastino, *Department of Dance*
 2001–02: William R. Schonfeld, *Dean of the School of Social Sciences*, “The Legacy of Daniel G. Aldrich Jr.: Leadership, Integrity, Honesty, and Commitment”
 2000: Charles A. Lave, *Department of Economics*
 1999: Arnold Binder, *Department of Criminology, Law and Society*
 1998: Warren L. Bostick, *Department of Pathology*
 1997: James N. Danziger, *Department of Political Science and Dean of Undergraduate Education*
 1997: Ellen Greenberger, *Department of Psychology and Social Behavior*
 1996: Dennis J. Aigner, *Dean of the Graduate School of Management*
 1995: Michael Butler, *Former Dean of Undergraduate Studies, Director of the UCI Farm School, and Department of Cognitive Sciences*
 1994: Leslie W. Rabine, *Department of French and Italian and Program in Women’s Studies*
 1993: Murray Krieger, *Department of English and Comparative Literature*
 1993: J. Edward Berk, *Department of Medicine*
 1992: Louis A. Gottschalk, *Department of Psychiatry and Human Behavior*
 1991: Spencer C. Olin, *Department of History*
 1991: Julius Margolis, *Department of Economics*

Distinguished Mid-Career Faculty Award for Service

- 2005–06: Amelia C. Regan, *Departments of Computer Science and of Civil and Environmental Engineering*

Principles of Community

UCI is a multicultural community of people from diverse backgrounds. Our activities, programs, classes, workshops, lectures, and everyday interactions are enriched by our acceptance of one another, and we strive to learn from each other in an atmosphere of positive engagement and mutual respect.

Our legacy for an increasingly multicultural academic community and for a learning climate free from expressions of bigotry is drawn from the United States and California Constitutions, and from the charter of the University of California which protects diversity and reaffirms our commitment to the protection of lawful free speech. Affirmation of that freedom is an effective way of ensuring that acts of bigotry and abusive behavior will not go unchallenged within the University. Tolerance, civility, and mutual respect for diversity of background, gender, ethnicity, race, and religion are as crucial within our campus community as are tolerance, civility, and mutual respect for diversity of political beliefs, sexual orientation, and physical abilities. Education and clear, rational, and vigorous challenges are positive responses to prejudice and acts of bigotry.

The University's nondiscrimination policy, in compliance with applicable federal and state law, covers treatment in University programs and activities as well as admission and employment. UCI expects all those affiliated with it to adhere to the letter and the spirit of University nondiscrimination policies and related federal and state laws. Information concerning these policies is available on the World Wide Web at <http://www.ucop.edu/>.

Allegations of physical abuse, threats of violence, or conduct that threatens the health or safety of any person on University property or in connection with official University functions will be investigated promptly and, where found to exist, appropriate actions will be taken in accordance with University policy.

All who work, live, study, and teach at UCI are here by choice and, as part of that choice, should be committed to these Principles of Community which are an integral part of the guidelines by which the University community can successfully conduct its affairs.

Student Conduct and Discipline

Students enrolling in the University are expected to assume an obligation to conduct themselves in a manner compatible with the University's function as an educational institution. A handbook is available which sets forth standards of conduct expected of UCI students. *University of California Policies Applying to Campus Activities, Organizations, and Students* lists rules concerning conduct and related matters, as established by the policies of the Regents and the President of the University and also incorporates campus regulations. Copies are available from the Dean of Students, located in the UCI Student Center; the University Ombudsman, located in 437 Administration Building; and on the World Wide Web at http://www.dos.uci.edu/judicial/uci_policy.html.

Academic Honesty

The UCI Academic Senate Policies on Academic Honesty were approved by the Irvine Division on June 2, 1988. Revised December 12, 1996; October 12, 2000; November 21, 2002; and January 26, 2006.

A. PREAMBLE

The University is an institution of learning, research, and scholarship predicated on the existence of an environment of honesty and integrity. As members of the academic community, faculty, students, and administrative officials share responsibility for maintaining this environment. It is essential that all members of the academic community subscribe to the ideal of academic honesty and integrity and accept individual responsibility for their work. Academic dishonesty is unacceptable and will not be tolerated at the University of California, Irvine. Cheating, forgery, dishonest conduct, plagiarism, and collusion in dishonest activities erode the University's educational, research, and social roles. They devalue the learning experience and its legitimacy not only for the perpetrators but for the entire community.

B. RESPONSIBILITIES

All members of the academic community have a responsibility to ensure that scholastic honesty is maintained.

Faculty have primary responsibility for:

1. Upholding and enforcing universitywide principles of academic honesty and integrity and explaining clearly these principles including any qualifications which may be operative in the classes they are teaching.

2. Minimizing opportunities for academic misconduct in their courses.
3. Confronting students suspected of academic dishonesty in a way that respects student privacy.
4. Affording students accused of academic misconduct the right to appeal any resulting disputes to disinterested parties for hearing and resolution.
5. Assigning an appropriate grade to a student who engages in academic dishonesty.
6. Reporting all instances of academic dishonesty to appropriate Associate Deans.
7. Protecting the anonymity of any student reporting an incident of academic dishonesty to the extent permitted by due process required for the accused and other legal requirements.

Students have responsibility for:

1. Refraining from cheating and plagiarism.
2. Refusing to aid or abet any form of academic dishonesty.
3. Notifying professors and/or appropriate administrative officials about observed incidents of academic misconduct. The anonymity of a student reporting an incident of academic dishonesty will be protected.

C. WHAT IS ACADEMIC DISHONESTY?

Academic dishonesty applies equally to electronic media and print, and involves text, images, and ideas. It includes but is not limited to the following examples:

Cheating

1. Copying from others during an examination.
2. Communicating exam answers with other students during an examination.
3. Offering another person's work as one's own.
4. Taking an examination for another student or having someone take an examination for oneself.
5. Sharing answers for a take-home examination or assignment unless specifically authorized by the instructor.
6. Tampering with an examination after it has been corrected, then returning it for more credit.
7. Using unauthorized materials, prepared answers, written notes or information concealed in a blue book or elsewhere during an examination.
8. Allowing others to do the research and writing of an assigned paper (including use of the services of a commercial term-paper company).

Dishonest Conduct

1. Stealing or attempting to steal an examination or answer key from the instructor.
2. Changing or attempting to change academic records without proper sanction.
3. Submitting substantial portions of the same work for credit in more than one course without consulting all instructors involved.
4. Forging add/drop/change cards and other enrollment documents, or altering such documents after signatures have been obtained.
5. Intentionally disrupting the educational process in any manner.
6. Allowing another student to copy off of one's own work during a test.

Plagiarism

Plagiarism is intellectual theft. It means use of the intellectual creations of another without proper attribution. Plagiarism may take two main forms, which are clearly related:

1. To steal or pass off as one's own the ideas or words, images, or other creative works of another.
2. To use a creative production without crediting the source, even if only minimal information is available to identify it for citation.

Credit must be given for every direct quotation, for paraphrasing or summarizing a work (in whole, or in part, in one's own words), and for information which is not common knowledge.

Collusion

Any student who knowingly or intentionally helps another student perform any of the above acts of cheating or plagiarism is subject to discipline for academic dishonesty.

D. PROCEDURES FOR DEALING WITH INCIDENTS OF ACADEMIC DISHONESTY

Many, perhaps most, incidents of academic dishonesty involve accusations which are based on clear evidence and which are not contested by the accused student. In such cases, if the infraction is relatively minor and there is no indication that the accused student has previously been involved in such incidents, it is most appropriate that the matter be resolved between the student and the faculty member. When this occurs, it is nevertheless important that a written report of the incident be filed to ensure that penalties assessed are commensurate with the offense and that repeated infractions be detected and dealt with appropriately.

More serious incidents and repeat offenses which call for stronger disciplinary action, may result in campuswide sanctions, in addition to the actions imposed by a faculty member. In such cases, these sanctions, as described in Section 105.00 of the *Policies Applying to Campus Activities, Organizations, and Students*, will be administered by the Academic Associate Deans or the Office of the Dean of Undergraduate Education or Graduate Studies.

Finally, whenever an accusation of academic dishonesty or a grade given by a faculty member is contested by an accused student, the student has recourse for mediation of the dispute. Processes for mediation, resolution, and/or an investigation may be requested by the student or the Associate (Undergraduate or Graduate) Dean of the faculty member's school through the Office of the Ombudsman. In incidents where a campuswide sanction has been imposed, the student can request a hearing with the appropriate Committee on Academic Honesty which will be convened by the Office of either the Dean of Undergraduate Education or the Dean of Graduate Studies, depending on the status of the accused student.

The procedures outlined here are designed to institute a system that recognizes that many cases of academic misconduct are best resolved between the student and faculty member involved, while it provides for appropriate record keeping and handling of serious and repeated offenses and guarantees a fair hearing to a student who has received a campuswide sanction.

Authority of Faculty Members

When a faculty member has evidence of student academic dishonesty, the faculty member must present the evidence to the student in a private meeting or communicate with the student by some other means. The faculty member must initiate this communication with the student within 15 calendar days of discovering evidence of academic dishonesty and evaluating the relevant work. The faculty member then may follow up with one or more of only the following actions:

1. To issue a reprimand to the student with letter of explanation to the student's file.
2. To require repetition of the questionable work or examination with letter of explanation to the student's file.
3. To reduce the grade to an 'F' or zero, if appropriate, on the questionable work or examination with written notification to the student and a letter of explanation to the student's file.
4. To assign the student a failing grade in the course or otherwise lower the grade in the course with a letter of explanation to the student's file.

It is essential that any such action be reported in writing to the student in a letter from the faculty member. Copies of this letter must also be sent to (a) the Associate Dean of the faculty member's school, (b) the Associate Dean of the student's school, who will maintain a file of cases of academic misconduct involving students enrolled in that school, and (c) the Office of the Dean of Undergraduate Education or Dean of Graduate Studies, as appropriate. The faculty member is strongly encouraged to consult with the Associate (Undergraduate or Graduate) Dean of his or her school before the letter is drafted. Reference to (or a copy of) the UCI Academic Senate Policies on Academic Honesty should be included in the letter. If action (4) is taken, the faculty member is responsible for making certain that the failure is recorded by the Registrar on the student's permanent academic record. Careful documentation of the incident must be maintained by the faculty member in the event that his or her actions in the case should later be subject to review.

Responsibilities of the Academic Associate Deans

1. The Associate (Graduate or Undergraduate) Dean of either the accused student's school or of the faculty member's school may impose campuswide sanctions. Sanctions imposed by Associate Deans are final unless the student requests a hearing within 15 calendar days of notification. The 15-day period starts from the time the Associate Dean has notified the student of the discipline or has notified the student of the hearing and

appeal process by providing a copy of this policy, whichever comes later. It is recommended that each case be brought to a final resolution within 90 days of instruction.

2. The Associate Dean (or equivalent official) of each school is responsible for maintaining confidential records concerning academic dishonesty of students enrolled in that school. All letters reporting faculty-imposed academic penalties for academic misconduct will be included in these files.
3. The Associate Dean of the accused student's school will be responsible for identifying all incidents which represent repeated offenses by a student and may impose a campuswide sanction because of repeat offenses.
4. Associate Deans are required to notify the student of the hearing and appeal process and provide the student a copy of this policy or explicitly refer the student to it. If an Associate Dean suspects grounds for a grievance involving discrimination, the student should be referred to Part 3 of *The Manual of the Irvine Division of the Academic Senate*, "Student Academic Grievance Procedures" (which is limited to allegations of discrimination).
5. In those classes where academic dishonesty continues to be a problem and the faculty member or another university official has already been approached by the student(s) from the class, the Associate Dean will consult with the appropriate faculty member to address the problem.
6. Students who have on file recorded acts of academic dishonesty, as defined by the *Policies Applying to Campus Activities, Organizations, and Students*, may be excluded by the Associate Deans from consideration for academic honors at graduation. Another consequence could be that in admission to a major, for students who wish to change majors, individual majors may take into account the commission of an act of dishonesty. Exclusion from consideration for honors and exclusion from major change is not for the purposes of this policy to be considered a campuswide sanction. Students excluded from such consideration under this policy therefore are not eligible to request a formal hearing.
7. In those situations where a campuswide sanction is imposed and the student requests a hearing, the Associate Dean will forward to the Committee on Academic Honesty the materials which led him or her to impose the sanction. In addition, the Associate Dean will appear before the Committee to discuss the case upon request of the Committee.

Student Hearings

When any student accused of academic dishonesty wishes to contest an action by a faculty member, the student may, within a 15-day period, request mediation by writing to the Associate Dean of the faculty member or to the Ombudsman. However, it should be understood that all grades are ultimately the responsibility of faculty. The period is 15 calendar days and starts from the time the Associate Dean has notified the student of the discipline or has notified the student of the hearing and appeal process by providing a copy of this policy, whichever comes later.

When a campuswide sanction is imposed, the affected student may, within 15 days of notification, request a hearing before the Committee on Academic Honesty. Students considering a hearing in response to campuswide sanctions for alleged academic misconduct are urged to contact the Associate Dean of their academic school and/or the University Ombudsman concerning possible sources of advice and assistance. Students should be advised regarding the grounds for appeal as specified in section 103.11 of the *Policies Applying to Campus Activities, Organizations, and Students*.

Role of the Ombudsman

The services of the Ombudsman may be requested at any time by the student, the faculty member, or the Associate Dean. The role of the Ombudsman is to assist in conflict resolution, mediate the dispute, perform an informal investigation of the case, and clarify policies and procedures for anyone involved.

In those incidents where imposition of a campuswide sanction is a consideration and the student has requested a hearing, the case will be referred to the Office of the Ombudsman by the Dean of Undergraduate Education or the Dean of Graduate Studies, as appropriate. An investigation may be conducted by the Ombudsman who will then confer with the Associate Dean and the accused student. However, the findings of the Ombudsman will not be forwarded to the Committee on Academic Honesty. The case may be referred by either the student or the Ombudsman to either the Dean of Undergraduate Education or the Dean of Graduate Studies, as appropriate, who will be responsible for convening the Committee on Academic Honesty.

Students should always be informed by the Associate Dean of their school of their right to secure the assistance of the Ombudsman in understanding and addressing the problem or issue.

Role of the Deans of Undergraduate Education and Graduate Studies

Whenever an incident of academic misconduct is referred to the Office of the Dean of Undergraduate Education or the Dean of Graduate Studies by the student or the Ombudsman, a representative of the appropriate offices will meet with the student and, if requested, explain the process and arrange the time and place of a hearing before the appropriate (Undergraduate or Graduate) Committee on Academic Honesty. The appropriate Dean will maintain a record of all cases of academic dishonesty reported by the respective Associate Deans.

Formal resolution by the appropriate Committee on Academic Honesty may result in the imposition by the Dean of Undergraduate Education or the Dean of Graduate Studies of one or more of the sanctions described in section 105.00 of the *Policies Applying to Campus Activities, Organizations, and Students*, including suspension or dismissal from the University.

E. COMMITTEE ON ACADEMIC HONESTY

1. Jurisdiction of the Committees on Academic Honesty

There will be two Committees on Academic Honesty. One Committee will hear cases of campuswide sanctions on undergraduate students while the other will hear graduate student cases. The Committees can reduce, affirm, or increase sanctions.

2. Composition of the Committees on Academic Honesty

The Committees on Academic Honesty will be standing administrative committees composed of two faculty, two students, and a representative of either the Dean of Undergraduate Education or Dean of Graduate Studies, as appropriate. Terms of faculty members will be two years. One faculty member will be appointed annually by either the Dean of Undergraduate Education or Graduate Studies, as appropriate for the particular committee. To ensure continuity, terms will be staggered; during the first year of operation only, one faculty member will be appointed for a one-year term. One additional faculty member will be appointed to serve as an alternate to each of the Committees. The two students shall serve for one year and will be appointed by either ASUCI or AGS as appropriate to the specific committee. One additional student member will be appointed to serve as an alternate to each of the Committees.

3. Role of the Associate Dean

The Associate Dean will forward to the committee the evidence which led to his or her decision to impose the campuswide sanction. In addition, the Associate Dean will appear before the Committee to comment on the case if the Committee wishes.

4. Hearings

- If the student requests a hearing, the Dean of Undergraduate Education or the Dean of Graduate Studies shall schedule a hearing of the case before the appropriate Committee. Written notice must be given to the parties involved regarding the date, time, and place of the hearing.
- The chair will be elected by the membership of the committee. The chair will rule on all questions of procedure, the admission or exclusion of evidence, and the need to call witnesses for additional testimony. Hearings shall be held in accordance with generally accepted standards of procedural due process.
- Hearings will be closed unless the parties involved agree to an open hearing. Every effort must be made by all parties to maintain confidentiality during the process.
- Hearings shall be held following the provisions in sections 103.11. (5, 6, and 8) of the *Policy on Student Conduct and Discipline* in the *Policies Applying to Campus Activities, Organizations, and Students*, except that the role of the Dean of Students shall be filled by the Dean of Undergraduate Education or Graduate Studies, depending on the status of the student.

5. Report of the Committee on Academic Honesty

After the hearing the Committee shall arrive at a decision. When a decision is reached, the student and the appropriate Academic Associate Dean will be informed of the judgment.

6. Final Appeal

If the campuswide sanction is upheld by the Committee, the report of the Committee and all supporting evidence can be sent for a final level of review at the request of the student. If the accused student is an undergraduate, the case will be reviewed by the Dean of Graduate Studies. If the accused student is a graduate student, the case will be reviewed by the Dean of Undergraduate Education. This final review process can only result in decreasing the sanctions imposed on the student or leaving them unchanged. There are no further appeals or processes.

7. Implementation

Once the judgment has been rendered the Dean of Undergraduate Education or Graduate Studies will implement the judgment in the form of a letter to the student as well as initiate any other necessary administrative actions.

F. MAINTENANCE OF DISCIPLINARY RECORDS

Records relating to academic dishonesty will be maintained by the Associate Deans and the Offices of the Deans of Undergraduate Education and Graduate Studies to promote consistency of penalties for a given offense and to ensure appropriate action against repeat offenders. Records will normally be destroyed after five years, unless the Associate Dean determines in any particular case that there is good reason to extend the period of retention. In order to ensure that minor and nonrecurring infractions do not negatively impact a student's career beyond UCI, any student may petition to the Associate Dean of his or her academic school to have relevant academic disciplinary records expunged after the record is two years old or upon graduation, whichever comes first. The Associate Dean has sole authority to consider and to grant or deny such petitions. The University will release a student's disciplinary records to potential employers, governmental agencies, other educational institutions, or other organizations or individuals only if authorized to do so by the student in question or if compelled by law. Any record expunged by the Associate Dean will also be erased in the Dean of Undergraduate Education or Graduate Studies Offices.

ADDITIONAL INFORMATION

This policy is intended to focus solely on issues related to academic dishonesty. Certain details of the implementation of procedures specified here can be found in the UCI publication *Policies Applying to Campus Activities, Organizations, and Students*, available free of charge from the Office of the Ombudsman, located in 437 Administration; the Office of the Dean of Students, located in the UCI Student Center; and on the World Wide Web at http://www.dos.uci.edu/judicial/uci_policy.html.

Anti-Hazing Compliance

The State of California and the University of California have expressly and repeatedly asserted their opposition to hazing and preinitiation activities which do not contribute to the positive development and welfare of the individuals involved. In January 1988, the Education Code of the State of California was modified to reflect changes to the State's anti-hazing statute. In accordance with the revised Education Code, students are advised of the following:

Education Code 32050

As used in this article, hazing includes any method of initiation or preinitiation into a student organization or any pastime or amusement engaged in with respect to such an organization which causes, or is likely to cause, bodily danger, physical harm, or personal degradation or disgrace resulting in physical or mental harm, to any student or other person attending any school, community college, college, university, or other educational institutions in this state; but the term "hazing" does not include customary athletic events or other similar contests or competitions.

Education Code 32051

No student, or other person in attendance at any public, private, parochial, or military school, community college, college, or other educational institution, shall conspire to engage in hazing, participate in hazing, or commit any act that causes or is likely to cause bodily danger, physical harm, or personal degradation or disgrace resulting in physical or mental harm to any fellow student or person attending the institution.

The violation of this section is a misdemeanor, punishable by a fine of not less than one hundred dollars (\$100), nor more than five thousand dollars (\$5,000), or imprisonment in the county jail for not more than one year, or both.

Education Code 32052

Any person who participates in the hazing of another, or any corporation or association which knowingly permits hazing to be conducted by its members or by others subject to its direction or control, shall forfeit any entitlement to State funds, scholarships, or awards which are enjoyed by him, by her, or by it, and shall be deprived of any sanction or approval granted by any public educational institution or agency.

Copies of Sections 32050 through 32052 as well as UCI's policies regarding hazing are available from the Office of the Dean of Students, UCI Student Center. See Appendix F on the World Wide Web at http://www.dos.uci.edu/judicial/uci_policy.html.

Campus Safety and Security

The UCI Police Department (UCIPD) is responsible for the safety and security of the UCI campus as well as properties owned, controlled, or occupied by the University. UCIPD and UCI administration make continual efforts to reduce crime on campus and at the Medical Center. The following information is excerpted from the *Crime Awareness Bulletin*, which is published annually in September and distributed to new and continuing students, as well as to faculty and staff, at both the campus and the Medical Center.

CRIME PREVENTION

The UCI Police Department's Crime Prevention Unit offers ongoing educational programs and presentations to the campus community. With the assistance of the Community Service Officers and Patrol Division, the Crime Prevention Unit teaches prevention and awareness about drugs and alcohol, domestic violence, sexual assault, identity theft, property and auto theft, workplace violence, and personal safety including the RAD (Rape Aggression Defense) Program for women and radKIDS (Resisting Aggression Defensively) for children. For more information or to schedule a presentation, call (949) 824-7181 or visit <http://www.police.uci.edu>. Monthly crime prevention tips are also available on the Web site.

SAFETY TIPS

Day and night, no matter where you go, you should be aware of your surroundings, should exercise good common sense, and should use safety precautions as you would elsewhere. Theft is the most common security problem. Property theft is preventable if you keep your personal belongings (backpack, laptop computer, cellular phone) in sight, within arm's length, or secured in a locked place. Students living on campus should keep their doors locked at all times. Faculty and staff should keep valuables locked up while they are in their workplace. The last person to leave a laboratory or building should lock the doors. Report the presence of unknown visitors or suspicious persons to the UCI Police Department or UCI Medical Center Security as soon as possible.

Use the UCI Safety Escort Service (949-824-SAFE) if you are out at night, don't walk alone—walk in pairs, and learn the location of the Emergency Call Boxes (Blue Light Phones).

EMERGENCY CALL BOXES (BLUE LIGHT PHONES)

Both the campus and the Medical Center have emergency call boxes (Blue Light Phones). Use them to report emergencies, crimes, suspicious persons or activities, accidents, safety hazards, and to call for a Safety Escort.

The campus has 125 Blue Light Phones scattered around the ring mall and in parking structures and lots. (See the campus map for locations.) The blue light on the box easily identifies them, and the boxes detect all sounds within a 15-foot radius. To use the phone, just push the button located on the front of the call box. You are then automatically connected to the UCI Police Department. The Medical Center has 21 emergency call boxes located throughout the complex and in the southeast corner of the Manchester parking lot. These phones are connected to the UCIPD dispatcher.

SUBSTANCE ABUSE POLICIES

UCI is designated a drug-free environment, and only under certain conditions is the consumption of alcohol permitted. The sale, manufacture, distribution, or possession of any controlled substance is illegal under both state and federal laws. Such laws are strictly enforced by UCIPD. All members of the UCI community—students, faculty, and staff—who violate these laws are subject to disciplinary action, criminal prosecution, fines, and imprisonment.

Sales, consumption, and the furnishing of alcohol on the UCI campus are restricted by UCI's Alcohol Policy and California State law and are controlled by the California Department of Alcohol and Beverage Control (ABC). However, ABC and UCIPD share enforcement of alcohol laws on campus. It is unlawful to sell, furnish, or give alcohol to a person under the age of 21 years (this includes the Anthill Pub & Grille). The possession of alcohol by anyone under 21 in a public place, or in a place open to the public, is illegal. It is also a violation of UCI's Alcohol Policy for anyone under the age of 21 to consume or possess alcohol in any public or private housing area on campus. Students and employees found violating alcohol/substance policies or laws could be subject to sanctions by the University.

WEAPONS POLICY

It is a serious violation of the law to possess a firearm on University property. Section 626.9 of the California Penal Code makes it a felony to bring or to possess a firearm on the grounds, or within buildings (including private residences) of the University of California, without the written permission of the Chancellor or the Chancellor's designee.

Please report to the UCI Police Department anyone who has stated that they have a gun on campus or who has made a threat to use a firearm on campus. You can ask to be anonymous when reporting.

TO REPORT AN INCIDENT

UCIPD needs your help to build and maintain a safe community. If you become suspicious about unknown visitors or someone's actions appearing unusual for the time and place, call UCIPD. They will assess the situation and take the appropriate action. Please report crimes; you can ask to be anonymous.

On campus, dial 9-1-1 or (949) 824-5222 for a police, medical, or fire emergency. For non-emergency police services dial (949) 824-5223. The UCI Police Department's campus office is open 24 hours a day and is located on the ground floor of the Public Services Building, at the corner of East Peltason and Pereira Drives.

At the Medical Center, dial 9-1-1 or (714) 456-5222 for a police emergency, (714) 456-6123 for a fire or medical situation. The Medical Center Security office is located in Building 2 adjacent to the Emergency Department's ambulance ramp.

Crimes occurring off campus should be reported immediately to the city/state law enforcement agency where the crime occurred.

UCI CRIME STATISTICS

Pursuant to the Federal Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act of 1999, the University of California, Irvine annually makes available to all students, faculty, and staff statistics on the reported occurrences of criminal activity on and off campus and at the UCI Medical Center.

The University of California, Irvine's annual security report includes statistics for the previous three years concerning reported crime that occurred on campus, in certain off-campus buildings owned and controlled by UCI, at the UCI Medical Center, and on public property within or immediately adjacent to and accessible from the campus and Medical Center. The report also includes institutional policies concerning alcohol and drug use, crime prevention, the reporting of crimes, sexual assault, and other matters. To obtain a copy of this report go to the UCI Police Department Web site at <http://www.police.uci.edu/studentright.html>, or visit the Department in person.

UCI Police Department

Crime Prevention Unit: (949) 824-7181

Computer- and Network-Use Policy

The University of California, Irvine (UCI) provides computing resources and worldwide network access to members of the UCI electronic community for legitimate academic and administrative pursuits to communicate, access knowledge, and retrieve and disseminate information. All members of the UCI community (faculty, staff, students, and authorized guests) sharing these resources also share the rights and responsibilities for their use.

Rights and Responsibilities

Worldwide, open-access electronic communication is a privilege and continued access requires that users act responsibly. Users should be able to trust that the products of their intellectual efforts will be safe from violation, destruction, theft, or other abuse. Users sharing computing resources must respect and value the rights and privacy of others, respect the integrity of the systems and related physical resources, and observe all relevant laws, regulations, and contractual obligations. Users are responsible for refraining from acts that waste resources, prevent others from using them, harm resources or information, or abuse other people. To help protect files, users are responsible for setting passwords appropriately and for keeping passwords confidential by not giving them to another person.

Most UCI-owned computers are under the control of a system administrator or lab manager. These administrators are expected to respect the privacy of computer system users. However, UCI computer system administrators may access user files or suspend services on the systems they manage without notice as required to protect the integrity of computer systems or to examine accounts that are suspected of unauthorized use, misuse, or have been corrupted or damaged. This includes temporarily locking vulnerable accounts, removing hung jobs, reprioritizing resource intensive jobs, and such.

Many UCI departments have their own computing and networking resources and policies. When accessing computing resources, users are responsible for obeying both the policies described here and the policies of other departments. Student responsibilities are also described in the *University of California Policies Applying to Campus Activities, Organizations, and Students*. In addition, all users are responsible for obeying policies of off-campus network services accessed using UCI resources.

Examples of Misuse

Examples of misuse include, but are not limited to:

- Knowingly running or installing on any computer system or network, or giving to another user, a program intended solely for the purpose of damaging or placing excessive load on a computer system or network. This includes, but is not limited to, computer viruses, Trojan horses, worms, bots, flash programs, or password cracking programs.
- Attempting to circumvent data protection schemes or uncover security loopholes without prior written consent of the system administrator. This includes creating and/or running programs that are designed to identify security loopholes and/or intentionally decrypt secure data.
- Using computers or electronic mail to act abusively toward others or to provoke a violent reaction, such as stalking, acts of bigotry, threats of violence, or other hostile or intimidating "fighting words." Such words include those terms widely recognized to victimize or stigmatize individuals on the basis of race, ethnicity, religion, sex, sexual orientation, disability, and other protected characteristics.
- Posting on electronic bulletin boards or Web pages materials that violate the University's codes of conduct (faculty, student). This includes posting information that is slanderous or defamatory in nature or displaying graphically disturbing or sexually harassing images or text in a public computer facility or location that are in view of other individuals.
- Attempting to monitor or tamper with another user's electronic communications or reading, copying, changing, or deleting another user's files or software without the explicit agreement of the owner.
- Violating terms of applicable software licensing agreements or copyright laws.
- Using campus networks to gain, or attempt to gain, unauthorized access to any computer system.
- Using a computer account or obtaining a password without appropriate authorization.

- Facilitating or allowing use of a computer account and/or password by an unauthorized person.
- Employing, either directly or by implication, a false identity when using an account or other electronic resources. This includes sending unauthorized mail that appears to come from someone else.
- Performing an act without authorization that will interfere with the normal operation of computers, terminals, peripherals, networks, or will interfere with others' ability to make use of the resources.
- Using an account for any activity that is commercial in nature not related to work at UCI, such as consulting services, typing services, developing software for sale, advertising products, and/or other commercial enterprises for personal financial gain.
- Deliberately wasting computing resources, such as playing games (for example, MUDS or IRC) while someone else is waiting to use the computer for UCI-related work, sending chain letters, spamming, treating printers like copy machines, storing or moving large files that could compromise system integrity or preclude other users' right of access to disk storage, and the like.

Consequences of Misuse

Misuse of computing, networking, or information is unacceptable, and users will be held accountable for their conduct. Serious infractions can result in temporary or permanent loss of computing and/or network privileges and/or Federal or State legal prosecution. Appropriate corrective action or discipline may be taken in conformance with applicable personnel policies, student policies, collective bargaining agreements, and procedures established by the Academic Senate. California Penal Code, Section 502 makes certain computer abuses a crime, (such as illegal reproduction of software protected by U. S. copyright law) and penalties can include a fine and/or imprisonment. Files may be subject to search under proper authorization.

Minor infractions of this policy, such as poorly chosen passwords, overloading systems, excessive disk space consumption, are typically handled internally to the department in an informal manner. More serious infractions such as abusive behavior, account invasion or destruction, attempting to circumvent system security, and the like are handled formally through the Office of the Dean of Students or by other appropriate officials.

Contact Information

For additional information, contact Network & Academic Computing Services (E2130 Engineering Gateway Building) by calling (949) 824-2222, or by sending e-mail to nacs@uci.edu.

Student Records

The University of California campuses maintain various types of records pertaining to students; some are maintained for academic purposes; others, such as medical records, are maintained for other specific purposes. Student records—that is, those pertaining to students in their capacity as students—include but are not limited to academic evaluations, transcripts, test scores and other academic records, general counseling and advising records, disciplinary records, and financial aid records. At UCI, an "applicant" becomes a "student" at the time of submission of the Statement of Intent to Register form.

The disclosure of information from student records is governed in large measure by the Federal Family Educational Rights and Privacy Act of 1974, by the State of California Education Code, and by University policy and procedures implementing these laws which protect the student's right of privacy, provide safeguards for the confidentiality of student records, and permit students access to their own records.

Pursuant to the Federal Family Educational Rights and Privacy Act of 1974 and the University of California Policies Applying to the Disclosure of Information from Student Records, students at the University have the following five rights:

1. to inspect and review records pertaining to themselves in their capacity as students;
2. to inspect records maintained by the campus of disclosure of personally identifiable information from their student records;
3. to seek correction of their student records through a request to amend the records or a request for a hearing;
4. to file complaints regarding alleged violation of the rights accorded students by the Federal Act with the Family Policy Compliance Office, U.S. Department of Education, 400 Maryland Avenue S.W., Washington, D.C. 20202-5920; World Wide Web: <http://www.ed.gov/policy/gen/guid/fpco/index.html>;

5. to have withheld from disclosure, in the absence of their prior consent for release, personally identifiable information from their student records, with exceptions as noted in the University student records policies.

NOTE: There are instances in which information can be disclosed without prior written consent of the student. University officials may require access to student records in the course of the performance of their assigned duties. Further, confidential information can be disclosed without prior written consent of the student (a) in connection with conditions of certain financial aid awards; (b) when the campus is complying with a judicial order or subpoena; and (c) when authorized federal or State officials are conducting an audit or evaluation of federally supported educational programs. There are also other situations in which the University is required to disclose information. See University of California Policies Applying to Campus Activities, Organizations, and Students for a list of exceptions.

Normally, the campus will release the following as personally identifiable information which can be made public:

Student's name;
Photo;
Address (e-mail, local, and/or permanent) and telephone numbers;
Date and place of birth;
Major field of study, dates of attendance, number of course units in which enrolled, degrees and honors received;
Grade level;
Enrollment status, e.g., undergraduate or graduate, full-time or part-time;
Most recent previous educational institution attended;
Participation in officially recognized activities, including intercollegiate athletics;
Name, weight, and height of participants on intercollegiate University athletic teams.

However, students have the right to refuse to permit any or all of these categories to be designated public information with respect to themselves. (See the NOTE above.)

If a student requests that information from his or her records not be regarded as public information, then the information will not be released to anyone without the written consent of the student. The student should be aware of the important implications of exercising this right. For example, if a request is made to withhold from disclosure a student's name and degrees and honors received, the campus cannot release for publication information on any honors received by the student, such as election to Phi Beta Kappa, and cannot include the student's name and degree earned in the campus commencement program without the written consent of the student. Similarly, if a request is made to withhold from disclosure a student's name and dates of attendance, a student's status as a student cannot be verified for potential employers without the written consent of the student. Further, if a student's last instruction to the campus was to withhold from disclosure the degree granted to that student and the date on which the degree was conferred, that information cannot be confirmed for a third party in connection with the appointment of that graduate to a new position or in connection with an honor that individual received without the written consent of the student.

Students wishing to restrict release of public information should contact the Registrar's Office for instructions on how to do so. Questions regarding the rights of students under the University policies and the federal law should be directed to the University Ombudsman, 437 Administration.

It is extremely important for each student to keep the Registrar's Office currently informed as changes to personal data occur to assure that accurate and complete records are maintained.

Students are informed annually of their rights under the University's student records policies and the federal Act. Copies of the Act and University and campus policies are available for review in the Reference Room, Langson Library. In addition, University policies are published in *University of California Policies Applying to Campus Activities, Organizations, and Students*, copies of which are available in the Office of the Dean of Students and on the World Wide Web at http://www.dos.uci.edu/judicial/uci_policy.html.

Types and locations of major student records maintained by the campus are listed in the following table; consult the Campus Directory or building directories for room numbers.

Type of Record	Location of Record	Responsible Official
School, department, or program	Administrative office for particular unit	Dean, Chair, or Director
Admissions—Undergraduate	Administration	Director, Admissions and Relations with Schools
Admissions—Graduate	Administration	Dean, Graduate Studies
Admissions—School of Medicine	Med. Sci. I	Director, Admissions
Career Center	Student Services I	Director, Career Center
Child Care Services	Early Childhood Education Center	Director, Child Care Services
Counseling	Student Services	Director, Counseling Services
Dean of Students	Administration	Dean of Students
Disability Services	Disabled Student Center	Director, Disability Services
Education Abroad Program	Student Services II	Coordinator, EAP
Financial Aid	Administration	Director, Financial Aid
Financial Services (Cashier, Collections)	Administration	Manager, Financial Services
Housing	Housing Administrative Services	Director, Housing
International Center	Berkeley Place	Director, International Center
Learning and Academic Resource Center	Fourth Floor, Social Science Tower	Director, Learning and Academic Resource Center
Ombudsman Services	Administration	University Ombudsman
Parking	Public Services Facility	Parking Supervisor
Placement Testing Office	Student Services II	Director, Testing Office
Registrar—Graduate/Undergraduate School of Medicine	Administration Med. Sci. I	Registrar Assistant Deputy Registrar
Relations with Schools	Administration	Director, Admissions and Relations with Schools
Student Academic Advancement Services	Student Services II	Director, Student Academic Advancement Services
Student Conduct	Humanities Trailer Complex	Dean of Students
Student Health	Student Health Center	Director, Student Health
Summer Session	University Extension	Director, Summer Session
Undergraduate Education	Administration	Dean, Undergraduate Education
University Extension	University Extension	Dean, Continuing Education
Veterans		Coordinator, Veterans Student Services
Incidental Records (minutes of various committees, copies of correspondence in offices not listed above, and other records not listed)	Administration	Vice Chancellor Student Affairs, or other Student Affairs officials (for conduct issues, could be Dean of Students, Dean of Undergraduate Education, or Dean of Graduate Studies)

Salary and Employment Information

Sexual Harassment and Consensual Relationships Policies

Adapted from the full text of the UC Policy on Sexual Harassment

The University of California is committed to creating and maintaining a community where all persons who participate in University programs and activities can work and learn together in an atmosphere free of all forms of harassment, exploitation, or intimidation. The University is strongly opposed to sexual harassment, and such behavior is prohibited both by law and by University policy. Any member of the University community may report conduct that may constitute sexual harassment under this policy. The University will respond promptly and effectively to reports of sexual harassment, and will take appropriate action to prevent, to correct, and if necessary, to discipline behavior that violates this policy. This policy also prohibits retaliation against a person who reports sexual harassment, assists someone with a report of sexual harassment, or participates in an investigation or resolution of a sexual

harassment report. Consensual sexual or romantic relationships between members of the University community are subject to other University policies, including the Faculty Code of Conduct and the UCI Policy on Conflicts of Interest Created by Consensual Relationships.

Questions or reports regarding the UC Policy on Sexual Harassment or the consensual relationships policies may be directed to Kirsten K. Quanbeck, Sexual Harassment/Title IX Officer and Assistant Executive Vice Chancellor/Director of the Office of Equal Opportunity and Diversity at (949) 824-5594 or sho@uci.edu.

Links to the full text of the UC Policy on Sexual Harassment, the Faculty Code of Conduct, and the UCI Policy on Conflicts of Interest Created by Consensual Relationships are available at <http://www.sho@uci.edu>.

Nondiscrimination Policy Statements

Student-Related Matters. The University of California, in accordance with the applicable Federal and State law and University policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy¹, disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran. The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities.

Employment Practices. The University of California, in accordance with applicable Federal and State law and University policy, prohibits discrimination against or harassment of any person employed by or seeking employment with the University on the basis of race, color, national origin, religion, sex, gender identity, pregnancy¹, physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or status as a covered veteran². This policy applies to all employment practices, including recruitment, selection, promotion, transfer, merit increase, salary, training and development, demotion, and separation.

In addition, it is the policy of the University to undertake affirmative action, consistent with its obligations as a Federal contractor, for minorities and women, for persons with disabilities, and for covered veterans. The University commits itself to apply every good faith effort to achieve prompt and full utilization of minorities and women in all segments of its workforce where deficiencies exist. These efforts conform to all current legal and regulatory requirements, and are consistent with University standards of quality and excellence.

Inquiries regarding the University's nondiscrimination policy may be directed to: Kirsten Quanbeck, Assistant Executive Vice Chancellor, Director/Title IX Officer, UCI Office of Equal Opportunity and Diversity, 4500 Berkeley Place, Irvine, CA 92697-1130; eod@uci.edu; telephone (949) 824-5594.

¹ Pregnancy includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth.

² Covered veterans are special disabled veterans, recently separated veterans, Vietnam-era veterans, or any other veterans who served on active duty during a war or in a campaign or expedition for which a campaign badge has been authorized.
